 And then in the soft, still even,
 'Mid the golden light of the setting sun
 It sings as it soars into heaven;
 And the blessed notes fall back from the skies,
 'Tis its only song, for in singing it dies.

Have you heard these tales? Shall I tell you one,
 A greater and better than all?
 Have you heard of him whom the heavens adore,
 Before whom the hosts of them fall?
 How he left the choirs and anthems above
 For earth in its wailings and woes,
 To suffer the shame and the pain of the cross,
 And die for the life of his foes?
 O Prince of the noble! O Sufferer divine!
 What sorrow and sacrifice equal to thine?

Have you heard this tale, the best of them all,
 The tale of the Holy and True?
 He died, but his life now in untold souls
 Lives on in the world anew.
 His seed prevails, and is filling the earth

As the stars fill the skies above.
 He taught us to yield up the love of life
 For the sake of the life of love.
 His death is our life, his loss is our gain,
 The joy for the tear, the peace for the pain.

Now hear these tales, ye weary and worn,
 Who for others do give up your all;
 Our Savior hath told you the seed that would grow
 Into earth's dark bosom must fall;
 Must pass from the view and die away,
 And then the fruit will appear;
 The grain that seems lost in the earth below
 Will return many-fold in the ear;
 By death comes life, by loss comes gain;
 The joy for the tear, the peace for the pain.

—Author Unknown.

COLLEGE BARBARICS.

SOME days ago it was reported that a contest known as a cane rush took place between the two lower classes of a Massachusetts college and that, while the "honors" of the "scrap" were about evenly divided, one young man was so injured that paralysis of the lower part of his body ensued. That that injury was intentionally inflicted no one believes; nevertheless, it was a result of a superheated contest for a victory in which brawn alone is the winner for the party that can muster the larger aggregate of flesh and muscle and the smaller amount of consideration for the bodily welfare of the other fellows. Every year presents a number of young men disabled for a long period, and some crippled for life, in rough-and-tumble engagements into which they were drawn by foolish college sentiment or were moved by a desire to participate in something spectacular for the amusement of the campus or sidewalk audiences. This species of college custom is near kin to that direct descendant of barbarism known as hazing. Parents who have boys to educate are becoming more and more pronounced in their determination to send them to colleges that are free from barbarous annexes wholly foreign to the educational functions for which such institutions were originated. It is a hopeful sign that the list of colleges placing the ban upon such unnecessary and unmanly proceedings is growing from year to year. The sentiment of the entire country should concentrate in an emphatic demand for their elimination from all those institutions. Why any of the good men in authority in college management sanction things that endanger the physical well being of their students and weaken the sense of fairness and manliness and humaneness, is something that is puzzling to onlookers who believe that such principles are of great importance in forming true character.—*The Universalist Leader*.

THE HOME WORLD

AN UNCROWNED MOTHER

CLARA NORTH RULEY

IN a little obscure town in Indiana there lives a woman who is the ideal type of mother. God saw fit to leave her childless, and those who know her and her good works in this world are quite able to see his hand in it all.

For she has mothered many. There has never been a hired man on her husband's farm but has gone away a better man for her influence. She has never had a maid in the kitchen but that can trace some good qualities in her after life to the lessons inculcated by that wise woman. Her name was Mary and indeed inwardly she was the type of that one who was blessed among women, but perhaps owing a merry twinkle in her ever-youthful eyes and the cheery insouciance of a little nose slightly tip-tilted, the Mary soon degenerated to Molly and "Aunt Molly" she has been to every one who has ever known her.

One child was adopted by the couple "just to ease the pain in our hearts when we found that we weren't likely to have any of our own," she told me simply. This boy has grown to be the blessing and the mainstay of the house; indeed, he has put many a natural son to shame with his loving care and attention to his adopted parents. But those who have been helped, who have been given an impetus toward right living, number more than a score. No child was left homeless and friendless for miles around but that the question of "What shall we do with the poor little thing?" was solved by the answer, "Oh, take him to Uncle Jeff and Aunt Molly, they'll take care of him until some one will adopt him." And so it always happened. There was never one turned away.

Aunt Molly told me that often they became so attached to the temporary charge that they were tempted to adopt him, but "we thought as some one *did* want that particular one we had best let him go for perhaps there would be one some time that nobody else would want and then we would keep him."

However, that never came to pass, for no matter how poor in body and lacking in all that goes to make a child desirable in character, after they had been in

Aunt Molly's care for a time they attracted the attention of some one who was looking for a "bright, healthy, intelligent child." And so that one went on while his benefactors prepared the way for some other little poverty-stricken waif.

One should not think that Aunt Molly's cheerfulness was the effect of her being without sorrow. Once she left her own home for many months to go back to the home of her childhood and care for a poor bedridden father. And then when she had seen him die after suffering intensely for a long time, she took an invalid mother back home and cared for her until her death. Then, after years of happily-married life, her husband was taken with an incurable disease and one exceedingly disagreeable for those who cared for him. She with the adopted son cared for the husband and father until he was laid to rest. Since then she has spent most of her time nursing. Her cheery presence in the sick room is a veritable elixir of life in many cases.

Aunt Molly is a Christian, and a practical one at that. While the prayer meeting seldom finds her absent, and the revival service would lose its savor for many, without her presence, yet more than once she has missed the church service to finish a dress for some poor child or to keep a family of children so their mother to whom an occasional religious service was indeed a boon, might attend the meeting.

I happen to know personally one of the women the saving of whom will no doubt be the bright particular star in Aunt Molly's crown. She—we will call her Jennie, though that isn't her name—lived in the village near by the farm of Aunt Molly and Uncle Jeff. Her father was not much force and her mother was, if I may be pardoned for the expression, "as bad as they make 'em." Two of the older girls had already followed in the footsteps of their mother, and Jennie bid fair to follow them, when some good angel attracted her to Aunt Molly. Jennie was then about twelve years of age. She was absolutely untaught when it came to domestic affairs, though she could and did swear fluently. In spite of her ignorance Aunt Molly

took her for the summer. She clothed her, and taught her, and I have no doubt Jennie got much the best of the bargain that year, but before the summer was over Jennie's mother demanded her help at home and there was nothing to do but to let her go. Aunt Molly congratulated herself, however, on one thing, the child had good clothes and enough of them to last her through the winter if she were careful.

About Thanksgiving Uncle Jeff came home from town and said, "Molly, you just ought to see Jennie. She had nothing on this cold day but a thin calico dress, that is, I feel quite sure that was all she had on. If you say so I will go back and get her and we will keep her here for the winter and let her go to school." Of course Aunt Molly agreed. As she said, she "couldn't sleep o' nights with that poor child in such a state." Back came Uncle Jeff with the poor little detrimental. He had been quite right about her lack of clothing and Aunt Molly's eyes filled with tears as she gave her the necessary bath before installing her between the clean woolen sheets. Her sisters and mother had helped her wear out her other clothes, so she said.

So Aunt Molly started all over again, and this time by dint of persuasion and sundry threats from the officers, the child was allowed to stay in her new home. She went to school in winters and helped with the work in summers, and under Aunt Molly's capable teaching came to be an excellent housekeeper. There came a time, however, when the dawning womanhood in the girl made her want what her good protector called "company."

Up to now Jennie had been a good girl, and to the credit of all the boys and girls who attended the same school and Sunday school she was treated as one of them. But Aunt Molly and Uncle Jeff both knew that in a place where every one knew so well about her mother's and sisters' characters, no young man would pay her any attention that meant honest intentions. But they couldn't find it in their hearts to tell Jennie. So one day they made a trip to another part of the county and found the girl a place for the summer. They told her future mistress all about her, and why they didn't want to keep her themselves, and as the good housewife was, one might say, the "Aunt Molly" of her neighborhood, she promised to do the best she could for Jennie. Aunt Molly told the girl that she didn't intend to keep help that summer for as was natural she did not wish to go among strangers. But she did go, and proved herself such a satisfactory housekeeper that an honest young farmer in the neighborhood asked her to be his wife. She consented, and since has brought up his children of a former wife besides one of her own. They live in a thriving town where they own a nicely-furnished home, and are sufficiently well to do to maintain a horse and phaeton.

Jennie's associates are good people and Aunt Molly

said when speaking of her not long ago, "I feel repaid for that summer's hard work. You see I told the child I didn't intend to hire any help that summer so I could get her to go and work for Mrs. Hubler, and I nearly worked myself to death keeping my word to that poor dear."

One time Aunt Molly was heard to say to a group of young mothers, "Oh, you mothers, you will have all the rocking-chairs reserved for you in heaven while we childless women will have to be contented with something not so good." One of the women spoke up. "Ah, Aunt Molly, if you get your just deserts, as I believe you will, you will enjoy the very 'cushionest' rocker there is."

Milford, Ind.

DON'T MAKE THE WRINKLES DEEPER.

Is father's eyesight growing dim,
His form a little lower?
Is mother's hair a little gray,
Her step a little slower?
Is life's hill growing hard to climb?
Make not their pathway steeper;
Smooth out the furrows on their brows,
Oh, do not make them deeper.

There's nothing makes a face so young
As joy, youth's fairest token;
And nothing makes a face grow old
Like hearts that have been broken.
Take heed lest deeds of thine should make
Thy mother be a weeper;
Stamp peace upon a father's brow,
Don't make the wrinkles deeper.

In doubtful pathways do not go,
Be tempted not to wander;
Grieve not the hearts that love you so,
But make their love grow fonder.
Much have thy parents borne for thee,
Be now their tender keeper;
And let them lean upon thy love,
Don't make the wrinkles deeper.

Be lavish with the kindly deeds,
Be patient, true, and tender;
And make the path that ageward leads
Aglow with earthly splendor.
Some day, the dear ones, stricken low,
Must yield to death, the reaper;
And you will then be glad to know
You made no wrinkles deeper.

—Selected.

AN OLD-FASHIONED SUNDAY.

I KNOW a family of grown up sons and daughters who look back upon their childhood's Sunday as the happiest day of the week, and its blessed influence has never left them. During the mornings when their parents were in church they were under a careful nurse's supervision; but immediately after an early dinner the servants were allowed to leave for the entire

afternoon, and the children enjoyed the company of father and mother for the remainder of the day.

Immediately after dinner the father and children went off for a time to the garden and to view the "stock," as they called the horse, pony, dogs and chickens, returning after the mother had rested. Then the groups divided, the mother taking the little girls apart for Sunday school, while the father told stories to the boy, who was younger.

The books selected for Bible study were those delightful and never surpassed little volumes, "Peep of Day," "Line Upon Line," and "Precept Upon Precept." One question in the catechism was learned, which though not understood at the time, was a bulwark in after years. For this difficult achievement a prize was offered. An entertaining story followed; then books were closed for the day, the family reunited and a scramble was made to find the Sunday "treat," which was always a secret. It was hidden away downstairs and was never the same twice. Sometimes the parcel contained maple sugar, or dates, or figs, fruit, candy, nuts, as the case might be; but it usually was something these simply brought up children did not get during the week. They had a merry time over this, for these wise parents knew little folks required variety and that restless feet and hands must be employed.

The treat finished, coats and hats were put on, and the whole party was off for a long country walk, only returning in time for half an hour's singing before tea. If the day were stormy, other employments were found—the most enjoyed being that of making a Scripture scrapbook for the children's ward in the hospital. The prettiest pictures to be discovered were cut out by the children very carefully, and texts were chosen to be written under the pictures when pasted in the book. For instance, if the picture were a lamb, the text was, "Behold the Lamb of God which taketh away the sin of the world," or "He shall gather the lambs to his bosom." If flowers were used, "I am the rose of Sharon and the lily of the valley," or "Consider the lilies of the field." If the pictures were animals, something about mercy and kindness would be chosen. The children cut out the pictures, the mother arranged and pasted them in, and the father wrote down the texts. The verses naturally were never forgotten either by these children or the little sufferers for whom the book was designed.

After tea the mother took the little ones off to bed, and this hour she counted the most blessed of the whole week. It was the time their little hearts were most tender and susceptible to influence. After they were ready for bed she explained to them that God had promised to listen to and answer prayers when two or three asked for something, and then she reminded them of some one who was in trouble or sorrow, and knelt down and prayed with them. Then with arms en-

twined the three little white-robed figures said in unison their evening prayer, and so ended a happy, holy day.

Some one will naturally ask whether the father and mother had not a too strenuous day, and if they did not need rest on Sunday. They would have answered that they never begrudged a moment of their time so spent, and that they looked back upon it with as much pleasure as did the children.—*Northwestern Christian Advocate.* ❀ ❀ ❀

"BEFORE TAKING."

THE real business of house-cleaning is generally a pretty big dose for the mother of the family, yet the spring medicine must be taken, and it is well to begin with a gradually increasing measure until the final plunge must be taken. Now is the time to weed out the attic, overhaul the closets, bureau drawers, cupboards, boxes and bundles, and other storage places, and get all the tangles out of the edges during the dull, dark days the month always brings. Undesirable, or useless things should be given away or cremated; the bane of most households is the spirit of hoarding of useless things. Things that are to be made over in the way of clothing, bed furnishing, table linens, carpets, curtains, etc., should be got ready now for the renovation at an early date. The ripping and brushing out of seams will keep little hands busy and little heads interested if the mother goes at it right; and the wise woman will get all the help she can, by filling the idle hands of the adults with some of her daily duties. Get the "gude mon" interested in burnishing up things indoors, or make the job attractive to the big boy who will be only too glad to earn the proud title of "mother's helper" by "tinkering with tools." —*The Commoner.* ❀ ❀ ❀

EASTER RECIPES.

GRANDMOTHER'S FAVORITE EGG DISH—A tablespoonful of butter was melted in the frying-pan, then covered with fine bread-crumbs. Over this she laid thin slices of cheese; well-beaten eggs seasoned with salt and pepper came next, then the cover was closely adjusted and the dish cooked either in the oven or on top of the stove.

SCOTCH EGGS—These are delicious served hot or cold. The ingredients called for are one cupful lean cooked ham, chopped very fine, five hard-boiled eggs, one-third cup stale breadcrumbs cooked to a smooth paste in one-third cupful milk, one raw egg, one-half teaspoonful mixed mustard and a half saltspoonful cayenne. Add ham and seasonings to the bread and milk paste, together with the raw eggs. Mix well. Take the shells from the boiled eggs and cover with the seasoned ham and bread paste. Have ready a kettle of deep fat smoking hot, drop in the eggs, fry two minutes, drain, and if to be served hot send at once to the table. When served cold, cut in two lengthwise and arrange on lettuce or parsley.

EASTER EGGS COLORED AT HOME—While dyes for coloring eggs can be purchased cheaply, beautiful colorings can be obtained at home without money and without price. The skin of onions, boiled for a few moments gives a good shade of red or orange, saffron gives yellow, and spinach or parsley a delicate green. If a flower pattern is desired, a piece of new calico wrapped smoothly around the egg and then boiled will leave color and pattern behind. If a different name or motto is desired upon the tinted egg, write with liquid fat on the shell of the egg, and let it stand long enough to "set," before putting in the dye. This keeps the shell from taking the color wherever the tracing was applied and the motto, name or picture comes out in pure white.—*The Delineator*.

MOVING BOXES.

JOHN S. FERNALD.

FAMILIES who live in rented houses and move frequently will find this idea valuable: Permanent packing boxes are economical, both of time and money. Buy the large-sized packing cases from your retail shoe dealer, and strengthen them by adding a few nails. For heavy goods, such as books, dishes, etc., the boxes should be further strengthened by putting a strip of hoop iron around each end. Put in each end of the box a rope handle, or becket, long enough for the hand of the person carrying the box to come above the top, cleat the cover, and you have a box that may be used for many movings. When not so employed the boxes may be piled in a back room, open side outward, and serve admirably as shelves, after the style of sectional bookcases.

The Children's Corner

THE OLD UMBRELLA.

"MAMA, I don't want to carry that old umbrella," whined Ned. "All the boys make fun of me because it is so big."

"But, dear, it looks like rain," said Mrs. Graves. "Some day, maybe, I will be able to get you a new umbrella, but you must not get wet because you dislike the old one. Be my brave little man, and don't mind what the boys say."

"I am sure it is going to snow, and I don't mind that a bit," went on Ned. "Please don't make me take it."

But at last he went to school with a frown on his face, and the big, old umbrella in his hand. He had gone only a short distance when Rob Turner came along and grabbed the handle of the umbrella.

"Got your roof along, haven't you?" he said. "Why do you carry a whole shed to school with you, Ned?"

"Mama makes me," said Ned.

"I'll tell you what to do," said Rob. "Let the wind tear it to pieces, and then you won't have to carry it. Mama used to make me carry a horrid old one to school, but I got rid of it one day in a high wind. It isn't going to rain today, but the wind is blowing just right. I'll show you how to do it."

"I'm afraid mama wouldn't like it," said Ned, holding onto the umbrella. "She said she couldn't afford to buy a new one just now."

"Of course she wouldn't like it if she knew, but you needn't tell her, baby," sneered Rob, who was taller than Ned. "Here, let me have it. The big drops are beginning to fall, and you can let her think it was an accident."

"O Ned!" called a voice behind them, "will you let me have your umbrella when you get to the schoolhouse? Robert had an accident with my last one, and I must take the baby to the doctor."

"Of course you may have it," said Ned, handing it to Mrs. Turner. "Rob and I will run to the schoolhouse, so you take it right now."

"I'm glad you didn't do as I said," panted Rob when they reached the schoolhouse, and the rain pattered down. "I don't know what would have happened if little Bess had got wet. I'm going to tell mama what I did, and ask her to take the money out of my bank to buy a new umbrella."

Mrs. Turner brought back the old umbrella that day, and said the baby did not get a bit wet. "The doctor said she would have been very ill if she had not been protected from the cold rain," she said gratefully. "I am so glad you had it with you, Ned."

"I didn't want to carry it, but I'm glad mama made me," said Ned. "After this I'm going to try to mind without pouting, for she knows best."—*Herald and Presbyter*.

THE JAY.

The jay is a jovial bird—Heigh-ho!
He chatters all day
In a frolicsome way
With the murmuring breezes that blow—
Heigh-ho!

Hear him noisily call
From the redwood tree tall
To his mate in the opposite tree, Heigh-ho!
Saying: "How do you do?"
As his topknot of blue
Is raised as polite as can be—Heigh-ho!

Oh, impudent jay,
With your plumage so gay,
And your manners so jaunty and free,—
Heigh-ho!
How little you guessed,
When you robbed the wren's nest,
That any stray fellow would see!
Heigh-ho!

—St. Nicholas.

THE QUIET HOUR

COWORKERS WITH GOD.

"The day is long and the day is hard;
We are tired of the march and of keeping guard;
Tired of the sense of a fight to be won,
Of days to live through and of work to be done;
Tried of ourselves and of being alone.

"And all the while did we only see,
We walk in the Lord's own company;
We fight, but 'tis he who nerves our arm;
He turns the arrows that else might harm,
And out of the storm he brings a calm.

"And the work that we count so hard to do,
He makes it easy, for he works too;
And the days that seem long to live are his,
A bit of his bright eternities,
And close to our need his helping is."

—Susan Coolidge.

LOVELINESS OF PURITY.

D. E. BRUBAKER.

I BELIEVE it impossible to overestimate the importance of purity of heart and character. This is the only open door and highway to all of the highest possibilities of the sweetest enjoyments here and hereafter. The New Testament teaching of Christ insists above all things on personal purity, and from the nature of the God of divine revelation whoever aims at high attainment in the fields of knowledge and wisdom, must follow that path of teaching or forever be disappointed.

Purity and cleanliness of heart must necessarily appear in the sight of God as does bodily purity and cleanliness in the sight of good and pure men and women. In both cases the virtue of purity is lovely and beautiful and draws commendation and favor and good will from the beholder, and brings the reward of fellowship and companionship. How repelling to all refined people to approach and behold that unfortunate class of people who for any cause have slipped into a careless, slovenly, untidy manner of keeping their person.

Heart cleanness and purity pays the highest dividend of any investment it is possible to make. And not only the highest but also the surest. Heart purity is the first and great law of spiritual health and growth. Inattention to bodily cleanliness invites and breeds disease. So the heart when kept foul with unclean and unholy thoughts becomes the breeding ground for

the fatal maladies of the soul which tend to separate it from God.

We meet with people who are scrupulously neat and clean—as to hands and face—who betray in their conversation anything but harmony between internal and external cleanliness. Impure thoughts pollute the very fountain of the stream of life and should therefore be avoided as one would a deadly plague. A pure imagination—the image-making power of the soul—is one of the very richest and best endowments of man by an all-wise Creator, but like many other good things may be converted into a curse.

This seems to have been the unfortunate condition of the race in antediluvian days. Those unfortunate people had degraded the highest and holiest endowment to the lowest and most unholy use. "Every imagination of the thoughts of his heart was only evil continually." That was a dark and gloomy day in the history of the early race. And it is a dark day in the life of any individual and bodes ruin when evil and impure pictures are the predominant stock in trade in the art gallery of the mind.

To a large degree impure thoughts are revealed in the face and countenance of their possessor; and those who have deep insight and experience can to a large degree detect the characteristic mental images cherished in the heart. The most beautiful and marvelous temple of temples, the human body, is to each of us a most sacred gift and trust. Will we not all strive to keep it beautiful and clean and pure, within and without, by right living?

"Blessed are the pure in heart, for they shall see God."

Mt. Morris, Illinois.

THE INNER HAPPINESS.

If we accept his teaching we must believe that men are not wrong in wishing for happiness, but wrong in their way of seeking it. *Earthly happiness*—pleasure that belongs to the senses and perishes with them—earthly happiness is a dream and a delusion. But *happiness on earth*—spiritual joy and peace, blossoming here, fruiting hereafter—immortal happiness, is the keynote of life in Christ.

And if we come to him, he tells us four great secrets in regard to it.

It is inward and not outward; and so it does not depend on what we have, but on what we are.

It cannot be found by direct seeking, but by setting our faces toward the things from which it flows; and so we must climb the mount if we would see the vision, we must tune the instrument if we would hear the music.

It is not solitary, but social; and so we can never have it without sharing it with others.

It is the result of God's will for us, and not of our will for ourselves; and so we can only find it by giving our lives up in submission and obedience, to the control of God.

"For this is peace—to lose the lonely note
Of self in love's celestial ordered strain:
And this is joy—to find one's self again
In him whose harmonies forever float
Through all the spheres of song, below, above—
For God is music, even as God is love."

This is the divine doctrine of happiness as Christ taught it by his life and with his lips. If we want to put it into a single phrase, I know not where we shall find a more perfect utterance than in the words which have been taught us in childhood—words so strong, so noble, so cheerful, that they summon the heart of manhood like marching music: "Man's chief end is to glorify God and enjoy him forever."

Let us accept without reserve this teaching of our divine Lord and Master in regard to the possibility and the duty of happiness. It is an essential element of his gospel. The atmosphere of the New Testament is not gloom, but gladness; not despondency, but hope. The man who is not glad to be a Christian is not the right kind of a Christian.—*From "Counsels by the Way," by Henry Van Dyke.*

A SWEET-SMELLING SAVOR.

OF all man's sources of enjoyment, none display more clearly the bounties of God than the fragrant odors of nature. The world might have been made entirely scentless, and yet every essential purpose have been fulfilled. The vegetable kingdom, which is the great storehouse of perfumes, might have performed all its functions, and yet not a single plant exhaled an agreeable odor. Fragrance seems so wholly superfluous and accidental that we cannot infer that it was imparted to the objects which possess it, nor for their own sakes, but for our gratification. We regard it as a particular blessing, sent to us directly from the hand of our Heavenly Father; and we are the more confirmed in this idea by the fact that the human period is the principal epoch of fragrant plants. Geologists inform us that all the eras of the earth's history previous to the Upper Miocene were destitute of perfumes. Forests of club mosses and ferns hid in

their somber bosom no bright-eyed floweret, and shed no scented richness on the passing breeze. Palms and cycads produce no perfume-breathing blossoms. It is only when we come to the periods immediately antecedent to the human that we meet with an odoriferous flora. God placed man in a sweet-scented garden as his home.—*Hugh Macmillan.*

ALONE, YET NOT ALONE.

THERE are, within the range of everyone's life, processes of life which must be solitary; passages of duty which throw one absolutely upon his individual moral forces, and admit of no aid whatever from another. Alone we must stand sometimes; and if our better nature is not to shrink into weakness, we must take with us the thought which was the strength of Christ: "Yet I am not alone, because the Father is with me." The sense of right can more readily indurate the tender than melt the rocky soul, and that is the most finished character which begins in beauty and ends in power; that leans on the love of kindred while it may, and when it may not, can stand erect in the love of God; that shelters itself amid the domesticities of life while duty wills, and when it forbids can go forth under the expanse of immortality, and face any storm that beats, and traverse any wilderness that lies beneath that canopy.—*James Martineau.*

PURE GOLD.

IT is said that the way to tell genuine gold quartz is to examine it from every direction. If it is the genuine article it will glisten and sparkle no matter what the position. There is a commodity that resembles gold, and under certain lights only will shine, but it is not pure. So it is with the real Christian and the nominal professor: The one will shine wherever he is and Christ will be lifted up. The other only looks well under certain lights, and will not bear close scrutiny at all. There is no shining, because the pure gold of a sincere Christian life is not there. What a sad thing it is to occasionally have a counterfeit shine, and thus deceive yourself, and those about you. Why not be a pure-gold Christian, then if looked at from any angle the Christlike life will be radiated?—*Zion's Herald.*

SIR FREDERICK TREVES, surgeon to King Edward VII, speaking of alcohol, says: "It is a poison. Moreover, it is an insidious poison in that it produces effects which seem to have only one antidote—alcohol again."

"If you never take enough interest in religion to have positive beliefs, you'll never amount to anything, spiritually."

ECHOES FROM EVERYWHERE

Commencing on April 1, 1909, the reduced rate on postage of 2 cents an ounce now in effect on letters exchanged between Great Britain and Ireland and the United States was extended to Hawaii. The rate already extends to Alaska. The rate applies to letters only and not to postcards.

A resolution has been adopted by the Oregon Legislature for a constitutional amendment permitting the State to construct and own its own railroads. Supporters of the resolutions declared that E. H. Harriman, railroad magnate, had prevented the development of the central part of Oregon and that the construction of a road by State authority was necessary.

Permission will be asked of the Mexican Congress to permit President Diaz and Minister of Finance Mariscal to accept decorations from the Czar of Russia. The decoration tendered Diaz is second only to those retained for the Russian royal family. The front is almost a solid mass of diamonds. The decorations are presented as a mark of friendship between the two countries.

As a result of the successful work of the ten Belgian hounds doing police duty in Brooklyn, their working hours have been lengthened and their beats will be extended. Police records show that since the advent of the dogs, about a year ago, the number of burglaries has been reduced at least fifty per cent. They previously occurred at the rate of about three a week.

China is about to take a census of the uncounted millions within her borders. In accordance with the program for constitutional reform, an edict, copies of which have been received at the state department, has been issued directing the police at Tao Tais, and provincial treasurers to enumerate the individuals and families of the empire. The returns for the census of families must be completed by 1910 and for individuals by 1912. All Chinese living in foreign lands must be enumerated according to the prescribed method.

The theory that eight hours of sleep is necessary to the human body in order that it may best perform its labors does not appeal to Thomas Edison, the inventor. He is generally content with 3 hours out of 24 in the arms of Morpheus, and his wife takes one hour more. Wishing to experiment in this matter, the inventor during the course of two years had a number of his associates to take but four hours of sleep a day and note the effects. No change was made in their ordinary course of life save that at midnight they took a fourth meal. After a few days of weakness and drowsiness these men became normal again and noticed no ill effects from the experiment. Edison holds that in taking but the four hours of sleep one gets a more regular and uninterrupted repose than when spending eight hours in bed.

A sensation has been caused by the report of a case of sleeping sickness in the heart of Paris. The victim is a missionary of the Order of the Holy Ghost, who dropped unconscious in the Luxemburg Garden and was conveyed to the Pasteur Institute. The institute physicians state that the condition of the man is most serious. He contracted the disease on the Upper Ubanghi, a river of equatorial Africa.

An inventor has recently devised a method whereby a ship can determine its distance from another vessel, or from shore. The vessels, as well as the shore station, are provided with wireless telephone apparatus, which is used to transmit the sound of a submarine signal bell. The difference in time which it takes for the sound to be transmitted by wireless telephony and to travel through the water enables the receiver to determine the distance of the sending station from him.

March 28 Wilbur Wright left Paris for Rome. Mr. Wright expects to remain in Rome about a month in order to make some demonstrations of flying before the Italian military authorities and also to instruct an Italian army officer in handling the machine. When this work is completed he and his brother intend to return to America by way of England. Once back in America they will take up their work at Fort Myer. Again in late summer either one of the brothers will go to Berlin for the purpose of presenting their machine to the German Government.

An appropriation of \$2,500,000 is asked by Congressman Sabath of Chicago for the purchase of 20,000 acres of land in Colorado and the erection of a national tubercular sanitarium. Mr. Sabath would place the control of the sanitarium under the Secretary of the Interior, who is authorized by the bill to make regulations for the admission of patients, including the fixing of hospital charges. A board of physicians, the members of which have had at least ten years' practice in their profession, is provided for.

The suppression of sleeping sickness is only a question of efficient administration and organization, and there is little doubt that in time the tsetse fly will be conquered, with the result that the disease will cease to devastate wide districts in Africa. The disease is spread by a biting insect which is distributed in patches over many thousand square miles in Africa, the inhabitants of which vast areas are too apathetic to lift a finger to save themselves from annihilation. Moreover, the disease is difficult of detection in its earlier stages, during which period infected persons may travel long distances, affording opportunities for the diffusion of the malady. One of the first essentials in grappling with the difficulty is to instruct the African native as to the true nature of the disease and its mode of spreading.

Nineteen to five the Missouri Senate engrossed Senator Bradley's resolution for a constitutional amendment in relation to aliens. The proposed amendment would permit no one to vote who is not a bona fide citizen of the United States. Under the present law any alien who declares his intention to become a citizen may vote. Should the amendment prevail an alien would have to be a citizen of the United States seven years before voting. Many who take out first papers never become citizens and often return to their native countries.

In furtherance of what is believed to be one of the most important movements ever launched for the improvement of child labor conditions in the South, official representatives from eleven southern States met in New Orleans March 29 for a conference to extend over a period of three days. The gathering was upon the invitation of Governor J. Y. Sanders of Louisiana, who recently asked the Governors of several other southern States to name delegates for a meeting which would have for its object the adoption of a more comprehensive and uniform system of child labor laws in the South, safeguarding both the welfare of youthful laborers and the legitimate interests of the employers.

In the last annual report which he will issue to the overseers of Harvard College, and which covers the year ending Oct. 1, 1908, President Eliot again advocates a three-year course for bachelor degrees of arts and sciences, notes that notwithstanding the hard times, gifts to the university amounted to \$691,896 and once more scathingly denounces football as a demoralizing spectacle and unfit for college sport. While he admits that appreciable improvement was made in Harvard athletics during the year and he commends the general view of college athletics taken by Graduate Manager William F. Garcelon, President Eliot says that too much time is devoted daily to baseball and football.

The new cabinet: For Secretary of State, Philander Chase Knox of Pennsylvania, age 56, lawyer; for Secretary of the Treasury, Franklin MacVeagh of Illinois, age 67, merchant; for Secretary of War, Jacob McGavock Dickinson of Tennessee, age 58, lawyer; for Attorney-General, George W. Wickersham of New York, age 58, lawyer; for Postmaster-General, Frank H. Hitchcock of Massachusetts, age 44, chairman Republican national committee; Secretary of the Navy, George Von Lengerke Meyer, of Massachusetts, age 51, banker; Secretary of the Interior, Richard A. Ballinger of Washington, age 53, lawyer; Secretary of Agriculture, James Wilson of Iowa, age 74, farmer; Secretary of Commerce and Labor, Charles Nagel of Missouri, age 60, lawyer. Thus it will be seen that there are five lawyers, one merchant, one banker, and one farmer in the cabinet; the average age of the new body is $57\frac{2}{3}$ years. Mr. Knox has been a cabinet member before, having been Attorney-General under McKinley and during a portion of Roosevelt's first administration, and Messrs. Wilson and Meyer are cabinet members. Mr. Hitchcock will not enter upon a totally new field in taking up the work of Postmaster-General, inasmuch as he was First Assistant Postmaster-general at the time he was made chairman of the national Republican committee. Mr. Wilson has been a member of the cabinet since 1897. He is a native of Scotland.

On reliable authority it can now be stated that Dr. Charles W. Eliot, former president of Harvard University, will accept appointment as American ambassador to London. There will accordingly be no further indecision about the successor to Whitelaw Reid, for it is planned that the London post, the most important foreign diplomatic place within the gift of Yale's first President of the United States, shall be offered to Harvard's retiring president at a dinner to be given him by the Washington alumni of Harvard next Tuesday night. Mr. Reid will remain at London until the end of the season next summer and Dr. Eliot will probably present his credentials to King Edward early in the fall.

Roadmaking in a sandy country is attended with difficulties, but in Minnesota an experiment was tried last year which turned out so well that it will be repeated in some parts of the State this spring and summer. In order to make the sand into a vegetable loam so it might be worked into a road, freshly cut yellow clover and rye straw were mixed with the sand base, and after six months of use the road is doing well, and meets with the approval of the farmers who travel over it. The highway was graded and yellow clover and rye planted, leaving only a right of way of about 20 feet. Then rye straw was thrown on the road and worked into the sand by the passing teams. The clover was cut from time to time, thrown upon the road, and worked so well into the sand that the character of the soil was actually changed. In another part of the State four inches of sawdust were spread over the road for a quarter of a mile and worked into the sand by the teams, and as this slowly rots it is possible to work the road very much the same as if it were made of loam.

The long-talked-of bill for tariff revision, known as the Payne bill, is now in the hands of our law-makers at Washington. The distinguishing features of the new bill are:

The maximum and minimum tariff plan designed to secure fair play for the United States from other protectionist countries.

An inheritance tax estimated to bring in a revenue of \$20,000,000 yearly.

A new provision as to goods manufactured under foreign patents, designed to increase the manufacture of such articles in the United States by American workmen.

Coffee on the free list; tea taxed 8 cents per pound, and 9 cents when brought in from other than the producing country.

Iron ore on the free list. The duties on manufactures of iron and steel materially reduced. Tin plate and steel rails reduced.

Hides on the free list, and duties on manufactured leather reduced; shoes reduced 40 per cent.

Lumber and timber duties cut in half.

Reciprocal free trade with the Philippines, with a limitation on the amount of sugar and tobacco annually to be imported. Reciprocity with Cuba continues.

The internal revenue tax on cigarettes increased from \$3 to \$3.60 and from \$1 to \$1.50 per thousand.

Beer and whiskey not touched.

Nails, wire, hardware, tools, etc., reduced.

Changes in the pottery schedule are not material; some sizes of window glass reduced and others increased.

Sugar reduced five one-hundredths of a cent per pound.

The cheaper grades of wool are reduced.

Among the Magazines

THE STANDARD OIL COMPANY AND THE PUBLIC.

Because the recent acquittal of the Standard Oil Company in Judge Anderson's court on a charge of rebating has not called forth those special phenomena known as "a demonstration of popular excitement," certain people are industriously trying to prove that the "fickle public" has lost all interest in the company and in its various sins. The arguments are much too sophisticated.

The truth is of a different nature. When the Standard Oil Company was on trial before Judge Landis the case was by far the most important that had been brought against it, and probably the most important case against any offender charged with taking freight rebates. The popular interest, of that special form described as "excitement," lay in the developments that were coming from day to day as to the doings of the company and of the railroads it patronized; and this entirely without regard to the many-million-dollar fine, which, of course, had not then been imposed.

At the present time the case that was before Judge Landis and that later came before Judge Anderson has lost the unique character that once attached to it. The defendant has repeatedly been convicted of taking rebates and has been fined for it. Moreover, it has been punished in the person of one of its subsidiary companies for even more serious violations of the law by the Supreme Court of Missouri. Finally it is the defendant in a suit which will soon be tried at St. Louis, in which the Federal Government will strike at the very corporate life of the company, with the deliberate intention of putting a permanent quietus on it and its manner of offending. Clearly enough, then, the Chicago rebate case falls naturally to a minor position.

More than all this, however, the degree to which a topic is currently talked about is no measure of the degree of the real public interest in it. No men are more mistaken than those who think that the words of the mouth measure the life currents of men or of society. The people know that the Standard Oil Company and other similar offenders are harder pressed each month; that they are reforming their methods to a great extent, and that the Federal Government is as deliberately engaged as ever in its history in the endeavor to enforce the laws in just such cases. They are confident that President Taft is on the road to gather the fruits of his predecessor's initiative. And if they are not saying much they are watching the course of events with undoubtedly a greater degree of enlightenment and a keener real interest than ever before.—Chicago Record-Herald.

THE EMPLOYER'S LIABILITY IN PURSE AND CONSCIENCE.

This matter of the right of the employé to reasonable compensation in case of injury while at his labor is one of the fundamental and necessary conditions of our so-

cial life. It is necessary and right where you are building a great property, the results of which are intended for your especial delectation and gratification, that you look after those who, by reason of good will or necessity, or both, are moved to assist you. And if it is the public, acting through the States or Nation, that is building the property, then it is the public's place. All men can not succeed in a large measure. Neither are all men fitted in even a moderate way to lead. Many—the vast majority—must serve as foot-soldiers, and it is these whom the captains of industry, the great and enthusiastic conductors of material enterprise, must learn to protect.

How? The employer's liability idea does not ask much. It says that if an employé of yours in the course of his work for you, either by some error or negligence of yours, or some defect of machinery or material conditions with which you may surround and supply him, suffers some injury to his physical well-being which prevents him either temporarily or permanently from earning his way, then you must make good to him this loss. It usually is not so very much—three hundred, five hundred, a thousand, five thousand dollars. These are not so many dollars to pay a man or woman for the loss of an eye or a hand or foot. In the case of complete disability ten thousand dollars is not nearly too much, although the law does not at present contemplate a tax of this kind.

The fact is that this tax does not fall on you as an employer directly. It is intended only to make you take out insurance against accident in your factory, or on your road, or in your mine. There are plenty of great insurance companies anxious to have you let them insure you against loss from any form of accident in your company. They will guarantee, in case you comply with certain rules and supply certain safeguards, to insure against any damage. Today they do this and protect you. Only, in doing so, they fight the injured employé in the court so that he is not often able to collect from them the miserable damages which you have paid them to protect you from paying, and which should be his. Tomorrow, under the right sort of legislation and with your consent, they will pay him promptly and without question the little which he should get and which he so sorely needs. Of course, it will cost you a little more in annual insurance. And, of course, it will make you a little more careful of the manner in which you arrange and safeguard your machinery. But, of course, also, you will feel easier in conscience; and, of course, also, you will figure it in the general expenses of your business and charge it to your customers and patrons. Every other employer will be doing it. You will not be alone. And the maimed and disfigured will not then have to slink off into the shadow and suffer hopelessly; and you will be running your business, in part, at least, in accordance with the wisdom, the justice and the mercy of God.—April Delineator.

RADICAL SUNDAY-SCHOOL REFORM.

Religious education as furnished by our Sunday schools is carried on "with methods and a standard that would be more appropriate for the Middle Ages than for the twentieth century," says Mr. Joseph V. Collins, of the Wisconsin State Normal School. Nothing has come of the flood of literature poured forth dealing with religious and moral education in the public schools, he asserts, and "the vision of an oncoming irreligious citizenship has driven many a clergyman and writer wild with concern for the future." Hence the writer pleads for the most drastic measures of Sunday-school reform. Under present conditions of Sunday-school work, thinks Mr. Collins, it is "practically impossible to attain anything above a low standard of achievement." "The new psychology and the new education have hardly touched the Sunday-school except in the most superficial way." Too little time is given to the actual study of the lessons; the environment is often productive of "mischief and disorder that would not be brooked for a moment in a public school"; the lessons themselves lack continuity, "the plan followed being to hop-skip-and-jump through the whole Bible every six years"; while the great body of scholars and teachers often are guilty of failure to prepare lessons at all. Such is the analysis of present-day Sunday-school conditions which Mr. Collins, in *The Educational Review* (New York, March 1), prefixes to his definite propositions for reforms. The following, he thinks, "will meet all the requirements of religious education in the United States":

"This solution can be stated in one sentence: viz., a two or three hours' session on Sunday, instead of an hour's session as now, with changes in the administration of schools to correspond. The change in the administration would be the introduction of a study period in a main room, with classes reciting in smaller recitation-rooms, or off at one end of the main room, so as to disturb as little as possible those studying. By this plan the number of teachers needed would be greatly reduced. One teacher only would be sufficient to handle the study-room, keeping the pupils quiet, in order, and at work. The school could be divided into as many grades as desired, and one teacher could handle one or more grades, dependent on the size of the school, that is, in any ordinary-sized school. Devotional exercises, including perhaps a little sermonet by the pastor, should come in with all the school present, or all except the smallest scholars. The adult classes would be present at the general exercises and would then give an hour's time to the discussion of a lesson as now, not remaining the full time of the session. The strong incentive for the children to study would be that every one around the individual would be studying, there would be quiet, regular lessons would be assigned, and textbooks would be supplied for the pupils' use, and maps and reference books would also be at hand convenient for use of all the school.

"Since the number of teachers would be greatly reduced, presumably only the best would remain. These would have to put in longer hours, but in compensation they could be released from other church service, even that of the regular preaching service. As matters now stand, multitudes of teachers put in more hours in attendance at church services, including going and coming, than they would under the proposed plan, provided they were released from other engagements, and others took their places in an equitable division of labor.

"Of course a carefully prepared and graded set of lessons, put up in permanent book form, would be necessary. Under present conditions there is enormous waste

in the fact that the helps liberally supplied, being adapted for temporary use only, are immediately thrown into the waste-basket as soon as or sooner than the pupil is done with them."

The children, it is urged, would benefit by this change, for to them "Sunday is a long and drearish day in many homes." Saturday being the children's day of relaxation from mental work, "Sunday is extra, it is double and unnecessary measure." "If the children were kept busy on Sunday afternoon (or morning) they would be out of mischief, would be happier, and would be in much better condition for work in the day school the next forenoon."—*Literary Digest*.

TO THE WORKERS FOR PEACE AT HOME AND ABROAD.

Address by the National Council of British Peace Societies.

Friends and Comrades: The National Council of British Peace Societies desires to send cordial New Year greetings to all who are engaged in the sacred task of establishing peaceful relations between the great nations of the world and delivering them from the oppressive burden of armaments.

The year 1908 marked, on the whole, a substantial advance towards the ideal which we share. The cordial relations between our country and France continue, and the year witnessed a peaceful and welcome "invasion" of Great Britain by our brethren from France, for the purpose of visiting the Franco-British Exhibition in London.

Continued endeavors have been made, by the interchange of visits and otherwise, to counteract the mischievous efforts of those who would stir up jealousy and strife between Great Britain and Germany. It is more and more being made clear that the German people and the English people have no cause of quarrel and bear no ill-will towards one another.

There is much in recent events to encourage workers for peace to go forward with redoubled strength and courage. We may instance the democratic revolution which has taken place in Turkey without armed conflict; the relaxing of the tension between great powers with regard to Morocco; and the reference of the Casablanca dispute to arbitration. We may further mention the understanding reached between the United States and Japan, which appears likely to have the best results on their international relations, and to make for the security of peace in the Far East; the inclusion, amongst treaties of arbitration signed during the past year, of a treaty between Great Britain and the United States (ratified June 4, 1908), for a period of five years, and the renewal of the Anglo-French Arbitration Treaty for a further period.

The international peace movement continues to grow in strength and popular acceptance, and received an unprecedented recognition from the King and government of Great Britain on the occasion of the seventeenth Universal Peace Congress, which met in London in July last.

On the other hand, the oppression of the world's armaments continues. Armed peace constitutes a burden upon industry and a check to social development which is felt by all the great nations with increasing severity. Certain persons in our own and other countries continue to sow the seeds of race hatred and mutual suspicion and fear. A large and influential part of the world's press is on the side of a narrow patriotism and the doctrines of physical force, and therefore forms one of the greatest

obstacles to international solidarity and the progress of civilization.

In the name of British pacifists, and, as we believe, of the majority of thoughtful British men and women, we would deprecate in the strongest manner recent alarmist utterances, the object of which appears to be the introduction of compulsory military service into this country under cover of the fear of a German invasion. We neither share these fears nor hold the doctrines from which they flow. We appeal with confidence to our German friends and comrades to help us to repel these assaults of military fanaticism, and to demonstrate the cordial feeling of the British and German peoples toward one another.

We appeal to people of good will in all countries to endeavor to strengthen the moral forces of law and order which ought to be predominant in international relations, and to combat in their own land the efforts of those whose trust is only in armed force, and many of whom thrive on international misunderstanding and jealousy.

To relieve the world of the crushing burden of armaments, to perfect the machinery of international equity, and to establish and cement good feeling and coöperation between the peoples—these are the tasks of the new year and the twentieth century, in which we call upon our comrades at home and abroad to engage with fresh zeal and enthusiasm.

Signed on behalf of the Council,

John E. Ellis, President.

(Rt. Hon. J. E. Ellis, M. P.)

T. P. Newman, Chairman.

Walter Hazell, J. P., Treasurer.

H. S. Perris, M. A., Secretary.

40 Outer Temple, Strand, London, W. C.

January, 1909.

—Advocate of Peace.

ORCHARD BEAUTY ABOUT THE HOME.

OF course, the owner of a small lot cannot have much of an orchard on it. But he can, in most cases, so arrange matters that he can grow considerable fruit there. And in arranging for this, he gets not only some fruit, but a great amount of the beauty peculiar to the orchard in spring. We have few shrubs as beautiful as the apple tree, in full bloom, and the crab, the plum, and the cherry do for early spring what our best shrubs do for a later season. We can combine the useful and the beautiful if we set about it intelligently, in planting the home-grounds. With this end in view, I would advise the small-lot owner to forego the planting of the ordinary shade-tree, and substitute for it some of the more easily-grown fruit-trees. The apple and the crab are better adapted in size to the lot of ordinary size than the large-growing trees are, for they seldom become so large as to crowd everything else into the background, which is just what the ordinary maple, elm, and oak will do, after a little, if allowed to have their way.

If apple trees are to be planted about the house, I would advise giving them a place at the rear. This for several reasons: There they will, in most cases, have a better chance to spread themselves after the

fashion peculiar to the apple tree, without interfering with the outlook from the house. They can be so placed as to serve as a screen against unsightly out-buildings, and they will not tempt the small boy as strongly, when seen at a distance, as they will be sure to when growing close to the street. The crabs, because of more upright habit, and less spread of limbs, are better adapted to the front yard. If there is anything in the floral line that can excel one of these trees in the profusion of its bloom, I would like to know what it is. Year after year they cover themselves with thousands of white blossoms that crowd themselves along the sturdy branches so thickly that there does not seem room for one more, and everybody that goes past them has to stop, and look, and admire. For days, each tree is a veritable flower-show in itself. Then the petals begin to loosen their hold, and when the winds blows, they flutter earthward in a cloud, till the ground is again white with a drift like that of winter. Crabs would be well worth growing for their flowers alone, but the fruit that follows is extremely attractive, and the housewife will find it as useful as beautiful.

A row of blackberry bushes along the rear fence will be "a thing of beauty" when in full bloom, and again when full of ripe fruit. Raspberries are not showy as to flower, but they are quite attractive when well laden with their purple and crimson clusters. So is the grape. All these plants can be trained to hide fences that are not particularly attractive in themselves.

The plum and the cherry are not as suitable to front-yard planting as the crabs, but they can do wonderful things in beautifying the house, in spring.

I know of several small-lot places on which nearly all the fruit used by the family is grown. No doubt a good deal more would be used, if it could be afforded, but the amount supplied by the trees and bushes which have been made to take the place of ordinary shade-trees and shrubs furnishes a luxury, in its season, which the laboring man's family fully appreciates, and which it would go without, most likely, if it were not for the little home-orchard.—*Selected.*

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

FOR SALE—494 acres in Mexico \$950. On Southern Pacific Railway in Sinaloa. The New California and Coming Country. Rich soil. Level. Bank and Government References. W. S. Hunt, Culiacan, Sinaloa, Mexico.

FREE—The Inglenook Handy Atlas of the World, with each subscription to the INGLENOOK Magazine at \$1.00 per year. This offer is not good after April 20, 1909.—Brethrer Publishing House, Elgin, Ill.

APRIL 20, 1909

is the date for the withdrawal of our popular sixty-day premium offer. Be sure to mail your order in plenty of time to reach us before the above date or you will be too late to secure a Free copy of the Handiest Geographical Encyclopedia published.

INGLENOOK 1909 HANDY ATLAS

The Inglenook Handy Atlas of the World includes 75 maps in colors. The remotest points of the far away countries are plainly depicted, and our own United States and the newly acquired American possessions are clearly shown. The book is an invaluable aid to any one who follows current happenings in the world's news.

Interesting historical sketches of all the Presidents of the United States are given—from George Washington to William H. Taft, who has just been inaugurated. Readers can glean at a glance information of the life and antecedents of any of these famous characters. A description of the White House is also included.

The Inglenook Handy Atlas of the World contains features of general interest to everybody. Pages are devoted to the United States Reclamation Service, explaining how government land may be reclaimed and acquired by citizens of the country, together with maps and a summary of the principal reclamation projects.

The Panama Canal project is always close to the people, and to be well informed on the subject is essential. The Inglenook Handy Atlas of the World contains an excellent profile map, showing every tracing of the canal's progress, together with an historical sketch and explanation of the final plans adopted by Congress, June 29, 1906.

Data concerning the principal cities of the world, with the 1905 census and the latest official estimates of population, are features that will appeal to everybody. Usually the ordinary atlas is remarkably incomplete in this respect. The cities of the United States, of course, are a feature, and a glance will determine the population and other important matters.

Beautifully colored plates showing the flags of all nations enable the reader to discern the emblem of any kingdom, empire, republic or principality in the world. A great education for old or young in its pages. Just the book for the school children to aid them in their studies.

Sixty-Day Offer

To every person sending us ONE DOLLAR for a year's subscription to the INGLENOOK before April 20, 1909, we send a free copy of the "INGLENOOK 1909 HANDY ATLAS OF THE WORLD."

If you are already on our subscription list, send us the Dollar and we will extend your subscription for another year or you can have the Magazine sent to a friend and keep the Atlas yourself.

Brethren Publishing House, Elgin, Illinois

\$400 Prize Cup Won by Colfax County, N. M. In Competition with Entire Irrigated West

Miami Ranch

is located in the choicest part of Colfax county, New Mexico, and it was largely due to the products grown upon and adjacent to this ranch that Colfax County won this valuable cup at the Interstate Industrial Exhibit held at Albuquerque, N. M., last October. Every State was represented—products from land selling as high as \$1,000 an acre were shown—but Colfax County won by many points.

Many other prizes have been won by this section of the country. New Mexico wheat took first prize at the World's Fair in Chicago, while apples raised in an orchard directly adjacent to Miami Ranch won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 an acre.

Miami Ranch

offers you health and pleasures as well as wealth. It's situated in a rich, cheerful valley, surrounded by picturesque mountains. Elk, deer, bear and other large game are to be found in the mountains, while thousands of wild duck and geese inhabit the surrounding lakes. The Rayado River, which flows through this ranch, is noted throughout the central west for its trout fishing.

The rainfall is sufficient to insure big crops. But with the gigantic irrigation system recently installed, there is not the slightest chance of crop failure.

The climate is perfect, the air is pure, and the scenery beautiful. Excellent church privileges, a good school and pleasant neighbors are all to be found on Miami Ranch.

Write for a free copy of our booklet, "Westward Ho." It tells in detail all about Miami Ranch. Tells how and when you can get a round-trip ticket from Chicago for \$30, and from Kansas City for \$25, via the Atchison, Topeka & Santa Fe. Write at once and take your choice of the bargain offers which we are now making on both large and small farms.

Opportunities

In Northern California for Colonization Purposes

We own several large tracts of land in the very best fruit growing sections of Northern California, and can offer you unequalled opportunities for Colonization purposes. Our large land holdings give you a splendid chance to make a selection of just the sort of land you want.

We have lands in four or five different counties located near railroads and principal cities. The living conditions in this section are ideal. Fine homes, excellent schools, splendid roads, good neighborhoods, in fact, we can offer you the very best locations possible for church extension work. We ask you to investigate our different land holdings at once by writing for our books showing our lands and giving full information about them.

We are the largest dealers in Northern California Fruit Lands in the country. 10 acres of our fruit land under cultivation will bring you a bigger income than 160 acres of ordinary farm land. Your land here will be worth \$500 to \$1,000 an acre with fruit bearing trees on it. Already 2,000 small farms have been sold.

We have just purchased the famous Hearst Ranch in Glenn County. Over 15,000 acres. **AN IDEAL LOCATION FOR A NEW COLONY.** We also have large tracts of land suitable for Colonization purposes in Sutter, Yuba, Butte and other counties located in the very best fruit growing sections of California.

WRITE TODAY FOR OUR BOOKS AND OTHER INFORMATION

Telling all about our lands, prices, and liberal selling terms. California with its beautiful scenery, wonderful health-giving climate and wonderful opportunities for easier and better living appeals to everyone. All sub-tropical fruits, oranges, lemons, figs, olives, plums, peaches, apples, prunes, berries, apricots, cherries and vegetables of all sorts will grow here. Nut growing offers great possibilities. English Walnuts, Almonds and Chestnuts yield exceedingly profitable crops. Market facilities are excellent. 10, 20 or 40 acres will net you a big, steady, permanent income. Our land is selling at its lowest figures now. Prices steadily advancing.

CHEAP RATES on all roads make it possible for you to go and see our lands for yourself. We invite your fullest investigation and will be glad to show you any and all of our lands located in Northern California.

Write us without fail today for booklets and maps showing the location of our best colony lands and telling about the wonderful opportunities in this section.

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the north. There is some snow at times but the Chinook winds quickly melts all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. I. J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

EMPIRE COLONY IN "SUNNY STANISLAUS"

The CO-OPERATIVE COLONIZATION COMPANY is now locating a colony of our people in the lower San Joaquin valley, in central California. The new town of EMPIRE, as well as the colony lands, is located on the Santa Fe railroad, five miles east of Modesto, the county seat of Stanislaus County, thirty miles south of Stockton, seventy-five from Sacramento and one hundred and fifteen from San Francisco.

The colony lands join the new town site and are within a few miles of three different railroads. These lands are all under cultivation, and are free from brush, stumps, stones or other obstructions. Two large ditches cross the tract, affording ample water for irrigation of all crops.

Empire Town-Site. Colony Lands and County Road.

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and Investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

LOW RATES FOR COLONISTS.

During March and April one-way Colonists' Rates will be in effect from Chicago to Modesto, California, for \$33.00. From Kansas City, and other Missouri River points, to Modesto, \$25.00. Via Merced, Cal. For further information address

"Mention Inglenook When You Write"

APRIL 20, 1909

is the date for the withdrawal of our popular sixty-day premium offer. Be sure to mail your order in plenty of time to reach us before the above date or you will be too late to secure a Free copy of the Handiest Geographical Encyclopedia published.

INGLENOOK 1909 HANDY ATLAS

The Inglenook Handy Atlas of the World includes 75 maps in colors. The remotest points of the far away countries are plainly depicted, and our own United States and the newly acquired American possessions are clearly shown. The book is an invaluable aid to any one who follows current happenings in the world's news.

Interesting historical sketches of all the Presidents of the United States are given—from George Washington to William H. Taft, who has just been inaugurated. Readers can glean at a glance information of the life and antecedents of any of these famous characters. A description of the White House is also included.

The Inglenook Handy Atlas of the World contains features of general interest to everybody. Pages are devoted to the United States Reclamation Service, explaining how government land may be reclaimed and acquired by citizens of the country, together with maps and a summary of the principal reclamation projects.

The Panama Canal project is always close to the people, and to be well informed on the subject is essential. The Inglenook Handy Atlas of the World contains an excellent profile map, showing every tracing of the canal's progress, together with an historical sketch and explanation of the final plans adopted by Congress, June 29, 1906.

Data concerning the principal cities of the world, with the 1905 census and the latest official estimates of population, are features that will appeal to everybody. Usually the ordinary atlas is remarkably incomplete in this respect. The cities of the United States, of course, are a feature, and a glance will determine the population and other important matters.

Beautifully colored plates showing the flags of all nations enable the reader to discern the emblem of any kingdom, empire, republic or principality in the world. A great education for old or young in its pages. Just the book for the school children to aid them in their studies.

Sixty-Day Offer

To every person sending us ONE DOLLAR for a year's subscription to the INGLENOOK before April 20, 1909, we send a free copy of the "INGLENOOK 1909 HANDY ATLAS OF THE WORLD."

If you are already on our subscription list, send us the Dollar and we will extend your subscription for another year or you can have the Magazine sent to a friend and keep the Atlas yourself.

Brethren Publishing House, Elgin, Illinois

Sunflower Stories and Lullabies

By Olive A. Smith.

A collection of stories and verses for young folks. Miss Smith is a writer of considerable ability, contributing to several young people's papers regularly.

The poems and stories found in this volume are among her very choicest productions.

In remembrance of her home in Kansas, the Sunflower State, she has called the collection "Sunflower Stories and Lullabies."

The book contains many such stories as "Mabel's Diamond," "The Story of a Bird," "A Real

Boy," "An Adopted Family," "The Class in Number Seven," and "Sammy." Interspersed throughout are a large number of such poems as "In Chipmunk Town," "The Moon Baby King," "The Wise Crow," "The Meadow Preacher," and "The Bye-Bye Boat." One hundred pages of the most delightful reading. The book is printed from large clear type, on a good quality of paper. The frontispiece is reproduced from a painting by David Emmert. Handsomely and substantially bound, artistic side title, profusely illustrated.

Price, prepaid,50 Cents

CRADLE ROLL BIRTHDAY POST CARDS

The phenomenal growth of the Cradle Roll Department of the Sunday School calls for constant activity on the part of the publisher to supply novelties and helps that will suit this peculiar field. Among the most useful helps are the birthday cards of which a new and beautiful line is just issued which may be mailed as post cards. The cards bear appropriate photographic reproductions embellished with exquisite floral designs and having greetings and verses in colored lettering; on the address side of the card is space that may be used for a personal message or invitation.

Form P. First Birthday—Boys.—A beautiful madonna with dainty decoration of trumpet border and lily of the valley.

Form Q. First Birthday—Girls.—Photograph of girl baby with border of snowdrops and colored leaves. One candle burns at top of card.

Form R. Second Birthday—Boys.—A bright boy's face with decoration of apple blossoms and golden bells.

Form S. Second Birthday—Girls.—A chubby two-year-old girl with pretty

background of violets and dainty lace.

Form T. Third Birthday—Boys.—A stalwart boy's figure in panel embellished with beautiful floral designs.

Form U. Third Birthday—Girls.—The girl's picture on this card is bordered with delicate grasses and pansies; three candles are burning on shelf.

The cards sell at the rate of 2 for 5 cents or 25 cents per dozen, postpaid. Order any one form or assorted.

NEFF'S CORNER

Nookers will please remember that I do a general brokerage business. If you want to buy or sell stock in any well rated stock company or bonds of any kind, write me. I also negotiate exchanges of real estate or other property. I now have 160 acres fine land near Elida, N. M., where there is one railroad and another building in, that I can sell at about half its value. By paying off a mortgage that was on it, I got it at a bargain and will sell at a bargain. A fine homestead relinquishment nine miles from another town can be had in exchange for other property. Also a good house and lot near Brethren church in Lake Arthur, N. Mex., is offered in exchange for stock in a reliable stock company. The property is bringing a good rental income. I make a specialty of stock in University Heights Realty & Development Co., People's Savings Trust Co., and Lewis Publishing Co., St. Louis. If you have any of this stock for sale, write me. I also buy or sell Share-Purchasing Coupons of the Albaugh-Dover Co., Chicago. My little folder, "New Mexico Investments," free on application. Address, JAMES M. NEFF, Clovis, New Mexico.

WANTED

A few hundred agents to represent us in their home county. We give large commission on Inglenook Cook Books, Floral Wall Mottoes, etc.

QUO, REGOR?

G. E. ROOT

ALL activities of those individuals of the animal kingdom that are capable of acting voluntarily are the result of mental stimuli. Of the animals that do not exhibit this volitive power, many have been found to possess a more or less highly developed nervous system. Even some plants display a sensitiveness which evidences that they have some means of receiving and transmitting stimuli. In the animal kingdom the degree to which the nervous system has been developed largely determines the position which the individual or class shall occupy among its fellows; it determines whether that individual or class shall be master or servant of those among which it lives. It is true that the physical characteristics of many animals help to make them masters over others, and this is more especially so with animals other than man; but a more important factor than bodily strength or agility is mental power. Many things done by animals for self-protection and preservation are prompted by what has been called instinct; but it matters not by what name it is known, the stimulus that excites these acts is a mental faculty.

As an illustration of the importance of such faculties to brutes, consider this example: the animals of the feline tribe, while usually larger and stronger than those they feed upon, are often not fleet enough of foot to overtake them, and could scarcely obtain enough food to live did they not know that, by crouching quietly at some place near which their prey will approach, they can spring upon it. The spider is not able to follow a fly in its flight, but it spins a web and quietly waits nearby until some unsuspecting insect becomes entangled in the trap, when the spider rushes out and seizes its prize.

The highest place in the scale of mental development is occupied by that being who was created in the image and likeness of his Maker, and given dominion over all other living things. Man is pre-eminently and dis-

tingtively intelligent. These facts warrant the statement that mind rules the world. The men who are directing the destinies of individuals and of nations, who are determining the courses and results of the activities of twentieth century civilization, are the men of mind. Since the body is ruled by the mind, conduct is an index to the mental state, and any improper act is proof that a wrong condition exists in the mind.

The various states or powers of the human mind may be classified in three main divisions: intellect, emotion, and will. The functions of the intellect are subdivided into three classes: perception, representation (or memory), and thought. All faculties of the mind figure to some degree in every complete mental act, and all are probably more or less prominent at every conscious moment, but the character of any mental state is determined by the element which is at that time predominant. Therefore the various conditions of mind and consequently the acts resulting therefrom are produced by the different degrees of activity assumed by the several mental faculties.

This brings us to the gist of our theme: which power of mind is the most potent factor in determining your acts and the course of your life? We believe that careful investigation proves a large majority of present-day evils to be due to the ascendancy of the emotions over the other powers of mind. What is it that impels some men to devote almost all their energies and spend their entire life accumulating vast, useless and burdensome fortunes, at the sacrifice of almost all the good and pleasant things that make life worth living and death hopeful? Can it be other than an unnatural and abnormal desire? There are women in our land who spend thousands upon thousands of dollars every year for dress, while there are those around them that scarce have the necessities of life. Men receiving large salaries have committed crimes that sent them behind

prison bars, to obtain money to furnish the wardrobe of an extravagant woman. Many people of smaller wealth waste just as much in proportion to their means endeavoring to keep pace with their rich neighbors in dress. Wars bring their horrors upon our nations, not because good judgement has shown them to be beneficial, but because men and nations become angry. Alcoholism, that has so long cursed our land, is a crying witness of the powerful influence that appetite and desire have upon the lives of men. Here emotion often completely tramples under both intellect and will. Emotion, it may be hatred or it may be some other passion, I say emotion and desire, certainly not intellect and reason, are responsible for the great and growing evil of divorce, which in our country alone wrecks its thousands of homes and lives every year.

Let us consider for a moment the tobacco habit. Do you realize the iron grasp that this habit has upon the American people? You can scarcely pass along the street of the smallest town or village without inhaling the foul odor of a pipe, cigarette or cigar. So universal and constant is the practice of smoking that the railroads regard the smoking car more essential than the dining car. Only trains running long distances carry the latter, but men cannot refrain from this habit long enough to ride even five or ten miles, so every train carries a smoker. I believe it would not be an extravagant estimate to say that two-thirds of the American men are slaves to the tobacco habit, and the rest of our more than 80,000,000 of people, who do not use the weed themselves, being exposed to its use by others, are not slaves but victims of the habit. There are today more slaves in this so-called land of the free than were liberated by Abraham Lincoln on Jan. 1, 1863, and often the slavery to evil desires and habits is worse than the servitude endured by the negro slave.

Do we conclude, then, that emotion is essentially an evil faculty of the mind? Certainly not, it has an office to perform. But the mental powers must be made to maintain proper relations toward each other, and emotion must not be allowed to assume the work of intellect. Intellect tells us what to do. Emotion furnishes the stimulus that makes us will to do the things intellect directs. Emotion is the energy that impels us to act. Napoleon was a successful general, not only because he knew how to lead an army, but because, from the crown of his head to the sole of his feet, he was fired with an ever-restless desire and ambition to become great, which made him will to exert every effort within his power. Each one of us is daily required to answer by our life this question, *Quo Regor?* "By what am I ruled?" Let us resolve that in our minds, reason shall sit enthroned, that emotion and will shall be her servants, and that by

proper cultivation of mind and character we *will* become not victims, but masters of our desires.

Union Bridge, Md.

OUR TINWARE.

M. M. WINESBURG.

OFTEN when I see old tin cans lying in the alleys I have wondered how many people, who pass by these cans, really know the amount of work it took to produce the tin used in those now useless cans, or the other tin vessels in daily use. I have an idea that there are not many housewives who know much about the various processes the iron must go through before it is converted into the shining tins and pans hanging in their kitchens.

As there are many persons who have neither the time nor opportunity to visit a tin mill I will try to give a brief but true description of the many processes of making tin. At a tin mill in my native town there are ten sets of rolls, or mills, as the tin-workers call them, and three crews to each mill, as they work on the eight-hour system. Thirty rollers for the ten mills.

The iron bars are first heated red-hot in the furnaces near the rolls and then rolled and paired. That is, two pieces of iron are started through the rolls one after the other, until the third pass and then both plates are caught together by the catcher and sent back through the rolls as one piece. The plates are now paired and they are thrown back in the furnace, until all the iron of that heat is rolled and paired.

When the iron is again hot each pair is again put through the rolls a couple of times, doubled and the ends sheared off and returned to the furnaces again. The pairs are now four-ply and if only four sheets of iron are wanted in these plates, when again hot they are just rolled into the required length; but if the plates are to be eight-ply the iron is doubled again and returned to the furnaces where it is again heated red-hot and then rolled the length desired and piled into a heap to cool.

Next these long plates are taken to the shears where they are cut into two and sometimes more pieces. As they are cut, the pieces are thrown onto a truck, and taken to the opening department, where the plates are opened or pulled apart by the openers. These openers have to wear large aprons and canvas gloves, for the sheets of iron cut like a knife. They also have to wear a piece of solid tin on the palm of their right hand with which they open the plates. In many of the tin mills the openers are women.

As the opener strips each sheet of iron from the plate, it is dropped on the front of the truck until the whole plate is opened. If any sheets are bad they are thrown out and the rest piled in a neat heap on the truck. When the truck is full of opened iron it is run down to the pickling department, where there are two

large tanks, one of water and the other of acid. Here the sheets of iron are stood on their edges in racks, and when the racks are filled with iron they are plunged up and down in the tanks, first in the water and then in the acid. This process is called pickling.

When the rack full of iron comes out of the acid, the iron is removed from the rack to benches, where it is sorted over to see if it has taken the acid well. From the benches it is packed into huge pots, and run into red-hot ovens where it is left for hours. This is called annealing.

When the annealing process is completed, the pots are drawn from the ovens and left to cool. After the iron is cool the pots are taken to the cold rolls. Here the iron is taken from the pots and put on benches, and again sorted over to take out the sheets that are sticking together. Then each sheet is run through the cold rolls to smooth out any dents that may have formed in it. They are then piled on a truck and sent to other pickling tanks, where they are again put through another pickling process, and afterward sent out to the dipping department.

Out in the dipping department are huge tanks of hot tin. Each sheet of iron is plunged into this bubbling hot tin and comes out tin-plate. From there it is sent to the tin house and again sorted and counted out, so many sheets to the box. This sorting and counting is done by girls; but it is put in boxes and nailed up by men, and it is then ready for shipment.

Now this is the process each sheet of iron must go through to be converted into the tin-plate from which all of our tinware is made. And thus the old tin cans, buckets and pans, that are lying around in the alleys and commons, represent many hours of toil for both men and women, and often it is almost red-hot toil, when the sweat streams from their faces and drops on their work. But it is honest toil for honestly earned money.

And then again these old tin cans teach a somewhat pathetic lesson; that all man-fashioned articles just serve for a time the purpose for which they are intended, and are then cast aside to make room for some newer invention.

THE NAUTICAL WATCH.

T. H. FERNALD

ON board a vessel the "watch is the period of time taken by each part of the crew alternately while on duty," to look after the vessel.

This period is one of four hours and the reckoning begins at either noon or midnight. In order that the same persons may not be on watch at the same time day after day, the time between 4 P. M. and 8 P. M. is divided into two shorts watches of two hours each, called "dog watches." Thus, the watch from 12 noon to 4 P. M. is known as the first afternoon watch;

from 4 P. M. to 6 P. M. the first dog watch; from 6 P. M. to 8 P. M. the second dog watch; from 8 P. M. to midnight the first night watch; from midnight to 4 A. M. the middle watch; from 4 A. M. to 8 A. M. the morning watch, and from 8 A. M. to noon the forenoon watch.

When this alternation of watches is kept up for the twenty-four hours it is termed "having watch" and "watch," to distinguish from keeping all hands at work during one or more watches. An anchor watch is a small watch consisting of one or two men set to look after the vessel while at anchor or in port.

A watch on shipboard is also a certain part of the officers who together attend to the working her for a certain time. The crew of every ship in the merchant service, while at sea, is generally divided into two portions called the "starboard watch," which is the captain's watch, and is generally commanded by the second mate; and the "port-watch" which is commanded by the first mate.

In the navy these watches are generally commanded by the lieutenants successively. There is on some ships—especially in the navy—a large bell which is sounded when the half-hour glass is run out, to make known the time, or divisions of the watch. The list of officers and crew of a ship appointed to the watch, together with the several stations to which man belongs is called the "watch-hill."

The "watch-glass" is an hour or half-hour glass used to measure the time of a watch on deck. There is also on battle ships a gun which is discharged at the setting of the watch in the evening and relieving it in the morning.

Belfast, Me.

AN INSTANCE IN PSYCHOLOGY.

J. W. WAYLAND.

THE annual published by the students of one of the prominent southern colleges is entitled *Corks and Curls*. A young man from another institution interpreted the name as referring to "bottles and girls." A lady in the West recently wrote to one she supposed to be the editor, asking for information concerning the "Curles." She being interested in genealogy, and being a descendant of the Curles, took *Cork and Curls* to be the title of a book on two well-known families. As a matter of fact, both she and the young man referred to, while true in greater or less degree to psychological principles; were shooting wide of this particular mark. The title of the book is coined from two phrases current at, and possibly peculiar to, the institution in question. When a student fails in recitation or examination, he "corks"; when he does well, he "curls."

"COMPLIMENTS are often nothing more than gilt-edged falsehoods."

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LIII.

THE *Albania*, a Greek steamer of graceful proportions and easy curves, rides high out of the water on her way through the Dardanelles to Constantinople.

And I am on it, I am sharing the wild deck with Greeks and Mohammedans, full of gratitude to somebody and to God that I am enjoying so much more than I would doubtless be enjoying had I remained at home and waited long years before coming to this land of circus curios.

The stock of flat-loafed bread and fruit I brought on board from Smyrna, with the fresh water which the ship must furnish to its passengers, will keep me going till I reach Constantinople. Then—well, I'll not "cross bridges," I am so glad I'm aboard—just on deck, with a dry hard loaf of old bread to chew at. It tastes like cake, for being satisfied with such simple diet makes it possible for me to keep on going. I eat all of my lunches cold, for I carry no stove with me, as do some of the others traveling on deck. A party of Mohammedans

are cooking their food on a little stove which they have unpacked from a big bundle of "traps." The Moslems insist on cooking their own food, and as the smoke and odor of the cooking fill all the deck space, the other passengers raise an objection. Cooking their food thus on deck is also against the ship's rules, and the Grecian sailors, ever ready to get even with the dusky race that conquered them in battle and tore from them the Golden Gate, are showing contempt for such narrow-minded ideas in religion. One of the sailors has just emptied a big pail of sea water into the odorous mixture and over the fire, putting it out,

and spoiling the Turk's dinner. To see the ship's men thus daring to punish such Pharisaism, gives me less fear of the Mohammedans. I find that their neighbors do not like their foolish freaks carried on in the name of religion any better than do we.

But I am real sorry for the stupid Moslems who have lost their dinner. Up to this moment they had been brewing black coffee and drinking little cups of it nearly every hour in the day. They are not at all sociable, but as their curious ways make a great impression upon me I study them as if that were my only duty.

On the second day, August 29, I find that I failed to get the names of two old towns at which we stopped to take on passengers, a lot of fruit and heavy freight.

It is the finest sailing I have had—a calm sea, like glass, all the way. The shore line, indented by little bays and lagoons, but rising high in rocky hills and spurs of mountains, is distinctly marked. Over all that is seen

"Still rise the isles enchanted here."

hangs a mysterious spell of enchantment. Don't ask me to tell you what it is. I don't know. The atmosphere is veiled with a sunlit purple that quiets my nerves and inspires my best feelings.

We have now passed the island of Lesbos, leaving the Ægean Sea and entering the Hellespontus, with ancient Troas or Troy on our right, and Samothracia on our left. Right over there is the site of old Troy, whence Æneas fled to Italy. On the round hill there men called archæologists are now digging up the rusty armor once worn by the Trojan heroes. I can hardly think they are all dead and gone. Alive or dead,

I am half afraid of them and I listen nervously to the thud! thud! of the machinery below to be sure that the *Albania* will run by without a breakdown. One thousand years before Christ was preached here by Paul, Minos, of Crete, sailed into these harbors on his slow-moving vessels. Ulysses, who wandered in exile for ten years, looked upon this landscape.

On Sunday morning I was "up and dressed" long before sun-up. The shores had retreated some during the night, but the Peloponnesus over which we are steaming,—for I am fond of giving it all of its classic names I can remember,—is quite narrow in most of its length, so that a good swimmer might swim from shore to shore.

Behind us lies the Ægean, of which I sang in the following verses:

The Blue Ægean.

The glory of the past is
thine,

Thou blue Ægean Sea.
Still rise the isles enchanted
here,
Like monarchs bold and
free.

Thy breath is like a fragrant
balm,

Thy wavelets soft or wild.
Thou hast the beauty of the
dawn,

The passion of the child.
Thy gods still live, O sacred
sea!

In richer form and clime,
They dwell in temples grand
and fair,

They speak in chaster
rhyme.

O noble nurse of noble names,
The cradle long of thought.
The earth is filled with logic pure,
Which thy wise sons have wrought.

New-peopled are thy shores, O sea,
But desolate are thy fields;
More bleak and wild than in the days
Of spears and shining shields.

Thy heroes play the dead's sad role,
Immortal though they be,
Strown are the fragments of thy fanes,
Which men come far to see.

Here come three Mohammedan women creeping noiselessly along the upper promenade deck. On their heads and brought down around their faces are white shawls. I am rubbing at them as they want me to do, though they feign it to be an impertinence. By the time they reach me, these women, with their little sallown hands, have drawn the folds over the face, hiding all except the lower part of the forehead and eyes that peep out above the soft cloth, their faces looking like the slice of watermelon shape of the moon when four-fifths of it are in the shadow. I never see the moon

thus shaded without thinking how closely it resembles the often sweet and modest face of the Moslem women.

And as from night to night the moon, moving into the mellow rays of borrowed light, hangs high her lamp of silver to make of earth a dreamland of poetry and of romance and lead the travelers of night in paths of safety, and increases in brilliant splendor until she becomes night's queen, so from day to day, the light of the Gospel, shining into the lives of these women as they emerge from the penumbra of custom's rule, will radiate from faces illumined by the Sun of Righteousness the cheery light of joy and song until their sisters in all this sad empire will change their harem home and become domestic queens.

I would take their picture but I know that they would resent this and it might cause me trouble when I land in the capital city.

Boxed in a narrow crate is a beautiful young bay horse, with glossy coat, large, distended nostrils and little head. You can tell by its appearance that it is a thoroughbred. There is enough white in its glassy eyes to make us afraid to be too familiar with it. A young girl pats it on its nose and croons to it in language that the four-legged tourist understands. It is making a long journey and it is tied short so that it can

not lie down until it reaches its master. A little wheat and common straw is its food. It snaps at some of the passengers and you can't blame the knowing animal. Horses and dogs, just as do all pets, know at sight the cruelty of human nature as well as the kindness of it.

The sun is up. Before us the grand panorama of sea narrowed to a stream, opening out in a lake around which rise banks covered with beautiful palaces and shady groves, with the city of Charlemagne lying on our left.

We are in the Golden Horn. Yonder the sweet waters of Europe meet the salt waters of the sea. Behind us lay frowning men-of-war flying the Turkish crescent. When we were passing them, I looked just as meek as I could so they wouldn't challenge our vessel, take me off the boat, or fire upon us with those terrible-looking guns, sticking out on all sides of the heavy iron-clads. I wanted to get into the great city of the Sublime Porte. After that,—anything!

Some men have come aboard from a launch and are now looking furtively about among the passengers

Passing Islands in the Ægean. Bell on Deck Tolling the Hour, "Eight Bells."

as the steamer swings into the bay that is alive with boats of all kinds and shapes, little and big.

One man examines the baggage, another watches the movements of the passengers, following some of them and listening to their conversation. I suppose he speaks a half dozen languages. He looks at me but fails to "feaze" me. I'm all right, and I know it. I'm minding my business, am on a mission of good will, and my gaze doesn't flinch under his detective eye. But yet I feel different because of his look. It draws from my present strength but it will give me added force of character, for every keen experience impresses upon our whole nature a new and improved manhood or a new and degraded manhood. Innocent, we grow larger. Guilty, we grow smaller. Every "bell" on board, tolling the hour of day or night, has tolled the death of a passing experience and announced the coming of a new force in the lives of every one of us.

If there should be bombs in my luggage or bullets for the sultan, I would tremble much or little, just as I happened to be on guard or off guard. But this detective has seen too many people coming into this world port. He knows I am not a bombist. He may fear me even more, for I have a bicycle and must be a student, and a student is one who thinks. In Turkey you can't think, or if you do, you must not think out loud. So I know that I for one am a "marked" man.

I'm so glad I'm here,—to see this strange old city of so many conflicts,—that I welcome the excitement of whatever is to come to me while here.

The Mohammedans kneel on their rugs which they carry with them and pray vehemently. Bowing low they put their faces flat on the rug many times, urging Allah to bless their coming to the city only second to Mecca in Arabia. On the voyage the hour of prayer has come often to these Moslems. With complete unconcern of those who may stare at them or scorn them for their devotion to devotion's claim upon them, they have knelt, bowed, run through their picturesque motions, and uttered the prayers of the faithful.

Night by night I have slept right alongside of a Moslem. In fact he stole away bed room or space on deck which I had chosen early on coming aboard. But as he carried a dagger in his belt, and I didn't, I left him have his way. Also, he was a Mohammedan and I a Christian. I could afford to give him the nice place in which to stretch out and sleep. But I didn't do it easily. He was overbearing and simply took possession by force. At first I resented this injustice as quite natural I should. We had some loud and angry words over it, neither of us understanding what the other said, but knowing precisely what each meant to say or was saying in the jargon between us.

That first night after our dispute he knelt on his rug spread for his head in the nook of the deck selected by

me and prayed a long prayer. But I was there, too, right beside him, for I meant to sleep as close to my own quarters as possible, and also I had decided to give up to him the better place. So, when he prayed, I being ready to lie down to slumber peacefully, also knelt, on my "rug" and prayed to my God, which was his same God, but praying in the name of the Son, while he depended upon the prophet Mohammed.

During the night we lay close to each other and often I came in contact with the knife, still worn while sleeping, in his belt. I was afraid of him, for I had read most of his bible, the Koran, which taught him among other things, good and bad, that for every Christian he slew he could have thirty blooming wives in Paradise. Many times during the night I awoke, rolled round to see if I was alive, and peeped toward the Moslem.

Though I fell asleep again I was never quite certain that ere morning dawned over the water my deck-mate would not have added to his sensual paradise thirty beautiful women.

All rights reserved.

BEFORE AND AFTER.

Sometimes I'd like to seize my pen*
And roundly roast my fellowmen;
To roast 'em to the good queen's taste,
And baste and turn, and turn and baste.
I feel that if I don't turn loose
And fairly cook some fellow's goose
I'm not performing well my work,
But rather am inclined to shirk.

But just when I am feeling mean
And start to thump this old machine,
Some friend comes stalking in my den
And lights it with a smile; and then
He says: "Hello!" and "Howdy-do!
How's this old world a using you?"
And then my grouch is gone from sight
And I am feeling right, all right.

Sometimes I feel that I am slack
If I don't rip things up the back;
That I should paw the air and rant,
And race and roar and fairly pant
In mighty effort to command
A remedy for wrongs at hand.
It seems to me I have a chance
To make all evildoers dance.

But just about that time I see
A laughing baby on my knee.
I feel a tiny hand's caress;
The touch of dimpled cheeks that bless—
And then it's "Mr. Grouch, good-bye!"
For in another minute I
Am quite content to sit and smile
And leave the "roasts" for afterwhile.

—The Commoner.

"If you haven't time for pleasure seek for it in your work. There is more of it there than many find."

THE TEACHING PROCESS

D. D. THOMAS

ONE of the grave questions that confront the teacher, is how to present the facts to be taught. There are two things to consider here. First, that the pupil may receive them. Second, that the pupil may retain them.

It might not be amiss to state that a great help to one's teaching ability lies in his teaching veracity. A teacher that makes many mistakes is likely to lose power and influence with his pupils no matter how tactful he may be in presenting the lesson. So that a thorough knowledge of what is taught is primarily necessary to every teacher. One can but welcome the laws that are making a more thorough education for one to be enabled to enter the schoolroom as a teacher.

The method of presenting a lesson depends to some extent upon the grade. But in every grade two things are to be considered. No work should be done for a pupil that he can do for himself, and his task should not be so great as to discourage him. It can be seen that these guard the two opposite extremes.

Two teachers come up to memory. One presented his lessons with great care and had them well analyzed. The thoughts seemed to be ready for assimilation. Not much of his teaching is retained. It was gotten with too little effort. The other teacher was different. He came to us with principles and comprehensive facts. Well, each student was compelled to labor to get the gist of the lesson, and his effort helped him retain what he learned.

A friend once complained that he liked to listen to a certain minister but he could never retain the thoughts he gave. He was too analytic. That was the secret of it. His thoughts were gathered with too little effort and hence were forgotten.

For this very reason most schoolroom helps are humbugs. Outside of a set of outline maps, a primary chart and a few others, they are not worth their purchase price, and are in the way in the schoolroom. Let the pupil dig down into the subject matter of his textbook and also the great book of nature and what he digs for he will appreciate. It will stay with him and he has a discipline that will help him to become a scholar. One of the things that should be prominent is the work. The pupil should be taught to work and to like his work. There is a difference in being taught to work and being driven to work. Being taught to work is manly but that cannot be said of the other. Let the appeal be made to the higher nature.

The pupil should not be discouraged. The bright side of the work should always be presented as an incentive. Give him a chance to see what he is working for and accumulate a vast number of facts that he may not see, so that he will be compelled to exercise faith. The larger the list the better. It is not a summing up of tasks, it is a curriculum of opportunities. It is not the laying on of burdens but the enlarging of the field from which to choose. And as the vision grows in his sight he takes up the song of a mission to fill rather than a pleasure to enjoy.

I have noticed the whistling boy in the corn making progress. When he ceases to whistle he loses his interest and lowers his standard.

The teacher's hand should ever be ready when the pupil's burden is too great. Then is the time to show his sympathy. He may solve problems, show him how to study his lessons so as to be able to know how to recite. Pupils can be found in almost any grade who have never learned the best way to study. Let the teacher do this not hurriedly and excitedly, but calmly and with warmth. If it is a problem take the time to explain until certain that he fully understands. This may give him the impetus to make a new start.

The class work calls for care lest some pupil fail to get the lesson. Frequently they pride themselves in being able to pass a good recitation grade when they have scarcely learned the lesson at all. And this is done by well-meaning pupils. It is the outgrowth of our principles of commercialism. The criterion is the bargain, fair or unfair. And herein is the value of tests. Do not have pupils recite in rotation; ask remote questions; vary the method of recitation. Put tasks upon pupils when they are least expecting it. Ask questions upon yesterday's or some former lessons.

As the grades rise the more should be included in the answer to a question. A simple hint as to what is wanted gives the mind more active exercise, and disciplines a keenness that will be very useful to the pupil. The class need not all recite. One pupil may recite the entire lesson, though this should not occur often.

From this one would gather that the class work should vary. As far as possible some new feature should enter into every recitation. The pupils should be kept alert with expectancy, and vigilant to guard against surprise. The teacher should not allow himself to be found napping on any feature of a lesson.

Any important feature should be nurtured with care even though he may think the class understands it fully.

And withal the teacher should not pose as a trickster. The pupil must be made to understand that these tactics are for his good and learn to know that the teacher is a sincere friend; that this is only a test process and that he sorrows in their failure; that he is laboring that they might be strong and might enjoy the reward that comes to the diligent. "I have no greater joy than to know that my children walk in the truth." This is the spirit of it.

FROM THE SOUTH.

J. I. MILLER.

As I have been on a vacation for some length of time, I will try to say something about what is transpiring in the South. During the great cold wave that passed over most of the North in February we experienced some of it in the great South. We had ice a few nights. The thickest the writer saw did not exceed one-half inch; some reported one inch. The cold wave lasted three days. Then we had another visitation March 15 and 16 in the shape of light frosts, —not enough to do any damage. Now spring seems to be here in all her splendor and glory. Almost all kinds of farm and garden planting are being done.

Some of the early variety of peaches are as large as a large cherry; pear trees are in full bloom; strawberries are bearing profusely. All manner of forest trees have put on their summer garb.

Rice farming is the great and leading industry in our locality, but there is more diversity in farming every year. People are learning more each year as time goes by "not to put all of their eggs in one basket." Rice as well as all other planting has been much retarded on account of excessive rains.

When people come to visit us in January and February, more particularly the latter, and find cabbage, turnips, radishes, onions, celery, lettuce, and some more of the hardier vegetables growing, it seems strange to them, while we who stay here are not satisfied without them. We often wonder how it would go with us now were we to get to a place where we would have to stow away our winter rations. I suppose we would get used to it, but it would seem very awkward after spending almost twenty-four years in the South.

It seems we have been here a good while and we have learned some things, but we have many more to learn and then we won't know it all, by any means.

The raising of stock has been much neglected by people who come here from the North, but it is rapidly coming to the front.

Think I had better stop for this time, with more to follow later.

Roanoke, La., March 22.

EDUCATIONAL VALUE OF HAND TRAINING.

ALTHOUGH in recent years much progress has been made in educating the public mind to the necessity and wisdom of manual training, yet there is much ignorance on the vital questions at issue in this attempt to incorporate manual training in the courses of instruction in the public schools. Some good people are shocked when we tell them that no matter how well-to-do they are and how little manual labor they ever expect their offspring to pursue, they need to have their hands trained as well as their heads; that we are dual in our natures—motor and sensory—and that no man can evolve into a real and efficient man in society unless he has had the motor half of his being trained and developed; that the real joy of living comes from living fully, participating in the things the race needs to have done. These good people raise their hands in holy horror when we tell them their children should be taught to work at something—to do something with their hands. They are accustomed to look upon work as a disgrace to those who have the means to exist without it.

Here such people make a sad mistake. It is a disgrace *not* to work when one is physically able, whether he is in immediate need of the income of his toil or not. We must teach the children of rich and poor alike in the public schools the true dignity of labor. We must point out to them the joys that come to one who is really efficient in some way and is able to maintain himself respectably by his toil. The cause of labor needs to be dignified in the schoolroom.

Besides, no one knows how soon a fortune in money may be swept away. The most miserable people in the world are those who were brought up to feel that they need not to work or ought not to work, and then were suddenly deprived of what they thought was a never-failing income sufficient to support them in luxury.

This movement to awaken the public mind to the value of manual training in the schools must continue. The introduction of manual training, elementary agriculture, home economics and the like into our public schools is viewed by a good many with alarm, because they think the schools will thus become too utilitarian in their aims. There may be such a danger if these subjects are not presented in a sane way. But certainly it is a worthy aim of education to train the young to social efficiency, so that they may not only know how to do something worth while in the world but that they may also obtain real pleasure from the doing because they have faith in the worthiness of the thing they are doing. Besides, our dual natures must be educated as dual natures, not as half-natures, and in order that the intellectual powers may achieve their full measure of usefulness the motor activities must also be trained and developed. Manual dexterity obtained as the result of proper mental direction is

more serviceable and of a higher type than the mere physical skill resulting from undirected mental effort. The mind and hand go together in their most fruitful achievements in the advancement and upbuilding of the race.—*The Ohio Teacher*.

THE PLOWMAN.

CENTURIES of tradition are behind the going out of the plowman.

Though there are no customs in honor of the event in the United States, in other countries there are many interesting superstitions and observances connected with the season.

Italy still looks upon the coming of plowing time with almost religious awe. Many of the customs of two thousand years ago survive on the plains of the modern kingdom built round the Eternal City.

Before the Roman of old put his plow into the ground, he went to the temple to pay his devotion to Tellus, goddess of the earth, one of whose priests always remained on duty in the temple at plowing time, ready to perform his rites. The signs in the heavens had to be right, or the farmer would not start his work. The time to plow for flax, barley and poppies, according to the old book of rules, was "when Balance has equalized the hours of day and sleep and halved the world exactly between light and shade." Beans were likely to get a proper start provided "Taurus had ushered in the year with flaming horns and Sirius sat facing the threatening bull." Nothing better could be asked for wheat than that the "Pleiades hid themselves from human eyes with the dawn." Thus it will be seen that the agriculturist of that primitive period had to be something of an astronomer as well as an agriculturist.

Thus to this day, before he puts his share to the earth, the Italian farmer studies the skies, and not until he is satisfied that all is well will he start. Often even when he is on the point of beginning he will permit himself to be deterred by the superior wisdom of some older neighbor who detects some unwelcome signs, to defy which means the utter ruin of the crops.

India has laws which forbid plowing on certain days. These are a survival of superstitions and traditions, centuries old, which have withstood even the efforts of the English to dislodge them. According to Indian lore, Mother Earth has a right to a certain amount of rest. During six days of every month it is proper for her to sleep, and the tiller who would be so churlish as to disturb this slumber is promptly punished.

India is perhaps the only country where one can at the present day still find employed a man whose duty is to study the times and pick out an auspicious day for the plowing. He is known as Pundit, and no one, not even the employer, knows when he will rule that the proper time has arrived. In the field the Pundit goes, taking with him a brass drinking vessel and a branch

of the sacred mango tree, whose function is to scare away evil spirits.

Then he marks off an imaginary line, five clods of earth are thrown up into the air, and water is sprinkled into the trenches five times with the sacred mango branch, to insure productiveness. On the succeeding day the farmer must continue his devotions and pray without cessation for the success of his crops. He must remain in seclusion, and eat no salt, nor give away any fire, money or grain. If the crop be a success, the Pundit takes all the credit; if it fail, he blames the farmer for having by some breach of the sacred laws undone his work and brought down the ire of the gods upon the harvest.

About the only survival of the ancient rites that China has to show is the fact that all plowing has to be started on a fixed day, the beginning of their solar year. In ancient times the beginning of plowing was made the occasion for the most elaborate ceremonies, which at one time included living sacrifices, but rulers have gradually enforced the abandonment of these customs.

At about this time of the year Siam is witnessing its great annual custom, the Raakua. This is an official rite, perhaps the only one in which government officers take part. On the day fixed by court astrologers, the minister of agriculture, who is always a member of some noble family, goes to a piece of ground some distance from the capital. Here is waiting a new, gayly decorated plow, with a pair of buffaloes yoked to it. The minister guides the plow over the field, while the attention of the people is concentrated on his flowing robes. If, as he follows the plow, his robes rise above his knees, there will be disastrous rains; if they fall below his ankles, there will be a disastrous drought; if they remain midway between his knees and his ankles, everything is propitious for a big crop. After the furrows have been opened old women strew grains of different sorts in them, and buffaloes are permitted to go and eat thereof. That of which they partake most freely will be scarce next harvest; that which they leave will be most prolific.

Formerly in parts of Germany the inhabitants heard mass over four sods cut from the fields. These were carried to the church and sprinkled with holy water, spells were spoken over the seed, and a "Hail Mary" followed the turning of the first furrow, when the rites had been transferred from the sacred edifice to the open field.

Even today no good Yorkshireman would think of plowing on Good Friday, and to be on the safe side and get as far away from Lent and Easter as possible, he usually waits till the first week of May.

An Irish peasant plowing will always turn the head of his horse away from a passing stranger, lest the latter be possessor of the evil eye, and put a curse upon the plowing.—*Selected*.

NATURE STUDIES

WILDWOOD MEMORIES.

Oh, the days of my childhood when all things were new,
Oh, the beautiful place where the wild flowers grew,
How I loved there to wander in bright sunny hours
And gather the fairest and sweetest of flowers.
Hepaticas, violets and adder tongues bright,
In memory, I'm breathing your perfumes tonight.
While voices of nature, so pleasing to hear,
Are now sounding sweetly in memory's ear.
The partridge is drumming upon an old log,
The woodcocks are calling away on the bog.
The wild geese are honking, while flying near by,
The henhawks are screaming, while soaring on high.
The crows are a cawing, while building a nest.
The squirrels are chattering, and never at rest.
The marsh frogs are piping way down in the slough,
And sweet birds are singing the whole forest through.
Oh, I loved the dear wildwood when I was a boy,
In memory still it is mine to enjoy.

—A. M. Johnson.

A WALK IN EARLY APRIL.

N. J. MILLER.

LAST year Dr. Jonathan brought in a bunch of wild flowers three days before I succeeded in collecting any, but this spring the tables were turned. I surprised him by bringing in my vasculum filled with flowers the first week in April! Just after that warm shower of rain I, with vasculum strapped to my shoulder, walked—half ran—across the fields one and a half miles

southwest to the old creek and the limestone bluff bordering its flood plain. Thirty yards north of the creek bank was a spot of rocky soil sheltered by oak woods, a splendid place for the heat of an April sun to accumulate. This spot never failed with early Buttercups and did not disappoint me this time. The thickened fibrous roots, narrow leaf segments and elongated yellow petals indicated clearly that the plants were the Tufted Buttercup. Without further ceremony the flowers found their way into the vasculum.

After crossing the creek and following the road past the ruins of the old mill I observed on the talus of the bank a patch of Creeping-Buttercup (H) in

bud. This plant has the habit of forming patches. Runners, similar to those of the strawberry plant, spread over the soil, each at almost regular intervals giving rise to a new plant.

Straying southward along the bank until reaching a deep, narrow channel cut by a small stream through the rock, and proceeding up the channel and climbing its wall to the top I noticed a bunch of wild poppies—Bloodroots—large, white flowers contrasting greatly with the rich soil in which they grew. The petals dropped off so easily that it seemed difficult to collect entire flowers. Slightly jar the stalk and off went the

petals. However, this behavior had an advantage,—making the pistil seem more prominent, giving a better hint of the long, narrow capsule it would finally form. The falling off of the petals wasn't the only difficulty I had. The red stain wouldn't come off my hands—a stain produced by the red juice (suggesting the plant's name) coming out of the root-stock and stem whenever bruised or broken.

A quarter-mile farther in spots the bank was blue, white, pink and purple with Liver Leaf (B). The leaves, green, leather-like, heart-shaped and three-lobed, had lived through the rigor of winter to be replaced in later spring by new ones which were mere bits of fuzz beneath the scales on the very short stem.

Two miles down the creek, near the Shaw farm, I plucked anemones, Pasque Flowers, by the score. The rather stiff appearing stalks were covered everywhere with down while the leaves and involucre, unlike those of Liver Leaf, were divided into shreds. So completely did this beautiful Crowfoot take possession of its territory that other plants were completely crowded out. In the western Rockies I have seen it

convert acres of brown foothills into a sea of blue. Next summer I hope to visit this spot again to gather some of the long plumose fruit.

Starting homeward I, by mere chance, found a new plant—new to me—in the thickets. To be sure it was

a lily, but where to place it was the problem. It recalled the large white trilliums, but the stem was but two to six inches high and the leaves petiolate (P). The leaves though smaller resembled those of the Prairie Wake-robin, but the color, form and attachment of flower very unlike. Nothing was left but to consult the plant analysis which dubbed it *Trillium nivale*, or Early Trillium. This find more than "delighted" me with the early botanical excursion—two butter-cups, a poppy, Liver Leaf, Pasque Flower and a lily, new to me.

THE CATBIRD.

THE catbird—mother's favorite songster—was a very valuable bird when I was a boy, and yet I had no idea of the extent of its work. We were surrounded with wild plums, pawpaws, blackberries, raspberries, strawberries, grapes, black and red hawes and many other varieties of luscious fruit furnished by an indulgent Father through his laws of nature. I had at that time no suspicion that if there were no birds there we should have had no fruit. But my hair is no longer red, it is now white with the snow that never melts, and I know more than I used to know.

The catbird came to us then in the springtime, wanting a home in which he and his wife might raise eight children during the summer time. He eagerly found an ideal location, for the forests were filled with underbrush. He was seeking then and does now also to have his home about seven feet from the ground among the branches of a bush where the twigs were so closely grown that when the leaves appeared they would furnish his family concealment from prying enemies.

The home was quickly built. In it were soon four beautiful babies, Isaac, Emma, Donald and Alice. Then for twenty-five days mother and father, working from sunny morn till dewy eve, gathered harmful insects and reared that happy family. I used to think they fed them ten or fifteen times a day, they seemed so busy. Now I know they fed their children more than one hundred and fifty times a day. And, but for their going into the fruit trees, the insects would have so multiplied that fruit-growing or even human living would have been impossible.

The old-time forest has disappeared. A great many trees are left in our country, but the bushes have been cut out, so that in their stead among the trees the grass may grow. And the catbird, forced by lack of homing conditions in the forest, is now a domestic

bird wanting to come about your house, children, to have his home within thirty feet of you, sing sweet songs for you in the evening time, and help cultivate the fruit trees for you. Would you like to have a pair at your home, girl or boy? If so, then help furnish him a home. Go to the syringa bush; look at it just now and see how the branches are swinging out from the center and you will know that the bird could not build on them and have the security that he wants. Go back to the house, get a rope six feet long, a quarter of an inch thick and place it five feet high around that syringa; pull the branches closer together, so that when the bird comes the branches will be so dense that he and his little wife will quickly see that when the leaves shall come upon those branches there will be the proper concealment for them. Many other bushes on the lawn may be treated in this same manner. The only thing necessary is to furnish the concealment so that the bird may see you from out his leaf-roofed home, and yet think you cannot see him. He will do you at least five or ten dollars' worth of work during the season, besides singing the sweetest music outside of heaven, and all it costs is a little kindly catering to one of your Father's creatures.—*Col. Isaac IV. Brown.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

THIS is house-cleaning time, and one makes the discovery that he is growing wealthy, since he can haul out and burn as trash the things which he once stored away as being very valuable.

ARE we going to be the means of two grass blades growing where only one grew before? Or if there is room for only one, will we help it to be larger and more luscious than its parent? With some such resolve we ought to begin our partnership work with the soil this spring.

THE Standard Oil case, in which by one trial the company was fined twenty-nine million dollars, has been dropped by the government. The last judge to hear the case declared the defendant not guilty. The question naturally arises, How is it that our laws cannot be framed so as to catch a rich offender as easily as they catch a poor one? Is it to be wondered at that some people have no faith in the real integrity of the administration of the law?

Is irreverence becoming a notable characteristic of present-day church congregations? That is the charge made recently by a Congregational minister in addressing the weekly meeting of the Congregational ministers of Chicago. We do not know to what degree the charge is true, but we do know that in many congregations the irreverent acts of church members before and after services, and sometimes while they are in progress, are indeed shocking. And if they appear so to us, what must they appear to the One whom we have come to worship? As a means of promoting reverence, this minister advocated the bringing back of kneeling benches into the pews so that the whole congregation would kneel during prayer. This would surely be more conducive to reverence than the sitting posture which many congregations maintain during prayer.

ANOTHER minister, a Methodist, in addressing the weekly meeting of his fellow ministers, emphasized the importance of giving more attention to the rich. Most of us think the rich get more attention now than is their due, but it is presumed the minister did not mean merely more attention but more attention of a particular kind. Some of us have read of the poor rich and how their riches form a sort of wall shutting them away from the sympathy and kindness of the great majority. The rich are expected to make all advances and go more than half way and when they are of a timid, retiring disposition and cannot do this, they must suffer alone. Mrs. Hetty Green, known as the richest woman in the world, says that she is also the loneliest woman. While people should never seek an excuse for withholding sympathy, it is a fact, nevertheless, that if the rich find their riches a barrier to the blessings of good fellowship they can take it down.

WHERE ARE THE CHILDREN?

A SHORT time ago a large section of our country was much wrought up over the abduction of a child. The boy was taken away from school under a pretense that gave no cause for alarm. Some time elapsed before the awful truth dawned upon the parents that their child had been maliciously stolen from them. And then came the futher revelation that they were the victims of some one's greed for gold—that they could have their boy in exchange for ten thousand dollars and freedom from surveillance. The sum was a large one, considered in the hands of those who, far from having earned it, deserved the greatest punishment that one might mete out to another. But set over against their child it was considered a small amount by the distracted parents who were tortured with the thought of what the consequences might be if they refused to accept the conditions or if the abductors found themselves hard pressed by officers of the law.

It was a trying time and the sympathy of thousands of parents went out to the bereaved father and mother, while they counted their own little flock and returned thanks for their safety. Less than five days after the child was stolen, the requirements of the abductors were met and the child was again in the arms of his parents. But interest in the event did not die out at once, and for the protection of children and parents in the future kidnaping is being made a crime in many States, punishable by the severest measures.

We cannot explain and neither can we measure the mental torture of one who is at the mercy of conjecture and doubt as to the whereabouts and physical welfare of a dear one. One's children or dearest friends may be taken away by death and the bereaved may suffer deeply, but as a rule the suffering is not to be compared with the anguish of one who knows not whether her child is dead or alive, whether he is suffering or happy.

While this condition is as unexplainable as it is true,

yet in a larger sense it is a fact that worse things than this are happening to some of our children every day. The pure, innocent boy goes out of the pleasant, wholesome atmosphere of home into the street and away to school. He comes home every evening, it is true, but sometimes it is only his form that returns. The mind is polluted, the heart is turned toward evil, the real boy is lost and never comes back! And fathers and mothers do not seem greatly concerned—are not testing the moral atmosphere of their children as they do the physical. True, many mothers lose hours of sleep because of their anxiety for their children's welfare, and their only comfort comes from their trust in a higher Power, but some parents are seemingly indifferent and take these things as a matter of course. Would it not be consistent, as well as wise, since this incident has aroused our concern about the children, to look well into their surroundings and see whether it is not possible to improve them?

And then there is another thought. If the child away from its home needs our help and sympathy, what are we to say of the thousands of children who have *no* homes—no loving mother who would overcome mountains of difficulties to shield and protect her own? They are being cared for, it is true, in some institution, but it is a pitiable excuse for a real home at the best, where all the little sensitive minds and love-hungry hearts are reduced to the working of one individual by the machine-like order and discipline. Shall we who have homes and the power to make homes for others be held guiltless if we shut our doors in the face of these little ones?

"NEVER HAD NO SHOW."

How often you hear this complaint: "I hain't never had no show"—or words to that effect. And the very fact that a person feels he is kept down by "plutocratic" or other powers, keeps him down. The man who goes up and down in the land wailing and whining over the way he is oppressed, instead of getting busy at something, thereby mesmerizes himself into a condition where in truth he is no good. Others take us to a large extent at our own estimate; if we say we are slaves, bound hand and foot to the trusts, etc., then are we indeed such. How common is this tendency to "kick," and lay the blame for all our troubles on some mythical scapegoat.

We have a letter from one patron discontinuing his subscription in these lucid terms: "I like your readable and pithy journal, but will stop it until the authorities at Washington divvy with me. I give myself to government gratuitously and expect it to show the same free hand to me in my financial straits."

Now, what does such a man as this want? A man of intelligence, evidently, yet one with some crotchet in his head to the effect that he is being plundered by the government and that after he has spent his earnings

somebody, somewhere, should "grubstake" him until he makes another strike. What a contrast this attitude of mind offers to that brought out in a case told of by Booker Washington. A certain negro woman came to him, and on questioning her he found that she had got together considerable property, besides making a living. When asked how she got it, she answered that she had "swapped a yaller puppy-dog" for it. And here was her account:

"Well, it was this way. When I started I didn't have nothing at all but jest a little yaller puppy-dog. I took the dog over to my brother-in-law's. He had eight little bits of pigs, oh, jest so little, an' I swapped the puppy with him for one of the pigs. It was sech a little pig that it didn't look like it would live, but I nursed it good and I prayed to the Lord to make that little pig come forward to do me good, and the pig lived and grew. The first year I turned her out, and when she came back in the fall she brought me seven little pigs with her. That was my start. I've never had to buy any meat since. This winter I've killed three hogs and I've got another at home now ready to kill. I've got 40 acres of land now, all paid for, and a house, and it all come from that one little puppy."

"Do you hear that," exclaimed Washington, "you men? Some of you better go back home and swap your dogs for pigs."

Now, we believe most people will agree that this poor ignorant negro woman has a better conception of her place in society and is a better citizen and better example to us all than this cranky man. This man, if he would rely on himself, put the blame for his own unthrift and discontent where it belongs, keep busy, save his money for things worth while, and, above all, learn to appreciate his opportunities, instead of despising them, ought certainly to do as well as this unlettered negro woman, but one generation removed from actual bondage. Instead of this, he is a failure, admits as much—but tries to lay the responsibility on the government. Such a man as that might appropriately go into the business of having his wife take in washing.—*The Pathfinder*.

SAY IT NOW.

IN the pages of the INGLENOOK we are endeavoring to put out a magazine that will be safe reading for every member of the family—free from the corrupting element found in so many of the periodicals of the day. We further endeavor that this safe reading shall be of the highest usefulness to the reader—full of helpful information and inspiration. If you find that we are making some approach toward this ideal tell your neighbors and friends about the magazine, and tell them *now*. The offer of the Handy Atlas free with a year's subscription may help them to decide to take the paper. The offer is good *only one more week*.

THE HOME WORLD

HOW TO EDUCATE CHILDREN BETWEEN THE AGES OF THREE AND TWELVE AT HOME

J. H. HARNLY

In Four Parts. Part One.

THE opening years of the twentieth century will be memorable for unprecedented evolution of methods in developing the faculties of children and inculcating knowledge.

It might be pertinent, however, to ask, has the effect on the child's well-being been commensurate with this more scientific effort to quicken its faculties? And if not, why not? Is the child of today as respectful to parents, and superiors generally, as was the American youth of a generation ago? Does he voluntarily and cheerfully give precedence to his elders? Has he the same veneration for sacred things, and the same reverence for preceptors, or is he insolent, selfish and irreverent, capable of little restraint? I apprehend that the latter is only too frequently the case.

Anyone who is a close observer must needs be appalled at the lack of self-restraint, and the proneness to be disrespectfully familiar, that today exist among our youth. Bryce refers to this lack of refined manners, in his "American Commonwealth"—in fact this reprehensible condition frequently attracts the attention of the more cultured foreigners who visit our country.

The cause of our predicament becomes self-evident when we note the two extremes that prevail among us in family government; that of neglect on the one hand, and of over-indulgence on the other. In the case of the latter, evil results are hastened by ever and anon parading the children in public. Attendance at public schools, where children of refined homes are thrown into society with those whose every home environment is debasing, is also likely to have pernicious effects.

The virtuous are always more susceptible to the evil influences of the vicious than are the vicious to the wholesome influences of the virtuous. Certainly, then, no one who has observed the evil propensities of our heterogeneous population will dispute that the in-

discriminate association of children, on the streets, on school playgrounds, or in public parks, unattended, is fraught with the gravest dangers. Hence the importance that attaches itself to the consideration of the question, "How to educate children at home."

THE INGLENOOK could render no greater service to mankind than to facilitate discussion and due consideration of the subjects connected with home life.

A fifty-thousand-dollar mansion, provided with all the improvements and conveniences that modern ingenuity can devise, is, at the best, only an incidental, and not an essential prerequisite of a good home. The Burghley family, which for many centuries occupied one of the most luxurious palaces in England, degenerated into profligates and maniacs. Behold the magnificent apartments of Lady Burghley, gorgeously ornamented, sumptuously furnished, walls enriched by an invaluable collection of paintings and tapestry, and windows commanding splendid views of the romantic environs, and contrast them with the plain old rooms—"heavily timbered ceilings, massive timber framework, walls filled in with brick and mortar, great open fireplace, low windows and uneven oaken floors" which constituted the house over which the mother of Shakespeare presided.

Then also compare the opportunities of the gaudy heir to titles and estates, surrounded by attendants and learned tutors, with the deprivations of the rustic lad of Stratford, perchance catching some inspiring thought from his mother's life. Now observe the titled heir, indifferent to his superior advantages, soon degenerate into a despised sot, while the youthful Shakespeare overcomes all difficulties and develops into the world's greatest literary genius—giving an impartial life and character to every passion subject to man, clothed in language at once unique for its unrivaled sublimity and precision. One, the descend-

ant of an eminent lord and statesman; the other, the son of a wool-comber! How contradictory their destiny!

But this is no exception. Most great men of history had humble beginnings. Joseph was sold to the Ishmaelites; Daniel carried as booty to Babylon; Moses abandoned to the bosom of the Nile; David a herder of sheep; Christ was born in a stable, laid in a manger, and exiled to escape the blood-stained hands of an Herod; Luther was the son of a miner; Wesley the child of a poverty-stricken clergyman; Webster and Greeley the descendants of poor New England farmers, and Lincoln born and reared in a pioneer's log hut. These were men of destiny—epoch-makers in history! They were such, the world proclaims, not because, but, in spite, of their humble beginnings.

We may, however, have been too hasty in our conclusion; for it is in rowing up stream that the muscles become rigid and manly vigor increases. Any prodigal can drift with the current, or bask on the deck of an excursion steamer while the stokers work in the sweltering heat below. But the habitual pleasure-seeking voyage dissipates vitality, and when overtaken by shipwreck life is at a low ebb with not sufficient energy left to battle against adversity. How then to provide an ideal home for one's children, and escape mistakes in their early training is a much more intricate problem than we first anticipated.

Lincoln, though bereft of his mother at the age of ten, says, "All that I am, or hope to be, I owe to my angel mother." A log cabin, a few pieces of rustic furniture, a Bible, a Pilgrim's Progress—these constituted the home comforts and sources of culture of the boy Lincoln! Yes, these alone, but hallowed by one of the world's most faithful mothers! Lincoln could have ill afforded to exchange these lowly surroundings for the sumptuous regal environments of the most favored prince. A log cabin, a wide open chimney ablaze with a hickory fire, an old oaken settle, a Nancy Hanks Lincoln, an open Bible in her lap, an attentive lad at her knee with face aglow as he drinks in the story of Joseph, of Moses, of David, of Daniel, aye of the lowly Babe of Bethlehem—what a picture for the artist! Who can paint it and portray upon the canvas the sublime influence of a consecrated mother over the destiny of her offspring? Oh for a Raphael to paint the "Madonna of Emanicipation" as she dedicates her child to true nobility, anticipating anew the world's ever-recurring need of apostles of freedom!

The mother of Lincoln found an easy solution for determining the future destiny of her son. His service to mankind was alone equaled by his opportunity for service. This is the destiny that any mother may secure to her children, if she abides under the shadow of the Almighty. Mothers, be diligent in the exercise of maternal duties, no matter what the external cir-

cumstances are, for these are likely to be fraught with opportunities in an inverse ratio to their apparent adversity.

There is certainly one particular, then, on which we can all agree—the paradoxical proverb that a child can be none too careful in its choice of a mother.

Although a few famous men have risen from slothful and depraved parentage, yet, as a rule, the world's greatest benefactors, whether in science, literature or art, whether in society, church or state, have descended from frugal and virtuous ancestors, of humble origin, but possessing lofty ideals, and a genius for looking to the future welfare of their children, that is so often wanting in the upper as well as lower strata of society. God save the child from neglect, and deliver it from over-indulgence. If it escapes these deleterious tendencies, so common in this age of free thinking, there is hope for the future.

HER EXAMPLE.

SHE was the principal of a girls' school now famous for its high standard of scholarship and yet *higher* standard of *character* as portrayed by the teachers and the pupils constantly being sent out into the world. In those days, however, the school was young, and only great as the expression of faith of its founder, who, in selecting her as the woman who should mold the lives of the students, had chosen on bended knee.

There were many things that troubled the principal; the spirit of indolence, of shirking, of deceit, seemed to be everywhere in evidence, and nothing that she could do or say appeared to be of avail, and she almost decided to give over that school for another.

For weeks the girls had been particularly lax regarding their observance of the rising bell, with the result that never a morning came that at least a third of the pupils were not late to breakfast. She addressed them somewhat severely on one of these occasions:

"Young ladies," she said, rising from her place at table after striking her table-bell for attention, "young ladies, this lack of punctuality must be stopped. There is no need of your being late; it is inexcusable; there is no excuse for your oversleeping, if that is the reason you have to offer. Your teachers do not oversleep; *I* do not. When *I* do"—a smile lighted up the strong, sweet features—"when *I* do, *I* will give you like permission, or at least will condone your tardy arrival at the table. Please do not force me to speak of this matter again. You *must* be punctual hereafter."

Impressed by her evident earnestness the students were one and all at their places next morning when the principal gave the signal for being seated, but the following morning it was the house-mother who signaled them to sit. This fact, however, occasioned the girls no surprise, since the founder of the school

was somewhat famous for making early calls which sometimes detained the principal from appearing at the breakfast table at all.

On this morning, however, the fruit and cereal course had just given way to the substantial when the principal appeared, walking rapidly down the long dining-room, her face flushed, the while she struggled with a refractory cuff-button.

As she reached her place she tinkled the tiny bell.

"Teachers, young ladies"—she was very pale by this time, although her voice was steady, ringing—"will you pardon me for being late? *I overslept.*" Then, quietly, "And may I hope that my girls will *not* think the fact of my tardiness gives them the privilege of doing likewise?"

In the corridors and rooms the girls discussed the situation. As one of them said, it *was* brave, that outspoken apology and confession.

"She didn't *need* to let us know," one said with eyes bright with admiration; "we should have thought, if we'd thought about it at all, that she had been detained just as she is so often."

Said another, "There are different ways of being honest. Belle Peters, I'm going to call in every last invitation to that blanket-spread. We can have it just as well in recreation hour. Let's go tell the girls."

In the privacy of her own room a third girl sobbed quietly, "I wish, oh, I *wish* I knew how to be good. I'm going—to ask her—how. It must be *splendid* to be so—so—*honest!*"

It was some months after this that the principal of the school awoke to the fact that a different spirit pervaded the seminary; why and how it had come about she did not know; it is more than possible, indeed, that she never suspected how great an influence for good that one incident exerted over the girls with whom she had to do. And yet the fact remains that that one act of transparent, beautiful truthfulness, reinforced by a life of as perfect, if not as striking, honesty, was the medium which has made that school for a quarter of a century a standard of excellence.—*Home Herald*.

A WIFE'S RIGHTS.

If husbands only knew the power of a little praise where their wives are concerned, there would be fewer domestic tragedies. All work is made sweeter by kindly appreciation.

It does not cost much to tell your wife that she looks pretty in her new dress, and yet how many of you fail to notice the dress at all, or worse still, if you do notice it, it is only to find fault with the cost of it.

You were glib enough with pretty speeches when you courted her. And now that she has far more right to your courtesies and attentions, why is it that you show her so few?

She of all people in the world has the first right to your interest and respect. She has given you years of wifely devotion, and has helped just as much with the building of your fortune as though she earned an actual salary.

And yet many a wife goes through agonies of indecision before she dares ask her husband for money to buy a new dress, or necessities for the children or house.

The house and children are yours as well as hers. You have no right to look grumpy when she asks for money to provide for them.

Every wife should have as generous an allowance as her husband's income permits. It is too humiliating to have to ask humbly for every necessary cent.

Just try the praise plan for a while. Give up fault-finding. Why should you speak to your wife in a tone of voice that you would not dare to use toward another woman.

A woman will work cheerfully forever if she gets love and you appreciate her efforts. You can't afford to lose your wife's love, for it is the most precious of all your possessions.

But even the tenderness and endurance of the most faithful of women wears out if it meets with nothing but neglect.—*Farm Journal*.

YOU AND YOUR BOY.

I HAVE never been one to feel that the best love was won from a child by extreme indulgence. In fact, I hold that the contrary is the rule. Observing the families of my contemporaries and predecessors it is borne in upon me that the most indulged children have not been the most devoted to their fathers and mothers. On the contrary, having had the happiness to be associated with several households where strict obedience has always been demanded and received, I feel justified in declaring that the families where discipline is observed are those whose children are most affectionate.

Be it noted that strictness does not mean harshness or severity. It does stand for reasonable rules, positively enforced, for commands which must be obeyed, and, above all, it should stand for justice.

Were I asked to put in a word the most desirable quality in dealing with boys, or with girls, either, for that matter, I would put *justice* first. It would not be a synonym for hardness, although this is a meaning often applied to it. It would mean obedience to orders and penalties when orders were disobeyed, but it would mean also an appreciation of the child's standpoint, an almost agonizing care that he should not be punished without adequate cause, a rigid adherence to promise of reward as well as of rebuke, an understanding of what led to this or that course of action which from an adult's viewpoint may seem inexplicable.

There may be well brought up children who resent a just punishment. I have never known them. But I have found injustice of reproof or of penalty resented with a bitterness which left its mark for years afterward.—*Christine Terhune Herrick in The Circle Magazine for March.* ❀ ❀ ❀

BOOK CASE.

TAKE four quarter-inch rods sixty inches long, get a blacksmith to weld a burr onto one end of each. Have a thread cut for about two inches on the other ends, with nuts to fit. Take six boards twenty-four inches long, eight inches wide and a half-inch thick; bore a hole in each corner one and one-quarter inches from the side and the same distance from the end. On the bottom board fasten an inch cleat across each end, and to these cleats fasten four table casters. Now pass the four rods through the holes with welded ends under, by the casters. Then slip eight spools—No. 24—on each rod. Then another board and eight spools—No. 40. Another board and eight spools—No. 50. Another board and eight spools—No. 60. Now the last board and three or four spools—No. 60—above it; then put on the nuts and screw tight. Nail an inch strip in front on the bottom shelf, having edge even with shelf, to hide the casters. Now it is ready to be painted. It will be pretty painted white with a narrow strip of gold or bronze paint where the spools meet.—*Selected.* ❀ ❀ ❀

SELECTED RECIPES.

CHICKEN PATTIES—Mince up fine cold chicken, either roasted or boiled. Season it with pepper and salt, and a little minced parsely and onion. Moisten it with chicken gravy or cream sauce, fill scalloped shells that are lined with pastry with the mixture, and sprinkle bread-crumbs over the tops. Put two or three tiny pieces of butter over each, and bake brown in a hot oven.

CHICKEN CROQUETTES—Take any desired quantity of chicken, chop very fine, add an equal quantity of smoothly mashed potatoes, mix, and season with butter, salt, black pepper, a little prepared mustard, and a little cayenne pepper; make into cakes, dip in egg and bread-crumbs and fry a light brown. A nice relish for tea.

HAMBURG ROAST—Have the butcher chop very fine (or run it through a meat chooper) an inferior cut from the round; for every pound of round use one-fourth pound of salt pork chopped fine, half a cupful of toasted bread-crumbs, one-third cupful of water, one egg, half a teaspoonful of salt, a pinch of pepper and a teaspoonful of grated onion. Mix all well together, form into a shapely loaf, lay strips of salt pork over the top, and roast, allowing about twenty minutes to the pound. Macaroni, plain boiled, is a "must-have" with this dish, and onions in cream sauce, may be served with it.

The Children's Corner

IT'S FINE TO GROW.

SLEEPING in the soft protecting earth lay the little grain of corn. He lay in his dark nest, and slept on until suddenly one cold morning he awoke, when the spring sunshine threw shadows of the leafless beeches across the brown ridges of the cornfield. He felt a strange and new desire to bestir himself and to push upwards, he knew not whither. It was as if some wonderful voice were calling him, a voice which he could not help obeying and which urged him to awake and move. And as he tried to do so he became conscious that a tiny green shoot was springing from him which had the power to grow, and to force its way through the brown earth.

"Why, where are you beginning to go?" asked a fat red worm, which lay comfortably coiled near him.

"Up through the earth. Some one is calling, and I want to go."

"I shouldn't trouble if I were you," said the worm, in a slow, drawling voice. "It's much more peaceful down here."

The little grain felt discouraged. In fact, he felt half tempted to take the worm's advice. He hesitated for a moment, then, thrusting forth his green shoot more resolutely than ever, he said, "I shall go on. I cannot stay."

The soft earth parted as if to help him, and the raindrops pattering above sank lower and lower until they reached him. He drank the moisture gratefully, and felt a throb of triumph as he found his tiny shoot growing higher and stronger hour by hour.

One fresh sweet morning in early April the wonderful thing happened. The last grain of earth yielded, and the young blade had reached the light. Little rosy clouds floated across the clear sky, and then the golden sun rose slowly above the horizon.

The little blade gasped for breath. His slender stem quivered with emotion.

"What is that glorious thing?" he cried.

An older blade of corn grew near.

"That is the sun," he said kindly. "You have come to the upper world, and you're a brave young blade, for you've done the journey very quickly. I had a fair start of you."

The little blade was still trembling.

"Now I know whose was the voice," he cried. "It was the sun who called me. It is a wonderful thing to grow!"

"You are quite right," said the older blade. "Grow on higher and higher, push on, don't stop; then one day we shall stand tall and strong, crowned with yellow light, and ready for the service of man."

"I am glad I obeyed the voice," whispered the little blade. "It's a fine thing to grow."—*Little Folks.*

THE QUIET HOUR

OUR TALENTS.

JOHN S. FERNALD.

If you have a talent, use it,
Be it great or be it small.
If you've one or if you've many,
Make a faithful use of all.

Can you fish with John and Peter?
Can you plant the seed with Paul?
Can you water with Apollos?
Can you do these—one or all?

Every day brings many chances
To the watchful Christian's hand.
He can plow, or sow, or water
On his Master's fertile land.

We can never lack occasion
For the labor in the field.
God has need of all the workers—
He himself will give the yield.

Can you sing the songs of Zion?
Lift your voice in holy praise;
Can you tell the old, old story?
Tell how Jesus guides your ways.

Can you teach the Scripture lesson?
In the Sunday school enlist;
Can you lead the prayer in meeting?
Never fail to thus assist.

Can you cheer the sick and lonely?
'T is a Christian's duty plain;
Can you help the poor and needy?
Do not let them want in vain.

Can you help those in temptation?
Stand beside them in the strife;
Can you warn some thoughtless sinner?
Show to him the Way of Life.

But teach all with whom you labor
That man's help at best is weak.
Lead them up through Christ the Savior
The sure help of God to seek.

Do each duty as presented,
Work in faith, and hope, and love,
For sure results are promised by
Our God who rules above.

Belfast, Me.

QUIT YOU LIKE MEN.

L. H. EBY.

MAN is a rational animal, an individual of the human race. Paul in 1 Corinthians 16: 13 by the Holy Spirit

told the faithful men of Corinth and all who follow them, "Quit you like men," present yourself manly in every caling of life; come up to the *original* idea of a man.

Jehovah describes the *real* man by the prophet, Jer. 5: 1-4. As one that executeth judgment and seeketh the truth; one who can truthfully say "The Lord liveth"; the one who "refuses not to return."

Man, when made, bore the image of his Creator, and was endowed with mental and moral powers which justly would place him in authority over all other creatures.

God said, "Run ye to and fro through the streets of Jerusalem and see now and know, and seek in the broad places thereof, if ye can find a man."

The spirit of the writer expresses doubt as to finding a *real* man roving about over Jerusalem streets, and in her broad places, expressive of the ways of evil.

Is it possible or likely to find a real man, one that executeth judgment, and seeketh the truth in such places? If so God promises, "I will pardon it" To such a man Paul said.

1 "Watch ye." Christ said, "Watch and pray."

2 "Stand fast in the faith."

But let him ask in faith, nothing wavering, for he that wavereth is like a wave of the sea driven with the wind and tossed.—James.

3. "Be strong."

God's ideal man is a man in the

(a) Home, regarding every domestic relation sacredly; in the (b) social circle and business; in the (c) intellectual and spiritual realms.

Michigan City, Ind.

GEORGE MULLER'S BIBLE.

GEORGE MULLER said: "The vigor of our spiritual life will be in exact proportion to the place held by the Bible in our life and thoughts. I can solemnly state this from the experience of fifty-four years. Though engaged in the ministry of the Word, I neglected for four years the consecutive reading of the Bible. I was a babe in knowledge and in grace. I made no progress because I neglected God's own appointed means for nourishing the Divine life; but I was led to see that the Holy Spirit is the Instructor and the Word the medium by which he teaches. Spending three hours on my knees, I made such progress that I learned more in

those three hours than in three years before. In July, 1829, I began this plan of reading from the Old and New Testaments. I have read since then the Bible through one hundred times, and each time with increasing delight. When I begin it afresh, it always seems like a new book.

"I cannot tell how great has been the blessing from consecutive, diligent, daily study. I look upon it as a lost day when I have not had a good time over the Word of God. Friends often say to me, 'Oh, I have so much to do, so many people to see, I cannot find time for Scripture study.' They are not many who have had more to do than I have had. For more than half a century I have never known a day when I had not more business than I could get through. For forty years I have had annually about thirty thousand letters, and most of them have passed through my own hand. I have nine assistants always at work, corresponding in German, French, English, Italian, Russian and other languages. As pastor of a church with twelve hundred believers, great has been my care; and, besides these, the charge of five immense orphanages, a vast work; and also my publishing depot, the printing and circulating of millions of tracts and books; but I have always made it a rule never to begin work till I have had a good season with God, and then I throw myself with all my heart into this work for the day, with only a few minutes' interval for prayer."—*The Wayside Evangel*.

GOD'S VOICE.

SOMETIMES God says "Be still and know that I am God." We do not always understand why an earthquake or a flood or some other calamity should be required to compel men to turn their attention to God's might, but if we fail to see a mercy in our having been spared from such a visitation, or if we ignore the opportunity to repent our being spared gives us, we belong to the number of those "who having eyes see not."

When God comes into the home and calls a dear little one to himself, whose presence made us better for his having been here, rebellious thoughts are likely to tempt us. Are we too blind to see that the tender plant transferred to the purer, better atmosphere of heaven will blossom into a glorious flower free from sin's contamination?

But God's voice is seldom harsh; it does not often bring tears and sorrows. Sometimes an earthly father finds it necessary to be stern, but generally he does his share in contributing his part toward the pleasure that the family enjoys. So and more so with God. The gifts from him that bring joy to the heart and comfort to the life are innumerable. The physical blessings of this life and the spiritual happiness with which he fills the soul are God's voice speaking a

message of brightness to the whole world. To get the best out of this life and give others the benefit of it we need only to keep our eyes open to see and our ears open to hear the many things God is doing all around us.—*The Mennonite*.

SPEAK TO THAT MAN.

AFTER all it is personal work that counts. It is the personal need, the touch of a life upon another life. This is possible to everybody and in multitudinous ways. Chaplain McCabe was driven to a strange house in a great city. As he stepped from the hack he reached for the hackman's hand and said "Good night; I hope to meet you in glory." About midnight his host tapped at his chamber door and said: "Chaplain that hackman has come back and says he must see you." When the rough-looking man came in he said, "Sir, if I meet you in heaven I have got to get saved tonight." The two men knelt together and the hackman went out of that room singing the new song of salvation.

Friend, it is not as hard as you think to "speak to that man." You will be surprised to find how easy it is—if only you begin—if only you put it to the test. Have you tried it? Have you tried it lately, even with your own children? When did you speak to your children, quietly, one by one, on the matter of their personal acceptance with God? And your neighbors, your friends, your business associates, have you spoken with them?—*Central Christian Advocate*.

THE STRENUOUS LIFE.

O Lord, we most of all give thanks
That this, thy world, is incomplete;
That battle calls our marshalled ranks,
That work awaits our hands and feet.

That thou hast not yet finished man,
That we are in the making still;
As friends who share the Maker's plan,
As sons who know the Father's will.

We see the end at which we aim—
Wrong's bitter, cruel, searching blight—
Beyond the present sin and shame,
The blessed kingdom of the Right.

What though its coming long delay!
With haughty foes it still must cope!
It gives us that for which we pray,
A field for toil and faith and hope.

Since what we choose is what we are,
And what we love we yet shall be,
The goal may ever shine afar;
The will to win it makes us free.

—Wm. DeWitt Hyde.

"THE man who once makes up his mind to depend upon his own resources, will be surprised to find how they hold out."

ECHOES FROM EVERYWHERE

Idaho is now a county option State. The Legislature, at its recent session, passed a law permitting the people of any county to vote on the license question on petition of 40 per cent of its voters.

Georgia's convict lease system has come to an end. The 1,550 convicts were led from the mines into daylight at sunrise amid prayers and songs for their deliverance. Hereafter they will be worked upon the county roads. During the lease system they were underfed, overworked and frequently murdered.

The attempt of the big life insurance companies to have nullified by the courts that section of the New York insurance laws which limits the amount of business they may do annually has failed. In the Supreme Court Justice Gorman handed down a decision declaring that this section of the State law is constitutional. As a result of the decision a number of the agents of these companies have been dismissed.

The Canadian Pacific and the Hill railroads have stored an enormous quantity of coal in anticipation of trouble as the result of the strike of the Alberta and British Columbia coal miners. The strike has tied up all the mines in that section with the exception of the Crow's Nest Pass Coal Company. The mines have been preparing for the strike for some time and have large quantities of coal in reserve. No famine is probable, therefore, for weeks.

The tower for the navy wireless station, which is to be erected in Washington, will be of concrete. At the base it will be 50 feet in diameter, and 8 feet at the top. The total height will be 650 feet. There will be a staircase within the hollow shaft, but no elevator. The antennæ will diverge from the top of the tower, and will meet the surface of the ground on a circle, which will measure 200 feet across.

Daniel J. Sully proposes to save the South from \$150,000,000 to \$200,000,000 annually on the cotton crop. Sully proposes to establish a chain of bonded warehouses sufficient to hold one-third of the crop. This will enable the holders to fix the price of cotton. Under the plan the farmers may deposit their cotton in warehouses and borrow money on it. Southern people are not asked to supply any of the necessary finances.

A great increase in building for March this year over the corresponding month last year is shown in the monthly report of the building department of Chicago. The buildings for which permits were issued in March had an estimated valuation of \$8,145,000, against \$4,829,300 for March, 1908. The increase appears chiefly in the cost of the buildings which are to be constructed, as the number and the frontage represented is only slightly greater than last year.

The French tariff commission, as the result of violent protests from home and foreign interests, especially England, has agreed to certain amendments covering chiefly the metal and textile schedules. Although the amendments have not yet been made public, it is learned that several notable concessions have been made in favor of the United States. The maximum duty on heavy agricultural machinery, practically all of which comes from the United States, which originally was increased from 15 to 16 francs per 100 kilos, has now been reduced to 12, and the minimum from 9 to 8 francs.

It is reported from St. Louis that a fight has been started for the repeal of the 10-cent tax on colored oleomargarine by the Retail Grocers' Association. They also want the \$48 yearly license fee assessed against retailers of the product removed. They have taken figures from the report of the commissioner of internal revenue which show that the present tax, instead of increasing the revenue, as intended, has really decreased it. In 1902 the amount collected by the Government was nearly \$3,000,000. That part of the bill assessing the 10-cent tax was passed. Since then the revenue on butterine has dwindled until the last fiscal year, when it amounted to less than \$1,000,000.

Japan sustained a national disaster when the historic Tuguawa Shogunates temple, the most famous edifice in the empire, was destroyed by fire with a loss estimated at \$3,000,000. Most of the priceless art and historic treasures in the building were saved. The destruction of this ancient structure which linked modern Japan with the feudal days of the warring Shoguns is regarded as the biggest calamity of the year. The temple was the lodestone which attracted students and travelers from all over the world. The craftsmanship displayed in its construction, which is now a lost art, and the exquisite stone carvings and interior decorations make it impossible to restore the temple.

A small herd of yaks, a domestic wild animal new to the American continent but common in all parts of Asia and northern Europe, will shortly be brought to Canada under charge of the department of agriculture, with a view to ascertaining their suitability for domestication in the northern parts of this country. The Duke of Bedford has presented six yaks from his herd to the Canadian Government, and they will be placed on the central experimental farm. The yak's chief habitat is at Tibet and the adjacent parts of central Asia. Its hair is long, and covers in fringe-like style its flanks and shoulders. The yak rug is a notable article of commerce. Yak milk is one of the chief articles of diet in Tibet. The yak does not like heat at all and is found in the summer season as high as 20,000 feet above the sea level. In Tibet it is both a wild and domesticated animal.

The Ohio Electric Railway of Cincinnati, Ohio, has equipped for its Columbus and Dayton division a number of flat cars with removable sides, on which it is transporting large loads of hay and grain. To prevent fire accidents to the cargo, an asbestos fiber shield, 4 by 10 inches in size, is placed under the trolley pole connection to catch any falling sparks.

After long and expensive experimentation, the Bethlehem Steel Co. has produced a nickel-chrome rail, which will sell at \$51 a ton, and which is practically unbreakable. This product is the result of a probing by the American Railway Engineering and Maintenance of Way Association for the railroads, the latter having been severely criticised because of the frequency of wrecks on account of broken rails. E. H. Harriman has put a sample of the new rails to the severest test, with perfect results. The credit for compounding the new material is given to Austin Buck, the chemist of the Bethlehem works, recently promoted to superintendent of the entire plant. The steel trust will erect a new mill at Gary, Ind., for the manufacture of the new kind of rail.

An automatic telephone exchange system is in use in Vienna, and has been tested for a number of years. As a result of these tests the head of the Austrian telegraphs, Mr. Charles Barth de Wehrenalp, declares that the automatic system can be made to seriously compete with the manual system. He states that in New York it takes on the average sixteen seconds from the time the subscriber removes his telephone receiver to the time the ringing signal is set; whereas in the automatic system for 100,000 subscribers this work is done in but ten seconds. Three seconds after the subscriber hangs up the receiver the line is clear. Owing to this saving in time a larger number of messages can be delivered through the automatic exchange than through the manual exchange.

The imports of merchandise and the duties collected at the port of New York for the month of March were the largest of any month in the history of the customs service at the port of New York. The total appraised value of merchandise was \$87,997,387, a million and a half dollars in excess of the previous record in March, 1907. George Wanamaker, appraiser of the port, said in speaking of the increase: "Business men have been buying in smaller quantities during the last year and now that trade is improving throughout the country they are of necessity compelled to buy to meet conditions, even though the tariff laws are undergoing revision." The receipts at the Boston customs-house for March also broke all records at that port, the total for the month being \$2,761,705.

Government officials here are clearly becoming alarmed over Japan's attitude in Manchuria and her refusal to submit to The Hague tribunal both the Manchurian and Fakumen railway differences. The statement in the Yokokumen, the official organ of the Japanese government, that unless China withdraws her demand for arbitration Japan will continue her present activities in Manchuria, is taken to mean that Japan has little thought of recognizing China's authority in Manchuria. It is feared that no matter what representations are brought to bear on Japan she will hold out against the proposed arbitration. The Japanese demand for proofs of China's sovereignty over the Prauts islands, where hundreds of Japanese are colonizing, is another feature of the strained relations that China considers to be portentous.

The Illinois Legislature has passed an important measure which marks a stage in the progress of the tuberculosis battle. By its provisions any municipality in the State may decide by a referendum vote to establish a tuberculosis sanitarium, and may provide for its erection and maintenance by a tax of not to exceed one mill. A vigorous campaign for the immediate erection of such a sanitarium has been going on in Chicago, whose citizens are eager to check the plague which at present claims 3,000 of their fellows every year. Other cities are organizing for the battle, and the outlook is bright for putting a substantial check on the ravages of the disease in Illinois.

President Taft is known to favor a consolidation of all the agencies under federal control which look to the preservation of the public health in one health bureau. He has, therefore, recently instructed the surgeon-general of the marine hospital service to prepare a plan looking to this consolidation. At present there are a number of health departments, which the President thinks would discharge their duties more effectually if they were merged into one bureau. The bureau of public health and marine hospital service is under the treasury department, immigrants who are suffering from contagious diseases are taken in charge by the department of commerce and labor, while the war department supervises the work of sanitation in the Philippines and on the Isthmus of Panama, and the department of agriculture attends to the inspection of foods. Whether or not the consolidation of these different health divisions into one bureau would cause friction between the health bureau and the department in which it undertook to work remains yet to be seen.

The Woman's National Sabbath Alliance.

The fourteenth annual meeting of the Woman's National Sabbath Alliance, held a few weeks since in the Calvary Baptist church, New York City, was from the beginning to the close an interesting and inspiring occasion. It gave additional evidence that the aim of the Alliance is, "to keep abreast of every intelligent effort to protect the Lord's Day; to advance the cause of a true Sabbath observance, whether from a physical, mental or spiritual point of view." The report of the corresponding secretary stated that nearly four hundred thousand pages of literature had been sent out during the year, to different States and to Canada; that the Alliance had sought in various ways to draw the attention of religious conferences and societies to the pressing need of the Sunday Rest Day.

The father of the Governor of the State of New York, Rev. David C. Hughes, addressed the meeting. His theme, "The Place of the Sabbath in the Christian Economy," was a forceful, impressive presentation of the rightful place of the Lord's Day in every Christian community. The threefold reason for the change of the Sabbath from the seventh to the first day of the week, its significance and its blessedness, was ably argued and illustrated.

Taken as a whole the fourteenth annual meeting of the Woman's National Sabbath Alliance was most encouraging to all who would have the benefits, the blessings of "a well spent Sabbath and its week of content."

The Alliance will send upon application, without charge, sample packages of its literature to those who are interested and who desire to awaken in others an interest in the cause of the Sabbath.—The Woman's National Sabbath Alliance, 156 Fifth Ave., New York City.

Among the Magazines

VENTILATION OF PASSENGER COACHES.

From the description of the seventy-five steel passenger cars recently ordered for the Pennsylvania Railroad, it is evident that the company are in a fair way to secure the fireproof and collision-proof qualities which are sought in the design of the cars. Outside of mahogany window sashes and seat frames, the cars will be entirely free from wood fittings, the total weight of wood in each car being only 300 pounds out of a total weight of 116,000 pounds for the entire structure. The collapse of the car in collision is guarded against by the provision of a central steel box girder 24 inches wide and 9 inches deep, extending throughout the floor framing for the whole length of the coach. This massive construction will receive the full brunt of a collision, and serve as a defense against that disastrous telescoping, which is the most fruitful source of fatalities in accidents of this kind.

It is to the ventilation of these cars, however, that we wish to direct attention. The subject is particularly timely just now, when the traveling public is being put to so much inconvenience through the overheated and stuffy conditions which are the rule rather than the exception on some railroads. In a properly ventilated car the whole of the air should be renewed at frequent intervals; it should be warmed, and the proper amount of moisture should be imparted to it. The mere provision of steam pipes, and the opening of a few ventilators in the roof, will not secure the desired results. The air will be heated, but not properly renewed; and a considerable portion will be endlessly circulated through the floor and ceiling, and dried out by steam heat to the point at which it becomes uncomfortable, if not positively distressing.

In the new Pennsylvania coaches the air enters by two hoods on diagonally opposite corners of the car roof. From the hoods it is let down by vertical ducts, placed within the sides of the car, to a horizontal duct adjoining the side sill and running the full length of the car between the floor and the sub-floor. Above the floor, for its full length, along the sides, are rectangular ducts in which are placed the steam heating pipes. The outside air enters the hoods and passes through the ducts beneath the floor, to openings into the duct containing the heating pipes. Here it is thoroughly warmed and is finally discharged into the aisle of the car through outlets provided beneath each seat. The air is liberated through ventilators in the roof which are furnished with valves that regulate the escape of the air. The forward movement of the car forces the air in under a slight pressure, and the restraining action of the discharge valves maintains this pressure and prevents drafts of cold air passing in through cracks in the doors and windows. The system is an excellent one, being founded on thoroughly sound principles of ventilation; but we would suggest that, if provision could be made for adding the requisite amount of moisture to the warmed air before

its admission to the car, its hygienic qualities would be improved, particularly for passengers whose throat and nasal passages are subject to catarrhal and kindred troubles.—Scientific American.

OURS IS A NATION OF MOVERS.

Until a dozen years ago the reason why so many families moved was that they might find a place in which to make a living or a better living, says William Eastbrook Chancellor in the April Delineator. But in the great and general prosperity of the period that began to draw to a close a year or two ago, another reason became important—to find a place in which to spend to the best advantage the income from considerable property.

Any change in the dollars and cents of life means usually that the family will move. When we get rich, we move. When poverty threatens, we move. When the land on which our house stands rises considerably in value, we move in order to invest the profits; and when it falls, we move because "the tone of the neighborhood is no longer what it was."

We move for many other reasons. When we marry, of course we move. Sometimes we marry in order to have a plausible reason for moving; and sometimes, when our children marry and go away from home, we move "because the old home seems lonely." Nearly every divorce means that two must move. When the parents die, the children move. As the family grows in number, we move into a larger house in order to have more room; and, when we can, we move into a better neighborhood in order to give the children social advantages. When unwelcome faces appear upon our street, we move; and when our friends move away, we move. When the landlord raises the rent or refuses to make repairs, we move.

One-sixth of the white population of the city of Washington changes every year, while the change of the colored population is even more extensive. In a quarter-century, Los Angeles has grown from a few thousands to a great city. Seattle doubled twice in the thirteen years from 1893 to 1906. Mobile and Memphis are similarly growing with astonishing rapidity. In our census we count only the net growth or the net loss. In many instances thousands move out annually while more thousands move in. A generation ago the men were in great excess in Muskegon, Michigan, because of the lumber industry, while now there is an equally great excess of women, due to textile factories; and yet the population of the city is not much greater than in the former period.

Before the Civil War, and for some years after it, the migrations of our people were almost all westward, and few but the poor or the young changed their homes. Now our well-to-do families are on the move; and not a few of them migrate eastward. Some sections of the coun-

try are building up for one reason, while others are building up for an opposite reason.

In casting about for a new home there are, among other things, these to be considered—the long memories of the past, the ancient landmarks and the ideals of generations of our own family stock. Often in losing one's hold on things about him, one loses hold on life itself. And yet moving is perhaps the typical and peculiar characteristic of Americans. We seem to understand better than any other people that without change there can be no progress. Sometimes we forget that not all change, however, is progressive. Consequently, it pays to look about, so that when we move we may change our abodes for better. A house that fits us is what we mean by a home.

A FRESH CALAMITY.

As though we had not already enough worryment, dodging automobiles and taking orders from the cook, we are now told that a hundred and fifty years hence there will be no more children. Viewed from either pole of the situation, this is indeed a woeful prophecy. If you are a lover of children, it makes your blood run cold to realize that they are so soon to be added to the schedule of extinct animals, along with the dodo and the sabre-toothed tiger; while if you belong to the opposite class, it is equally distressing to know that this promised millennium is so far remote that you will not be here to enjoy the days when Angora cats and bull pups shall hold undisputed place as household pets.

However, 't is useless to bewail the oracle of statistics. A learned college professor has computed the rate at which human births are declining, and when he announces that they will come to an end during the next century and a half we have no alternative but to accept his dictum. It is not a guess; it is a mathematical certainty. To be sure, he might have kept this dismal prediction to himself, but 't is one of the moral duties of a statistician to temper the joys of life with melancholy auguries. The horrors of the future are calculated with the same precision as eclipses of the moon. Every twelfth marriage results in a divorce; and yours may be the twelfth. Once a week, with clock-like regularity, some one is murdered in New York, and every ten hours somebody is attacked, every forty-eight minutes a building catches fire, every seven minutes there is a funeral, and every three minutes somebody is arrested; so that if you can remain in New York for a month without getting into trouble you are to be congratulated. But even in your own village home you are not out of danger: Every two minutes somebody in the United States is killed by tuberculosis; and if that fails to daunt you, then you must know that every minute of the day four and a half persons are tagged by the undertaker; and if you are not one of the four you may be the half.

No prophet who conjures with statistics has ever yet predicted anything pleasant. 'T is just as well, perhaps, that this is so; for, as Father Gregory once remarked, "Peradventure this world here is made troublesome unto us, lest we be delighted by the way and forget whither we are going." At all events we may not plan ahead for a picnic without remembering that the day is coming when there will be no water on the earth, and our Yuletide levity is checked by the knowledge that a hundred years from now there will be no more Christmas trees; also, no more coal. Indeed, whichever way we turn, the future is black with calamity. There will be no more lumber, no more fuel, no more teeth, and now, latest on

the list, no more children. And if our descendants manage to survive these subtractions it will be merely to look forward to the time when a slowly cooling sun will put the ice-man and all his cousins out of business.—Clifford Howard, in April Lippincott's.

ALCOHOL: THE BRAIN DESTROYER.

Two great German investigators, Kraepelin and Kurz, published, in 1900, the results of a series of careful experiments in illustration of the persisting influence of slight chronic alcoholic intoxication. The daily dose of alcohol decided on was eight grams (equivalent to two liters of beer), and this was taken before going to bed. The subjects of the experiment were two medical men, one of whom had been a teetotaler for years, while the other seldom took alcohol. The tests were the learning of figures, the adding up of sums, etc. The influence of these moderate doses of alcohol was found to be decidedly unfavorable. Mental aptitude slowly and then, after some days, more markedly decreased, the loss being in one case equal to twenty-five per cent of the normal ability. Moreover, in one case at least, the unfavorable influence did not cease with the discontinuance of the alcohol. It was proved that even a very moderate dose of alcohol exerts its effects for more than twenty-four hours.

Even those physiologists who maintain that alcohol has food qualities, are agreed that it is a very expensive food, and that the same quantity of nutrition can be obtained in much safer and less costly ways.

But, indeed, the question is largely academic, for men do not take alcohol for the sake of its power to build up tissue, but for the sake of its effect on the emotional tone of the mind. Alcoholic drinks are seldom taken for their taste alone. Alcohol is at once a kind of pseudo-stimulant and a depressant. Hence some men, when in a merry mood, drink in order to check their shyness and other worries and thus raise their sense of happiness to a higher pitch; but the majority drink because of the narcotizing influences of the drug. The troubled business man, the woman left alone to face the petty details of domestic drudgery, the overdriven professional man, the individual on whom some terrible calamity has fallen and who can see no way of escape from ruin—all these betake themselves to drink in order to drown their sorrows, to lose their personality for a brief period in oblivion.

Alcohol is taken at first as a means of relief. The reason why this happens is that, in common with other agencies, such as morphia, cocaine, and other kindred drugs, it can banish fear, worry, care; it can create a world peopled with the illusions of happiness. But at what a dread penalty! For alcohol awakens a morbid appetite, a pathological desire. After a time this desire becomes dominant, the forces of the will go down before it, and the drinker is then the victim of a disease.—Rev. Samuel McComb, in the April Everybody's.

THE PUBLIC SCHOOL.

ALMOST the only democratic institution remaining in American life today is the public school, and we look upon any attempt to sweep this secondary institution of learning from its democratic moorings as nothing less than a public calamity. The classification of pupils of adolescent age by placing some in a preparatory school for the professions only and others

in a separate and different school to prepare them for the industries, the offices, the machine shop, the farm, and the factory must mean a social cleavage which savors too much of difference only in dollars and cents, in kind of clothing and social prestige. To us this looks like an importation upon which the tariff should be made immediately prohibitive. Too well do many in secondary school work know that in all this great Middle West, where there is much smaller opportunity to send the boys and girls to expensive, fashionable fitting and finishing schools, the public high school has been infested with small, exclusive, barbaric, undemocratic cliques, called frats, and that these organizations have done unmeasured harm to schools. Let us avoid any step in our educational development which would recognize, foster, give aid or comfort to, or in any way encourage such an innovation. "An ounce of prevention is worth a pound of cure."—*Journal of Education*.

CHICKEN NOTES.

Eggs for hatching should not be kept for more than two weeks, for the fresher and more uniform they are in size, age and color, the better they will hatch.

ABOUT two years ago I saw a suggestion, which I tested last year, in selecting eggs for setting. I used the eggs with the aircell decidedly on one side, and the proportion of pullets for this year was much larger than the year before, when I did not select the eggs.

SCATTER sand or sharp gravel on the floor of the brooder and let the chicks pick at it the first day or two, which will give the youngsters a supply of "teeth." Is seems hard-hearted to withhold food for thirty-six hours, but it will not hurt them; on the contrary it is a positive benefit.

At the same time that I set my incubator I set four hens on three eggs each, and when the machine begins to hatch I take out several half-hatched eggs and put them under each hen. Then when the hatch is over I give each hen about twenty chicks and put them all in a nursery or lot together. I find this a safe way to raise the chicks.

If there are any spare, sunny nooks about the houses, they will afford good places to put in sun-flowers. If they are planted irregularly in such spots they will make a good appearance when in bloom, and will serve as good feed later on. Planted in masses they look better than when in straight lines; but do not have them too close together.

If you want to find out whether your fowls or chicks have lice, try wrapping one of them in an old white cloth that has been well sprinkled with kerosene. The chick may object, but keep it bundled up for at least twenty minutes, then examine the cloth for lice, and if any are on the bird they will at once be attracted to the cloth. This simple test shows the existence of the lice, if they are present, and the value of kerosene as a louse exterminator.—*Selected*.

Between Whiles

Wife—Is there any difference between a fort and a fortress?

Husband—Not much, except, of course, that a fortress must be harder to silence!—Lippincott's.

Time to Strike.—Johnny—"They're makin' shingles out o' cement now'days."

Dickey—"I don't mind that so much, but if maw ever gets a pair o' cement slippers I'm goin' to run away!"—Chicago Tribune.

Willie and his little sister, with their mother, at a mountain resort, heard a great deal of talk of the fine views from the piazza. One day the sister in her play fell over the edge of the piazza, and Willie ran screaming to his mother: "O mama! come quick; Bessie has fallen into the view."

Mrs. Jones (a Suffragette): "I don't ask any special privileges, Mr. Jones. What I do ask is that you, for example, a man, should treat me exactly as you would another man. Instead of talking small talk and treating me like a thing to be protected, and all that, assume towards me the attitude you do to Mr. Warrington. Treat me like a good fellow."

Mr. Jones (quickly): "Why, certainly, old chap. Lend me five, will you?"

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

FOR LAND SAKES

come to **Reedley, California** where you can raise all the oranges and lemons you want and make a fortune at the same time. Where snow is practically unknown. Located in the heart of the famous **San Joaquin Valley**, the home of the raisin, peach, pear, apple, fig, nuts and vegetables of all kinds. An extra fine place to go into the dairy or chicken business. Have fine **alfalfa** land and there are hundreds of tons raised here. Located on two railroads and on the banks of the Kings River and always in sight of the stately Sierra Nevada Mountains. Nearly perfect climate. Come to California where you don't freeze to death. We always use the Golden Rule in all our dealings and it will pay you big to see us before you locate. For further particulars address

Real Art Mottoes

These "Real Art" cards are by far the finest specimens of lithography we have ever offered. The stock has but recently been imported from Germany, hence the line is entirely new. They are lithographed on heavy glazed stock, size 16x20 inches and represent the best in modern art. The subjects consist of bouquets and vases of Roses and other flowers. Suitable for the home, office, school room or Sunday school.

We can furnish "Real Art" mottoes in Eight designs and Fourteen texts as follows:

50. The Lord Is Thy Keeper.
51. He Careth for You.
52. In Me Is Thine Help.
53. Shew Piety at Home.
54. Lead Me in Thy Truth.
55. I Will Never Leave Thee.
56. Looking Unto Jesus.
57. Ye belong to Christ.
58. God is a Refuge for Us.
59. Seek and Ye Shall Find.
60. God is Our Refuge and Strength.
61. The Lord Bless Thee and Keep Thee.
62. Thou Wilt Shew Me the Path of Life.
63. Who daily Loadeth Us With Benefits.

The illustrations presented herewith can give but the faintest idea of the beauty and quality of the "Real Art" line. These same subjects have sold in art stores the country over for 35 to 50 cents each. We are pleased to announce a price so low as to place the best mottoes within the reach of every one.

Price, each, postpaid, only

25 cts.

SPECIAL TERMS TO AGENTS ON REQUEST

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

\$400 Prize Cup Won by Colfax County, N. M. In Competition with Entire Irrigated West

Miami Ranch

is located in the choicest part of Colfax county, New Mexico, and it was largely due to the products grown upon and adjacent to this ranch that Colfax County won this valuable cup at the Interstate Industrial Exhibit held at Albuquerque, N. M., last October. Every State was represented—products from land selling as high as \$1,000 an acre were shown—but Colfax County won by many points.

Many other prizes have been won by this section of the country. New Mexico wheat took first prize at the World's Fair in Chicago, while apples raised in an orchard directly adjacent to Miami Ranch won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 an acre.

Miami Ranch

offers you health and pleasures as well as wealth. It's situated in a rich, cheerful valley, surrounded by picturesque mountains. Elk, deer, bear and other large game are to be found in the mountains, while thousands of wild duck and geese inhabit the surrounding lakes. The Rayado River, which flows through this ranch, is noted throughout the central west for its trout fishing.

The rainfall is sufficient to insure big crops. But with the gigantic irrigation system recently installed, there is not the slightest chance of crop failure.

The climate is perfect, the air is pure, and the scenery beautiful. Excellent church privileges, a good school and pleasant neighbors are all to be found on Miami Ranch.

Write for a free copy of our booklet, "Westward Ho." It tells in detail all about Miami Ranch. Tells how and when you can get a round-trip ticket from Chicago for \$30, and from Kansas City for \$25, via the Atchison, Topeka & Santa Fe. Write at once and take your choice of the bargain offers which we are now making on both large and small farms.

Farmers Development Company, Springer, New Mexico

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the north. There is some snow at times but the Chinook winds quickly melts all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. I. J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

EMPIRE COLONY

IN "SUNNY STANISLAUS"

The CO-OPERATIVE COLONIZATION COMPANY is now locating a colony of our people in the lower San Joaquin valley, in central California. The new town of EMPIRE, as well as the colony lands, is located on the Santa Fe railroad, five miles east of Modesto, the county seat of Stanislaus County, thirty miles south of Stockton, seventy-five from Sacramento and one hundred and fifteen from San Francisco.

The colony lands join the new town site and are within a few miles of three different railroads. These lands are all under cultivation, and are free from brush, stumps, stones or other obstructions. Two large ditches cross the tract, affording ample water for irrigation of all crops. The cut below shows us how well this section is improved.

Farm Home Half Mile West of Empire; on County Road with Rural Mail Service.

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and Investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

LOW RATES FOR COLONISTS.

During March and April one-way Colonists' Rates will be in effect from Chicago to Modesto, California, for \$33.00. From Kansas City, and other Missouri River points, to Modesto, \$25.00. Via Merced, Cal. For further information address

The Home Model Washer

Contains new features that should concern all who are in need of a washer. By means of a thumbscrew, the lever can be quickly set for long or short leverage, for light or heavy work, a good feature.

The agitator, the part that does the washing is also something new in that line. It is Simplicity and Strength and

makes this washer noted for easy, fast and clean washing. Do yourself a favor by learning all about this washer. It is low in price. I pay all the freight whether the washer is returned or not after a thorough trial. The circular illustrates and explains it all. Send for circular at once. Agents wanted. Address: WM. S. MILLER, Meyersdale, Somerset Co., Pa.

Southwestern Kansas Lands

For a home or a profitable investment.

THE GARDEN CITY LAND & IMMIGRATION COMPANY (Inc.), GARDEN CITY, KANSAS, Offers a fine selection of irrigated, sub-irrigated and diversified farming lands at attractive prices.

SOME SPECIAL BARGAINS.

640 acres in Brethren settlement, 12 miles from County Seat, on line of new R. R. Level, fertile land. All tillable. 480 acres cultivated. 340 acres winter wheat. 3 wells fine water 50 feet. Wind-mills, tanks, etc. Good house and outbuildings. 10 acres fine bearing orchard. Good shade trees. All fenced. 1/2 mile of school. Near church. Telephone. R. F. D. Only \$25.00 per acre. Easy terms.

160 acres choice level land 1 1/2 miles Garden City. Irrigated from the United States Pumping plant. All under cultivation. All high class alfalfa and sugar beet land. Price, \$10,000.00.

160 acres well improved irrigated farm. 12 miles from good town. A snap at \$25.00 per acre.

Write for descriptive literature and full information. DO IT NOW.

NEFF'S CORNER

Nookers will please remember that I do a general brokerage business. If you want to buy or sell stock in any well rated stock company or bonds of any kind, write me. I also negotiate exchanges of real estate or other property. I now have 160 acres fine land near Elida, N. M., where there is one railroad and another building in, that I can sell at about half its value. By paying off a mortgage that was on it, I got it at a bargain and will sell at a bargain. A fine homestead relinquishment nine miles from another town can be had in exchange for other property. Also a good house and lot near Brethren church in Lake Arthur, N. Mex., is offered in exchange for stock in a reliable stock company. The property is bringing a good rental income. I make a specialty of stock in University Heights Realty & Development Co., People's Savings Trust Co., and Lewis Publishing Co., St. Louis. If you have any of this stock for sale, write me. I also buy or sell Share-Purchasing Coupons of the Albaugh-Dover Co., Chicago. My little folder, "New Mexico Investments," free on application. Address, JAMES M. NEFF, Clovis, New Mexico.

Training the Teacher

The "Brethren" Edition of this popular textbook has been slightly revised by the authors, and is in strict conformity to the teaching and practice of the Church of the Brethren. There are 227 pages. Cloth bound, stiff covers, sewed, 50 cents, postage prepaid. Strong paper covers, sewed, 35 cents, postage prepaid.

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities, of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

THE CALL OF THE TWENTIETH CENTURY

NETTIE CULLER

TWENTIETH CENTURY AMERICANS face twentieth century conditions. They are new; they are different from the conditions of half a century ago as an electric cab is different from the ox-cart of our grandfathers. The progress of modern science, the opulence of our inventions and the splendor of noble achievements are themes of ceaseless praise and gratulation. We rejoice with the gladdest and glory with the proudest, but there remains yet much to be done.

Never in the history of the world were there so many loud, clear calls; various fields of labor are waiting to yield to men of invincible statesmanship their bounteous harvest. In a time when empires are being born, old nations lifting their heads from the sleep of ages, new lands being opened to the mind and hand of the civilized world, there are offered such unparalleled opportunities as never before were given to leaders in all the vocations of life. From those who are in need of help men and women are urged to come and lift the veil of superstition and darkness.

This is the age that most forcefully illustrates the real worth of the individual. Upon him all depends. The destiny of nations, the hope of empires, the well-being of the church, all hang upon their constituent men and women. The principle of the development of the individual introduces the new, achieves liberty and insures growth. In every age men have lavished treasure, toil and genius on their temples, but it is a far nobler ambition and a more acceptable service to strive for the perfecting of God's living temple.

The call of the twentieth century may be one of humble duty, yet so many long for more and greater work to do. The youth and maiden with high hopes and buoyant spirits look forward to some new, untried vocation in life. They dream of a future time when it shall be theirs to wield the sceptre,—social, educational, or political—that shall rule vast multitudes of men and

women. But what lack we yet? Is there nothing to do? Why, in such an age of opportunity, when the golden dawn of this century floods the universe with a halo of unbounded possibilities, should we sell our birthright for a little indolence and ease? Why do we stand idle? The future is lighted for us with the radiant colors of hope and promise. We greatly need an inculcation of soberer views of life. Humble employments are held in contempt. Too few possess an education that will help them to beautify and make noble their humble positions by lives of content and gladness. If our education or other training fails to make us happy, useful and contented in humble surroundings and lowly, unnoticed service, it has undoubtedly been a failure.

The call of the century demands gallant, chivalrous Christianity, an age in which Christian manhood shall assert itself as the highest earthly thing and the noblest earthly estate. Give us an age which, lifted into the likeness of its most precious possessions, shall be made by them patient, pure, heroic and honorable. We need a generation of men who think less of dogma and more of duty, less of law and more of love, whose worship will be less formal and more truthful and spiritual; for such a generation there exists a deposit of divine truth and blessing almost unknown to modern Christendom. The Christian world needs bone and muscle, blood and nerve, courage and power. Every truth learned and every influx of spiritual power should be manifest in act,—in something for good accomplished in the world. In the Christian enterprise are the world's destiny and the world's hope.

There are steps to be climbed in life, but we can climb them worthily only by becoming fit for the ascent. Aspiration, worthy ambition, desire for higher good, all indicate a soul that recognizes the beckoning hand of a good Father who would call us ever to the highest and best. To serve God and our time well,—to

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LIV.

CONSTANTINOPLE!

There before us, under a veil of cloud and fog, lay the city of Constantine, rounding in a quadrant of beauty on her seven hills, like a Queen of May, awaking, with the morning sun etching in delicate tracery of silver the proud fronts of palace and fringing with lace work the fine cloud effect that at first had hidden the higher part of the city from our view.

As if the world had come to claim the bride of heaven which up to now had been covered with the mantle of modesty that her virgin face might be seen only by the expectantly impatient lover, the clouds of the night, so seldom seen in Turkey in August, began to break away, rising above the fair scene, and frightened by the brilliant sun now rising higher and higher from out of the Golden Horn, rolled noiselessly away before the golden chariot of day.

It was the most brilliant panorama in city landscape I have seen. We arrived just at the right moment. Everything was opportune. The big, round sun, so yellow in contrast to the rocky hills covered with groves and parterred with white palaces set like glittering diamonds along the Sea of Marmora, came up in the right spot, burnishing every scene with glowing light. The quick-fleeing clouds, like guilty spectres of dark-

Bridge and Mosque, Constantinople.

ness, no longer able to cower over the city of graceful minarets, dissolved, like views in a lantern, just at the most telling time.

Every one on board felt the grandeur of the scene.

The night had been cool. The morning air was moist and fragrant. The ozone of electric impulse gave snap to the nerves, and brightened every eye. Like children fastened to the spot in rapt admiration, fearing lest we should lose it, our newly-awakened eyes ravished over the glorious beauty of picturesque splendor.

At last the city, with a mottled history that reads like the romance of nightmare, beguiling us by its weird smile of coquetry, lay teasingly before us.

The *Albania* did not anchor at once but slowly steamed at a short distance from the shore, affording those of us high upon the promenade deck a series of ever-changing pictures, bringing before the eye now one and now another striking building, or exposing the structure of the city from all of its varied positions along the sea. Like a solid mass of buildings, built together like the sections of an elaborate bird-house, it rose abruptly from the beach, leaving not so much as a footpath between it and the sea.

When the anchor was finally dropped I counted fifty-six minarets that rose straight and defiant, above everything else. In some of these the muezzin or priest was calling the Turks to prayer.

One after another the boats lying along the wharf or out in the stream began to move about, enlivening the picture with their action and giving me a good chance to get them within range of my kodak. One of these was a ferry-boat, covered by breeze-flapping canvas to shield the pleasure-seekers who already crowded the deck for an excursion out of town.

It was Sunday, the outing day for Europeans in Constantinople. Already was I forming in my mind the picture of the church I would attend when a boatman succeeded in winning a place by our vessel right below me, having fought his way through many other boats, each of whom was eager to carry the first ones disembarking to shore.

A swift-gliding launch bearing the stars and stripes at the stern, came up, with right of way given it by all the other boats, just as I stepped down into the boat of the native. Of all the inspiring sensations I enjoyed that morning, the white launch flying Old Glory was

the most beautiful. When I looked upon my flag, it seemed to say to me:

"Glad you're here. I'll take care of you. Come right in. No one can touch you. You are an American."

The flags of nearly all the countries of the world were waving from other boats anchored in the harbor. It was the home of the Turkish crescent,—the half-moon and its solitary star,—and this flag was on most of the smaller boats. No one cheered it. None spoke of it. The bright colors of Old Glory, waving in silken folds at the stern of that little steam

Dogs of Constantinople.

launch, commanded the admiration, without fear, of all on board. On its mission of love in power it went everywhere, unchallenged and undaunted.

I was so glad I could have leapt overboard and swum to shore with the baggage in my teeth.

As the slender boat ran near the dock I read the queer and strange names of the vessels. These names were not "Columbia," "Majestic," or "Lusitania," but "Æneas," "Alekra," "Abbas," and other unpronounceable names. Others, with funny Arabic hieroglyphics, that sailed between the Golden Horn and the Suez Canal, lay near the dock.

I was landed near the custom house where the officials good-naturedly began to go through the baggage and even the pockets of every passenger as fast as they came to shore. Some of these escaped this ordeal by making the officer a present of a few coins.

To avoid trouble in entering my bicycle I left it at the college in Smyrna, and carried with me only a small bundle containing some clothes, my camera, shaving outfit and Bible, together with my passport and a small purse of money.

My camera was very carefully looked over, outside and inside, the customs officer almost afraid to hold it in his hands, thinking it might be an infernal machine. Without opening the shutter, to the unexposed film, I allowed him to peep in at the lens, warning him, first, not to squeeze the bulb that hung loose in front. When he had finished examining my several pieces which he seemed to be sorry were not contraband, he packed my camera down at the bottom of my bundle,

saying that I must not take any pictures with it in Constantinople.

Then he went through my coat pockets, trouser pockets and vest pockets.

"You are armed," he said, when he took from me my small penknife. "That is a weapon."

I laughed, or tried to laugh at what I considered a joke. He persisted, however, in holding the knife, and meant to keep it.

"No," I said, reaching out for it, "that knife I bought on my way, in Sheffield, England, of the world-famed cutlery house there, and I carry it as a souvenir, and to cut my food. I want it. You can not take that."

He opened the big blade and felt its edge. It was good steel. It was just what he had been looking for, a good knife that wouldn't cost him anything.

"Weapon!" I exclaimed, in jovial irony, laughing,—"toad-stabber! Let me have it."

He then handed it back, or rather placed it down in the bundle, saying that I must keep it hidden there among the clothing, and that I must not carry it in my pocket.

I suppose that if my teeth had been movable, as are those people's who neglect to fasten them into their sockets while growing up, he would have made me take them out and pack them away with the dangerous penknife and outlawed camera.

He next looked over my United States passport and shrugged his shoulders.

"What's wrong with it?" I asked, looking at it as he began to fold it together.

"It won't do," he said, with an emphasis and a look of foregone conclusions.

I jumped back in astonished perplexity, opened the beautiful big passport issued to me by my countrymen at Washington and renewed by Ambassador White-law Reid in London, and held it full before him.

"This is my passport,—from the United States,—Roosevelt—Teddy—I don't need any other—it takes me everywhere." "You can't get in on that," said he, turning away.

For some minutes I held the passport, opened out before me and glanced, first at it, then at the men. Beginning at the top, I read again every word,—the print, and the filled-in portion by the clerk of the Department of State, acting for Mr. John Hay. To be sure that I had not exchanged passports with a fellow traveler, I read the descriptions of the voyager which the United States was taking the liberty to introduce to all the nations of the world.

First in the list was the age,—but as I am unmarried, I am not expected to tell that.

Second, the stature—five feet nine and a half inches. Forehead, medium. Eyes, brown. Nose, large. Mouth,

medium. China, prominent. Hair, black. Complexion, sallow. Face, thin and long.

What a thing that must be when put together. But everybody seemed to think it would look like me. These officers had not disputed that fact. I had a long, thin, sallow face with big nose. To prove it I was there with it. The time limit of this passport was two years, for it said at the right hand top corner: "Good only for two years from date." Again I computed the time. May be I had lost a year, somewhere in the Mediterranean. No, it was still good and in force. There also, at the bottom, on the left-hand corner, was my signature, and just on the other side of the same line, the signature of John Hay.

Above his name was the following statement making the passport officially authoritative:

"Given under my hand and the Seal of the Department of State at the city of Washington the 3rd day of July, 190—, and of the Independence of the United States the one hundred and twenty——." Just at the left of this declaration was the great seal, in brilliant red, with scalloped edge, stamped into the passport so as not to be removed, the American eagle clutching the three arrows in its left claw and an olive branch in its right claw, with the big shield over its breast, and the banner "*e pluribus unum*" streaming from its beak, in the center, encircled by the words "Department of State, United States of America," looking as unconquerable as ever.

All Rights Reserved.

MAKING THE RIGHT WAY EASY.

"I SEE there's a temperance lecturer coming to the town hall next week," remarked The-Man-With-the-Strong-Will, "but I for one don't care to hear him, and I guess there's plenty of others that feel the same way. We aren't drunkards in this town, nor criminals; we don't stay out too late at night nor beat our wives. I'm tired of hearing these same old horrid example tales and I believe that the sooner we discourage these fellows from going around and collecting their living from a tired public the better it will be."

"It's true you aren't a drunkard, and I don't have any idea that you ever will be," responded Uncle Ezra, "but how does it happen that you aren't?"

"*What's that?*" flared The-Man, "how does it *what?*"

"I say," continued Uncle Ezra, "*you* aren't a drunkard, but how does it happen that you *aren't*? What is it that has given you your boasted innocence? Is it your will? I don't think so. There are thousands of men with as strong wills as yours, who have drifted from bad to worse and slipped into drunkards' graves. Is it your intelligence? Yours is as good as any, but drink has got plenty of intelligent men. Is it anything about you or to your credit? Probably it is not. You

are a decent citizen and well-to-do, instead of being a drunkard, not because you are any more virtuous than the great majority of your fellow men, but because, by the grace of God, you are born into a family and a community where liquor is not used and where respectability is king.

"In the last analysis every man is responsible for his acts, and if he succumbs to evil it is through his own choice. But whether it is hard or easy for him to resist depends upon the surroundings in which he is placed. You remember the story of the Bishop of London who stood with a friend watching a criminal being taken to jail. 'What are you thinking of, my Lord?' asked the friend. And the Bishop turned to him and said, 'I am thinking that but for the grace of God there goes the Bishop of London.'

"Now, I'm not combating what you said about the lecturer. I'm not at all sure that his is the most effective work for temperance, but I take your comment to mean that you are out of sympathy with all temperance work, and that is wrong. The great blessing which God has given you in the shape of good parents and friends and freedom from temptation lays a debt upon you which won't be discharged until all your fellow beings are put into a position equally as blessed as yours. If liquor hasn't caused sorrow to your life, it's not for you to exult in your strength, but to thank God for making your way so easy, and to sail in with the determination to help some one else who has a harder row to hoe. We're all sheep in God's fields, you know, and we're all liable to get burrs in our wool. But before I criticise any of my fellows for the number of burrs he has collected, I want to see the pasture that he has to find his feed in and compare it with the well-kept lawn where I roam. And even then I don't think I'll condemn him very hard until I have done all I can to clean his pasture up.

"We're living in a time when it ought to be mighty easy to get up interest in temperance in people like you, because it's a time of victory. One couldn't blame our fathers much for getting discouraged at the proposition. They preached temperance and practiced abstinence and still the saloon continued to rule their politics and debauch their people, and for every one they voted out, two sprang up somewhere else. They kept pushing along, knowing there was a promised land ahead somewhere, but getting nothing out of the struggle but sunburn and stone bruises. And then, just at the time when they were passing *off* the scene, and we are coming *on*, behold, the clouds are drifting away and Canaan looms up bright and beautiful across the Jordan. And today we are hitting the Philistines fore and aft, taking about thirty of their strongholds every day, and the Lord is delivering them into our hands almost faster than we can handle them. I can forgive a soldier for not getting real excited about the

war when he's wading through swamps and wildernesses with only manna and water to eat and the enemy facing him ahead with a front like a stone wall, but there must be something wrong with the soldier who doesn't get interested when all he's ever seen of the enemy is their rear. This is a great time to be alive, and the only thing we have to fear is that things will be so easy that we won't develop the endurance that's going to be required to finish the war.

"For we're going to have setbacks; one of the remarkable things in the world is the wonderful vitality of sin. We trample on it here and think we have done it to death and it comes up bright and smiling; we legislate its life out in one State and go to bed, and in the night it goes around and buys the legislature and gets the bill repealed. We must make up our minds that we are in for a long campaign and that we're going to hand the fight down to our children as a legacy. It will be a more hopeful fight, and it will have shown gains, but it will be the same old struggle and they in turn will carry it forward and lay it on the shoulders of the next generation. That's the reason for temperance lectures in a dry town, and temperance lessons in dry quarterlies. It's to keep our own fighting blood up and to breed into our children such a hatred of the saloon that though they may never have seen its evil effects they will not hesitate to contribute their strength and their money to its defeat wherever the battle against it is waged."

"You want to remember that you're fighting for temperance and not prohibition," said the Man-Who-Boasts-That-He-is-Liberal-in-His-Views. "You'll never gain anything by forbidding a man to drink. It's un-American and simply makes him more keen to do the thing you have forbidden. Now, I occasionally take a drink, and it does me no harm. I know how far I can go and I know when to stop."

"My friend," said Uncle Ezra, "if all the men in this country were drinking only as much as they planned when they started out it wouldn't take but one brewery to supply the trade and the employees of that would have long vacations."—*Home Herald*.

EVERYTHING SATISFACTORY.

ONE day a new boy came to the school, a rather chubby, round-faced, good-natured looking boy, who wore very coarse and clumsy shoes and carried his lunch wrapped in a newspaper and stuffed into the side pocket of his skimpy and threadbare jacket. He said his name was Jimmy Stagg.

Percy Heffner, whose mother fitted him out with a clean waist every day of his life and wouldn't let him wear darned stockings, took notice of Jimmy for some reason and strolled up to him as he was eating his lunch. It was bread and butter. Just plain bread and

butter. Percy looked rather disgusted. "Ain't you got no pie, even?" he asked.

"Got er napple," said Jimmy, with his mouth full. "Want a bite?"

Percy shook his head. "I just threw away a big piece of apple pie," he said, "and some fried chicken."

Jimmy did not seem to be at all impressed. "Pie ain't good for the stummick," he remarked. "My father says so, an' it ain't good to eat meat more'n once a day. I like bread an' butter. My mother made the bread an' we churned the butter ourselves. It's lickin' good."

"Why don't you carry it in a lunchbox?" asked Percy.

"I'd sooner have it in a paper," replied Jimmy. "I'd have to pack the lunchbox back. When I get through I can just roll the paper in a wad an' throw it away." Percy seemed to think there might be something in that argument, but he departed, leaving the new boy contentedly munching his bread and butter, while he polished the rosy apple on the leg of his trousers.

The next day one of the other boys spoke in derogatory terms of Jimmy's shoes.

"Them shoes!" cried Jimmy, opening his eyes in amazement. "Them shoes is made of real cowhide. See here!" He went to the wall and rubbed the toes of the shoes vigorously against the brick and then directed the attention of the spectators to the small effect the friction had on the leather. "Them shoes won't never wear out," he declared proudly. "Come an' feel of 'em."

Which they did, admiringly, enviously. Percy went to the wall and rubbed his toes against it and came back to the group with holes in the thin caps. One or two others tried the experiment, with like results. Percy went home and asked if he couldn't have some awfully thick shoes made of real cowhide.

Jimmy's parents were not well-to-do, but according to their son they had more delightful possessions than anybody else in town. There was the cow. There was the tremendous mangle in the shed that Jimmy was allowed to operate when his mother was rushed with work. There was the model ship that Jimmy's uncle, who had been a sailor, had carved with his own hands and no other tool than a jack-knife. No end of things. Jimmy had a dog. "He's just a cur," said Percy.

"He suits me," said Jimmy. "I bet you he's smarter than any dog you know. You ought to see him go after a rabbit. He can do tricks too, I'll show you."

"Anything that you've got is all right," said Percy, with intended sarcasm.

"I'm lucky, that's all," said Jimmy, simply. "It just seems to come that way."

"My father says folks that are always satisfied with everything don't never get anywhere," said Percy.

That saying, by the way, made a great impression on Percy. He thought of it often in after years as he shifted about from one place to another, moved by a divine discontent.

It occurred to him when he, a clerk in a bank, met Jimmy and found that Jimmy felt not at all abused by fate in the lowly occupation of office boy in a railroad office. He appeared to be even proud of it. "A fellow has to be pretty smart and hustle mighty lively to do my work—and do it right," said Jimmy. "It's good wages, too, and I've got a dandy boss. I tell you the railroad business is the business to be in."

The next time Percy saw him Jimmy was a full-fledged clerk in the auditing department of the road and seemed to have nothing left to ask for. He was engaged to the loveliest and sweetest girl that ever happened. Percy wasn't feeling in a happy frame of mind at that time, having been treated very shabbily by the manager of the hardware house he had been working for. He was rather glad to get away from Jimmy, that round-faced embodiment of satisfaction.

"He's found his level," thought Percy when they had parted. He'll save his money and he'll have the best wife and the neatest little house and the finest bunch of children and the prize vegetable garden and he'll jog along on his little salary to the end of his days and be happy. Well, we aren't all made alike!"

It was only a part of his prophecy that came true. A long, long time after that Percy Heffner was waiting at a certain railroad junction for a train to take him to his home city and chafing because a special had delayed it. Presently the special drew up to the platform and a chubby, round-faced man of prosperous appearance got out and walked briskly into the telegraph office. In a few minutes he came out again and was about to re-enter the car when his quick glance encountered Percy's stare and he stopped.

"Heffner!" he exclaimed. "Why, what in the world! What are you doing here?"

"Is it Jimmy Staggs?" imply accepting the proffered hand and shrinking a little under the slap on his back. "I'm going to Chicago as soon as I can get a train."

"Here's your train," said Jimmy. "Jump aboard and we'll talk. This is all your baggage? Yes? Hey, George!"

A porter leaped for Percy's suitcase and Jimmy hoisted his boyhood friend into the car. In another minute the train was sliding out of the junction and Percy was gasping at his luxurious surroundings from the depths of a leather upholstered chair.

"Whose car is this, anyway?" asked Percy, as soon as he got his breath.

"It's mine," replied Jimmy. "All right, isn't it? I think it's about the best that ever ran on rails myself. Suits me."

"Your're still on the road, then?" said Percy, feebly.

"I own the road," smiled Jimmy. "Pretty good little road, too. It isn't a trunk, but you show me a better managed one or a better paying one. I'm satisfied with it. Say, we'll eat now. Lunch is just ready. Don't you tell me that you've eaten, because I've got the best cook in this country. You always did think I was easily pleased, though."

"That's right" assented Percy. "I did think so. but now I know it was nothing but a bluff."—*Glenwood Boy.*

EXPERT ADVISES THE COOKING OF GRASS-HOPPERS AS HUMAN FOOD.

"BIRDS and beasts" might be the title of a portion of the hearings before the committee on agriculture of the House of Representatives. Mr. C. Hart Merriam, chief of the bureau of biological survey, talked to the committee about the birds of the air and the beasts of the field. He gave that committee a lot of very valuable information. This information has been contained in various reports and bulletins issued by the agricultural department from time to time during the past year or more, but it was not in the condensed form adopted by Mr. Merriam. He wanted to tell the committee what the birds and beasts were doing on agricultural lands and in the forests of the United States. He wanted to tell them about the birds that protect the trees and fruits from insects, and the destruction of crops and farm products by animals. And so he condensed volumes into two hours of talk. That members of the committee were very much interested in what Mr. Merriam had to say was evident from the attention they gave him and also on account of the questions they asked.

Nearly all that he had to say was interesting, but the most striking features of his statement are summed up in the following:

This particular bureau studies the habits of birds in relation to agriculture from different points of view. That is, birds which go after insects, birds which eat different kinds of insects in different localities, the crops affected in the areas inhabited by different kinds of birds. It has been found that 57 different varieties of birds feed upon the boll weevil, which at one time threatened the destruction of the cotton crop. There are 57 species of birds that feed on scale insects which are so destructive to fruit trees in California. This reference to 57 varieties, one against the boll weevil and the other against the scale insects, ought to attract the advertising agents of a celebrated firm.

The gypsy moth has 38 different kinds of bird enemies and the brown-tail moth 24 species. For a long time it was believed that these moths were going to destroy the fruit and shade trees of New England.

There are more than 450 different kinds of birds that feed on grasshoppers. At one time grasshoppers were very destructive to the crops of the West. Speaking of grasshoppers, Mr. Merriam remarked that Prof. Wiley, the food expert, has recommended that they should be used as food by white people. Already they are eaten by the Indian tribes in Idaho, Oregon, Washington, California and Nevada. Chairman Scott of the committee asked Mr. Merriam how the grasshoppers are prepared when they are used as food, and Merriam replied: "Usually they are roasted a little and pounded up into a meal, which is usually mixed with pine-nut meal or acorn meal and made into cakes or bread, or put into soups or mushes." This is a recipe which housekeepers generally will not cut out and paste in their scrapbooks.

The English sparrow, by some people thought to be of some account in destroying insects, is not a welcome bird in California. In fact, Californians have driven the sparrow out because it drove out the other birds and the other birds killed the insects. Mr. Merriam said that so far as he knows there is not an English sparrow in southern California at the present time. He said that once in a while these birds kill an insect, but they are generally of no particular account. Here is the way Merriam explains the method of the English sparrow:

"Twenty-five years ago a native robin could not light on our grounds at the department of agriculture or in the Smithsonian grounds that a group of English sparrows did not immediately gather around. They would not usually attack the robin, but would sit around close to him and embarrass him, so that he would leave. Then he would fly into a tree and they would immediately fly after him and light around him in the tree, and would make it so disagreeable for him that he would go somewhere else. So they broke up the nesting of many of our native birds in the city parks and along the streets, and in that manner drove them away."

Mr. Merriam went on to say that the English sparrow is pretty good food and that it is sold in Washington under the name of reed bird, rice bird and under other names.

There was a long discussion about wolves and such animals, and it appears that the forest service has done great work along this line, having destroyed 1,800 big wolves and 24,000 coyotes in the last year. This work is estimated to have saved stock worth \$2,000,000.

The great rodent family, which includes rats, prairie dogs, ground squirrels, gophers and other animals that live under ground and prey upon the crops, was discussed at considerable length, together with the methods of exterminating these animals. Mr. Merriam estimated that there are now 400,000,000 prairie

dogs in the State of Texas and that 35 dogs eat as much grass as one sheep, and 210 dogs eat as much as a steer on the range. He said that enough range grass is eaten every year in Texas to support more than a million head of cattle and between five and six million sheep. The prairie dogs do not eat root products, but are very destructive to grass and alfalfa. In speaking of prairie dogs Mr. Merriam destroyed that tale of fiction about rattlesnakes, burrowing owls and prairie dogs all living in holes together. He says that the owls and snakes go in holes which the dogs have deserted, but the only time they go together is when the young dogs are surrounded by rattlesnakes.

There was a long discussion on the question of whether the prairie dog burrows down to water and how deep he digs his hole and the character of his home in the ground. Chairman Scott was particularly anxious to get facts on that subject and Merriam gave him a great deal of detailed information, the conclusion being that the prairie dog might go fifteen feet deep, but that he never digs to water. The idea has been that the prairie dog lives so far from water in the arid regions that he must have underground connections. In the case of nearly every animal discussed Merriam was asked whether the animal is good for food. He declared that the squirrels and gophers are fairly good eating, but did not have much use for prairie dogs.

Ground squirrels are said to have caused an annual loss in the whole country of \$10,000,000, and \$125,000 was spent in a single year in fighting them in the State of Washington. It has also been found lately that the gray ground squirrel of California has contracted plague and is disseminating it among men in the State, which has resulted in war upon the animals. The gophers are doing a great deal of damage in the West, and especially in the reclamation districts, where they are destroying dams and causing breaks in the irrigation ditches. Merriam estimated that the loss from gophers is more than \$12,500,000.

In speaking of birds, Mr. Merriam said that on some of the natural breeding places the entire species of game had been exterminated. Men have made as high as \$500 a day plume hunting on the Malheur Lake in Oregon and on Tulare Lake in California; they have made \$400 a day for many days in succession shooting birds for women's hats. The object of the biological survey, Mr. Merriam stated, was to preserve beneficial and beautiful birds and also useful wild animals.—*Woman's National Daily*.

FREEDOM for its own sake is not beautiful; it is nearer to bestial. To make it human it must be the freedom to do good.—*George Matheson*.

NATURE STUDIES

BUDS AND FLOWERS.

MRS. M. E. S. CHARLES.

WHEN the April sunshine falls upon the streams which have recently recovered their freedom, and the robin sings his wooing song, we find that the buds and flowers have braved stern skies and nipping winds to give us greeting.

Sometimes Mother Nature does up leaves and blossoms in the same parcel, sometimes separately. Flowers will issue from some buds, leaves from others, and from yet others both leaves and flowers. The stems on which these buds rest are stored with rich nourishment which was laid away last summer, in the wood and bark. The lilacs, for instance, put forth their blossoms last May, and by August their clusters of seeds were completely formed, fully grown, and only needing for their perfection what sun and frost could accomplish. The prudent plants then turned their attention toward providing for the wants of the future. The leaves drank in the late summer sunshine, the roots eagerly soaked up the late summer rain, and the nourishment thus gathered, no longer needed to support a showy and expensive family of blossoms, could be stored away in stem or root, for next year's buds.

Most leaves are protected in the bud by a covering formed of many overlapping scales. These are often coated with a sort of varnish which keeps out wet. The buds of the horse-chestnut and of the balsam poplar are so covered with resin as to be quite sticky to the touch, and they shed water like a rubber overcoat. As the sunshine grows warmer it makes the resin soft and lustrous so that the glistening of these large buds is one of the early sights that greet us in our spring rambles.

To the average person flowers are more attractive than buds, but it is only the most hardy ones that have dared to come forth.

Down in the wooded hollow sheltered from the north wind we may find *hepatica triloba*, an evergreen, four to six inches high. The opening flowers are in the midst of a clump of leathery leaves wearing autumnal tints of brown and purple. They have weathered the winter, and look very much used up after their rough experience, but will stay at the post of duty until a new set of leaves appear after blossoming time. This family of plants is from Europe, and, like some other immigrants they look so simple that

one wonders how they have been able to roam so far.

Everywhere in moist meadows, on sunny banks, along little streams, by the edges of ditches, in the shadow of the forest, down deep in the gulches, upon the mountain tops or in valleys, East or West, North or South, the three hundred species of violets flourish and beautify the earth in many shapes and colors. The common blue violet that adorns the roadside is the favorite of them all. Nature, fearing that one of her most beautiful flowers should be entirely lost from grazing animals and too free plucking, has protected it by a double device for seed bearing. Should the bees fail to fertilize the blue flowers, the plant resorts to other methods. Down in the ground near the root of the plant are very peculiar flowers possessing neither colored petals nor nectar, but their own pollen fertilizes their own ovules, and sets the seeds. These hidden flowers of the violet produce pods full of seeds and from them will grow the violets of the next year.

No wild flower is more universally beloved—excepting perhaps the violet—than the spring beauty or *Claytonia*. This plant takes its name from one of the earliest botanists, John Clayton of Virginia. It is very common in the middle States and is found growing in moist soils, preferring moist, open woods. It will readily domesticate itself upon our lawns, if it is only treated with the courtesy of allowing its seed to ripen before the lawn mower goes over them. The plant springs from a little brown tuber, about the size of a large pea, the tuber being as deep in the ground as the plant is high. It bears loose clusters of pinkish flowers with various markings. It is very sensitive to sunlight, opening wide its blossoms in bright sunshine and closing them under a cloudy sky. No one of our wild flowers is a more profuse bloomer, none lasts longer, almost none arrives earlier to tell us "The flowers appear on the earth, the time of the singing birds has come."

Just now we find nothing in the woods that catches the eye more quickly than the yellow poppy with its great clump of long, hairy leaves hanging by their slender petioles, and with its long, wiry flower stem, slim and erect, its apex crowned by a magnificent golden flower. It is so gorgeously painted that it seems to light the whole plant with its own brightness. Two dull green sepals inclose the flower bud

until the petals open. Then they fall off as if unable to keep company with the four petals and numerous stamens so richly colored.

Among flowers, yellow is most frequent; then comes white. Next in abundance comes blue, then pink, purple, red and, least of all, that rich scarlet that graces the cardinal flower and the salvia.

Spiceland, Ind.

SOME WONDERS OF THE VEGETABLE WORLD.

IN botany, certain trees and plants stand out from the majority owing to their monstrous size, eccentric shape, and mysterious properties.

In Sumatra have been found the largest flowers as yet discovered. On one species of the trees in that island grows parasitically a large carbuncle-like bud, which expands into a flower measuring from three to six feet across. Its cup will hold twelve pints of fluid, and its weight is fourteen pounds. This flower was discovered by Sir Thomas Raffles and Dr. Arnold, and hence its name, "*Rafflesia Arnoldi*." Its exceptional size, and curious scent, which resembles that of tainted beef, would make it an extraordinary and unpleasant boutonniere.

IN Western Sumatra grows a still larger flower, *Amorphallus Titanum*. This plant has two stages of existence—first as a flower, next as a tree. The flower grows to about three feet in height, and measures about the same across. Its appearance is grand, but the smell, like that of the former flower, is offensive, an odor being emitted from the cone like decaying fish. Within the cone are the seeds of the plant, growing out of the stem. When the flower dies it falls away, and then the stem shoots rapidly into the air. Increasing in circumference as it does so, it grows to the height of eight feet. On the top are clusters of seeds, some four hundred in number. Each seed is as large as a date, and of a bright holly-berry red.

Another large flower is the well-known *Victoria Regia*, one of the grandest and most beautiful of aquatic plants. It was discovered by Sir Robert H. Schomburgh in 1837, in a river at Berbice, South America. The leaves of the specimen here met with measured from five to six feet in diameter, the flower fifteen inches across. This plant is an annual, and disappears below water during our winter.

The Lattice-leaf Plant (so called from its resemblance to lattice blinds) is a native of Madagascar. It is one of the most extraordinary plants in existence, because the leaves have the ribs and veinings only, and appear but as the skeletons. The tissue usually found in the interstices is quite absent. It is an aquatic plant, and looks exceedingly delicate and graceful as it floats on the surface of the water.

The Sensitive Plant possesses the curious property of shrinking, and the leaves fold up at the slightest touch. Even the breath strongly directed on to it has

the same effect. At night the leaflets close together, as also do the partial leaves, and the common footstalk bends toward the chief stem, and they so remain until the dawn recalls them all to their former position.

Of the Fungus tribe the "puff-ball" throws out its seed in a fine powder, and this the wind carries and distributes for miles, impregnating the earth with myriads of similar fungi. Of large trees, one of the most useful is the Bamboo. It grows in the East Indies, China, Japan, and other warm climates. Some species grow with great rapidity; ten feet in a fortnight has been noticed to be reached by one plant. Some bamboos reach the height of one hundred feet; old stalks grow to five and six inches in diameter, and are used for water-pipes, bottles, circular boxes, poles for scaffolding and building purposes, walking-sticks, and musical instruments. The wood is split and woven into cloth for sails, mats, and cordage, and the pith produces bread, starch and paper. The bamboo is thus almost invaluable to the natives of the tropics.

The Bottle-tree is a native of Australia; it has the curious peculiarity of the trunk swelling from a short distance from the ground until it assumes a globular shape.

The East Indies are remarkable for strange growths in trees; we could fill pages with extraordinary varieties. The Banyan-tree throws out branches which, descending in line to the ground, take root, and in turn become auxiliary stems. Thus, in course of time, one tree will cover an enormous space. A specimen, growing on the banks of the Nerbudda, although it has suffered badly from floods, which have washed large portions away, still measures two thousand feet in circumference. It has three hundred and twenty main trunks, while the smaller stems exceed three thousand in number. It is reputed on good authority to have on one occasion sheltered seven thousand persons.—*Selected*.

FOR A BIRD'S NEST.

If you do not have a hollow tree near the house, and will take the trouble to plant a partly-rotten post in which a hole has first been made and an aperture scooped out, you will be likely to find the habitation presently tenanted by a pair of flickers, or yellow-hammers, as they are known in some sections, though they are more properly known as golden-winged woodpeckers. If you should have such a pair of tenants this spring, they will afford you an interesting study. They are quite tame, and the young, usually six in number, will remain with the old birds for several weeks after they leave the nest. It is interesting to see them walking up and down a tree trunk with all the nimbleness of their tiny relative, the downy woodpecker.—*Exchange*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

THINK you are in need of some sort of a spring tonic? Well, throw out your chest, draw up the corners of your mouth and step out as though you were engaged in the best business going. The wise man says, "A merry heart doeth good like a medicine," and a love for one's work and a wholesome interest in the signs of vigorous life around will do much to give one this kind of a heart.

MORE failures are due to a lack of faithfulness and perseverance than to any lack of ability or brain power. Very little of the work of the world calls for more than ordinary intelligence, but the successful accomplishment of every undertaking calls for faithfulness. The world has known this all along, but the workers have seemed indifferent to the fact with the result that faithfulness has come to outweigh almost every other commendation.

PERHAPS at one time the seed-sower considered that seed was seed and therefore sowed without much regard for quality. But the up-to-date sower knows better; he knows that there is seed and seed, and he is careful to sow only the kind giving promise of a crop most closely approaching his idea of perfection. Clean seed and pure strains are important considerations with the modern farmer and gardener. And we may carry these principles into other lines of effort with equally gratifying results.

If our congressmen at Washington would put forth as much real, downright effort to give the people what they have promised in the way of tariff revision as they have spent in introducing "jokers" and endeavoring to hide the real meaning of the various parts of the pending bill, we might hope for some measure of the relief promised. As it is, judging the future by the juggling already done, the people may

expect to have to put forth an extra effort under the new tariff bill to secure what has been looked upon as common necessities. Consider the spectacle of our dignified law-makers descending to the level of the trickster!

SIX bills which especially favor the liquor element and two which aim to lessen its power are at this writing in the hands of the Illinois legislators. We would not have it understood that the interest of each party in the cause for which it stands is proportionate to the number of bills each one is pressing for passage. However, it must be confessed that the liquor element's activity is partly due to the fact that it finds the territory encouraging compared to other fields. It maybe it aims to make up here for losses elsewhere. But this is a delusion that cannot last long. The temperance movement is a growth and it is growing. It is only a matter of rapid, or slow and sure, growing as to when a territory will drive out the evil. Let us be sure that we are contributing to this growth and not lulling our senses into inactivity with the thought of what has already been accomplished.

GAMBLING MOTHERS.

PASTORS of city churches as well as others who are interested in the moral uplift of city dwellers are alarmed over the prevalence of gambling among women. Taken up as a pastime in their social gatherings, it has developed into a passion as absorbing and as ruinous in its effects as that which possesses the professional gambler.

Mr. Barker, of the First Congregational Church of Maywood, a suburb of Chicago, in a recent sermon denounced all forms of gambling among women. He declared that the gambling mother's influence was "pernicious, sapping the very foundations of our civic life and threatening its integrity and morality," and of card parties where the trophies are cut glass and chinaware, he said they are "the mediums through which the womanly virtues of many of our women are seared, their morals degenerated, their children neglected. Gambling must be ranked with drunkenness and immorality as enemies of the American home. Gambling is ethically wrong, whether practiced by the wealthy society woman or the poor man in his craps game. All loyal citizens, regardless of creed or nationality, should unite to destroy this mania for gambling. Our city council should be supported in its efforts, for the mothers of this stripe will inevitably breed a race of degenerates."

Many of the mothers of our Nook family, away in their quiet homes, their hands and their minds and their hearts fully occupied with their home duties, will be shocked to know that their more favored sisters, as they have thought, blessed with leisure for work out-

side their homes have, instead of improving that time, neglected even the few duties they have and have plunged into practices that make them subjects for reform themselves. Truly, our busy homemakers have reason to be thankful for the duties that demand so much of their time and strength and place them beyond the temptations that come to the idler.

We have been accustomed to looking upon the women of the land, especially the mothers of our homes, as our strongest champions of social reform work. Now a large per cent of them has given us another problem to solve, another evil to put down, and besides they have killed the influence they might have put to good use in fighting some other evil. It is indeed a deplorable condition,—one that calls insistently for a remedy.

MIGHT HAVE BEEN.

'Way out in the Sea of Vain Regret
Lies the Island of Might Have Been.
It is walled about by the Cliffs of Remorse,
Which are lashed by the Waves of Sin.

We who live in this flowery world,
And have ever hope before,
Know not of those hearts in anguish rung
Who dwell there evermore;

Whose each sad smile tells a woeful tale
Of years that were spent in vain,
In the empty search of the joys of life,
And woke from the dream in pain.

Not a murmur tells of their poignant grief,
Only a weary smile;
But they long to flit on the Wings of Death
Away from the sunless isle.

'Way out in the Sea of Vain Regret,
On the Island of Might Have Been,
That is walled about by the Cliffs of Remorse,
Which are lashed by the Waves of Sin.
—Clarence Richard Lindner, in Leslie's Weekly.

GOATS TO FIGHT FOREST FIRES.

WHO ever heard of goats acting as firemen? It is true that some of them learn to climb ladders, but one can scarcely imagine a caprine hollow-horned ruminant donning helmet and boots, and, bleating, making a bee-line for the holocaust. Yet goats are to act as firemen for Uncle Sam—3,000 angora goats. They are not going to replace any of the fire forces anywhere, but are going right to the front in the forest and work for the salvation of trees. According to an announcement made by the forest service, 3,000 angora goats herded out on the brush-covered foothills of California are going to do some hard work for the government during the coming two years, beginning this spring. The experiment will be unique both as a stock-raising proposition and as an engineering and tree-culture problem. The little white animals, whose long wool is of such great value, are going to be put to no less a task than constructing mile after mile of

fire line through the bushy chaparral growth in the national forests, saving much labor by the United States forest service engineers and making way for forestation by merchantable trees. Not the least important feature of the experiment, which for the first two years will be confined to the Lassen forest, is the fact that the task will be performed during the regular grazing by the goats, which will not even realize they are doing a valuable work.

The scheme is to run fire lines parallel with the contour of the slopes by cutting trails about 80 rods apart. These trails are to serve as guides for the angoras. They will graze in each direction from the trails, killing, it is estimated, a strip of brush about 300 yards wide. The wide lanes cut out and grazed by the goats will serve as ideal fire lines in protecting the forest-covered lands lying beyond and around the chaparral areas, and also make a place for reproduction of merchantable trees. The proposed work of the angora goats may finally solve the chaparral problem, which has been troublesome in the State of California for many years. The bushy chaparral growth chokes out seedlings of valuable commercial trees, which may get a start, and when dry is one of the worst kind of fire risks. Often a small blaze which starts in it gains such headway in a few minutes as to travel hundreds of yards and lick into valuable stands of merchantable timber.

The protection to be afforded by the goat-built fire lanes, therefore, may at last bring relief to the State, which in the past has had its full share of timber loss through destructive forest fires. At the same time, a large amount of chaparral will be killed out to make room for the growth of good trees that produce lumber. If proven successful at the end of two years the work will be carried to national forests in other sections where chaparral has choked out good forest trees and created a dangerous fire risk.—*The Pathfinder*.

IN these latter days there seems to be a variety of opinions as to what constitutes sane discipline in a school. Indulgent parents seem violently opposed to anything savoring of rigidity, preferring, apparently, that their children should lack respect for constituted authority rather than have them acquire this respect through anything approaching severity. The trouble is that every parent thinks his child a model of excellence. There are children of excellent parents who often need positive restraint and, if the school doesn't give it, they will suffer by the omission. Some colts, if driven with a stiff bit, become tractable and, therefore, valuable. Likewise, some boys need to realize what authority is if they are ever to become worthy citizens. There is such a thing as carrying soft sentimentality too far in the school, just as this same thing is true in the home.—*Ohio Educational Monthly*.

THE HOME WORLD

HOW TO EDUCATE CHILDREN BETWEEN THE AGES OF THREE AND TWELVE AT HOME

J. H. HARNLY

In Four Parts. Part Two.

THAT every danger may be averted, parents must personally direct the training of their children. It is, indeed, doubtful if they are justified in delegating to others any of the responsibilities that fatherhood and motherhood impose. The public school and the church can be made valuable adjuncts in the intellectual and religious discipline of children, but in a well regulated home these must be given incidental prominence only. Let the scepter remain in the hand that rocks the cradle if you would attain best results.

Wesley has been christened "The Father of Methodism," but this is an absurdity, for Wesley himself owed his great religious fervor to the early exacting training of a methodical mother. Susanna Wesley was the mother of nineteen children and found ample time to personally direct the intellectual and religious culture of each individual child, scorning to shift the least part of this responsibility upon the church and state.

Since home training produced such marvelous results in the eighteenth century, why not resort to some of the same kind on the morning of the twentieth, and save the church from a blighting lethargy?

A century ago the palladium of our government was the sovereign individuality of its citizenship, but today our citizenship has resolved itself into classes, severally striving for sovereignty. Then the church was fast recovering from civil prostitution and placed greatest emphasis on individual regeneration; but now she is again advocating the Christianizing of society as a whole. A political creed never produced Lincoln, and an ecclesiastical creed certainly never fostered Wesley, but a sanctified motherhood did.

The illustrious Garfield immortalized his inauguration to these United States when, after having kissed

the Bible, he turned and tenderly embraced his mother. This is too sublime a spectacle of the vital element in our republic to be lost to the American youth. Let it be perpetuated on canvas, and, with other celebrated historic scenes, decorate the walls of the American home—the bulwark of our free institutions. Furthermore, this country will not have discharged its highest obligation until it secures to every mother an hearthstone inviolate, where she may dedicate her children to noble purposes and instil those principles of truth and right living that will shield the child from all contaminating influences.

A stream cannot rise above its source unless gravitation is overcome by some ulterior force; moreover, a child is not likely to surmount its hereditary tendencies unless placed under superior tutors; hence the importance of giving the child the best possible start in life by raising parental competency to the highest limit. Prospective parents should acquaint themselves with the grave responsibility enjoined by ushering a soul into the world, remembering that its weal or woe is largely dependent upon prenatal impulses—influences brought to bear on the newly-developing life, soon to become the citadel of an angelic or demoniac spirit. God save the offspring of sensual cohabitation! Human aid is of little avail.

The fowls of the air build nests that they may rear their young. How instinctively they avoid miscegenation! How wisely they take every care, and provide against every danger, in locating and furnishing their nest before the mother bird deposits her eggs—not one is lost. There are as many mouths supplied with sustenance as there were speckled eggs, and when summer is waning they have wholly performed their mission, making the world more cheerful with their quota of new songsters. Likewise, the young man and woman of noble purpose should instinctively repulse

those of doubtful character, and when an opportune alliance is made, take every precaution in establishing a home and providing for its maintenance.

Ideal home environments must be sought for and created with the utmost care, and when once found and established, should be reluctantly abandoned. Frequent change of residence creates a roving disposition in the children, and otherwise interferes with their right culture and proper choice of associates. To insure permanency a family should own its home, as this would also stimulate the desire to add improvements and keep up repairs—a lesson in enterprise to the children.

A home in the country is preferable to one in the city, as it affords the best safeguard against evil associations, and ready employment is always at hand—an absolute essential in rearing a family. Washington, Lincoln, Garfield, Clay, Webster and Greeley, together with a host that cannot be numbered of eminent statesmen, professional and business men, were farmer boys, and were early trained to physical as well as mental labor.

Having provided the best possible home environment for the child, we are in a favorable condition for its more specific training. Although the foregoing has in part only an indirect bearing on the subject, the ideas advanced are quite as pertinent as the tried theories now to be advocated applying directly on the question.

Wherever heredity has failed, or come short, culture must now come to the rescue and, if possible, supply the deficiency. If the temperament is bad, special precaution must be taken not to provoke the child, and tantalizing playmates and situations avoided until careful education results in a normal disposition.

Certainly no one can have a more wholesome interest in the education of a child than its mother, and but few sacrifices should be considered too great, lest her obligations to her family be encroached upon and the care of the children left almost exclusively to the discretion of employes. The more children see of their mother the better. The services of a governess may be valuable, but the personal direction of the education of a child by a faithful and accomplished mother is invaluable. Let the roll of the great men of history be called, and compare those who have enjoyed the luxury of a special governess with those who were solely dependent upon their mothers for their early training. Where wealth and aristocracy have produced one benefactor of the race, the peasantry have produced one hundred, and it must needs always be thus. So let the mother who must forego a governess for her children be encouraged and undertake the happy task of child training herself.

The public kindergarten is not above criticism, because it takes innocent children from pure homes and subjects them to innumerable temptations, at a time

when their characters are not sufficiently developed to ward off evil. It is not the kindergarten methods we object to but the public element involved; hence the importance of providing child education in the home, for, as already intimated, the graded schools even are objectionable on this score, although both serve an invaluable purpose in educating the children of incompetent parents.

THE LONELY LITTLE BOY.

The little boy whom you forget
To play with when the days are fair,
The child whose hopes are sinless yet,
Who kneels to lisp his evening prayer,
Will soon leave off his childish ways
And learn the things that men must learn;
Why do you waste the precious days
That never, never can return?

You never lead him by the hand,
Nor make his little joys your own;
Ambition sends you her command,
And he is left to play alone;
He never climbs upon your knee
Delighted at the long day's end,
To find that you have time to be
His fond and sympathetic friend.

You never can afford to waste
A precious hour amusing him;
The prizes after which you haste
Are always far away and dim;
You must be ever pressing on,
Forgetting while you strive and plan,
How soon his childhood will be gone,
How quickly he will be a man.

You never pause with him to hear
The breeze that sings among the reeds,
You have no time to give the dear,
Sweet sympathy for which he pleads;
You never rush with him in wild
Pursuit of fairies through the glen,
Yourself again a careless child,
Freed from the cares that worry men.

Have you no treasured memories
Of one who gladly played with you,
Before you had been robbed of ease,
And when your cares were small and few?
Ah, will you rob him of the joy
Of looking back along the years
When he has ceased to be a boy
And Duty's call rings in his ears?

The little boy whom you forget
To play with when the days are fair,
The child whose thoughts are sinless yet,
Who kneels to lisp his evening prayer,
Will soon leave off his childish ways,
And you will sit somewhere alone
Regretting precious wasted days
And joys that might have been your own.

—S. E. Kiser.

"DRINK less, breathe more, eat less, chew more, clothe less, bathe more, ride less, walk more, worry less, work more, write less, read more, preach less, practice more."

THOSE WHO HAVE AN ACID STOMACH.

THE following are a few principles that it will be well for you to bear in mind: Meats and meat extracts and meat soups were found by Pawlow, the great Russian investigator, to be the most powerful gastric stimulants, hence they are not advisable in cases of excess of acid. As meat uses up for the time being a large amount of acid, it is often the most *comfortable* food for a short time after meals, but in the end it aggravates the difficulty.

Starchy food calls out but very little gastric juice but if it is not well cooked, so that it can be quickly digested, it will remain in the stomach a long time and irritate it. For this reason all the breads, in fact whatever is made from grains, should be thoroughly done, and for this reason it is best to discard half-cooked mushes, doughy bread, leathery pie crusts, rich cakes, etc.

Fats have a tendency to hinder the pouring out of gastric juice, and for that reason they are serviceable in case of hyperacidity. Fried fat, however, is difficult to digest, hence avoid fried foods. Butter, cream, olive oil and ripe olives are wholesome forms of fat.

Food should be thoroughly masticated, for then it does not stay long in the stomach to make trouble. In general the variety should be limited to three, four or at most five articles of food. Gradually accustom yourself to very few things. That is the way our forefathers lived who had excellent health.

It is well to avoid very highly flavored soups and desserts, also the irritating spices and condiments as far as possible. It is important in cases of hyperacidity not to miss meals and thus become unusually hungry, and above all things, not to eat when under great mental strain, as it nearly always produces an excessive amount of gastric juice.

It is extremely difficult to furnish a practical working bill of fare without a careful study of the adaptations of each food to the individual. Taste, habits, personal inclinations, have to be taken into consideration. However, a few ideas are given which must be simply accepted as suggestive. The dietary does not need to be confined exclusively to this list. A few articles selected from among the following will be very likely to agree well for breakfast:

— Corn flakes and cream, rice flakes and cream, boiled rice and cream, granola and cream, shredded wheat biscuit or tricut and cream, gluten mush made with milk or cream occasionally. Potatoes prepared in any form desired, except fried. Cream toast, poached egg on toast. Baked sweet apples, stewed prunes, pear or blueberry sauce, apple sauce provided not too sour, sweet oranges, stewed raisins, fig marmalade. Cereal coffee or good buttermilk, if it can be obtained.

For dinner: Cream pea, creamed rice, celery, corn or vegetable oyster soups, hot malted nuts, ripe olives,

protose prepared in any form that is most palatable, used moderately. Fresh cottage cheese, potatoes, roasted pine nuts, any vegetables that are not very full of woody matter, rejecting the woody pulp; granose biscuit, rice biscuit, toast, ordinary bread thoroughly well done, not doughy or sticky. Tapioca custard, cream rice pudding, rice custard pudding, and any of the fruits suggested for breakfast.

When a third meal is eaten it can easily be arranged from these. When traveling one can get almost anywhere shredded wheat biscuits and cream, rice and cream, bread and butter, and potatoes. These simple dishes are very nourishing, are easily digested and generally agree well with those who have a tendency to hyperacidity. Persevere along simple lines, at the same time continually consider your own individual factor. If you masticate your food thoroughly your appetite will soon become a pretty fair judge of what is good for you.—*David Paulson, M. D., Hinsdale Sanitarium, Hinsdale, Ill.*

LACK OF POLITENESS IN CHILDREN.

I HAVE recently met with so many elderly people who are deploring the lack of good breeding in the children of today that it made me think a word on this subject might not come amiss. Where are the sweet, modest, well-mannered children we formerly took such delight in? Where do these rude, loud, impudent, children come from? They come from the homes where the mothers are incompetent to train their children, and this lack of gentility is a direct reflection upon the mothers of the present generation. They, and all those who have the care of children, are to blame for the disagreeable nuisances that we encounter on every hand. I have always been a great lover of children, and still have many friends and playfellows among the wee ones, but as the years roll by the lovable are more and more scarce, says a writer in the *California Voice*.

A dear, noble gentleman with a great big warm heart told me, a week or two ago, of a circumstance that had occurred just previously. As he was passing a large school at the hour for dismissal he stopped to watch the apparently well disciplined children as they came marching from the schoolroom, keeping perfect step and order until the gate was reached, when a great transformation occurred. The line broke, yells and catcalls rent the air, the gentleman in question, who had stood in loving admiration, became the object of their derision and a target for their marksmanship. I write this indignantly and with the cry of shame not so much upon these children as upon their mothers, for my friend is one whose appearance and address command deference everywhere, and any child or adult may well feel proud of his notice.

Prof. E. S. Morse, who lived for a number of years in Japan, says that Japanese children of whatever

rank or station are uniformly polite, and that a man can make his home in any part of a great city with the assurance that his children will not be corrupted by the bad manners of their associates; that his fruit and flowers would not be stolen, his dogs would not be stoned, or his fences be defaced.

The late Lafcadio Hearn, a well-known writer of magazine articles, recently living in Japan announced his intention of making that country his future home. He had the misfortune of being deformed, and when in America was so insulted by the children of our land that living here held no pleasures for him. He went to Japan and was so kindly and politely treated by the youth of that land that he decided to stay. The mothers of Japan have given a lesson to the mothers of America. May they learn the lesson and learn it well.—*Christian Safeguard*.

SMOTHERED STEAK.

HAVE a two-pound steak cut from the rump, about one and one-half inches thick, and brown on both sides in a skillet in a tablespoonful of butter or melted suet, then put in a baking pan, cover and keep warm while frying two sliced onions and a small bunch of parsley to a light brown, when lay on top of the steak, pour over the fat in which they were fried, add two stalks of celery cut in small pieces, a few whole cloves (which run in the steak), a small chopped pickled cucumber and a shake of salt and pepper. Pour in two cupfuls of boiling water, cover closely and bake for an hour and a half, then add a chopped spring turnip and carrot, and pour in more water if the steak seems dry. Cover and bake for another half hour, then place on a hot platter, arranging the vegetables in mounds on top. Thicken the gravy with a little flour and pour over all.—*Selected*.

POTATO NOODLES—Two cupfuls of left-over seasoned mashed potatoes mixed with one egg; add sufficient flour to roll out. Cut into strips three inches long and one inch wide. Drop them into boiling salt water; boil up once, then drain them and fry brown in deep, hot grease (like doughnuts).

The Children's Corner

WONDERFUL THINGS.

Isn't it wonderful, when you think,
How the creeping grasses grow,
High on the mountain's rocky brink,
In the valleys down below?
A common thing is a grass-blade small,
Crushed by the feet that pass—
But all the dwarfs and giants tall,
Working till Doomsday-shadows fall,
Can't make a blade of grass.

Isn't it wonderful, when you think,
How a little seed asleep,
Out of the earth new life will drink,
And carefully upward creep?—
A seed, we say, is a simple thing,
The germ of a flower or weed—
But all earth's workmen, laboring,
With all the help that wealth could bring,
Never could make a seed.

Isn't it wonderful, when you think,
How the wild bird sings his song,
Weaving melodies, link by link,
The whole sweet summer long?
Commonplace is a bird, away,
Everywhere seen and heard—
But all the engines of earth, I say,
Working on till Judgment Day,
Never could make a bird.

—The Century Path.

THE BOY AND THE BIRD.

THE other afternoon Philip was throwing stones at a catbird. Now, Phillie is one of the kindest-hearted boys in the world, but the hunting spirit seized him for the moment, and to his grief and surprise—for he is anything but “a good shot”—the poor bird fell to the ground. For an hour afterward Phillie held the little creature in his hands, and tried his best, I suppose, to bring back life to the pretty feathers; but it was too late. At bedtime my little friend felt very badly.

“I do wish that a catbird had nine lives!” he sobbed.

“So do I,” I told him. “You see, Phillie, these ‘Little Brothers’ of Saint Francis have but one short life. When they die that is the end of them, so far as we know. You and I have souls, and if we try our best we will go, after our death, into a much happier and pleasanter place. Don't you believe, then, that we ought to be careful not to shorten the lives of birds and beasts, unless we have an *extraordinarily* good reason? And the catbird is a wonderful fellow—indeed, he is the mocking bird of the North.”

Of course, Phillie did not mean to kill the bird; but he made a mistake in throwing the stones. I once killed a bluebird with an air rifle that was famous for not shooting straight, and I have never since taken the life of a songster.

The millinery men are justly responsible for much of the sickening slaughter of birds; but I know of boys who haven't Phillie's kind heart—boys who actually boast of the number and kind of song birds that they have killed. There is something serious the matter with a really cruel boy. He needs to be watched. Not so dear little Phillie, who always frees the swallows that he captures in the big library, and who knows a great deal about live birds, for he has two remarkably bright eyes. You see, Phillie is not my own boy, so I don't feel at all guilty in praising him.—*Vincent Van Marter Beede, in Sunday School Advocate*.

THE QUIET HOUR

PSALM 144: 12. (Authorized Version.)

NANNIE BLAIN UNDERHILL.

"A diamond in the rough, is a diamond, sure enough;"
But such stones are trampled beneath our feet,
Are buried and hidden from sight;
Till, chiselled and cleansed, sharp friction they meet,
To make them shine clear, true and bright.

The lusterless stones are of little worth—
They are thrown away at first sight;
But the pebbles dug from the depths of earth
And polished, will sparkle at night.

The Master's touch makes the beauty complete—
(God's palace is made of live stones:)
The study and toil, the discipline mete—
His touch makes most beautiful souls.

Then let us tread humbly the narrow way—
Our Savior climbed the steep ascent,
To purchase a home in the land of day—
For us! That's what the thorn crown meant.

KEEP THY HEART.

R. A. NEDROW.

WHAT a *wonderful* organ is the human heart. It is indeed the seat of life, the seat of our desires, of our affections, and our love. It is certainly the *busiest* organ of the entire being. Life, itself, depends upon its proper action. When it becomes diseased so as to prevent it from performing its function properly, there is a derangement of the entire system.

Many people meet death very suddenly,—the result of a common ailment, known as "*heart disease*."

A short time ago a man of our community died of heart trouble. Earlier in life he received an injury in the chest. During the process of healing a cartilaginous growth formed, which crowded the heart, thus interfering with its action. Oh, how many are there whose hearts are so contaminated with jealousy, envy, deceit and various other forms of worldiness, that all chastity and goodness are crowded out. Yes, they have heart trouble of the worst type,—the result of which is far more serious than physical death. Their hearts are not right in the sight of God.

Dear reader, have you ever consulted the "Great Physician" in regard to *your* heart? Perhaps you are needing a tonic to stimulate its action.

You know that the heart of man is deceitful above *all things*, and *desperately wicked*. The All-wise Creator, knowing this, desires to lend us aid, for he

has said, "Son, give me thine heart." He will help us to keep it free from the pollutions of sin.

I am no doctor, but I find that prayer and Christian devotion are excellent heart tonics.

Heart disease is the most fatal of *all* diseases. Therefore, "keep thy heart with all diligence, for out of it are the issues of life."

Jones Mills, Pa.

WAIT AND SEE.

"I NEVER let bairns (children) or fools see my pictures until they are done," said a Scotch artist to me once, quoting a familiar proverb of his countrymen. We all are but "bairns" in God's sight, and we sadly play the fool in regard to his providential dealings. As no artist is willing to have a judgment pronounced on painting or statue until the work is completed, so our heavenly Teacher bids us possess our souls in patience. "What I do thou knowest not *now*, but thou shalt know hereafter." We must wait and see. This world is but the preparatory school, in which character is on the easel or under the chisel; exhibition-day will come in another world.

God only lets us see his providences "in part," and then we only see them as through a glass, darkly. Why the pleasantest room in our house is turned into a hospital; why that coffin was carried, like a spectre, up our stairway; why the pillow in that empty crib is unpressed today; why that income on which so many mouths depended is dried up; why this and that staff were broken—our poor, blind, aching hearts cannot understand.

God keeps his own secrets; all the answer he vouchsafes now is, "All things work together *for good* to them that love me." Impatient and rebellious as we may be now, we cannot displace God's hand from the canvas. There is no help for us but to wait until the picture is completed. Some of the colors he is laying into our lives are frightfully sombre, but by and by, in the revealing light of the last day, they may be only a background on which faith and submissive trust and victorious strength will stand out in hues of golden glory. Let us wait and see.

It is not from the assaults of open infidelity, or from the skeptical pages of the Renans or Strauses, or Spencers, that the hardest strain on our faith cometh. It is from dark and mysterious permission

of Providence that we are oftenest in danger of making shipwreck of Faith. We not only turn cowards in the dark, but, like fools, we doubt whether there will ever be daylight. At such times it is good to bring in the lamp of that blessed passage of Psa. 30:5: "Weeping may endure for a night, but joy cometh in the morning." The original Hebrew is far more forcible; it literally reads: "In the night-time sorrow lodgeth, but at the day-dawn cometh shouting."

A great deal of our work in this world is night-work. Weary with rowing, we even get frightened by the apparition of the Master, and cry out. "It is a ghost!" until he reveals himself in the words, "It is I, be of good cheer; be not afraid." The history of every discovery of new truth, of every enterprise of benevolence, of every Christian reform, of almost every revival, is the history of long working, waiting and watching through seasons of discouragement.

. . . The lesson for every missionary, every pastor, every teacher, and every sorely tried child of God is in these heaven-taught words: "I wait for the Lord, and in his word do I hope; my soul waiteth for the Lord more than they that watch for the morning."

—*Dr. Cuyler.*

TABULATING SPIRITUAL RESULTS.

THE science of statistics is not by any means an exact science, though for that matter no science can be said to be absolutely exact. One should always make allowance for an elusive something which cannot be analyzed or weighed or even perceived. But if anything were wanted to bring statistics into contempt it is the effort recently made—doubtless with good enough intent, but with a woeful lack of judgment, not to say of humor—to estimate the cost of soul-saving in different denominations of Christians. The method makes use of no intricate mathematics. The number of additions to the membership is the divisor, the cost in dollars for running the plant for one year is the dividend, the quotient is the cost per soul. A representative of the Salvation Army—an organization that is somewhat afflicted with the statistical habit—hit the nail on the head when he said: "You cannot put into figures the good we do." No, indeed. A church which shows for a year a decline may have made the greatest advance in its history, while another church with several hundred additions to its roll may have truly surrendered its right to be called a Christian church. To our daily litany we might well add the petition: "From the statistical habit, good Lord deliver us!"—*Northwestern Christian Advocate.*

AS YEARS ROLL ON.

THE poetry of all growing life consists in carrying an oldness into a newness, a past into a future, always. So only can our days possibly be bound "each to each by natural piety." I would not for the world think

that twenty years hence I should have ceased to see the things which I see now, and love them still. It would make life wearisome beyond expression if I thought that twenty years hence I should see them just as I see them now, and love them with no deeper love because of other visions of their loveliness. And so there comes this deep and simple rule for any man as he crosses the line dividing one period of his life from another, the same rule which he may use also as he passes through any critical occurrence of his life: Make it a time in which you shall realize your faith, and also in which you shall expect of your faith new and greater things. Take what you believe and are and hold it in your hand with new firmness as you go forward; but as you go, holding it, look on it with continual and confident expectation to see it open into something greater and truer.—*Phillips Brooks.*

EACH LONGING SATISFIED.

("He satisfieth the longing soul, and filleth the hungry soul with goodness." Psa. 107: 9.)

I longed for peace and quiet,
Confusion reigned without:
I would not be entangled
In all the strife and doubt.
But now there's nothing moves me
Nor makes my soul afraid:
I prove God keeps in perfect peace
That mind upon him stayed.

I longed for light, for guidance,—
I saw not where to go;
'Mid many paths around me
The right I longed to know.
His Word my Lord then gave me
As lamp from day to day:
Upon my path a light it sheds
And keeps me in the way.

I longed for love unchanging,—
A true friend close at hand,
Who both in joy and trial
Could feel and understand.
A voice then heard I, saying:
"I'm with thee all the days;
I love thee, yea, with lasting love,
And know and plan thy ways."

I longed for strength to make me
Victorious in the strife,
To meet the trying moments
With which each day is rife.
Then said again my Savior:
"Fear not, beloved," "be strong";
And with the words the strength he gave
To conquer fear and wrong.

I longed, my heart was longing,
But Christ its longing stilled;
He from his full abundance
Its emptiness has filled.
And yet he still continues
New blessings to bestow:
He makes my heart with gratitude
And joy to overflow.

—*Pearl Waggoner, in Lifeboat.*

ECHOES FROM EVERYWHERE

The Iowa House has passed the Senate bill which prohibits the sale of liquor on dining cars and the drinking of intoxicants on railway trains.

During March the diamond dealers in Maiden Lane imported \$3,353,407.97 worth of precious stones; an increase over March, 1908, of 800 per cent.

At Brantford, Ont., the Bell Memorial Association has acquired the former homestead of Prof. Alexander Graham Bell as a public park. A monument of Bell to cost \$25,000 will be unveiled in 1910.

The Agricultural Department at Washington has issued a free farmers' bulletin, No. 347, devoted to "The Repair of Farm Equipment." It says that farmers commonly make the mistake of not having proper tools to make repairs to their implements, harness, etc., and gives a list of proper tools for such purposes, with illustrations and the prices that are proper.

During March a new record was set on the Isthmus of Panama, 4,562,632 cubic yards being excavated, against 3,487,287 in March, 1908. Since May, 1904, when the United States took hold of the work, 69,963,435 cubic yards have been excavated. There remain to be excavated 104,703,160 cubic yards. At the present rate of excavation the canal should be completed in three years.

Ethan Allen Hitchcock, aged 74, Secretary of the Interior under Presidents McKinley and Roosevelt, died at Washington April 9. Mr. Hitchcock was born in Alabama, educated in Connecticut, and entered business in St. Louis. His work in the Interior Department is especially noted for the prosecution of numerous cases of fraud in the acquirement of public lands in the western States.

F. Marion Crawford, the novelist, died at Sorrento, Italy, April 9. Mr. Crawford was born in Italy in 1854. He was a highly educated man, Cambridge, Heidelberg, the University of Rome and our own Harvard contributing to the development of his intellectual powers. Mr. Crawford began the writing of novels in 1882 and in the time since then has written forty-four books and one play.

Theodore Roosevelt and King Victor Emmanuel met April 6 on the Italian battleship *Re Umberto* in Messina Harbor. The meeting was characterized by the utmost cordiality and the King took occasion to express the gratitude of himself and the Italian people for the generous assistance of America to the earthquake sufferers. At the close of the interview Mr. Roosevelt went ashore and inspected the ruins of the city, the desolation of which moved him strongly. He then boarded the steamer *Admiral*, which just at sunset hoisted her anchors and proceeded on her way to Mombasa.

Algernon Charles Swinburne, one of England's foremost poets, died at his home, "The Pines," at Putney, of pneumonia April 10. He had been ill for several weeks. Swinburne was a native of London and was 72 years of age. For nearly 50 years he had been prominent in the English world of letters, his first noteworthy contribution being made in 1861, when his "Queen Mother" was published. His poetical works fill a number of volumes.

The prairie dog has become such a pest in the national forests of Arizona and New Mexico, that the United States Forest Service has decided to carry out an active campaign for its extermination. Poisons are used such as strychnine, cyanide of potassium, anise oil, and molasses, the poison being smeared over wheat. The riders carry the wheat in a tin pail supported by a gunny sack slung across the shoulder. One hand is free for the reins. With the other the rider uses a teaspoon to measure out the poison.

A special train on the New York Central system recently made a run from New York to Chicago which is worthy of being placed on record. Leaving New York at midnight, eastern time, or eleven o'clock central time, Buffalo was reached at 6:39 in the morning, Cleveland at 9:27, Toledo at 11:23, Elkhart at 1:23, and Chicago at 3:07, the total distance of 965 miles being covered in 967 minutes. The train consisted of three empty cars and one private car, and six changes of engines were made on the trip.

Mme. Helena Modjeska, the world famous tragedienne, died at her home island near Los Angeles, April 8. Her husband, Count Charles Bozenta Chaplowski, and her son, Ralph Modjeska of Chicago, were at her bedside when the end came. By her will she leaves her estate, valued at \$120,000, to her immediate relatives, while her husband gets her magnificent stage library. The body will be temporarily placed in a vault in Los Angeles, pending arrangements for its transfer to her native land, Poland, for burial.

The liquor interests will appeal to union labor to aid them in their fight against the rapidly growing power of the anti-saloon forces. The movement was launched in Ohio recently, when leaders of State and national organizations of the liquor men told representatives of several important unions that their very existence depended upon the maintenance of the liquor traffic. Among the liquor dealers are Timothy McDonough, president of the National Saloonkeepers' Association, and Otto Remer, Cincinnati attorney for the Ohio Brewers' Association. The appeal is directed particularly to the cooks, waiters and barkeepers' union, but all branches of union labor are asked to help check the encroachments of the anti-saloon men upon individual liberty. The plan of campaign is the recruiting of members of all labor unions to the Personal Liberty league.

Joseph Russell Jones, pioneer traction magnate of Chicago, close friend and adviser of Abraham Lincoln and Ulysses S. Grant, prominent as a diplomat and widely known in business and social circles, died suddenly at his home in Chicago April 11 at the age of 86. Death was due to acute bronchitis. Mr. Jones became a warm friend of General Grant while the latter lived at Galena and also worked vigorously for the election of Abraham Lincoln in 1860. When the former became President Mr. Jones was made minister to Belgium in which position he rendered efficient service.

With only 16 votes against and 39 in its favor, the House anti-cigarette bill passed the Minnesota Senate April 6. It will have to go back to the House, however, as the Senate committee re-drafted the bill and amended it so that it will not become effective until August 1, whereas the original bill was to go into effect at once. No trouble is anticipated, however, in passing the amended bill in the House, where a strong majority voted for the original bill. While Governor Johnson declines to indicate his action, it is thought he will sign the bill. The bill prohibits the sale or giving away of cigarettes or the paper used in making them and prohibits the keeping of the cigarettes and makings for sale.

In Japan there is a paper made which is impervious to water, being made of bamboo fibers and eucalyptus mixed with the fibers of the gampi and some other shrubs. The fibers are first torn apart, made dry, cleaned and scraped, boiled in weak lye, and thoroughly washed in water, after which they are beaten and then mixed with certain roots made into a viscous state. A solution containing resin, caoutchouc, and camphor is also added. A sort of pulp is thus formed and then made into sheets which are run through a calendering machine heated to various temperatures. The result is that a paper is produced which is exceedingly tough, light, and which may be washed. The Japanese use it for leather imitations and India rubber.

The eightieth birthday of William Booth, founder of the Salvation Army, April 10, was celebrated by Salvationists throughout the world as one of the most significant milestones in the history of the organization. On this date the first steps were taken toward a realization of General Booth's recently announced plan for a world-wide university of humanity. The plan, as outlined by the aged commander in chief, involves the expenditure of about \$5,000,000 for institutions of learning at various central points throughout the world. The first \$2,000,000 will be used for the building of two parent universities in London and New York and for smaller branches in the cities of America, Europe and Asia, Chicago being included prominently in the list. The remaining \$3,000,000 will be set aside as an endowment fund.

Statistics gathered by the Indiana bureau of statistics show that marriages are falling off in Indiana and divorces are increasing. In the year 1908 there were 2,814 fewer marriages than in the previous year, and at the same time there were 120 more divorces granted. For a number of years the divorces ranged around 10 per cent of the number of marriages, but they have increased till they are now more than one-sixth. In former years, too, the divorces granted to wives were in excess of those granted to husbands, but in 1908 the rule was reversed and the greater number were granted on complaints of the husbands.

An investigation conducted by the Des Moines Tubercular Association has resulted in the discovery that six out of every ten children examined in Des Moines are infected with tuberculosis. The majority of the cases are incipient, but in many the disease has progressed far. The association is considering establishing a children's tubercular camp this summer. It is proposed to isolate infected children to prevent further spread of the disease. Miss Ida Wolverton, who is conducting the examination, said she was appalled at the number of cases of tuberculosis in Des Moines. In one block she found twenty cases among children.

The United States Senate has established a new committee, whose work should be of the highest advantage to the country. Its field is that of curtailing appropriations for the expenses of the Government so as to prevent a deficit in the treasury. In carrying this out it will supervise all appropriation bills. It will be practically a committee of comptrollers, who will examine into the merit of every proposed appropriation. The results of unchecked spending the past three years do not need arguing. The efforts now imperative to get revenues in the tariff and taxation bill tell the situation in cold figures. It is the duty of Congress to prevent the continuance of such demands. And the way to cut them off is to stop the wide-open expense.

Director Newell of the reclamation service has been making extended investigations in Hawaii to see what are the chances of reclaiming much of the land there. He thinks that more than 100,000 acres of land which are now useless may be reclaimed, and if so, he thinks that 5,000 farms of 20 acres each could be furnished to homesteaders, thus providing for a population of some 20,000 persons. In recommending a systematic examination of the water resources of Hawaii he says: "There is probably no part of the United States where in as small an area there is as great a diversity in the quantity of water and its availability as in Hawaii. At one point the annual rainfall may be more than 300 inches in depth; only a few miles distant extreme aridity prevails. Even with the heavy rainfall on the mountain slopes there are relatively few rivers. Much of the water sinks into the porous lava."

Some scientists who have been making investigations into the part played in the matter of illumination by light and dark walls have come to the conclusion that the dark walls are better fitted for good illumination than the light. In a room where the walls are dark and where the source of light is entirely behind the reader's field of vision, a person who reads is impressed with the idea that the room is excellently well illuminated; but if now another light is brought into the room and placed within the field of his vision, though not shining on the paper he is reading, the pupils of his eyes will contract, less light will enter them from the paper he reads, and the reader will be impressed with the idea that the illumination has been reduced and the paper is becoming darker. These scientists say that the experiments show that if the walls are light colored the efficiency of the illumination may actually be diminished.

Among the Magazines

ABNORMAL REGARD FOR ANIMALS.

That love of animals is often carried to a degree where it becomes a symptom of mental disorder, is asserted by Dr. Charles L. Dana, the eminent nerve specialist, in *The Medical Record* (New York, March 6). To this "modern malady," as he calls it, he gives the name of "zoophil-psychosis," and he classes it as an "obsessive psychosis" or "psychasthenia"—a type of morbid mental activity that is peculiarly characteristic of modern civilization. This condition of the mind produces mental disorder without loss of control, so that it is not "insanity" in the usual significance of the word. Says Dr. Dana:

"It is produced by bad methods of education and training, acting on minds very sensitive to suggestions and impressions from without and within; minds lacking in power to handle the problems of life, and to see things in their right proportion. Modern activities are too strenuous for this kind of mental organism, which is meant for a life of simplicity, moderation, and restraint. The present popular 'absorbent' method of education, which lets the mind follow its interests and take the line of least resistance, is a potent factor in the pathogenesis. For through it the power of inhibition becomes weakened or lost; and the mental life is approximated to the conditions of dreaming."

The zoophil-psychosis, he adds, is characterized by tormenting ideas and worrying fears, but it has underlying it a morbid affective state toward certain persons and animals. This anomaly of the emotions is not usually referred to as part of ordinary types of this class of disorders; but he regards it as a most important feature; and thinks it may even exist as the dominant thing in the psychosis.

After describing some typical cases of this malady—the French woman who lost her mind because her cat had died of cancer; the girl obsessed with remorse because she had given away her cat; the young man who did not dare to go about for fear of seeing animals suffer; the woman who neglected her domestic duties to keep a cat-hospital—Dr. Dana goes on to make some observations about this general attitude of mind. We have come to regard animals differently, he tells us, in the past hundred years; we breed them more carefully, train them better, kill them less ruthlessly, and are more concerned for their welfare. But along with these advances there has come a tendency to regard the animal mind as of the human type, which is not justified by the facts. The "zoophil-psychosis" is an abnormal development of this feeling. Says Dr. Dana:

"The psychosis is really the expression of a selfish and weak nature. A very kind-hearted person, for example, may be also very indolent and very selfish—the combination is not uncommon. Now, it is much easier to pet a dog or nurse a kitten than to tell the exact truth, or, speaking more concretely, to nurse the sick; provide

thoughtfully for the poor; or keep watch over the temper and make a household comfortable. Thus the kindly feelings of the indolent and unintelligent often take this line of least resistance; and then the feelings and interests grow, until the care for the pets vastly exceeds that in any other unselfish work. The dog is plump and over-cared for; and the cat is more happy than the husband. As Janet says: 'It is easier to love a cat than a man. Its nature is more simple; its demands more limited; its responses are definite.' . . .

"It happens that many people can not nowadays go out into a city's streets and not be distressed continually at the sight of tired, overworked, and badly driven horses; or over some very thin-looking and ungroomed dogs. They are so eager to observe the unhappy horse that they do not see the human suffering. I confess that, after twenty years of experience with cab-driving in this city, I have grown sympathetic to the driver more than to the horse, for on the whole the driver is good to his horse and has a harder lot.

"It having been my lot to look after the human sick, I feel that their needs are immensely greater than those of the dog, because their capacity for suffering is so immensely greater, and the suffering of one human being involves a group of others; thus the sick or invalid mother cripples a whole household and her death sends a whole group into mourning.

"The animal, being dumb, is helpless, but so is the baby; and so practically are the sick poor, while the defective child is vastly more the slave of circumstance than the dog or cat, which have chances everywhere.

"This all seems very commonplace, but it has its application. I plead for sick humanity, and against the excesses in such sentiment for animals as leads to selfishness and injustice and the development of more psychopathic states. There is growing up an enormous mass of artificially cultivated tenderness toward a supposititious suffering. There will come next tears over the suffering of a faded flower, and sorrow over the unquenched thirst of the withering plant.

"This lack of proportion in the kindly sentiment is harmless enough generally, but it develops by mutual encouragement among the unstable and by self-indulgence, until the individual becomes the victim of a psychosis and a source of distress to self and friends, or demoralization to family and of serious social injustice."—*Literary Digest*.

HOW SOUTHERN UPLANDS HAVE SUFFERED FROM SOIL EROSION.

A yearly loss of many million dollars which need never take place; a loss, not of one year, like that occasioned by a great fire, but one which has occurred year after year without interruption for decades; which in its aggregate, since the Civil War, nearly equals the national

debt,—this is the toll yearly exacted by erosion from the farm soils of the upland South.

The profits of the farmer noiselessly flow from his sloping fields in muddy streams. In spite of the large amount of loss the tiller almost ignores it; he is, in fact, frequently ignorant of it. Yet this immense loss to the farmer represents only a portion of the actual damage; other industries suffer directly and indirectly from the same cause. On account of it there are in the dissected upland regions of the South more than 5,000,000 acres of land at one time cultivated and now idle. Many reasons have been assigned: the reduced fertility of the soils; the lure of the newer, more level, and more easily tilled lands of the West; economic changes which followed the Civil War; lack of labor and home markets. These have been secondary factors. Soil exhaustion and erosion are the fundamental causes. The exhausted "old fields," eroded, gullied, raw with deep wounds, and red as though stained with carnage, need only the touch of knowledge to become revived.

The causes which produced the old fields still operate to the ruin of much of the farming land. The decrease in the productivity of the farms of the eastern United States has been general. Nowhere has it been so evident as in the upland region of the South, where the loss is certainly not less than 30 per cent of the yield when the lands were fresh and new. Erosion is the basal problem which underlies soil exhaustion in this region, and so prevalent and so disastrous is it that it has become not only a serious local agricultural problem, but an important national problem as well, seriously affecting the value of many investments which have been made in the region. Its enormous extent has not been due entirely to poor cultural methods. The heavy rainfall, the physical characteristics of the region, the broken topography and the close-textured soils, and in some measure also the economic conditions have contributed to increase it. Where methods of cultivation suited to the local conditions have been used, not only has erosion decreased, but the yields have responded in a wonderful manner, indicating that the soils are not only not inferior to those of other sections, but that, on account of the ample rainfall and the long growing season, they have many distinct advantages over those other humid parts of the country.—From "The Waste from Soil Erosion in the South," by W. W. Ashe, in the American Review of Reviews for April.

BARRING OUT OPIUM.

A law passed by Congress during the winter session prohibits the importation of opium into this country except for medicinal purposes, and the Secretary of the Treasury has issued regulations in which it is declared that the term "opium" shall cover all forms of the drug.

This is convincing evidence that the United States Government sees danger in the possible spread of its habitual use in any of its forms, and the dispatches say in particular that smoking opium will be seized and destroyed as an illegal importation.

As Americans have been prominently identified with the efforts to relieve China from the opium evil the new law involves us in no unpleasant contradictions, as it might the United Kingdom, but it does express the deliberate judgment of an occidental nation against British theories concerning the harmlessness of opium—theories that are intended to help British trade. We do not mean to intimate that those theories are held by all Britons. They

are indignantly repudiated by many of them. But elaborate attempts have been made to bolster up a bad cause by expert and other opinion published to show that China really did not suffer so much by her importations from India. That any nation should be forced to admit the drug is, of course, an outrage which cannot be explained away by volumes of expert opinion and the most ingenious casuistry.—Chicago Record-Herald.

THE SPECULATOR WHO WINS.

Of the many popular delusions touching Wall Street and its people, none is more persistent or more dangerous to the outsider than the belief that from nothing great permanent fortunes have been made by shrewd and lucky speculation in prices. It isn't true. We differentiate here between speculation in prices only, and the kind of legitimate speculation which seeks to anticipate great economic changes. Legitimate speculation has its translation into prices, too, but it takes, first, original capital in some reasonable proportion to the profits expected, and, secondly, the treatment of exceptional opportunity with correct imagination. Its risks at best are very large. Among our Wall Street acquaintances are several hard-headed men who average to make \$25,000 a year by speculation. Not one of them has a capital of less than \$250,000. They make it earn about 10 per cent.

Take Blank, one of the ablest speculators we know. He has made a half million dollars during the past five years. Very handsome return, you say. Let us look at Blank: He was the chief accountant of one of the big railway systems when an uncle, dying, left him \$20,000. Mind you, he was an expert railway statistician, and an exceptionally able young man to boot. He knew his own road like a book, as well as some other things that only the directors were aware of. The stock of the system looked cheap to him and he used his \$20,000 to margin 4,000 shares. A bull market was beginning, and within a month or two Blank's capital had increased to \$60,000. He was content with a 10-point rise, though the stock advanced 10 points more. That was the first of Blank's deals. Twelve months later he won again. He thought that the stock of a certain western system was selling below its value, and set about an investigation to find the facts. He hired a first-class engineer and a retired traffic manager to travel from one end of that railroad to the other, and he himself analyzed the accounts. When all the reports were in, it seemed to him that the system was earning enough money to justify an increase of its dividend, and he plunged once more. He waited six months for his profit this time, and his investigation had cost him \$5,000. He made \$50,000. Good interest, you say; but think of Blank's special equipment for the game and the trouble he took to be right. You, Mr. Thinmarginist, after reading the Wall Street gossip in your daily paper, adventure your thousand or two thousand dollars and expect to double your money. Mark the difference.—John Parr, in the April Everybody's.

FIGHTING RED MITES.

IN former years, early in the season, I have soaked the roosts of my hen house with crude oil, and have had but little trouble with lice or mites. This year, however, has been an exception. Through care-

lessness, or laziness, before I was aware of it, my houses were literally alive with the little red pests.

First I tried my old remedy, kerosene, crude oil and crude carbolic acid. It did not seem to be of any benefit. I inquired of my poultry friends and found they were all in the same boat. I was advised to smoke the houses with sulphur. I did that and the lice only seemed to grow fat on that treatment. The next advice was to whitewash. I mixed a barrel of white-wash and with my spray pump I literally soaked all parts of the houses, removing roosts, drop boards and all movable things. The next morning the lice seemed to be just as thick on the roost as ever.

I then tried smoking again with sulphur with the addition of tobacco dust. The lice seemed to increase on the roosts. Next, with a torch I burned the roosts every morning, until the wood seemed to be all charred, and again they were just as thick as ever. I was advised to try boiling water, which I did a few mornings with the same results.

I began to get discouraged and bought some of the advertised lice killers. The directions reminded me of a bedbug killer I read about when a boy, viz.: A party not having had good results with the preparation complained to the agent. The agent said the way to use it was first to catch the bug and squeeze him until he opened his mouth, then drop some of the liquid into it and he would strangle.

The lice killers were about the same; catch the hen by the legs and thoroughly dust all parts of the hen with the powder.

Now, for a person with a few hens, that may be all right, but to catch and dust a hundred hens two or three times a week, to say the least, is rather trying to one's nerves and patience. Besides, I fail to see how that would affect the mites on the perches. I tried only a few, as it was too much like useless labor.

I looked in my poultry books and they said keep up a constant warfare, or something to that effect, but they didn't say what to fight with,—shot gun or arbitration. I concluded the authors didn't know. Then as an experiment I dusted a bunch of lice with a little tobacco dust and was surprised to see them all die immediately. I tried the *spray pump* and *white-wash* again, and while the perches were still wet I sprinkled them liberally with *tobacco dust* and the next morning the perches were all covered with lice,—all dead. So I think I have solved the problem of red lice, as I haven't seen one since.—*Farm Journal*.

Between Whiles

Brains.

Thomas L. Masson, in Lippincott's Magazine, thus wittily discourses upon a fruitful theme:

"Brains are common to all parts of the country, and

traces of them have even been discovered in summer at Lenox, Bar Harbor, and Newport.

"They are originally used to obtain money, but when money is obtained by them it usually takes their place.

"The quality of brains varies in different localities. Mixed with ginger, they become very valuable. With a spine, they are a necessity in every household.

"At one time they influenced literature, but the discovery was made that literature could do without them. Since then they have been almost exclusively devoted to advertising.

"Brains are employed in various enterprises. They make bridges, railroads, and other systems of transportation. They also create capital, and are used extensively in evading the law. They mix with water and gasoline, but are absorbed by alcohol.

"Brains are bought and sold in the open market. They may be traded in on the exchange in Washington and Albany or in other political centers. The best quality, however, are not traded in. Indeed, oftentimes they are not even heard of until long after they have passed away."

The Great Trouble.

"Look here, Bingerly; what do you mean by bolting our candidate for Governor?"

"Oh, he's no good!"

"What makes you think so? Isn't he standing squarely for the reforms demanded in our platform?"

"Yes, but the trouble about him is that he means what he says."

Often Happens.

"Who is the ragged old tramp going across the street?"

"That's Wimperly, the man who invented the double-plex perfecting press." "And who is that richly dressed gentleman who has just dropped a quarter in the tramp's hand?"

"That's Gougerly, the man who invented an ingenious little attachment to Wimperly's press."—The Commoner.

The Simple Life.

Passer-by—"See here, you are the man who struck me for a dime three days ago."

Beggar—"Yes, sir; but do me best, I can't keep me expenses any lower than 3½ cents a day."—Baltimore American.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

FOR SALE—494 acres in Mexico \$950. On Southern Pacific Railway in Sinaloa. The New California and Coming Country. Rich soil. Level. Bank and Government References. W. S. Hunt, Culiacan, Sinaloa, Mexico.

FARMS FOR SALE from \$40 to \$65 per acre. If you are in the market for a farm, write at once for a 1909 price list giving full description.—M. H. Miller, Bristol, Ind.

FOR SALE—Six fine lots on corner. Wilson Ave., Chambersburg, Pa., close to Willson female college, just outside city limits. Price, seven hundred dollars.—D. Hostetler, Chambersburg, Pa.

Life and Sermons of Elder James Quinter

BY MARY N. QUINTER.

Ever since the first edition of this book was exhausted there has been more or less call for a new edition. Thousands of the younger members of the church know little or nothing of this interesting leader and church worker.

We have already received over 100 advance orders and will publish a new edition of this book, provided we secure advance orders for 200 or 300 copies at \$1.00 each.

The book contains 426 pages, paper. The frontispiece is a splendid likeness of Elder Quinter and adds much to the appearance and value of the publication. The introduction is written by Eld. H. B. Brumbaugh.

Besides the interesting sketch of Bro. Quinter's life and labors there is a full account of the funeral services and numerous tributes of respect from his co-workers.

Part Two contains some forty of Brother Quinter's choicest sermons, delivered here and there throughout the Brotherhood.

If you desire to secure one of these books fill out the blank below and return to us today. If the book is not published by August 1 you are under no obligations at all. In any case you need not send us the \$1.00 until we notify you that the book is ready for delivery.

Cut here.

Date,
Brethren Publishing House, Elgin, Ill.

Sirs:—Please enter my order for..... copies of "Life and Sermons of Elder James Quinter" at \$1.00 per copy, provided you decide to issue the new edition before August, 1909. I will remit for same as soon as the book is ready for delivery.

CHRISTIAN WORKER'S MAGAZINE
10c a copy, \$1 a year. Practical Bible courses, helpful articles on Bible themes, methods of work, and deeper Christian life; reports from evangelists; practical and perplexing questions answered; world news at a glance; notes and questions, usable illustrations and outlines. Nothing like it in the country.
THE INSTITUTE TIE, 80 Institute Place, Chicago, Ill.

\$400 Prize Cup Won by Colfax County, N. M. In Competition with Entire Irrigated West

Miami Ranch

is located in the choicest part of Colfax county, New Mexico, and it was largely due to the products grown upon and adjacent to this ranch that Colfax County won this valuable cup at the Interstate Industrial Exhibit held at Albuquerque, N. M., last October. Every State was represented—products from land selling as high as \$1,000 an acre were shown—but Colfax County won by many points.

Many other prizes have been won by this section of the country. New Mexico wheat took first prize at the World's Fair in Chicago, while apples raised in an orchard directly adjacent to Miami Ranch won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 an acre.

Miami Ranch

offers you health and pleasures as well as wealth. It's situated in a rich, cheerful valley, surrounded by picturesque mountains. Elk, deer, bear and other large game are to be found in the mountains, while thousands of wild duck and geese inhabit the surrounding lakes. The Rayado River, which flows through this ranch, is noted throughout the central west for its trout fishing.

The rainfall is sufficient to insure big crops. But with the gigantic irrigation system recently installed, there is not the slightest chance of crop failure.

The climate is perfect, the air is pure, and the scenery beautiful. Excellent church privileges, a good school and pleasant neighbors are all to be found on Miami Ranch.

Write for a free copy of our booklet, "Westward Ho." It tells in detail all about Miami Ranch. Tells how and when you can get a round-trip ticket from Chicago for \$30, and from Kansas City for \$25, via the Atchison, Topeka & Santa Fe. Write at once and take your choice of the bargain offers which we are now making on both large and small farms.

Farmers Development Company, Springer, New Mexico

THE INGLENOOK

NO. 14. MAP OF THE ROMAN EMPIRE. Illustrating the Journeys of the Apostle Paul based on recent explorations of Ramsay, Sterrett and others. Size, 36 x 58 inches. Lithographed in Four Colors on Muslin of Superior Quality. Price, postpaid, \$1.00.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

FOR LAND SAKES

come to **Reedley, California** where you can raise all the oranges and lemons you want and make a fortune at the same time. Where snow is practically unknown. Located in the heart of the famous **San Joaquin Valley**, the home of the raisin, peach, pear, apple, fig, nuts and vegetables of all kinds. An extra fine place to go into the dairy or chicken business. Have fine **alfalfa** land and there are hundreds of tons raised here. Located on two railroads and on the banks of the Kings River and always in sight of the stately Sierra Nevada Mountains. Nearly perfect climate. Come to California where you don't freeze to death. We always use the Golden Rule in all our dealings and it will pay you big to see us before you locate. For further particulars address

The Saloon Under the Searchlight

By George R. Stuart.

A book of sixty-four pages. The best thing we have seen on this subject. A new book, dealing with an old question.

Simple, Practical and True.

"I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

Bright, Breezy—Not a Dull Line.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."—United Presbyterian.

Every minister of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village, town and city in the United States.

Organized Sunday School Work In America

1905-1908

We are now ready to fill orders for this Great Encyclopedia of Sunday School Information which every Pastor, Superintendent, Officer, Teacher and Friend of the Sunday School should have for reference; being the Official Report of the Twelfth International Sunday School Convention held at Louisville, Ky., June 18-23, 1908.

A book of 700 pages beautifully bound in red silk cloth stamped in gold and fully illustrated.

Price, one dollar per copy, Postpaid.

BRETHREN PUBLISHING HOUSE,
Elgin, Illinois.

The Sunday School Calendar

Issued annually. Enlarged and improved. Beautiful cover design containing reproduction of Hofmann's famous painting of the boy Jesus.

In addition to the International Daily Bible Readings, the calendar contains International Sunday-school lesson titles and references for every Sunday in the year, also the Golden Text for each week, printed in full. Each leaf contains choice selections from the best writers, helpful thoughts for every-day living. A calendar for the entire year is printed on the back, and an extra leaf is inserted containing Scripture selections, etc., arranged for easy memorizing.

This calendar is endorsed by the leaders in Sunday-school work and has proved very helpful wherever used. As a Christmas gift from teacher to pupil it is extensively used. Many schools distribute them at the Christmas season to every scholar. They are especially valuable to Home Department members.

Price, each, postpaid,\$0.10
Price, per dozen, postpaid, 1.00
Price, per hundred, postpaid, 8.00

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the north. There is some snow at times but the Chinook winds quickly melts all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. I. J. A. Weaver.

EMPIRE COLONY

IN "SUNNY STANISLAUS"

The CO-OPERATIVE COLONIZATION COMPANY is now locating a colony of our people in the lower San Joaquin valley, in central California. The new town of EMPIRE, as well as the colony lands, is located on the Santa Fe railroad, five miles east of Modesto, the county seat of Stanislaus County, thirty miles south of Stockton, seventy-five from Sacramento and one hundred and fifteen from San Francisco.

The colony lands join the new town site and are within a few miles of three different railroads. These lands are all under cultivation, and are free from brush, stumps, stones or other obstructions. Two large ditches cross the tract, affording ample water for irrigation of all crops.

Modesto Irrigation Ditch Supplying Empire Colony Lands. "Water is Wealth."

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and Investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

LOW RATES FOR COLONISTS.

During March and April one-way Colonists' Rates will be in effect from Chicago to Modesto, California, for \$33.00. From Kansas City, and other Missouri River points, to Modesto, \$25.00. Via Merced, Cal. For further information address

'Mention Inglenook When You Write'

\$400 Prize Cup Won by Colfax County, N. M. In Competition with Entire Irrigated West

Miami Ranch

is located in the choicest part of Colfax county, New Mexico, and it was largely due to the products grown upon and adjacent to this ranch that Colfax County won this valuable cup at the Interstate Industrial Exhibit held at Albuquerque, N. M., last October. Every State was represented—products from land selling as high as \$1,000 an acre were shown—but Colfax County won by many points.

Many other prizes have been won by this section of the country. New Mexico wheat took first prize at the World's Fair in Chicago, while apples raised in an orchard directly adjacent to Miami Ranch won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 an acre.

Miami Ranch

offers you health and pleasures as well as wealth. It's situated in a rich, cheerful valley, surrounded by picturesque mountains. Elk, deer, bear and other large game are to be found in the mountains, while thousands of wild duck and geese inhabit the surrounding lakes. The Rayado River, which flows through this ranch, is noted throughout the central west for its trout fishing.

The rainfall is sufficient to insure big crops. But with the gigantic irrigation system recently installed, there is not the slightest chance of crop failure.

The climate is perfect, the air is pure, and the scenery beautiful. Excellent church privileges, a good school and pleasant neighbors are all to be found on Miami Ranch.

Write for a free copy of our booklet, "Westward Ho." It tells in detail all about Miami Ranch. It tells how and when you can get a round-trip ticket from Chicago for \$30, and from Kansas City for \$25, via the Atchison, Topeka & Santa Fe. Write at once and take your choice of the bargain offers which we are now making on both large and small farms.

Satan and the Saint

or

The Present Darkness and the Coming Light

BY DR. JAMES M. GRAY

Dean of the Moody Bible Institute of Chicago

A series of popular Bible Studies as delivered to Bible classes numbering several thousand members, in Chicago, and Grand Rapids, Mich.

These are the Chapters of the Book:

The Trial of Job; or, Is Satan a Person?
The Evil of Christian Science; or, Satan as an Angel of Light.
The Power Behind the Medium; or, The Secret of the Occult.
Old Foes in New Forms; or, The Heresies of the "Millennial Dawn."
A Dream of History; or, Is the World Growing Better or Worse?
"That Blessed Hope"; or, What is the Second Coming of Christ?

Clear print, on good book paper, with art stock covers. 128 pages.

Price 25 cents a copy.

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

"CALL IT ST. HELENA"

ELIZABETH D. ROSENBERGER

MANY curios were treasured in the old library of Pennsylvania's greatest antiquarian. "And who was this great antiquarian?" you ask? And I answer, "Abraham H. Cassel of Harleysville." One day he opened a drawer and showed me some note paper. I looked at it curiously. It was of fine texture, pale blue in color, ruled, and yet different from any note paper I had ever seen.

"You could never guess its history," said Mr. Cassel.

"No, I suppose not," said I' dubiously, for I knew that among those old books there was always something new, something I had never heard of before.

"This is some of Napoleon Bonaparte's note paper," said the antiquarian. And then he related the story of Joseph Bonaparte's exile in America.

On August 29, 1815, the *Commerce* landed at New York with two mysterious passengers, registered as M. Bouchard and secretary. The captain lost no time in spreading the news that two noted persons had engaged passage with him from Bordeaux, France. It came to the ears of the mayor. With a few friends the mayor went to interview the strangers at their modest lodging house. The strangers were surprised at the unexpected honor.

"Are you really M. Bouchard?" queried the mayor.

"No, that is not my name," replied the stranger.

"Then may I inquire," asked the mayor expectantly, "under what title you do pass?"

"I pass under the title of the Count de Survilliers," answered the Frenchman. "But here in America I believe I may safely announce the truth: I am Joseph Bonaparte."

The mayor was delighted. Here was the brother of Napoleon Bonaparte, an ex-king, for he had ruled successively over Naples and Spain. A royal reception befitted the royal guest.

But Joseph was timid and refused any public honors. He did not want to make his refuge in America too conspicuous. He proposed to live in America, and forget the storms of Europe and end his life in peace.

That he might buy land, the State of New Jersey passed a law, "to authorize aliens to purchase and hold lands in this State." And so Joseph Bonaparte bought a tract of land known as Point Breeze, in the immediate vicinity of Bordentown, New Jersey. The land was situated on a high bluff overlooking the Delaware River, in all the primeval glory of stately trees and trailing shrubbery. Bonaparte bought a thousand acres and set to work to make a garden out of this wilderness. A tract of marshy land lying at the foot of the slope he turned into an artificial lake; the forest was intersected with drives and walks; open spaces were cleared here and there for lawns; rustic bridges were thrown over rocky-sided ravines; summer houses were built in sequestered spots. And just where Crosswicks Creek meets the Delaware, Joseph Bonaparte built his palace.

This palace was a wonder for those days. The outside was covered with white plaster, and the slanting roof, high dormer windows and broad-columned doorways were the admiration of every one. When you entered the hall, you beheld a grand staircase, flanked on either side by large reception and dining rooms. The huge fireplaces had marble mantels with marvelous bas-reliefs, the bedchambers were hung with rare tapestry. The walls were decorated with still rarer paintings. Scattered throughout the rooms were some beautiful pieces of statuary. But hardly had the last touches been given to everything, when the house was utterly destroyed by fire January 3, 1820.

A new house was built but not on the same magnificent scale. And here the ex-king of Spain lived quietly, assuming no kingly state. He had been joined by his two daughters, Princesses Zenaide and Charlotte. Princess Zenaide was accompanied by her husband, Prince Charles Lucien Bonaparte. For the convenience of the young couple he built another house at the entrance to his grounds which he connected with his own house, a quarter of a mile away by means of a subterranean passage. This passage was to be used in time of storms by the family. But gossip whispered

that Joseph Bonaparte lived in daily fear of capture by some foreign agent; that there were trap doors in the house leading into secret labyrinths where hiding places were to be found. The ruins of the old passageway are to this day looked upon with superstitious awe as hiding strange secrets.

When the ex-king was asked to give a name to his estate he said: "It is my Helena. Call it St. Helena." And St. Helena is the popular name for it to this day.

I unfolded a sheet of the blue note paper. "And

was this brought over by Joseph Bonaparte?" I asked.

"That was given to me by a friend whose father had it in his possession. Yes, it was brought to this country by Joseph Bonaparte, but it belonged to his brother Napoleon Bonaparte, originally." There came a day when the imperial purple disappeared from Bordentown forever. The Bonaparte exiles were permitted to return home, so in 1839 the ex-king took his final leave of America, and died five years later in Florence.

A LITTLE HISTORY

PAUL MOHLER

I REMEMBER very well indeed the great interest we boys all took in Bro. D. L. Miller's lectures on the Bible Lands, some twenty years ago. The New Testament story became so much more vivid and interesting when we understood something of the customs of the country where the events occurred. Today, no thorough Bible scholar thinks of teaching an event without teaching with it all of the surroundings that may throw any light on it. Here at the Bible school, Brother Hoff even takes us back a thousand years to teach us where the customs came from. He has been telling us some very interesting stories, indeed, of ancient times, stories that he has dug out of many a book, and tells to his classes. He has told us much of the history of the world from the time of David, up to the time of Christ, and I am sure that the stories will bear repeating. However, while I have called them stories, these are in reality historical facts, carefully attested.

The Bible tells us of a number of times when foreign armies overran Israel; but it doesn't tell us of the larger world movements of which Israel's experiences were but small parts. Palestine, the home of Israel, is such a little bit of a country. It is only about one-third the size of Indiana, and on a clear day, a man can see from one end to the other of it and from side to side, if he gets on the right mountain. To the north, along the seacoast, lay Phœnicia, whose capitals were Tyre and Sidon; east of Phœnicia lay Syria, whose ancient capital was Damascus; still further east was Assyria, with her capital at Nineveh, and south of Assyria, in the Euphrates Valley, was Babylonia,

whose capital was Babylon. Southwest of Palestine lay Egypt, one of the most powerful of the nations. In view of these surroundings, it is remarkable that Israel ever existed as an independent nation.

It took a series of remarkable miracles to give the land over to Israel in the first place, but that was nothing to the favor necessary to keep them free from their powerful neighbors. Every day they needed Divine protection; there never was a day in the history of Israel as a nation, when they would not have been in great danger, but for the protecting hand of Jehovah. And whenever, by their sins and stubbornness, they thrust his protection from them, they were attacked and overcome by their enemies. The period

ANCIENT SAMARIA.

in which they enjoyed the greatest security was during the reign of Solomon, when there were no wars, and when the surrounding tribes and kingdoms sent tribute and rich presents to Jerusalem. Phœnicia and Syria were friendly, and Assyria and Babylon must cross Syria to find Israel. As long as these conditions remained, there would be peace on the north and east. But in the centuries that followed the reign of David,

Israel became very sinful and idolatrous, especially the northern, or Samaritan kingdom.

At about the time when Samaria's sins were getting ripe for her ruin, Assyria began a westward movement; an expansion we would call it, like that which we have recently seen of Japan. Tiglath-pileser, king of Assyria, began this movement, directing his first

Israel a number of Kuthites, a heathen people. These Kuthites were the ancestors of the Samaritans of today. Later, I will tell you why the Jews and Samaritans were such bitter enemies; but perhaps this is the place to tell how they came to be worshipers of Jehovah.

It was the common belief of idolatrous people, that each god had his own special field of operations. He was supposed to be supreme in his own territory, but unable to help his subjects when they left his territory. When, therefore, the Kuthites began to suffer from wild beasts, they sought Divine protection. But they had left gods behind, and had not become acquainted with the gods of their new home. So they sent to the king for a priest to teach them how to worship the God of Israel. Sargon sent them a priest, one of the captive priests of Israel. He taught them the law and the ceremonies of the Jehovah worship. Many years later they built a temple on Mt. Gerizim; and today, the few Samaritans remaining there (about 125) are the only people in the world who observe the Passover as it was instituted.

JUPITER AND THE SHEEP.

THE sheep was obliged to suffer most of all the animals, so he went to Jupiter and prayed him to lighten his fate. Jupiter seemed willing, and said to the sheep: "My innocent little creature, I see plainly that I have created you too defenseless. Now choose how I may best remedy this fault. Shall I arm your mouth with terrible teeth and your feet with claws?"

"Oh, no," said the sheep, "I will have nothing in common with those tearing animals."

"Or," continued Jupiter, "shall I put poison in your bite?"

"Ah," returned the sheep, "the poisoned serpents are much hated."

"What, then, shall I do for you? I will plant horns upon your forehead and add strength to your neck."

"Nor this either, most gracious father. I might in that case become a butting animal like the ram."

"But," said Jupiter, "you must be able to hurt others or you will not be able to protect yourself."

"Must I?" sighed the sheep. "Oh, then leave me as I am, kind father. For *the power of injuring creates the desire to injure, and it is better to suffer wrong than to commit wrong.*"

Jupiter blessed the innocent sheep, and from that hour he forebore to complain.

Is there not a lesson here for consideration by the nations of men?—*Advocate of Peace.*

Damascus.

campaign against Damascus, the capital of Syria. The king of Syria, being frightened, asked aid from Pekah, king of Israel; and they, together, made war upon Ahaz, king of Judah, probably hoping to force him to help them. Ahaz was so badly frightened that he trembled like a leaf. Isaiah, the prophet, advised him to put his trust in the Lord alone; but the king lacked the faith; so he did the unexpected thing. He stripped the temple of much of its wealth, and sent it unto Tiglath-pileser, offering him his homage and service in delivering the entire land to him. Syria and Israel alone could not resist the Assyrians, so in 733-2 B. C., Tiglath-pileser took Damascus, and broke the Syrian power. Samaria escaped capture, but agreed to pay tribute to Assyria.

But no permanent peace could remain, for Israel's sins were full. She could yet have turned to God, but she refused to hear the last prophets sent unto her (Hosea and Amos) and was incapable even of keeping faith with Assyria. So Israel rebelled. Then came the second invasion, this time under Shalmaneser IV, who besieged Samaria in 724 B. C. The siege was finished and the city taken by Sargon in 722. It was Sargon's policy to remove people whom he conquered from their native land and replace them with other captives. When he took Samaria, therefore, he took a large number, 27,290 of the people, from their homes, transplanting them into the neighborhood of the Caspian Sea. To take their place, he brought into

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LV.

"You must get another."

"Another what?" I asked, looking amazed.

"Another paper—passport."

"Why isn't this all right?"

"No good—can't admit you on that."

He used but few intelligible words, most of these being French and the rest in his own language, Turkish, but I knew exactly what he would have said if he had spoken all of it in my own tongue.

"But see!" said I, and I pointed to the big words on my passport that had always looked so authoritative until now,—

UNITED STATES OF AMERICA

DEPARTMENT OF STATE

TO ALL TO WHOM THESE PRESENTS SHALL
COME, GREETING:

The undersigned, Secretary of the United States of America, hereby requests all whom it may concern to permit

HENRY M. SPICKLER

A CITIZEN OF THE UNITED STATES

safely and freely to pass, and in case of need to give him all lawful Aid and Protection.

(Signed) John Hay.

My passport, that had been unquestioned until now,—my beautiful diploma to American citizenship that had been honored by all the countries, big and little, republican and monarchial, was now ignored by the "Sick Man of Europe." My passport was no longer sufficient to render me the aid and protection vouched for me by the Department of State of the United States of America. Second only to Russia in treacherous brutality, the crooked government on the Bosphorus now refused me to pass into its capital city.

The *passport, issued by the American people, through their State Department at Washington, D. C., was wanting in authority and lacking in honor in the city of the False Prophet.*

One after another of the boat's passengers had been brought ashore, examined by the customs officers and checked out. One by one, or in parties, they had been allowed the freedom of the city, and were now already

registering at the hotels or seeking out their private homes.

Several poorly dressed, ignorant looking fellows were refused their freedom. These had been made to stand aside in the right hand corner of the custom house. Everybody seeing them, half-standing, half-crouching there, believed them to be criminals of some sort, and were congratulating themselves that the keen eye of the government detective had found them before they escaped into the streets.

By them stood a policeman, and at the door, leading into the city, two other policemen. These kept their eyes upon the "gang" in the corner.

For some reason, possibly because of my determination to "stand or fall" on the authority of my passport, the chief was in doubt as to whether he ought, in my case, to honor my passport, and allow me to go on my way. On his return from a short consultation with another official, I saw by his looks that his mind had not been changed.

"Stand there," he said, "with those men," and he pointed me to the bums in the corner.

Like a soldier of the flag, I marched over, passport and all, and took my place near the scraggly bundle of mutilated human statues.

They looked significantly into one another's eyes, and at me, their countenances lighting up with a little beam of joy at the accession of myself to their number. Misery always loves company. I was really glad I could be of use to somebody, even if they were "suspects."

A minute seemed like an hour. At last a tall, burly officer in Turkish baggy trousers, came over to us, speaking some more Turkish which the others seemed to understand, and motioned to them and to me to follow, with one of the guards behind us, to some locality apparently not far from the landing-place.

I waited until the others filed out after our leaders, when I, too, fell in behind, wondering where, in the name of the Pleiades, they were about to take "us."

My food had been exhausted at supper the last night on board. We knew that the *Albania* would land us at Constantinople early on Sunday, and few, if any, had taken their breakfast on board. We were anticipating a good breakfast at one of the popular coffee-

houses or hotels. Only tourists know the welcome taste of the first meal taken in a new port, and especially when taken soon after arrival from a steamer.

We passed some native coffeehouses where a few men were eating and smoking. I turned and looked wistfully at these, and signified that I was hungry, so that the policeman, walking behind me, might know what I wanted.

He only smiled and gestured that he, too, was hungry, but that his duties with me restrained him from a morning siesta. He threw his hands up in front of him, turning over the palms as he did so, making a rapid semicircle, ducked his head to the side and inclined to the front, and shrugged his shoulders, as if to say:

"I would go myself, and I would let you go, gladly, if I could. But I must earn my pay. The law holds me. It holds also you. I must hold you. It is unjust, I grant you, but we'll have to take it as it is."

I was quite sure that my turn would come when I could do as I liked, and the temporary detention was possibly but to add "sauce to the gander." It was for me to speculate as to what was about to happen to me. Being a deck passenger, I would be honored with no recognition from the press. Steerage and deck passengers are not listed by ship companies in the same way as are the passengers in the first and second cabins. These are counted more worthy, and although the cheaper tourists have paid the amount demanded by the company,—more, often, than they get back in comfort and service, only the first and second class people see their names posted in some conspicuous place on board, with their titles, if any, and place of residence. International law, I believe, should compel all ships to post full lists of all their passengers by name, whether they ride in the steerage or hang on to the smokestack. On the steerage passengers the ship makes more money than on the high-priced cabin passengers, but simply because they wish to treat them like hogs or as nobodies, and to scare refined people out of these cheaper parts of the boat, they ignore their names, snub them whenever they can, and in heavy seas, when almost dying with seasickness, the ship's doctor goes to attend them, if he goes at all, with cold disdain.

On one of my ocean voyages across the Atlantic a young man, dying with the consumption, was trying to get back home to be among loved ones when the final moment came. Although he needed medical attention each day, the doctor failed to go to him. Finally the passengers, incited to indignation at the cruel doctor's selfishness, compelled him to attend the young man. Then, when he was about to walk down the main deck, among a lot of passengers looking on, they secretly fastened a big paper sign on his coat behind that read as follows:

"NOT WANTED!"

This label was used by the passengers on their baggage,—“Wanted” being pasted upon the trunks and hand baggage that they wished to have taken to their staterooms to be used en route, “Not Wanted” being pasted on the baggage that was to be down in the hold of the vessel and not gotten up again until the port or destination was reached. When each group of passengers laughed out loud just after he passed by them, he became excited, and learned the cause of it only from some of the sailors who took from his coat the decidedly appropriate notice. The boat was an English liner and the doctor was a proud Englishman who ought to be quarrying rock or diving for sponges,—anything dangerous or in the company of things that he couldn't hurt.

No matter how great you are, your name will not be given to the New York *Tribune* as an “arrival” from the other side when you travel other than by first or second class. For the same reason, the guides of the various tourist agencies would not break their necks getting to me to arrange an itinerary with them as guides over the city. They look after the tourists who have plenty of money to pay out for first-class hotels and first-class service everywhere. They prefer to take the tourist who can afford a carriage for every little jaunt and who can supply them with refreshments, gratis, many times a day. As the work of an honest guide is worthy of high recognition, it is economy to use one wherever possible. As for me I usually saw the sights without a guide.

I was glad that my bicycle and some other papers of identification had been left behind, at the college in Anatolia. The professors there had learned to know me well and they would be on the lookout for me and for my safety.

The incident through which I was passing was realistic enough without my seeking to color it by dramatic language. As nearly as it is possible I will tell it just as it happened, and give an insight into the thoughts and emotions that flashed into my mind now like birds of bad omen, now like harbingers of good, originating in a fertile imagination and flitting across the landscape of nervous apprehension. In some particulars my experience was starting out not much unlike that of adventurers before me. They too had their troubles. Some of them escaped. Others suffered death. One of them had been foully murdered here in this very country, back of the city,—the ill-fated Lenz, who, touring the world on a bicycle, like myself, risking his life in out-of-the-way places, was slain in cold blood by the Turkish soldiers. An acquaintance at Alton, Mr. Sachleben, a noted traveler, who accepted the government's commission, or that of a magazine, I do not remember, to find the lost man or to learn about his end, went to the very village and ferreted out the mystery of the sudden disappearance of the bicycle traveler. As a clue to his discovery, he

found one of the rubber tires used as a part of ornamental harness for a horse of one of the cavalry of the Turkish soldiers. All these incidents, multiplied now by the present dilemma, beset me with unnecessary fears, as I followed the medley group of those who like myself seemed to be in trouble.

I wondered if my camera, taken to pieces, would some day adorn the dress or barracks of these officers. Would they wear the brilliant lens on their coat, and give as a plaything the rubber bulb to their children?

Questions like these frowned at me for answer and pointed their bony fingers of taunting menace in the face of my unhappy predicament.

OBSCURE TRUE AMERICANS.

A MOVEMENT has been organized to do missionary work on a large scale in the Appalachian Mountains, a section where education is either neglected entirely or is showing a feeble light. It is of concurrent interest that Congress at its late session awoke to the fact that Appalachian America was of value and took steps toward conserving the natural resources of the section, but seemed to ignore the fact that here is the largest body of native Americans in the country who need help in many directions.

This mountain region, extending from the Pennsylvania line to northern Georgia and Alabama, with an extent east and west of from 100 to 200 miles,

contains a population of several millions of people, almost exclusively whites and almost exclusively descendants of English and Scotch settlers in the colonies before the War of the Revolution. Many of these people settled originally along the tidewater counties of Pennsylvania, Virginia and the Carolinas, but many of them pushed on toward the mountains, especially after the War of the Revolution in which they bore a leading part. Some of them passed on over to the fertile land of Kentucky, Tennessee and even Ohio, but the greater number remained in the mountains, where they still are in a state of arrested development.

They are physically well developed, have inordinate courage, live simple lives and are happy in their own way, but conduce little to the general welfare of the country. Of education there is little, but the men and women have a native intelligence of a high order. They are not the class commonly called "poor whites," but descendants of Scottish highlanders and English gentlemen. The ballads of the Elizabethan period are still sung in the cabins, where life is on the sixteenth century basis. They weave their own cloth and linen, make their own whisky and rifles and are as far removed from twentieth century civilization as the people of the Balkans.—*Philadelphia Inquirer*.

"THE modern Pharisee substitutes the photographer for the man with a trumpet."

SPRING

JOE STEPHENS

Spring like a glorious morning
Is shedding its beauties around.
We see its evidence skyward,
Its grandeur covers the ground.

We see its wonders forming
Of carpet beneath our feet,
Of vines, grasses, and flowers,
Oh, nature is surely complete!

Music more rich and harmonious
Than mortal could ever produce,
Wafted on wings of the springtime,
New hope and courage induce.

We being created an image
Of the one omnipotent God,
Should cultivate springtime within us
And walk with perfection shod.

THE WHITE SPARROW.

To ask help from a prosperous neighbor was not easy. But John knew that he had to do it,—he *must* know just what he could depend upon if everything turned out wrong, for it certainly looked as though everything would. So out he blurted his need:

"If—if, ahem, if I need help with the mortgage interest money, William, will you give me a lift? It'll fall due this day three months, and things look black with me."

"What's the trouble, John? Crops fail last season?"

"No, crops seemed to be good, William; but, somehow, I didn't get much out of them."

"Dairy not paying?"

"N—no, it isn't, William, although we've milk enough at the milkings. I can't seem to find out *what's* wrong. The farm's good and the cows the best stock in the countryside. But I'm down on my luck, William, and I can't seem to get up."

"Thee will need to find the white sparrow, I'm thinking, John. It's a rare bird, but a sight of it brings luck, they say."

"The white sparrow? Surely I need a sight of it, if there's luck in it! But how shall I go about hunting it, William, and where?"

"Nobody knows that, John, or the whole world would go a-hunting. Only one thing is known about it—that it flies only once a day, and that between four and five in the morning. Thy own barnyard or dairy is as likely a place to find it as any place on earth. But don't let me keep thee from thy work, John; only promise me to look every morning for the white sparrow until interest time, and, in turn, I'll promise thee the help thee asks."

John gave his promise eagerly. But from the first, things seemed to conspire against his ever finding the bird of luck.

The very next morning, four o'clock saw him making for his barnyard. Such a state as that place was in! Not a horse tended to, either; the stables in bad condition; the men asleep when they should have been at their work!

"Hi, there, Robert and Pete and Jim! Jack, you lazybones—up with you, boys! The work's waiting."

Up tumbled the men; sprang at their work (the master was about), and the horses and stables got a better cleaning in short order than they'd had for many a long day. But when John had time to think of the white sparrow again, it was after five. And the bird only flies one short hour a day.

The next morning he started again upon his search; passed rapidly through the barnyard, only stopping to arouse the men—not much time lost *there*. But at the dairy window stood one of the maids, giving away a great pailful of new milk to a friend. And at the run-way stood another maid, pouring out another great

pailful of sour milk—sheer waste, with all the little pigs on the farm having to have feed bought for them. And, besides, the farm was famous for its cottage cheese—every bit of sour milk should have been turned into that.

There was nothing to do but give the dairy a thorough going-over, and the maids some pretty strict orders. Oh, but the state that place was in! Milk set aside for favored friends to carry away—secretly, when the master lay abed. Or butter, or cheese—it was all the same, waste and theft.

But, by the time he had been through the dairy thoroughly, and thought once more about the white sparrow, it was six o'clock. One more day gone!

Somehow, through the three months that followed, try as he would, he never even got a glimpse of the wonderful bird. For, although four o'clock was sure to see him leave the house, something was as sure to need his attention until the hour of opportunity had passed. Surely there never had been so good a farm with so many things wrong on it!—he thought impatiently, whenever he had time to think.

The day before the interest money was due, William drove over to John's farm. Everything was trim and in good condition; the men were working with a will at the harvesting; in the cool, clean dairy the maids were busily packing the new butter—there was the bustle and the orderly confusion of successful work everywhere.

But when John saw his friend, his face fell, although he hurried up to William to give him greeting.

"How is it with thee, John?" said the older man, drawing out a fat purse. "I've been thinking of thy interest money, and I'm here, John, to give thee help. But tell me first, of thy search for the white sparrow?"

And that was why John's face had fallen. He had never had time between four and five in the morning to look for the white sparrow. Something always needed him just when he had tried hardest to be free to hunt it.

William listened gravely, with a merry twinkle in his shrewd eyes.

"But the money, John?"

"Oh, the money. Well, William, I don't think I'll need it. Thank you kindly, just the same. You see, the farm's paying better; the dairy's the best paying dairy in this part of the country, though I say it that shouldn't. Somehow, William, we've stopped the little leaks that had well-nigh ruined me. I've the interest money ready, and a bit laid by to pay on the principal. But, William, I've never had time to hunt right hard for that bird you told me about, though I tried to keep my word to you. I'll start in soon again, though; things are going well and I'll have more time. You see, the men know I'm following them up more than I did, and they work twice as well. But I do want to find that white sparrow—I want the luck."

"John, John!" said the old Friend, beaming on the younger man. "Why, John, man, thee has *found* the white sparrow. Don't thee see, man?"

Then John did see, and he's been seeing ever since. There's no interest due on his farm now—nor principal, either. But every morning, at the early hour the bird flies, he's after men and maids in his search for the white sparrow of luck, or, as he now calls it, the white sparrow of industry.

(Note: This little story was a favorite parable with an old Quaker doctor, who used thus to preach a kindly sermon to discouraged young men who felt luck was against them. And when he passed that way again, his cheery: "Been looking for the white sparrow to-day, boy?" was a call to duty with a note of hope thrilling through it.)—*Selected*.

READING.

As one who on some well-known landscape looks,
Be it alone, or with some dear friend nigh,
Each day beholdeth fresh variety,
New harmonies of hills, and trees, and brooks—
So is it with the worthiest choice of books,
And oftenest read: if thou no meaning spy,
Deem there is meaning wanting in thine eye;
We are so lured from judgment by the crooks
And winding ways of covert fantasy,
Or turned unwittingly down beaten tracks
Of our foregone conclusions, that we see,
In our own want, the writer's misdeemed lacks:
It is with true books as with Nature, each
New day of living doth new insight teach.

—Lowell.

HOW TO GROW OLD IN GOOD HEALTH AND HAPPINESS.

I AM seventy-four and write from experience. No rule of living, no set of rules would suit all cases or cover all conditions. Vast numbers of people, however, in all callings, but especially in the farm world, will, I trust, find the principles and rules here laid down both sound and practicable. To be still young and happy in heart, mind and body, when old in years, I would say to the young:

1. Be regular in your habits. As far as possible, do the same thing at the same hour, in the same way, each day. This means monotony but also longevity. The hours for bed, meals, bath, work, rest, recreation, etc., should be fixed and immovable. I hold this to be a prime secret of long life. They tell us that even a watch suffers by irregular windings. Irregular habits mean shocks geart or small to the system.

2. Eat slowly. The doctors say that we eat *too much*. I say that we eat *too fast*. Chew your food thoroughly, and drink little or not at all while eating. Gulping, washing down great chunks with liquids, means present dyspepsia, future hypochondria, and a black and sunless world. Eat slowly, and I will risk your eating too much. You *can't*; your appetite is gone first. Don't eat under haste, excitement, or in a

whirl of mental or bodily activity. Cool down first and be calm. And don't work mind or body just after eating. Stretch out after dinner for a brief nap. I believe that half the minor ailments, and many of the serious ones, are due to fast eating, under stress and strain. I have seen factory operatives rush back to work, pie in hand, finishing dinner on the street. They were yellow, cadaverous and melancholy. Is this the path to a happy, healthy old age?

3. Breathe pure air. Let in the sunlight and the breeze. Sleep with doors and windows open. Don't fear colds; the people who catch colds are those who box themselves up. You can't get too much oxygen. When out for a walk, clean out your lungs with long breathings, both in and out. Don't leave a bit of foul air in them.

4. Take regular exercise, if your occupation is indoors. Farmers may omit this, they get enough. The saddle, the oar, the bat, are good; walking is better. Shun the bicycle and the street car. We are in danger of losing the use of our legs, these days, I have doubts as to too strenuous athletics; muscle at expense of heart. Moderation in all things should be the motto of him who would live long and see good days.

5. Amusement and recreation. Use these sparingly. They taste sweeter when infrequent. They are necessary. Some poetry should spice the prose of life. Always to have "the nose to the grindstone" begets dullness, rust and mildew; it is bad for mind and body. See all the sights you can, and here all the music, laugh all the laughs. A good laugh may be a very earnest, serious man. Long faces do not tend to make long lives.

6. Keep a tight rein on your habits. Hold in the horses, if you would not go to early smash. If you must smoke,—don't! If you must drink, well,—don't! Beware whom you marry. A nagging wife would curtail Methuselah's age by 900 years. Be pure; impurity rots body and soul. Be calm; excitement wears. Don't fret, don't worry. Worry and fretting will wear out the strongest frame in short order. Don't let the daily little cares and crosses eat into your soul, and, through it, into your flesh and bones. They are "the little foxes that spoil the vines." Do your duty with busy hands but a light heart and cheerful countenance; then if things won't go right, why, just let them go wrong. Above all, curb your temper. Each violent explosion of anger means a nail in your coffin, a slice off your life. The house you live in can't stand this dynamite business. The soul kills or keeps alive. It should be kept as calm and unruffled as a lakelet amid the hills. Storms at sea wear away the shores; passions tear down these houses of clay. The mind has great effect. Ignorance does not tend to long life. A well-stored mind does. Mental activity

does. Genius does. Cultivate your mind. Thought is as a well spring of your life to the gross frame. The clodhopper who just works and eats and sleeps, would live longer with an intellect awake and doing. Man's immaterial part may greatly help to break up his body, or keep it filled with the sweet sap of life.

7. Don't make pleasure or happiness your grand aim. If you do you will shorten your days to no purpose. You will be like the boy who chased the rainbow for gold. Happiness flees the pursuer. If you would catch her, never make straight at her. You grasp her—she is gone! No, just walk the old, old path of Duty, and see how often she will come to you,—dropping in when least expected, and just *because* not expected. She comes and sups with the votary of Duty. Show her that Duty is the grand business of your life; that she is welcome if she comes, not greatly missed if she does not—this is the secret of happiness. As a young man, you will find it so; still more in mid-age, most of all in "the sere and yellow leaf," looking back on a life well spent. And what is duty? Filling to your utmost the niche in God's world that he has set you in. Making him the supreme object of your love, and your neighbor next. This is the true and only way to have a sound mind in a sound body to the very last. A conscience void of offense to God or man,—what a sweetener of existence! What a means to length of days and a happy old age! Self-worship shortens and cripples life.

8. Lastly, whatever your life's calling has been, stay with it to the last. I have seen busy merchants retire from business to enjoy the evening of life; but, shortly, they die. The whirring wheels too suddenly stopped. Many farmers I have known to leave the farm in advanced years, and eagerly betake themselves to town, there to enjoy the unwonted luxury of ease. In a brief space they were dead. Abrupt and total cessation of a life's strenuous labors, tends to cut life short. If you have been a busy man all your life, keep moderately busy to the end, or while you can, if you would prolong your days. Just keep doing enough to hoodwink nature, and save the fatal shock of sudden change from a strained activity to sheer idleness. And you will be happier, too. Happiness is wife to activity, and a foe to idleness in old or young. Don't stop short. Don't leap from high strain to total inactivity. Come down gradually with the declining years; but,—*keep going*.—*Farm Journal*.

\$1,000 EARNED BY EAGLE.

"I'LL give \$1,000 for an egg laid by an eagle while in captivity; I never have heard of an eagle laying an egg under those conditions, and my quest for information on the subject shows that eagles will not do so."

This offer, made by Cy De Vry, keeper of the zoo at Lincoln Park, Chicago, while on a visit to Lord's Park Elgin, Ill., about a year ago, will result in the proffer

of an egg, laid two weeks ago at Lord's Park in the eagles' enclosure.

For despite the custom of eagles in captivity, one of the queenly birds defied custom in this respect and laid an egg in a nest which it had been constructing for a week before. In view of the offer made by the Chicago animal keeper, who frequently comes to visit the Elgin park, the park commissioners are more pleased than if they had the goose that laid the golden eggs.

Park Commissioner Henry P. Rorig is wearing a broad smile because of the unusual happening. While he was at Lord's Park recently he went to the place where workmen were repairing the eagles' enclosure, and James Campbell, one of the workmen, came down from the top, carrying something carefully in his hand.

The egg he had found in the top of the enclosure was larger than a duck's egg and smaller than a goose egg, and Mr. Campbell stated that it had been found in one corner of the cage.

Just then Commissioner Rorig remembered the generous offer made by Cy De Vry when he was in Elgin about a year ago, and the genial commissioner's face lighted up with a smile as he thought of how Elgin's park might be benefited by \$1,000.

In a few days Mr. Rorig is going to Chicago, and he will tell Mr. De Vry about the extraordinary occurrence. "Unless Mr. De Vry backs down on his offer we can get \$1,000 for the egg, and we are interested to find out what Cy will do about it."

It may be necessary to secure affidavits from the eagle that laid the egg, from the workman who found it, and from all who are concerned in the matter, to prove that this is no hoax, but the park commissioners are ready to take these steps if necessary to prove the authenticity of the eagle-egg to Mr. De Vry.

In case the Chicago animal expert feels that he cannot now pay \$1,000 for the eagle-egg, the Elgin commissioners will have it placed under a hen for hatching. A prominent Elgin chicken fancier has promised to put the egg under one of his best sitting hens, and this course will be taken if the egg is not disposed of.—*Elgin Courier*.

THE SMILER.

Be a smiler—up the hill,
Rough or smooth, keep smiling still!
Be a smiler—let the throng
Hear your laughter and your song;
Let the echoes of your cheer
Calm the sobbing, stay the tear,
On the lips and in the eye
Of a brother passing by!
Be a smiler—with the ring
Of the heart of youth and spring
In your "Howdy-do, today!"
To the neighbor on your way.

—Baltimore Sun.

NATURE STUDIES

CLIMATIC CHANGES.

JOHN H. NOWLAN.

WE have all read of the changes in climate that have taken place since the creation of the world. Countries now intensely cold have remains of plants and animals of temperate regions, and even of those found only in the torrid zone.

However, a careful investigation shows many changes of a much later date. For a long time it has been known that the Sahara desert in some places is crossed by the beds of streams now dry. These water courses, known as *wadies*, have long been used as routes for caravans. An exploring party recently made a journey across this desert by a route not in the usual path. They found unmistakable evidence that it had been occupied by an agricultural race. Ruins of houses, earthworks, etc., plainly showed that the inhabitants were of a race to be found only in a climate much more humid than that existing there today.

Salt Lake City is built on the floor of the ancient Lake Bonneville, the only remnant of which is the diminishing Great Salt Lake. To fill its immense basin and keep it overflowing at a volume sufficient to counteract the rising of the mountains and erode a pass through them required a rainfall much greater than would be necessary for the agriculturalist in that region today. But the rainfall decreased in volume, and now the former beach and its deltas are up on the mountain side 1,000 feet above the present lake shore.

One effect of the change of climate has been to isolate kindred plants and animals. Some identical species are now found in widely separated regions of the world.

The potato has been called a native of the Andes, but recently it has also been found on Pike's peak.

Plants which are found in arctic regions may also be found by ascending mountains, even in the tropical regions, to an altitude where the climate is similar to that of the northern lands.

What has caused these changes? Some of them are but little understood by geographers of today. No direct cause is traceable. In some cases mountains have been upheaved and thus as the rain-bearing winds pass over them the rain falls on the windward side of the range and passes to the other as a dry wind.

Islands, either coral or volcanic, may have arisen

in the ocean and thus turned a warm current away from the shores toward which it formerly flowed. By this means the air was deprived of some of its heat and the climate became cooler.

Again, a current may have found an entrance through a shore that obstructed it, thus reaching hitherto inaccessible shores, raising or lowering the temperature according to the temperature of the stream.

As the climate changed the plants and animals changed also. When the change was toward a dryer the plants to survive were those of few and small leaves from which little water could be evaporated. Thorns also were developed to ward off any animal that would feed on the plants. Their texture was such that much water remained among the cells to enable the plant to live during the long drouths. The best example of this is the cactus of the plains.

The same change is noticed in the animal kingdom. Either they are of a class fitted to endure a long time on a limited supply of food or else they are venomous, thus enabling them to lead a sluggish life, which calls for only a limited expenditure of energy.

QUEER ACTIONS OF A SNAKE.

A. G. CROSSWHITE.

I HAVE read and heard all kinds of snake stories, some of which seemed so incredulous that I had almost resolved to never go on record as one who had helped to make the list grow longer or make the enmity between the "seed of the woman" and the serpent the stronger.

But the saying is, "Seeing is believing"; and what I here relate I saw with my own eyes and therefore relate it, either as fact, or as an "optical illusion."

It was in the summer of 1884, in Washington County, Tenn. I was assisting Mr. Ferguson, brother-in-law to our family physician, in oats harvest when this strange incident took place. It was excessively hot and rendered all the more excessive from the fact that heavy timber almost surrounded the field.

I was suddenly and unaccountably aware of the presence of a deadly foe of some kind. Whether I smelled its snakeship or had a premonition, I could not tell; at any rate there she was, a regular spread head, not so long nor so big around as many we read about but an ugly, venomous specimen of the blowing

viper family. It is said that "distance lends enchantment," and believing this to be proverbially true I was perfectly satisfied to watch her wriggle off to another bunch of oats and hide herself in triumph. Which was scared most I shall never know.

"Say, Bruce," said I, "there is a big snake under that pile of oats." "Just wait," said he, "till we get some clubs and we'll settle it." Being thus armed we cautiously overturned the pile and there she lay with her head as flat as a shingle and darting out her forked tongue in good old-fashioned snake style, first toward me and then toward him.

Before we could strike the fatal blow she raised her head pretty high, distended her jaws and made a hissing sound unlike anything which we had ever heard. We expected a charge from her snakeship with every breath, but what was our surprise to see quite a number of little duplicate serpents making toward her with lightning-like rapidity and every one of them disappeared down that cavernous throat. We looked at each other for a moment and the only expression made was, "Well, did you ever?"

MARVELOUS BIRD TRAVELERS.

PRICILLA B. LEONARD has thus called attention in *The Youth's Companion* to the speed and length of the flights of some birds in their annual migrations:

A man who travels ten thousand miles in a year is counted a "globe-trotter" of unusual energy. But our common night-hawk, which every American boy and girl knows, thinks nothing of having a summer home up in Alaska and a winter resort in Argentina, and traveling the seven thousand miles between twice a year.

And some of our shore birds, a government naturalist, Mr. Wells W. Cooke, tells us, are still more inveterate voyagers, making extra flights, and covering sixteen thousand miles or so a year, apparently for the pure pleasure of travel.

The robin is an old-fashioned, leisurely tourist in comparison with some other species. It never goes more than seventy miles a day. The average rate for all migrating birds, from New Orleans to Minnesota, is about twenty-three miles a day. But after leaving Minnesota several species of feathered migrants make first forty, then seventy-two, and finally one hundred and fifty miles a day before they reach Alaska.

The bird traveler that gives the naturalist the hardest transportation problem to solve is the red-eyed vireo. It winters in Central America, and appears each spring at the mouth of the Mississippi, traveling twenty miles a day. At this leisurely rate it proceeds for six weeks, all the way up to the latitude of northern Nebraska. Then, suddenly, in the space of twenty-four hours, and before a single red-eyed vireo has been seen anywhere in the region between, numbers

of the birds appear in British Columbia, a thousand miles to the northwest.

This puzzling performance is repeated every year. Unless the red-eyed vireo flies a thousand miles in a single night, how does it manage this bewildering schedule? Nobody knows; but, then, nobody knows, either, where the chimney swift goes for five months out of every year.

Great flocks of chimney swifts, with numberless fledgelings among them, leave the United States every autumn. Their movements can be easily followed till their various migrating bands join into a countless host on the northern coast of the Gulf of Mexico. One day they are there; the next day they are—nowhere.

Five months later, in March, a joyful twittering far up in the air heralds their reappearance on the same spot, plump and brisk after their winter sojourn. But where the winter has been spent only the swifts know. It used to be a tradition (made out of "whole cloth") that they hibernated in the mud. But that merely showed the hopeless attitude of men's minds toward the problem, for no swift was ever found in the mud in any known spot. What mud? Where? were therefore the natural questions, never answered, and leaving the mystery deeper—and muddier—than ever.—*Selected.*

LONG LIVERS.

THE tortoise is a very long-lived animal. Proverbially slow in its movements when it is alive, it would seem that it is almost equally slow to die.

The *Illustrated London News* told recently of an elephant tortoise at the London Zoo which died during his winter torpor. On his shell was painted a legend giving his age as three hundred and fifty years, but that was believed to have been an under-statement. The *London Illustrated* has under the picture it gives of the long-lived creature the words: "Died at the age of 400."

The shell of a large but slightly shorter-lived tortoise was for some time carefully kept under glass in the Episcopal Palace of Peterborough, England. Beside the shell lies the description, which says in part:

"It is well ascertained that this tortoise must have lived two hundred and twenty years. Bishop Parsons had remembered it for more than sixty years, and had not recognized in it any visible change. It ate all kinds of fruit and often a pint of gooseberries at a time, but it made the greatest havoc among strawberries.

"It knew the gardeners well, and would always keep near them when they were gathering fruit. It could bear almost any weight; sometimes as much as eighteen stone was laid upon its back. About October it used to bury itself, in a particular spot of the garden, at the depth of one or two feet, according to the severity of the approaching season, where it would remain without food until the next April.—*King's Own.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

ALL people are dreamers—the real workers as well as the idlers. The difference is the former have “visualized their visions,” while the latter have spent their waking hours, the time for constructive work, in chasing phantoms.

KEEPING posted on current events requires considerable effort these days. The daily arrival of our bird friends who have sojourned in the South during the winter is a matter of interest that should not be passed by, while the countless revelations in the plant world make not only interesting news items but furnish material for inexhaustible study and research.

IN the production of May flowers only a part of the work is accomplished by the falling of the April showers. The moisture must be taken up and appropriated along with the necessary proportion of sunshine before the exquisite blossom is possible. And the highest perfection in character is possible only by a similar combination of sunshine and shadow in the heart of the individual.

IT is a part of the duty of the temperance forces, where they are waging a successful war against the liquor business and forcing hundreds of saloons to close their doors, to look after the saloon employes and see that they have a chance to engage in some honest business. Efforts of this kind will go far toward convincing the people of our sincerity when we say we are fighting the liquor business and not the people engaged in it.

IN increasing numbers enlightened, thinking people are questioning the wisdom of the advice, “In time of peace prepare for war.” They believe that times of peace are the most favorable for progress in the arts that are concerned with real living as interpreted in

the light of Christian civilization, and that all effort should be directed toward the perpetuation of these conditions. In time of peace prepare for continued peace by the advancement of the arts of peace, by the education of the people to the highest conception of life.

IN one of our southern cities under the jurisdiction of a State-wide prohibition law, the law is enforced only against the colored population, public opinion as shown in present practice, holding that the white man who drinks is able to take care of himself. This partiality may not be so favorable to the white population as it appears at first thought. A long period of unhindered indulgence for the superior race with an equal period of strict prohibition for the inferior would wield a mighty influence toward changing the relative position of the two. We are never so surely deceived in our intentions as when we allow our friends or our children as a special favor the privilege to indulge in a wrong.

THE following touching lines were written by Edgar L. Robbins on the death of George T. Angell, editor of *Our Dumb Animals*, March 16:

No flags, half-masted, droop to mark his roaming;
No beat of drums—no martial bugles blow;
No thundering guns shall speed the brave soul's homing;
No sob of music—tremulous and low.

But what a song would hush him through the gloaming
If brutes could know.

And there will be no shrouded banners streaming,
When he goes by no troops shall line the way.
No clank of arms at rest—no sword blades gleaming
May do him honor on his funeral day.

But what a prayer would stir him in his dreaming
If brutes could pray.

BEGINNING with this issue under the title, “A Little History,” Paul Mohler is giving us a number of glimpses into Jewish history. The writer has found his studies in this subject of much interest, which fact is attested to by the charming manner in which he presents the subjects treated in these articles. A number of points are brought out that are entirely new to the average reader, and altogether we feel gratified that we are able to give these articles to our readers.

WE wish to call the attention of our readers to our “Want and Exchange” column. Some have found this a very satisfactory means of transacting certain business and we therefore recommend it to those who may have “trading stock” in their possession, may wish to secure a position, or may wish to secure workers. The Nook family is interested in material as well as mental and moral improvement and we are glad to help them in this line.

"IN YOUR MIND."

IN our endeavors to learn the real secret of contentment and happiness we have been surprised to find what the wise have told us all along, that one's station or condition in life wields little or no influence in the matter. Not our environments but our attitude toward them makes for tranquillity or stress. While we are surprised to find such an easy solution to this seemingly hard problem, a little thought will convince us that it is a fair one and, yes, a reasonable one, too. The discontented one will hardly agree with this last but of course we do not expect him to do so. It isn't his nature—the nature he is determined to appear in—to agree with anything or anybody. That is why there are always clouds in his sky and his life is a monotonous grind.

While we have little patience with the extreme views of the Christian Science believer with his pernicious doctrine of the complete domination of the mind, nevertheless a bit of his doctrine or of the doctrine which he has appropriated would work wonders in some people's lives. In the following lines, entitled "The Wiser Choice," Sarah K. Bolton pictures the lives of two men, showing how the mind of the one lifted him into the realm of the beautiful while the mind of the other held him bound down to the petty and unlovely things of life:

Two men toiled side by side from sun to sun,
And both were poor;
Both sat with children, when the day was done,
About their door.

One saw the beautiful in crimson cloud
And shining moon;
The other with his head in sadness bowed,
Wrapt him in gloom.

One loved each tree and flower and singing bird
On mount or plain;
No music in the soul of one was stirred
By leaf or rain.

One saw the good in every fellow man,
And hoped the best;
The other marveled at the Master's plan
And doubt confest.

One having heaven above, and heaven below,
Was satisfied;
The other, discontent, lived on in woe
And hopeless died.

This picture may seem overdrawn at first, but if we will think of it a little and of the lives of the people around us we will doubtless find within the circle of our own acquaintance many true representations of it. We must acknowledge that sometimes things come into our lives that are hard to bear, that are far from being what we would have them be, but the assurance that *they* are not the arbiters of our happiness will deprive them of half their baneful influence, while our determination to see only the good in them may render them harmless, yes, even a source of happiness.

The one who wishes to ridicule our claims to certain remarkable achievements, says, "In your mind." Clearly to him this cuts us off from any real claim to the particular achievement in question, but he has left us a means which for many purposes when rightly used will furnish us greater satisfaction than much material wealth.

"My mind to me a kingdom is,"

and from its storehouse may be fashioned the things that make for real contentment and peace.

**THE BUSINESS OF A COLLEGE PRESIDENT.**

FREQUENT reference is made in the daily press to the item that "President So-and So, of Blank College, has recently been very successful in securing a large endowment for his institution." College presidents are known nowadays and are a success, apparently, according to the amount of money they secure for their colleges. The time is gone by when the college president is regarded as a teacher or a moulder of character and opinions. Three college presidents in three of our best western institutions have recently resigned, worn out and nearly broken down by the constant strain of securing funds, and the more funds secured, the more expense seems to be brought upon the college, necessitating still larger endowment and greater expense. To be a successful college president in these days seems to mean more than anything else to be able to influence men of wealth to give large sums and then continue the process with an increasing ratio every year. One of our western college presidents, a man of fine temper and a born teacher, has said that during the last ten years he has not spent one hour in teaching the subjects for which he spent twenty-five years in preparation, but has instead exhausted his energy of mind and body as a "financial agent." This seems like a waste of material, and there is no remedy in sight so far as present conditions point. The question may well be raised whether, as the colleges grow in buildings and equipment, the product which is turned out of them is as fine material in matter of development and character as that which used to come from the smaller colleges. There are serious handicaps attending anything which is too large, and there is a real question whether the use of college presidents as financial agents is a wise use of human material which was born for something higher.—*Home Herald*.

The year's at the spring,
The day's at the morn,
The morn's at seven,
The hillside's dew-pearled;
The lark's on the wing,
The snail's on the thorn,
God's in his heaven,
All's right with the world.

—Browning.

THE HOME WORLD

HOW TO EDUCATE CHILDREN BETWEEN THE AGES OF THREE AND TWELVE AT HOME

J. H. HARNLY

In Four Parts. Part Three.

THE child should have its first introduction to home kindergarten diversions at about the age of three, so that traits of character that are then forming, and impressions received, may be directed into right channels, conducive to the future symmetrical development of the child. If convenient, let a room be especially set apart for training and educational purposes, furnished with all the facilities of the modern kindergarten. Care should be taken to keep the tasks from becoming monotonous. The playful moods of the child must be utilized, and methods so adapted that children will not be conscious of their being rigidly disciplined. A child is naturally vivacious, and the only tact required is that which gives proper direction to its activities.

Language lessons should begin as soon as the child lisps the simplest household words, and the vocabulary gradually developed. The correct use of name-words can be taught by illustrating with the objects for which the words stand; action words by "suiting the action to the word, the word to the action." Modern schools of expression cannot hope to improve upon Shakespeare's didactics as set forth in Hamlet's speech to the players. Put into this form intellectual training becomes at once fascinating to both pupil and teacher. After a child has been taught to speak correct English, and has acquired facility in writing the same, the study of a foreign language may be introduced in precisely the same way. This is preëminently the initial method to be pursued if great proficiency and accuracy would be attained. The writer himself was taught at his mother's knee to read German quite fluently before the age of twelve, while he spent years in hard study, getting a superficial knowledge of Latin and Greek.

If you wish your boy to become a great linguist, lay the foundation for at least one foreign language

before he enters his teens, remembering to follow nature's methods. Your child did not learn its mother's tongue from textbooks. Textbooks have an important use, but do not abuse it by placing too much dependence upon them, especially when dealing with children.

The synthetic method, as developed by Miss Pollard, has perhaps the highest approval, by progressive educators, for the study of orthography and subjects to which it is closely allied. This manner of unfolding technicalities of spelling and composition fascinates the children, being made-uniquely attractive, and herein lies its great educational value.

It is a great blessing that a dry and uninteresting task may be made pleasant and alluring to the child mind. In initial number work the "Speer" method of employing block illustrations serves a similar purpose. The intricacies of notation need to be thoroughly explained, illustrated and exemplified before proceeding to their application in problems.

Children at a very early age manifest the development of mechanical traits, and this must at once be taken advantage of, encouraged and directed. Furnish the child needful articles with which to display its ingenuity—slate and pencil for drawing objects, clay for modeling purposes, and provide facilities for designing, lending assistance in making beautiful effects. Indeed, take advantage of all the methods employed in our most efficient kindergartens for the development of the child faculties, that none be neglected or hopelessly dwarfed. Guard against the temptation of cramming to hasten development, thus nauseating the child's mind by overdoses of erudition, only to end in mediocrity.

Little drills in marching and simple exercises in physical culture may be introduced at a very early age with wholesome effect, not only physical but also

mental, for whatever trains the body disciplines the mind. The child's emotions may be awakened through the musical faculty, teaching it easy songs full of pure moral and religious sentiment. Special attention should be given to the training of the eye, the ear and the hand, but, however important development along these lines may be, they are only incidental to the higher culture of the heart—the seat of the affections—"for out of the heart are the issues of life." The general deportment of children needs to be carefully noted. They must be taught to respect the rights of others.

At this point the question of the child's playmates asserts itself. The best results are invariably accomplished where the associates of the child can be chosen from its own household, and herein lies the advantage that the children of large families have over those who have but few or no brothers and sisters. There can be but little democracy in family government where there is a dearth of numbers. There can be no respect for the rights of other children where there are none, the rights of which the child may be taught to respect. Where there is but one child there is danger of weakening its character by too much devotion, and in later years by over-indulgence, while its more fortunate cousin, with a half dozen brothers and sisters to share parental affection and attention, soon ceases to become dependent upon father and mother for every little attention required and learns to rely upon itself.

Children should be so disciplined that it becomes habitual for them to be courteous and mannerly. This habit is easily acquired through example. We must not expect children to develop refined characters when they repeatedly see those having authority over them lose their tempers upon the slightest provocation, and hear parents speak disrespectfully of any one with whom the family is on friendly terms.

Children should be much in the open air. If your home is in the city, frequent the parks and make occasional excursions into the rural districts to give opportunity for the study of nature, and to instil first impressions of the supernatural. Teach them to be grateful for everything that affords them pleasure or comfort, and for all favors received, setting the example of being thankful yourself for the blessings you enjoy. Early teach the child to become interested in devotional exercises by having it learn suitable scriptural texts. Gems of literature committed to memory will also have a salutary effect upon its character.

In all that further pertains to the right training of little children, Froebel's textbook for mothers is a comprehensive and valuable guide, the author of which best expresses the object of the kindergarten: "It shall give them employment suited to their nature,

strengthen their bodies, exercise their senses, employ the waking mind, make them acquainted judiciously with nature and society, cultivate especially the heart and temper, and lead them to the foundation of all living—to unity with themselves."

After these ends have been attained, and the methods peculiar to the kindergarten and primary grades have been exhausted—the rudiments of knowledge inculcated preparatory for education along specific lines, leading up to successful entrance into the grammar school,—a series of charts as perfected by Professor Woods may be used as a valuable auxiliary to the textbook process.

Learning by doing, illustrating and exemplifying is preëminently the method to be pursued. In mathematics the principles involved in each succeeding task must be thoroughly mastered, and the memorizing of rules avoided. The child must be taught to formulate its own rules from a knowledge of the basic principles. Accuracy is of first importance, but rapid calculation is immensely practical, and drills, conducive to the acquirement of speed in computation, should be continually resorted to.

Country boys, as a rule, are partial to mathematics, soon becoming adepts at figures, and this, supplemented by a genius for hard work, which farm life induces, no doubt accounts for the many successful boys in every branch of mercantile life. Let city residents take cognizance of this fact so that their children may become successful competitors for the best positions.

THE CHILD AT PRAYER.

A baby to a Baby prays.

O infant Jesus, meek and mild,
From 'mid the glory and the rays
Look on a little child.

As one child to another may
He talks without a thought of fear,
Commending to a Child today
All that a child holds dear—

His father, mother, brother, nurse,
His cat, his dog, his bird, his toys;
Things that make up the universe
Of darling girls and boys.

All sheep and horses, lambs and cows,
He counts them o'er, a motley crew,
And children in the neighbor's house,
And all the people, too.

His friends, why all the world's his friend,
This four-years darling, golden-curled.
'Tis long before it has an end,
The bed-roll of his world.

The child lifts up his little hands,
Unto a Child; and it may be
The host of heaven at gazing stands,
That tender sight to see.

—Author Unknown.

YOUNG LADIES AND DRESS.

A LADY who had taught for over thirty years, once gave the writer some interesting information. "When a new scholar was introduced," she said, "I always looked first at her dress. If that was plain, neat and tidy I was pretty confident that I had good material to work with. For the first two or three years of my teaching I was in the habit of scrutinizing the features, and the formation of the heads, but these came at last to be quite secondary considerations. Our school was so expensive that none but daughters of the wealthy could possibly enter it; so when a young lady came to the classroom in a plain dress, I was sure that it was on account of her idea of the fitness of things. This argued common sense. Common sense is always in direct antagonism to vanity, and where there is no vanity there is seldom self-consciousness. So, you see, a plain dress came to mean a great deal to me. I learned never to expect anything from a girl whose school dress was silk or velvet. I shall always retain the impression made upon me by a quiet little body in a blue flannel dress and plain trimmings. She came from one of the first families in wealth and culture, and was the most unobtrusive child I ever knew, as well as the most brilliant. When she told me graduation day that she had decided to study for a physician, I was not in the least surprised. I was sure she would succeed, as she certainly has in the most marvelous manner. She carried off every honor, and though the girls in 'purple and fine linen' sneered at her plain attire, and lack of style, there was not one who could ever compete with her."

Certainly, on the whole, the deductions of this teacher are correct. It takes time to array one's self in elaborate garments, and the girl whose mind is occupied with loops and trimmings and general furbelows can not, for a philosophical reason, have room for much else.

Then there is a reason deeper than this, even. The girl whose tastes are in the line of dress and display has not an intellectual development. She may be imitative and intuitive to a degree, but she will always or generally be superficial in her learning and shallow in character.—*The Congregationalist*.

THAT "BAD" BOY.

—DON'T tell him he is bad. He may believe you. Then there is no hope for him, and but little for you. Dr. Marden tells this story:

"I have brought my boy to see if you can do anything with him," said a parent, when the teacher answered his rap at the schoolhouse door. "Of all stubborn boys I know, he is the worst." The boy was seated and lessons were assigned him. Not long afterwards, as the teacher was going to his desk, he put out his hand and laid it kindly on the boy's shoulder, whereupon the little fellow shuddered and shrank away

from the touch. "What is the matter?" asked the teacher. "I thought you were going to strike me," replied the pupil. "Why should I strike you?" "Because I am so bad," said the boy.

"Who says you are bad?" "Father, mother, and everybody else says so." "You can be just as good as any boy if you try," said the teacher, kindly. "Can I be a good boy?" asked the little fellow in surprise; "then I will be a good boy." From that time his life changed. He made rapid progress in his studies, was almost faultless in deportment, and was soon a favorite with all. He became governor of one of our largest States.

"The teacher," says Marden, "had simply given the boy a new life and higher ideals, and had inspired him with the confidence and aspiration necessary to attain it; but how it transformed a whole life!"—*Selected*.

THE SISTER'S PART.

AN elderly lady and two young girls walking together in the street one day, met a boy known to one of the girls. Stopping to speak to him for a moment, she introduced him to her friends. When they had bidden him good afternoon and passed on, the lady remarked:

"I think that boy must have a very nice mother and sister."

"He has. Mrs. Lee and Nellie are both lovely. But how did you know?" replied the girl, in a surprised tone. The lady smiled.

"I do not know, but I guessed it from his manner. A boy who is snubbed at home does not act like that when he is out. Only home kindness and courtesy and the training that love gives can make a boy such a frank, easy well-bred gentleman," said she.

The girls looked at each other for a moment and then one voiced the thought of both.

"I am going to be careful how I treat Ned after this. If people are going to judge me by him I'll have to be on my guard. And I know you are right about it. There is Will —. When you speak to him he always shuffles his feet and puts his hands in his pockets and hangs his head and stammers. His sister is always chasing him out of her way and scolding him, and his mother acts as if she were ashamed of him, and sends him off out of sight when there are callers. I earnestly believe he would be as nice as Rob, too, if he had the same chance."

"Quite likely," said the other girl. "I know he is good-natured and bright when he forgets to be awkward and embarrassed. I think I shall have to be out, too, and make sure that my little brother is a living demonstration of my amiable disposition," and though she laughed as she spoke, under the laugh was a tone of real earnestness.—*Selected*.

GOVERNMENT WHITEWASH.

NICE, unslacked lime, one-half bushel; slack with boiling water poured over the lime, and keep covered during the process to keep in the steam. When slacked, strain the liquid lime through a fine sieve or suitable strainer, and add to the strained portion one peck of salt previously well dissolved in water. Boil three pounds of rice to a thin paste, and stir, boiling hot, into the lime solution; add half a pound of Spanish whiting; have one pound of clean, nice glue previously dissolved by soaking well and hanging it over a slow fire in a small kettle immersed in a large one filled with water which should be kept boiling until the glue is thoroughly melted, then stir the hot glue into the lime solution, with five gallons of boiling water, stirring it well and let stand, covered to keep out dirt, for a few days. This whitewash must be applied to any surface hot, and it can be used as oil paint on brick or stone, as well as on wood. Coloring matter, dissolved in whiskey or alcohol, may be used to make it any desired shade that can be used with lime—green can not, as the lime destroys its color, while in turn, the color ruins the whitewash, causing it to crack and peel. It can be used indoors or out, and is claimed to be very durable. For larger quantities, the above proportions must be used throughout. This is the recipe given for the brilliant stucco whitewash used on the east end of the White House in Washington.—*Selected.*

**FOR THE HOUSEKEEPER.**

WHEN putting up nails in the storeroom or attic, drive them through a spool so things will not rust when hung on them.

EVERY farmer's wife ought to have a book in which to keep her ought-to-buy-ography. That is, the things she ought to purchase.

RHUBARB is usually stewed, but is even better baked. Put it and sugar in alternate layers in a baking dish; cover and bake for twenty minutes.

CUT several slices of bread of medium thickness and spread them with butter; place them in a pan, cut them in small squares, and put in a hot oven until browned. You will find them excellent to serve with soup and a fine substitute for oyster-crackers.

WHEN asparagus is laid down in the water the tips cook to a pulp before the lower ends of the stalks are tender. Cut the bunches level across the bottom and stand them up in a pot of boiling, slightly-salted water, which reaches not more than half-way up the stalks, and cover closely. Have some buttered toast in a hot dish; lift the asparagus out to drain on this, and serve with a little melted butter, or white sauce poured over the tips.

The Children's Corner

KATIE'S SATURDAY.

"DEAR me!" sighed Katie, when she got up that Saturday morning.

"What can be the matter?" said mama, laughing at the doleful face.

"Oh, there's thousands and millions of things the matter!" said Katie, crossly. She was a little girl who did not like to be laughed at.

"Now, Katie," said mama, this time seriously, "as soon as you are dressed I have something I want you to do for me down in the library."

"Before breakfast?" said Katie.

"No, you can have your breakfast first," mama answered, laughing again at the cloudy little face.

Katie was very curious to know what this was, and as, perhaps, you are, too, we will skip the breakfast and go right into the library.

Mama was sitting at the desk, with a big piece of paper and a pencil.

"Now, Katie," she said, taking her little daughter on her lap, "I want you to write down a few of those things that trouble you. One thousand will do!"

"O mama, you're laughing at me now," said Katie; "but I can think of at least ten right this minute."

"Very well," said mama; "put down ten."

So Katie wrote:

"1. It's gone and rained, so we can't play croquet.

"2. Minnie is going away, so I'll have to sit with that horrid little Jean Bascom on Monday.

"3. —"

Here Katie bit her pencil, and then couldn't help laughing. "That's all I can think of just this minute," she said.

"Well," said her mother, "I'll just keep this paper a day or two."

That afternoon the rain had cleared away, and Katie and her mama, as they sat at the window, saw Uncle Jack come to take Katie to drive; and oh, what a jolly afternoon they had of it!

Monday, when Katie came home from school, she said, "O mama, I didn't like Jean at all first, but she's a lovely seatmate. I'm so glad, aren't you?"

"Oh!" was all mama said; but somehow it made Katie think of her Saturday troubles and the paper.

"I guess I'll tear up that paper now, mama, dear," she said, laughing rather shyly.

"And next time," said mama, "why not let the troubles come before you cry about them? There are so many of them that turn out very pleasant, if you'll only wait to see."—*Selected.*

THE QUIET HOUR

SONNET.

"Reviving the work of God among us."—2 Chron. 15: 8-15.

Up, Christian soldiers, all! Let us revive

God's work among ourselves. Arise with zeal,

New strength, and faith within yourselves. Appeal

Unto your God, and he will all these give.

There are things we must do ere this will thrive.

We must be consecrated (v. 12), bear God's seal.

The consecration we have must be real (vs. 12, 15).

To have no fear of man (v. 14), we e'er must strive,

Get rid of sin (v. 8) and keep from it aloof.

(They have no weal who are the dupes of sin.)

Self we must sacrifice (v. 11) to gain behoof.

We must be cleansed and wholly pure within (v. 8).

It must all be heart work to miss reproof (vs. 12, 15).

If we achieve all these, our end we'll win.

PILLARS OF SMOKE.

ROSA MILLER.

"Who is this that cometh out of the wilderness like pillars of smoke, perfumed with myrrh and frankincense, with all powders of the merchant?"—Song of Solomon 3: 6.

Across the sky float clouds of smoke, which God with his hand causes to rise like pillars to the dome of heaven, making one vast church for his children.

For can we not worship God in the field, forest, cave or plain, as well as in a house made by man?

And this worshiping of God, this following after Christ, has caused the suffering and death of millions of righteous souls who have perished by the cross, the bludgeon, the wild beast, and by the flame; the last being the most common mode of persecution.

In the midst of the flames the followers of Christ uttered no word of complaint toward God, showing that the fire only served to make their souls more pure, "as silver tried in a furnace of earth, purified seven times."

Some of the sufferings the true Christians endured are of too awful a nature to be mentioned.

The first Christian martyr we have record of is Stephen, a true, loving and trusting follower, upon whom the rage of men was spent, till he was bruised and finally killed with the stones, while he was praying to the Father for himself and his persecutors. They had followed him from place to place but at heaven's gate they had to turn back, unable to follow the martyr there.

During the ministry of Saul, Herod Agrippa I, without any apparent cause, drew the sword of per-

secution. James the brother of John was put to death, and Peter into prison.

One of the legends of the Catholic church tells how John was, when a very old man, cast into a caldron of boiling oil from which he miraculously escaped free from injury. It was then that he was banished to Patmos.

During the ministry of Saul, Herod Agrippa I instigated an uprising against the Christians, during which time Peter was crucified head downwards. At this time thousands of other innocent Christians were killed by the Romans.

Under Emperor Diocletian, 144,000 Christians were massacred, and 700,000 more died from banishment and exposure.

The Duke of Alva caused the death of 18,000 Christians.

In the early stage of the church, and particularly during Nero's reign, the Christians were thrown into the amphitheatre, to be devoured by wild beasts.

Four hundred and four years ago, the Huguenots or French Protestants suffered shamefully at the hands of the Catholics; yet after the Reformation the Protestants inflicted even more severe persecutions upon the Catholics.

What the final result will be, of all this persecution, we find in Rev. 7: 14-17:

"These are they which came out of great tribulation, and have washed their robes, and made them white in the blood of the Lamb.

"Therefore are they before the throne of God, and serve him day and night in his temple: and he that sitteth on the throne shall dwell among them.

"They shall hunger no more, neither thirst any more; neither shall the sun light on them, nor any heat.

"For the Lamb which is in the midst of the throne shall feed them, and shall lead them unto living fountains of water: and God shall wipe all tears from their eyes."

Roanoke, La.

CONFESSION NOT REPENTANCE.

THERE may be an admission that God has smitten without true repentance. The Bible gives us many examples of men who have come to believe in God, and have come to know their own sin, and who have actually confessed their sins, and manifested a kind of sorrow for them; and yet failing to act upon their

knowledge in seeking pardon and entering a life of righteousness, it has all gone for naught.

The Philistines confessed that the hand of God was sore upon them, and upon their god, but it led to no change in their disposition towards him. Pharaoh acknowledged that, "The Lord was righteous, and that he and his people were wicked," but his admission had no effect upon his conduct. Saul admitted that God had forsaken him, and was visiting him for his sin, but he turned not to him who had smitten him, but in direct opposition to Divine command, sought counsel of a witch.

I have known men and women who were deceived by the devil into the belief that it could not be possible that they could be lost because their consciences were so tender, and they were so often sorry on account of their sins. I have had a man say to me, "I never do wrong but that I am at once sorry for it." But there is no virtue at all in that. That is only an indication of God's goodness toward man, and not of man's at all. Pharaoh had that experience, it was Balaam's chronic condition; Judas felt that way, but it did not save them from becoming so deeply the slaves of sin that they rejected God until the last, and died in despair.

Many men of every age are compelled to acknowledge that God is visiting them, yet they will not turn to him in repentance. They may cry to God in their despair, but give evidence that it is not sin that troubles them, but punishment for sin. Like the Philistines they would be rid of their sufferings, but they are not willing to give up their Dagon, and to give glory and render obedience to the Lord of hosts.—*Christian Monitor*.

"THEY FEARED AS THEY ENTERED INTO THE CLOUD."

MANY of the greatest and most uplifting experiences of life approach in the guise of fearsome clouds. Whether any cloud shall be changed into "the Majestic Glory" depends upon whether it shuts in or shuts out Christ. If he be within it, the vision splendid must soon burst forth to show the Master more radiant, more divine than before.

To those drawing consciously near the close of their days this mount of the transfiguration has its lessons of exceeding grace. It is not a pleasant thing to anybody to grow old. To most men, despite all they say and the jests they make, age comes as unexpected and unheralded as a cloud drifting across Hermon's heights. From some source, invisible, there comes a sudden shadow and a dreadful chill. Something has shut out the sun, slowed the beatings of the heart. * * * Happy, thrice happy, that disciple who sees the curtain shut down behind him and life only to see the veil throw back which reveals to him the Savior glorious in the light of immortality.—*The Interior*.

HE UNDERSTANDS.

We do not know why Marah's waters flow
Beneath the place where Elim's palms trees grow,
To cool the desert sands,
Nor why when Canaan looks so sweet and fair,
Strong deadly foes are waiting everywhere,
But then God understands.

We cannot see why Jacob, all night long,
Must hold his feeble arm against the Strong
To get his high demands,
Nor why e'en now some souls in anguish plead
When God is waiting to supply each need,
But then he understands.

We can but wonder why some lives are bound
With chains of steel, nor hear a sweeter sound
Than toil's severe commands,
While Time makes melody for other ears,
As perfect as the music of the spheres,
But then he understands.

There must be purpose in our pain and strife,
And when rue mingles with the wine of life,
If we are in his hands,
So when we cannot conquer with the strong,
We need not with the vanquished suffer wrong,
Because he understands.

Sometimes I look upon the glowing west,
And think I see some shining mountain crest
In distant Eden lands,
And grateful for the way my feet have trod,
I care not which the path if close to God,
Because he understands.

—Myra Goodwin Plantz.

GOD MEETS US IN CHRIST.

Emmanuel, which, being interpreted is, God with us
(Matt. 1: 23).

WE have been hearing a great deal about the immanence of God, and many are captivated by the delightful thought of having God in such close contact with our finite life. But the immanence of God apart from Jesus Christ is pantheism or theosophy. In his natural state man is not in fellowship with his Maker. "Without God and without hope in the world," is the normal state of our fallen human nature. It is a cruel comfort to talk to any unconverted man about the Fatherhood of God, the brotherhood of man and the immanence of the Divine Spirit in every human conscience.

Jesus Christ has brought us nigh to God, and only in believing union with him and through the heavenly birth which he brings to every regenerate heart can the lost chord be found and the broken law of gravitation to our true centre be restored. It is through Jesus Christ and him alone that God is with us, for us, in us.—*Christian and Missionary Alliance*.

WHEN you talk of the failures of some of the saints, remember that God has not finished with them. We are only saints in the making, and God is having a good deal of trouble with some of us.—*Rev. J. Taylor Binns*.

ECHOES FROM EVERYWHERE

Secretary Seward did not make a very bad bargain when he purchased Alaska from Russia for \$7,200,000. Last year the Territory produced \$18,000,000 worth of gold and silver alone.

There are 80,000,000 Chinese who are slaves to the opium habit, and about 500,000 Chinese commit suicide each year because of the widespread use of the drug, many of them being helpless women whose husbands are users.

By order of the Oklahoma State board of health, physicians who have tuberculosis will be barred from practicing medicine in Oklahoma. Physicians from the East afflicted with consumption have been coming to Oklahoma to practice, hoping to benefit their health.

The condensed milk business in this country seems to be a paying one. In the course of the past 10 years there have been exported some \$16,000,000 worth of milk in cans. Oriental and tropical countries are the ones to which the milk is sent in largest quantities.

Dr. William Gill, an explorer, has returned after making a journey along the entire length of the great wall of China, a distance of 2,500 miles. In Northern China his party discovered a race of pigmies which had never seen a white man. In fact, at several places they were the first white men the natives had ever seen.

The war department of the United States has ordered stopped the sale of obsolete army rifles at the request of the Chicago police department. The Chicago officials took the position that the returns to the Government from the sale of the obsolete weapons did not amount to enough to offset the danger which the sale of the rifles might be to the peace and the police of the large cities.

The Japanese House of Peers has approved the budget voted by the House of Representatives. The budget has followed the newly adopted policy of retrenchment in all departments and effects a saving of about \$178,500,000 in the Empire's expenses. A good deal of the saving is in the army and navy budgets. Baron Katsura's ministry came into power on this issue, and he is faithfully applying the policy of retrenchment advocated by him in advance of the election.

Moslem fanaticism has broken out afresh in Adana and other towns in Asiatic Turkey and reports say that hundreds of Christians have been killed, among them two American missionaries. The killing of the Christians is accompanied by the pillaging and burning of houses, as in former massacres in this section. The Sultan is greatly disturbed over the reports as he fears the slaughter of Christians will cause the powers to interfere. He has ordered all available troops to rush to the scene and put down the riot at any cost.

A step in the big copper war between the Morgan-Guggenheim interests and the Standard Oil group became known when the financial world learned that the former had completed the deal whereby they get control of the vast copper acreage in Alaska owned by the Bonanza mines. The purchasers are the Alaska syndicate, composed of Morgan and the Guggenheims, and the property was that owned by the Havemeyer estate and Norman Shultz. The price is kept secret, but it is stated \$20,000,000 in ore is in sight. The Bonanza mines are officially known as the Kennicott group, 180 miles to the northeast of Valdez, Alaska.

The Liberian Commission, appointed by the State Department to go to the West African republic to study conditions there with a view to improving the management of the affairs of the republic, left New York for Liberia April 24. The commission will be absent from the United States about two months. The scout cruisers Chester, Birmingham and Salem are being utilized for transporting the party, which will include Dr. George Sale of Georgia, Emmett J. Scott of Alabama and Captain Sydney A. Cloman, military attache at London.

That the owner of an automobile may be held responsible for the act of his chauffeur in running down and injuring a pedestrian was established recently in the Supreme Court in New York City before Justice Fitzgerald and a jury in the case of James H. Sullivan, an iron worker, to whom a verdict for \$1,000 damages was awarded for injuries sustained when run down by the automobile of Charles Austin Bates. The owner was not in the car at the time. There are many other damage suits of a similar nature on the calendar, and the verdict in this case was looked upon as a victory for pedestrians in general.

Upon order of Secretary of the Interior Ballinger 364,000 acres of semi-arid lands, which had been withdrawn absolutely from all forms of entry, have been thrown open to settlement. The land is in three parcels, two of which were withdrawn pending preliminary surveys in connection with the Yellowstone reclamation project and the North Platte project. Of the first of these there are 200,000 acres in the Lander and Buffalo land district in connection with the North Platte project. The third parcel of 19,000 acres is located in the Kalispel, Mont., land district, and was withdrawn under the supervisory authority of the President for the conservation of water resources. A statement given out by the interior department says that the restoration has been made because "the interest of the Government no longer requires" the withdrawal. The lands restored are desert in character, with the exception of the Montana parcel, which is located in the Swan River country and will furnish homes for about 2,500 people, if taken up under the arid land act.

Representatives of the smuggling syndicate which recently offered to pay Collector Loeb of New York \$100,000 if the cases involving smuggled property to the value of \$50,000, were withdrawn, have raised the offer to \$260,000. Mr. Loeb says there will be no compromise, as the Government wants the smugglers.

The government snagboat Gen. McPherson has departed for Kansas City and will begin removing snags from the Missouri River above that point. The McPherson may go as far as Bismarck, N. D. St. Louis merchants have agreed to join those of Kansas City in the navigation of the Missouri River with a fleet of boats.

The final ceremony of the beatification of Joan of Arc took place at St. Peter's in Rome, April 18. The mass was celebrated by the bishop of Orleans, and the degree of beatification was read during the service. Following the announcement the Pope descended to the basilica to venerate the portrait of the maid. After the date of these ceremonies Joan of Arc may be venerated publicly and altars may be erected to her in churches. In the near future the Pope will publish a decree proclaiming the maid protectress of Catholic France. Trainloads of pilgrims attended the ceremonies.

The Chicago Telephone Company has installed nearly 2,000 "talk measurers." These telephone meters, according to Manager Hibbard, are much more accurate than are the women operators in keeping track of the amount of talking done on each wire. In addition to counting the number of calls of subscribers this instrument also counts the number of connections made by each operator. Its chief advantages over other meters is that it is impossible for it to be manipulated to register more than one time during one conversation. When a subscriber gets the number desired the operator pushes a button and the call is registered.

It is estimated that three and a half million wooden poles used by electric companies in this country require renewal each year. These poles are perfectly sound except at the ground line; and as it costs more to renew a pole than to set a new pole, a scheme of reinforcing the poles with concrete has recently been devised. It consists in bridging the weakened part with reinforcing rods driven into the pole above and below the decayed portion. Concrete is then molded around the pole over the reinforcing rods. In this way the pole can be rendered even stronger than it was originally and at very little expense.

Acting on instructions from Washington, April 15, United States Marshal Langhammer and Revenue Inspector B. A. Miller, with five deputy marshals, seized the plant and stock of the the Carroll Springs Distillery Company in Baltimore. The whole is now in the custody of a specially appointed watchman. At the same time six men connected with the distillery were placed under arrest, including H. J. Daly Jr., manager, and George J. Conway, bookkeeper. Subsequently they were released for a hearing before United States Commissioner Bond, Daly on \$5,000 bail and the others on bail of \$2,000 each. The seizures and arrests were made following charges that the men named had on or about July 1, 1908, and Jan. 1, 1909, conspired to defraud the Government by taking out of the warehouses of the distillery and selling old whiskey and substituting therefor new whiskey, upon which no tax had been paid.

The Wisconsin legislature took a sharp stab at Jas. A. Patten, the "wheat king," by passing a joint resolution calling on Congress to investigate the methods by which any set of men are enabled to control the bread supply of the country.

Sultan Abdul Hamid is contemplating an early abdication of the throne in favor of his third son, Mehemmed Burhaned-Din, according to the latest advices from Constantinople. Such a move would certainly precipitate a war for the succession, as Abdul's brother, Prince Rechad, is the rightful heir. Under the Moslem law inheritance of the throne is according to seniority of descent from Qthman, the Empire's founder, rather than by direct line. Mehemmed Burhaned-Din is the favorite son of the Sultan, and it has long been known that Abdul has been trying to find a way by which this son can succeed him without creating too much of a disturbance.

Jewish leaders are rejoicing over the generosity of Jacob H. Schiff, the New York banker, in placing \$100,000 at the disposal of the Central German Jewish Relief Alliance fund for the establishment of a technical college for Jews at Hafia, Palestine. The plans of the alliance contemplate the foundation of a plant costing \$250,000, with annual maintenance charges of \$20,000. The munificence of the American banker-philanthropist has made possible the early realization of the whole scheme. The underlying object of maintaining a great technical training school for Jews in the Holy Land is to give industrial life there such an impetus that the country will prove a natural attraction for the persecuted Jews of Russia, Galicia, and Rumania, and divert at least large numbers of them from the beaten tracks leading to the overcrowded Jewish centers of America, Germany, and England.

The investigations that are carried on by the agricultural department look to the improvement of man in most cases, and already life, especially farm life, has been greatly blessed by the discoveries it has made and the new methods that it has presented. Recently Prof. Hansen of the South Dakota agricultural college has been making investigations in the interest of the United States agricultural department in the northern part of Asia. Among the interesting things that he has brought back are some new varieties of arctic alfalfa, a grape that will grow in places almost arid, and a clover that actually sprouts in the winter time and will grow through ice. Under the direction of the department, Prof. Hansen carried on his researches through Russia, Siberia, Turkestan, Mongolia, Manchuria, China, Japan, Persia, Lapland, Finland and a few other countries the object being to discover as many plants as possible that will grow in the coldest parts of the United States and in the semi-arid regions of the West. Near the point where the temperature is lowest in northern Asia he found the alfalfa and clover growing and living in temperatures of 60 and 75 degrees below zero, temperatures at which the mercury itself freezes. These are growing wild, as the people in those districts do no farming, but rove from place to place. Now that the specimens have been supplied to the agricultural department, it will set immediately to work to see what it can do toward adapting these plants to growing in the United States. Of course, it will take several years to get them thoroughly acclimatized, but eventually one may expect that something will be developed that will be the means of making farms in the very cold and very dry States far more productive than they are at present.

Among the Magazines

SAVING THE NEXT GENERATION.

Defective eyesight, writes William Allen Johnston in the April Circle Magazine, calling attention to the necessity of guarding the health of the little people, is even more common than defective hearing and usually more disastrous in results.

A Chicago physician states that the number of "short-sighted" children in this country today runs away up into the millions. And this great army of little weaklings may be made healthy, robust children by the timely and proper fitting of glasses!

Besides defective eyes and ears there are many other nervous irritants which either escape the parents' eyes altogether—which is almost always the case—or else they are voted too trivial to need correction. The skilled physician can find them; he knows, too, that while there are quicker ways deliberately to wreck a child's health there is no surer and more deadly course than the neglect of these "trivial" abnormalities.

A crooked tooth sounds unimportant enough, but in a young child it may completely disarrange its bodily, mental and moral development. Proper mastication is prevented and impaired digestion with all its resultant ills and its promise of permanent weakness naturally follows.

The case is cited of a little girl who had grown to be a hopeless "liar." She was anemic, very delicate, and frequently ill. A careful examination revealed constant fermentation in her stomach and this was caused, it was found, by a single crooked tooth which prevented the grinding motion so necessary to proper mastication.

The fermentation of food in the stomach caused unnatural nervous reflexes which in turn overstimulated the brain and resulted in a disordered imagination. The child "day dreamed" and exaggerated. The straightening of the tooth made her normal in every way.

In the medical inspection of the New York City schools, it was found that thirty per cent were backward. Putting the matter in the light of economy, the city was wasting three million dollars a year in teaching children who were physically unfit to receive an education. Examination revealed the fact that of the small army of backward children over ninety-five per cent were "dull" because of physical defects. And of this considerable, almost total, number more than ninety-five per cent were changed from dullards into normally bright scholars by simple operation or physical treatment.

PERSONALITY OF "UNCLE REMUS."

In personality Joel Chandler Harris had no counterpart in literary life, says Frank L. Stanton in the Delin-eator for May. He was incomparable because he was different. He had not the "literary look," nor yet that of the comparatively well-to-do farmer, however much it may seem that the blended association would be demonstrated in appearance. Of average height, he still did

not seem so, for constant application at the desk had somewhat rounded his frame; and there was yet another roundness that bespeaks secular living and jovial temperament. Something comically blending the pathetic and the apathetic spoke from his ruddy face, but the mild blue eyes that seemed negligent or inattentive the previous moment brightened with a glint that was variously humorous, shrewd or sympathetic, as the provocation might be. The voice drawled lazily, faltering and hesitating increasingly as the man was closely touched.

A slight impediment of speech, largely imaginary, had accentuated a native modesty that impelled an unusual degree of seclusion; and yet, upon occasion, few could enter into more animated or unflinching conversation. When he was pleased or amused, immensely so, an apparent though scarcely audible chuckle vibrated his whole frame. He never laughed loudly; that chuckle was his superlative. And if you sat and talked with him by the hour; or, if, knowing the man, you watched him shambling his way through the crowded streets of Atlanta, your first impression was forever effaced. Through the strange mask of shyness and deceptive insignificance you saw the keen, kindly philosopher; the thoughtful, imaginative man of letters who had written his way into the heart of civilization.

The man and his methods constituted such an anomaly in American literature that one must needs tread in unusual paths to secure a glimpse of his real personality.

The sources of his knowledge of human nature were just two—observation and absorption by shy, silent contact. The fruits of these faculties were poured into the crucible of his keen but kindly philosophy and his alert introspection; the result is the stories that have made him famous.

INTERCOLLEGIATE SPORTS.

President Charles W. Eliot, in his last report to the Harvard overseers, takes a stand in opposition to present day intercollegiate football. His criticism has been variously received, but we believe that he has very fairly stated the opinion of the people at large, or at least of such of the people as have opinions on this subject. There is little excuse for college athletics as they are conducted today. The plan is such as to give the greatest value to those who need it least and to leave those who most need exercise quite without intelligent direction. Take the college football team as an example. This team is organized for the primary purpose of winning games, the one idea being that it is a disgrace to lose. The custom is for the coach to call for volunteers. He gets together a squad of men, varying in number, of course, according as the school is a large or a small one. Having brought out all the volunteers possible, the coach proceeds to eliminate. He lines up as many teams as can be composed of his squad and gets them into active competition with one another for positions on the 'varsity

eleven. By pitting two good men against one another on opposing teams, he is able to decide between them and in the course of time he has organized a "first team" and decided what men will be retained from the remaining candidates as substitutes. He is then done with the volunteers. The rest of his time is devoted to training the regular squad and to whipping them into condition to defeat their principal rivals on the field of battle. If there happen to be among the volunteers any of those enthusiastic spirits who refuse to be daunted by failure to obtain places on the regular eleven, they may organize class teams or minor elevens, but they are usually left to work out their own salvation. They have no training table, no athletic instruction and none of the other advantages accruing to those who were so fortunate as to win positions on the regular squad.

This is the system. It applies in exactly the same manner to baseball and track teams and to rowing crews as it does to football squads. It does not reach the great body of students at all. What exercise they get, they arrange for themselves, but most of them do not get any. It is probable that those whom the college really ought to require to take exercise are almost invariably neglected. The possible value of athletics is thereby almost entirely lost to the college or university. The only argument to be made in justification of school support of sports is that they benefit the individual students physically. But a system that benefits only 15 or 20 men in each of the three or four departments of college athletics profits the student body little, is largely a waste of time so far as the men who are benefited are concerned, and the cost to the school is out of all proportion to the returns made.

This is the result of athletic competition between schools. It leads often to professionalism in college sport and to that abominable practice of employing what are known as "ringers"—men who enter schools at the solicitation of the coach, solely for the purpose of strengthening some team and not for the purpose of studying or even with the expectation of studying. Frequently, these men are paid salaries. Abuses of this nature led to the organization of inter-collegiate athletic associations, which assumed jurisdiction over athletics, made the rules governing student eligibility on teams and placed restrictions on the abuses practiced by coaches. This was "regulation," and so far as it has been tested the result has been about as satisfactory as regulation of saloons. "Ringings" have been partly forced out of college athletics, it is true, but the great problem of making athletics of value to the student body instead of to a few fortunate individuals remains unsolved. So long as college athletics are conducted on the competitive principle coaches will give no attention to the physically weak student, who is really most deserving of his consideration. The coach's reputation rests on his ability to produce teams that will win games, and games are not won in the United States today by physical weaklings.

What is needed in our schools is athletic instruction that has been put on the same scientific and methodical basis as instruction in chemistry or psychology. Like English, it should be a "study" that is required of all students. And the course should consist not of competitive games, but of moderate exercise, both indoors and outdoors, gymnastic work, walking, running, etc., that will be of practical benefit to every student. At present, quite the only distinguishing mark between professional and amateur sport is made with a dollar sign.—*Woman's National Daily*.

RUSSIA'S PROTECTIONISM.

If one turns to enquire into the tariff attitudes of other European nations with which the United States maintains commercial relations more or less close, the fact that impresses itself most forcibly is that practically every one of them is firmly "standing pat."

The most uninterruptedly and irretrievably protectionist nation in all Europe is the Russian Empire. Untouched by the wave of commercial liberalism which swept over western Europe about the middle of the past century, Russia steadfastly maintained her tariff barriers and from time to time augmented them, until within the past two decades, when changed conditions, arising largely from German industrial preponderance, forced her into certain modifications, if not of purpose, at least of method. In 1893 Russia abandoned her single tariff schedule and arranged a maximum and minimum system on the plan of the French tariff of the previous year. There ensued between Russia and Germany one of the notable tariff wars of recent times, Russia enforcing her maximum rates as against Germany and Germany retaliating by an increase by 50 per cent of her rates as against Russia.

On February 10, 1894, peace was concluded, on terms which were satisfactory enough to German manufacturers, though not to the Agrarians because of the opportunity left open for the importation of Russian rye into the Kaiser's dominions. Russia was extended most-favored-nation treatment by Germany, while the latter secured a reduction of the Russian minimum duties on 135 items, including iron, cutlery, machinery, paper, and textiles. In the German tariff of 1903, however, the Agrarians gained their point by securing the insertion of a clause which forbids the government, in bargaining with Russia, to reduce the duty on Russian rye to below five marks per 100 kilograms. This arrangement ties the government's hands, and may at any time lead to a tariff dispute between the two powers. To provide for contingencies Russia, as early as 1904, forged a weapon for use against Germany in arranging a system of differentials in the duty rates upon imports by sea (preponderantly from Great Britain and the United States) and upon those by land, i. e., across the German frontier, so that the land rate would be from a fifth to a fourth higher than that by sea. Russia would appear for a good while to come absolutely committed to protectionism, and to the policy of wholesale retaliation, upon occasion.—From "Europe's Tariff Laws and Policies," by Frederic Austin Ogg, in the *American Review of Reviews* for April.

CONSERVATION OF NATURAL BEAUTY.

WE Americans are a "peculiar people." We have only "a speaking acquaintance" with nature, though she lives next door to us. We see her at work, year after year, but we pay less attention to what she does than we do to what man does. We seem, somehow, to have imbibed the idea that man-made things are superior to anything that shows the earmarks of nature's craftsmanship, therefore we ignore her, and one man patterns after another, and the result is a series of imitations, each one a little worse than the one patterned after. Have you never watched the operations of the man who makes a home for himself and family in the forest? The first thing he does is to cut down all the trees about the place, no matter

how noble they are, or how beautiful, they all fall before his axe. By and by, when his home is built, he sets out some saplings, and sets them in rows, and so many feet apart, because his neighbors do that, and he waits for years for them to develop. If he had left two or three of the old trees standing, he would not only have shade from the start, but he would have had such beauty as the trees he plants—and waits half a lifetime for—may never develop into. For, say what any one may about it, no tree that grows up under man's supervision ever has the grace, the dignity, the strong beauty that characterizes the tree that nature has reared. One such tree is worth a score of our ordinary "shade trees." It is a thing to respect, to revere, to make friends with. Can you ever work up a feeling of sentiment in connection with the tree that has been planted, and pruned, after the plan adopted by Tom, and Dick, and Harry? I can not. The sentiment has been pruned away from it.

It is with everything else as it is with our trees. We shut our eyes to the beauty on every hand and set about "improving on nature." If we were not so blind, so foolish in our own conceit, we would realize how futile all our efforts must be. We work by imitation, while nature works by instinct. The divine instinct of beauty, that cannot make a mistake. I have often wished we might organize a society whose aim should be the preservation of whatever is beautiful. Not for the sake of improving on it, as some matter-of-fact member might attempt to do, under the impression that man, being "the noblest work of God," according to a rather antiquated opinion, can do things better than anybody or anything else. Rather with a view to keeping before us the masterpieces of beauty, which we can never attain to, unless, by long loving and close companionship with nature, we are taken into her confidence and find out some of her secrets. We want to get rid of the idea that, being man, we are superior to everything else in the universe. As men, we may be entitled to the veneration we give ourselves, but we cannot overlook the fact that we have our limitations, our shortcomings. Let us look for natural beauty, everywhere, and having found it, let us endeavor to preserve it for those who come after us. But we cannot make a success of this most laudable undertaking until we disabuse our minds of the belief that, simply because we are men, we are in all respects superior to the great elemental forces which wrought the beauty to be seen all about us. We must get rid of some of our stupendous self-conceit, and put ourselves in a position to recognize the ability of nature in directions as yet beyond our ability to copy successfully.—*Eben E. Rexford.*

"THE practical and the beautiful are not so widely separated as many people suppose."

Between Whiles

The second day drew to its close with the twelfth jurymen still unconvinced.

"Well, gentlemen," said the court officer, entering quietly, "shall I, as usual order twelve dinners?"

"Make it," said the foreman, "eleven dinners and a bale of hay."

Advice to a President.

Be gentle with the Senators and soft as chocolate creams,

Be gentle as a female infant child;

Avoid all interference with their little private schemes,

For Tactless Opposition drives them wild.

Encase the Hand of Justice in a padded velvet glove,

Address the High and Mighty in the dulcet tones of love,

And coo to Malefactors like a blue-eyed turtle dove.

Be gentle, oh, be gentle, oh, be mild!

Be gentle with the Congressmen and do not muss their fur;

To criticise is wholly unrefined.

Remarks on Deals and Jobbery are sure to cause a stir,

With consequent distressfulness of mind.

Four hundred Gallant Gentlemen, all white as driven snow,

The Welfare of their Country is the only thing they know—

Or if it chances otherwise one must not tell them so.

Be gentle, oh, be gentle, oh, be kind!

Be thankful to the Plunderers for all that they have left,

Be gracious to the Pirates of the Street.

Forbear to mention "Knavery" and never speak of "Theft"—

Explicitness is always Indiscreet.

Employ a Barkless Watchdog who has lost his final tooth;

Conciliate the Erring Ones with tenderness and ruth,

And never hurt their feelings with the hard, unvarnished Truth.

Be gentle, oh, be gentle, oh, be sweet!

—Puck.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

HOMESTEADS.—Wanted, Brethren to locate on free homes of 160 or 320 acres. Good soil and water, near Santa Fe Railroad. Ten members now here, fast settling. Send 4c in stamps for reply.—Otis Weimer, Buchanan, N. Mex.

FOR SALE—Barred Plymouth Rock eggs. Pure bred, large, well barred, one dollar for 15. Reduced rates on incubator lots.—Mrs. I. C. Stine, Dallas Center, Iowa.

FARMS FOR SALE from \$40 to \$65 per acre. If you are in the market for a farm, write at once for a 1909 price list giving full description.—M. H. Miller, Bristol, Ind.

THE INGLENOOK

DIFFICULTIES IN THE BIBLE

—the new book by DR. R. A. TORREY, answering the common objections, alleged errors and contradictions attributed to the Word of God. Over 12,000 sold. 128 pages. Fully indexed.

Uniform with above: **HOW TO PRAY**, by same author. More than 100,000 sold.

Helpful to preacher and layman alike.

Either book, 15c each, 8 for \$1.00.

Bible Institute Colportage Ass'n, 250 La Salle Av. Chicago

Old Germantown Church

Post Card No. 26

A beautiful souvenir card of the church at Germantown (Philadelphia), Pa. This was the first church in America built by the Brethren, and has a very interesting history. The card is finished by the "Photo Chrome" process, in colors. We have just received from the importer a new lot of these popular cards and can fill orders promptly.

Price, per pack of six,15 cents
Two packs,25 cents

BRETHREN PUBLISHING HOUSE
Elgin, Illinois

HOW TO MEMORIZE

By WILLIAM EVANS, D. D.

A compact manual of fundamental principles and best suggestions for memorizing, with especial application to Scripture. Appropriate selections for practice also included. Every student, teacher, preacher and public speaker should possess this valuable book. Cloth, 96 pages, gilt stamp, net 50 cents. The Bible Institute Colportage Association, 250 La Salle Ave., Chicago, Ill.

The Home Model Washer

Contains new features that should concern all who are in need of a washer. By means of a thumbscrew, the lever can be quickly set for long or short leverage, for light or heavy work, a good feature.

The agitator, the part that does the washing is also something new in that line. It is Simplicity and Strength and

makes this washer noted for easy, fast and clean washing. Do yourself a favor by learning all about this washer. It is low in price. I pay all the freight whether the washer is returned or not after a thorough trial. The circular illustrates and explains it all. Send for circular at once. Agents wanted. Address: **WM. S. MILLER**, Meyersdale, Somerset Co., Pa.

Arnold's Chart of Paul's Journeyings

A useful teacher's tool that you should have close at hand while teaching the life of Paul. Prepared by Bro. C. E. Arnold. Clear outline journey maps; and the principle events and places arranged in easily read columns; all on one sheet of paper, 12 inches by 19 inches. Folds within stiff covers small enough to slip into one's pocket. Twenty cents.

BRETHREN PUBLISHING HOUSE
Elgin, Illinois

Training the Teacher

The "Brethren" Edition of this popular textbook has been slightly revised by the authors, and is in strict conformity to the teaching and practice of the Church of the Brethren. There are 227 pages. Cloth bound, stiff covers, sewed, 50 cents, postage prepaid. Strong paper covers, sewed, 35 cents, postage prepaid.

BRETHREN PUBLISHING HOUSE,
Elgin, Illinois

REVISED EDITION OF

Ropp's New Commercial Calculator

And Short Cut Arithmetic

THE STANDARD FOR STORE, FARM, BANK OR FACTORY

Pocket Edition.

It will make the study and use of Figures easy and interesting to both young and old.

It will enable every progressive mind to become an expert, sure and rapid calculator.

It will prove a boon to all whose education in arithmetic has been limited or neglected.

48 Cuts Illustrate the Elements of Mechanics and Mensuration.

It defines about 70 points in "Commercial Law" which every man and woman should know.

It is especially designed for farmers, mechanics, business and professional men.

Three Editions, Five Bindings.

Office Edition (9½x5¼ in.)

Cloth binding, gold stamp, large type,\$1.00

Pocket Edition (6½x3¾ in.)

Cloth, with pocket, flap and silicate slate,50
Leather, with pocket, flap and silicate slate, gilt edge, 1.00

Vest Pocket Edition (5¼x2¾ in.)

Cloth, round corners, red edges,35
Leather, gold stamp, burnished edges,50

Greatly improved, enlarged and thoroughly revised. Contains an entirely new system of unique Tables, Short Cuts and Up-to-date Methods.

Unquestionably the most complete and comprehensive Calculator ever published.

Has more than twice the matter, scope and capacity of Ropp's former editions, of which

Nearly 1,500,000 Copies have been Sold.

The Answer to Your Problem as Quickly as a Watch Shows the time.

It also explains and simplifies the principles of Arithmetic, Mechanics and Mensuration.

BRETHREN PUBLISHING HOUSE, Elgin, Ill.

Six Popular Periodicals

The lesson helps and weekly papers play an important part in the development of a strong, soul-saving Sunday school. You cannot afford to place an inferior Sunday-school Quarterly in the hands of your pupils. That's why we call your attention to the **BRETHREN SUNDAY-SCHOOL HELPS**.

Brethren Teachers' Monthly. The Sunday-school Teacher's best assistant. A concise, comprehensive commentary on the Lessons. Each lesson writer is a practical Sunday-school worker, and Bible student.

Single copy, per quarter, 16 cents; three or more copies to one address, per quarter, 13 cents each; three or more copies to one address, one year, 48 cents each. Single subscription, per year, 50 cents.

Brethren Advanced Quarterly. One of the best lesson helps published for the Senior and Intermediate departments. A scholarly treatment of the Scriptures. Single copy, per quarter, 5 cents; per year, 20 cents; five or more copies to one address, per quarter, 3 cents per copy.

Brethren Juvenile Quarterly. Well suited to boys and girls in the Primary and Junior classes. Lesson story and comments in simple yet forceful language. Helpful and interesting. Numerous illustrations showing Bible scenes and characters. Single copy, per quarter, 4 cents; five or more copies to one address, per quarter, 2½ cents per copy.

Our Young People. An ideal Young People's weekly. Eight large pages of short stories, historical sketches, scientific news items, Sunday-school and Christian Workers' Comments. Interesting, instructive and elevating. Profusely illustrated. Is read by young and old alike. Single subscription, one year 65 cents. In clubs of five or more to one address, per quarter, per copy, 10 cents.

Our Boys and Girls. Weekly. Filled with well-written stories and articles. Appropriately illustrated. Calculated to interest and instruct our youth. Clean, wholesome, moral and spiritual teachings. By far the best in its class. Single subscriptions, per year, 50 cents; five or more copies to one address, per quarter, 7½ cents per copy.

Children at Work. A well-illustrated four-page weekly for the little tots. Contains choice children's stories and poems, and the Sunday-school lessons with "Lesson Story." Single subscriptions, per year, 20 cents; five or more copies to one address, per quarter, 3 cents per copy.

If your school does not use all o f the above named publications ask about
Our INTRODUCTORY OFFER.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

CRADLE ROLL BIRTHDAY POST CARDS

The phenomenal growth of the Cradle Roll Department of the Sunday School calls for constant activity on the part of the publisher to supply novelties and helps that will suit this peculiar field. Among the most useful helps are the birthday cards of which a new and beautiful line is just issued which may be mailed as post cards. The cards bear appropriate photographic reproductions embellished with exquisite floral designs and having greetings and verses in colored lettering; on the address side of the card is space that may be used for a personal message or invitation.

Form P. First Birthday—Boys.—A beautiful madonna with dainty decoration of trumpet border and lily of the valley.

Form Q. First Birthday—Girls.—Photograph of girl baby with border of snowdrops and colored leaves. One candle burns at top of card.

Form R. Second Birthday—Boys.—A bright boy's face with decoration of apple blossoms and golden bells.

Form S. Second Birthday—Girls.—A chubby two-year-old girl with pretty

background of violets and dainty lace.

Form U. Third Birthday—Girls.—The girl's picture on this card is bordered with delicate grasses and pansies; three candles are burning on shelf.

The cards sell at the rate of 2 for 5 cents or 25 cents per dozen, post-paid. Order any one form or assorted.

Brethren Publishing House, Elgin, Ill.

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,

Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the north. There is some snow at times but the Chinook winds quickly melts all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. I. J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

EMPIRE COLONY

IN "SUNNY STANISLAUS"

The CO-OPERATIVE COLONIZATION COMPANY is now locating a colony of our people in the lower San Joaquin valley, in central California. The new town of EMPIRE, as well as the colony lands, is located on the Santa Fe railroad, five miles east of Modesto, the county seat of Stanislaus County, thirty miles south of Stockton, seventy-five from Sacramento and one hundred and fifteen from San Francisco.

The colony lands join the new town site and are within a few miles of three different railroads. These lands are all under cultivation, and are free from brush, stumps, stones or other obstructions. Two large ditches cross the tract, affording ample water for irrigation of all crops. The illustration below shows one of Empire's profitable crops.

Alfalfa One Mile from Empire. Four to Six Crops a Year—Six to Ten Tons per Acre.

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and Investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

LOW RATES FOR COLONISTS.

During March and April one-way Colonists' Rates will be in effect from Chicago to Modesto, California, for \$33.00. From Kansas City, and other Missouri River points, to Modesto, \$25.00. Via Merced, Cal. For further information address

Told at Twilight;

Or Bible Stories
That Never Grow
Old

By Elizabeth D. Rosenberger

This book is written for boys and girls in such an attractive and interesting manner that they will ask you to read and reread it again to them. The author, Sister Elizabeth D. Rosenberger, has represented Aunt Dorothy as gathering the little children around her in the evenings and telling these old stories in such a way that it is bound to create a desire for more Bible knowledge.

The book is beautifully illustrated. 151 pages.

Our Price,25 cents
(Postage extra, 5 cents.)

BRETHREN PUBLISHING HOUSE,

The Sunday School Calendar

Issued annually. Enlarged and improved. Beautiful cover design containing reproduction of Hofmann's famous painting of the boy Jesus.

In addition to the International Daily Bible Readings, the calendar contains International Sunday-school lesson titles and references for every Sunday in the year, also the Golden Text for each week, printed in full. Each leaf contains choice selections from the best writers, helpful thoughts for every-day living. A calendar for the entire year is printed on the back, and an extra leaf is inserted containing Scripture selections, etc., arranged for easy memorizing.

This calendar is endorsed by the leaders in Sunday-school work and has proved very helpful wherever used. As a Christmas gift from teacher to pupil it is extensively used. Many schools distribute them at the Christmas season to every scholar. They are especially valuable to Home Department members.

J. A. Bowers' apple crop of 1907 netted \$1,000 per acre, and in 1908, \$700 per acre.

E. A. Blair gathered from seven and one-half acres of apples 3440 boxes of fancy apples which netted \$5,500.00.

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

A CHORUS IN ONE FLAT

CLARA NORTH RULEY

WE were all surprised and just a little indignant at Mr. Hiatt. The idea of closing down the mill and throwing so many men out of a job. Father said that he had been running it for months at a loss and felt that he could not afford it any longer. Of course father was in the same boat as the rest of the men, and though he had been superintendent and had drawn a good salary, we were compelled to live in the best part of town—it was part of the price father had to pay for *holding* a good job—and our living expenses had not been small, so we saved little.

While the rest of the family were pitying the poor working men, however, I was feeling sorry for ourselves. It is born in me to be selfish, I suppose, for I try to be otherwise but in spite of all my efforts I just *can't* think of other people first. So I asked father what he was going to do and then the bomb exploded. Mr. Hiatt was looking for a janitor for an apartment building he owned, and father might have that place if he wished until the mill was opened up. It meant rent and fifty dollars a month, less than half of what he had been getting. There are six of us, and the basement flat, so father said, consisted of two bedrooms, a dining room, kitchen and living room,—five rooms in all besides the bathroom and a closet or two. Father explained that he had not given Mr. Hiatt a final answer, for he wanted mother to have the settling of it.

We all looked worried and perplexed. That is, all but father. He was almost his cheerful self now that he had thrown the onus of decision upon mother and man-fashion shirked responsibility. "How about it, mother?" he said, "shall we live up all the savings of years?"

"I suppose we could not live long upon the interest of them, could we?" asked mother with a little smile, "and it wouldn't do to use the principal."

She knew, of course, that we could not,—it would only be a drop in the bucket—that was just a little joke of mother's. "I suppose it is about the best thing we *can* do and we really should be grateful to

Mr. Hiatt for the offer," she said, finally. So it was settled and in a very few weeks we moved. I was ill with tonsilitis at the time, so mother arranged for me to stay with friends until they were settled, or at least partially so.

Katherine told me afterward that the settling was something terrible, that I might be thankful I had the tonsilitis and thus escaped a worse fate, but that shows plainly that Katherine never has had the tonsilitis. I can be thankful for many things but not for that.

Katherine said that father took to the work like a duck takes to water. He dearly loves to clean up and the state of the flat gave him ample opportunity to exercise his ability in that line. But after the family had scraped and cleaned and calcimined for a week or more they began to see their way out, and when I arrived I was ushered into as homelike a little apartment as one could wish. They sent Roger to the station after me and as I was perfectly able to walk the short distance we had to go, we elected to do so and save the car fare. Roger is my youngest brother, but you would have thought that he was years older than I, the airs he put on, and the knowledge he assumed. Chicago mud is about the slipperiest ever, and twice Roger had to catch me to keep me from measuring my length on the sidewalk. "Be careful, sis," he said patronizingly, "this is a mighty slippery city and it takes a lot of experience to walk standing up."

I meekly accepted his admonitions. Twice I had barely escaped, so I felt that I was not in a position to do any great amount of arguing. Just then I noticed that Roger had on his new suit, knickerbockers and all, and I spoke of it.

"Yes," he replied, "thought I would put them on to meet you, knew you would be pleased." Of course I was pleased.

"Dear old Roger," I thought.

When I reached home I rushed into the arms of the family. Just now I don't quite see how I accomplished that feat, but I did just the same. When they ushered me into the living room I fairly gasped. It was the

dearest little place you ever saw. Of course our furniture was all in good taste, and as Katherine had superintended the decorations, they left absolutely nothing to be desired. I sank down into a big, cushiony chair, and felt that I could stay in that dear little room forever. But just then I caught an odor of baked potatoes and corn muffins. Decidedly there were more worlds to conquer. Katherine took me into our own little bedroom.

It was little, that was the truth, but it was the biggest *little* room I ever saw. Everything had its place and was of some use. Not a superfluous article in it.

And the kitchen! That was where they all showed their genius. You see we had to eat in the kitchen in order to give mother and father a sleeping room, but somehow there was a charm in this particular kitchen that took away everything that might be common in any other. Everything was arranged so that there were no signs of labor, unless of course one looked behind a screen for it.

It was all very delightful, if a little crowded, and I felt that we all would be very happy and contented. Mother was showing me a little outroom she found so useful, and what did I see hanging upon a line in there but Roger's trousers—his everyday pair. Mother caught my look of inquiry and explained. "Roger had an accident yesterday," she said. "You see he isn't quite used to the slippery streets and fell down in the mud."

O Roger, Roger! So only yesterday you gained *your* boasted experience. That accounted too for the new suit donned in my honor.

We had settled down comfortably for the winter when a bombshell burst, so to speak, on our peaceful domicile. Mother had a cousin, once or twice removed, I believe, at least we never have seen very much of her. She has a great deal of money, much more than she knows what to do with, and Katherine and I used to build all sorts of air castles with what we hoped she would give us. That was when we were little and supposed wealthy relatives always shared up their money with their poor relations.

Well, mother was sitting in her bedroom sewing on a shirt waist of Katherine's when the postman came. We girls get nearly all the mail, both being inveterate letter-writers, but this time the only letter that came was for mother. We watched her curiously as she turned the letter over and over after the fashion of woman the world over, preparatory to reading it. With an excited little exclamation she cried, "What do you think, girls, Cousin Louise wants to spend the winter with us. She has lost her husband and like many another childless woman she has no one to turn to for comfort"—"And so she turns to us, who are crowded already," I murmured, fretfully. I said before that I was selfish and I did not feel that we ought to have to crowd ourselves any more than we

had just to make room for a woman who owned more houses than she could possibly use.

But to do mother's Cousin Louise justice, she thought we were still in our spacious home out at Hillsdale, so she could not possibly have realized to what inconvenience she was putting us. "She says," continued mother, quoting from the letter, "'My one crying need in my bereavement is a glimpse of just such a home as I know you possess.'

"It's hard to resist such an appeal as that, isn't it, girls?" and, musingly, "it will be *about* as hard to stow her away in this tiny place."

"Well, mother," I broke in, rebelliously. "I don't quite see the need of our crowding to accommodate a woman, even if she has lost her husband, who could live at the Auditorium Annex if she wished. We will surely be a chorus in one flat if she comes. That's what Roger said we were when I said we were too many for a quartette."

Mother laughed a little but in a moment said soberly, "Charlotte, when you are as old as I am you will realize that love, the thing people want most, cannot be bought, and I rather think that if I can discover any way to do it we had best ask Cousin Louise for the winter. It will only be doing the will of our Master. Perhaps I shall wake in the night and a way out of the difficulty will suggest itself to me."

You see mother has spells of insomnia when she will awaken at one or two o'clock and stay awake till morning. She has learned to take these spells philosophically and utilizes the time which might otherwise be wasted in planning our dresses, the new rug to be made out of the old ingrain carpet, and other domestic problems of equal importance. Hence the allusion to waking in the night.

When the boys came home in the evening and we were all at dinner mother told father about the letter. Ronald, who is eighteen and quite a man, at least he believes himself to be, said, "But where are you going to put her, mother?"

"Well, to tell the truth, I hardly know. I thought perhaps," this last hesitatingly, "that I might give her your room—yours and Roger's—if I could just think of some place to put you."

"Why, certainly, let her have it; you can just hang us up on the kitchen wall and put a screen around us."

It was a family joke about the number and various uses of the screens in the kitchen.

"Mother's depending on having a wakeful spell tonight and if she does there will be no difficulty as to where you will be put. She will conjure up some place," said Katherine.

But we knew that the thing was as good as settled and mother's fertile mind would find some place for the newcomer. Sure enough at breakfast she asked father if he could not spare the long light closet out by the furnace room.

"Why, yes," was his ready reply, "but really, Mary, you cannot get a bed in there with any other furniture." But that mother of ours got the boys interested and before night they had constructed two very creditable berths that could be swung up against the wall. By this time Ronald had become so enthusiastic that he made a seat that worked in the same fashion. True, the room was so diminutive that both bed and seat could not be in use at one and the same time, but as Ronald very sagely said, "Who wants to use them both at once?" After a combination dresser and washstand of small size was installed a delightfully cozy room was the result. The boys insisted on trying it that very night. Soon there came a cry from Roger, "Mother, make Ronald go outside till I can turn around."

After a time the boys' spirits came down to normal and at the end of the month came Cousin Louise. She was a little, dark woman, just a bundle of nerves and no more like mother than though she was no kin at all. She seemed rather shy, too, in the presence of all us youngsters. I suppose she is not at all used to children, but she went into ecstasies over her room, declaring she had never seen any place quite so comfortable and cozy, and I will say, though perhaps I shouldn't, that we had done very well indeed, and even her praise was none too extravagant to my mind.

Our new member quite took to us, especially the boys. She was vastly amused at their bedroom, though if she suspected any sacrifice on their part she never showed it by word or look.

Well, the upshot of it all was that we became so fond of Cousin Louise that when the time came that she left us we felt as if one very important and much-to-be-missed member of the chorus had left us. And though I, at least, didn't deserve it, we were rewarded for our kindness in taking in the lonely stranger, for about three months after she had left the flat we received another letter, offering father the superintendency of her big estate with the use of the house and at a salary sufficient to keep it up well. She gave us all *that* if we would always have a room for her whenever she wished to come home. So you see our experience ended well for all of us, and some one said, "All's well that ends well."

Milford, Indiana.

MEMORY OF INSANE.

ONE of the most peculiar features of insanity is that occasionally one faculty, either sight, hearing, smell, taste, or touch, is extraordinarily acute.

Certain insane persons, insensible to every other impression, have a pronounced taste for music, and can repeat with accuracy an air which they may have heard but once.

Others have a recollection of form and color, and

display an aptitude for drawing, while more frequently one may meet with an inmate of an asylum who has a special memory for figures, dates, proper names and words generally.

There is a case on record, for instance, of an imbecile who, at 27, had such an extraordinary memory that he could solve the most difficult problems in arithmetic and algebra, and repeat word for word long poems after once hearing or reading them.

In another case a boy of 14, with a defective brain, who had the greatest difficulty in learning to read, could, if allowed two or three minutes to run over a page printed in a foreign language, or treating of questions of which he was ignorant, repeat the words from memory as correctly as if the book had been lying before him.

Very curious was the case of another man, a devout churchgoer, who could remember the day when every person had been buried in the parish for thirty-five years, and could repeat, with unvarying accuracy, the name and age of the decedent and mourners at the funeral. And yet he was a complete fool, and outside the line of burials he had not one idea, and could not give an intelligent reply to a single question, or even be trusted to feed himself.

At Earlswood Asylum, England, they have records of imbeciles who could not only repeat accurately a page or more of any book which had been read years before, even though it was a book they did not understand in the least, but also of an insane person who could repeat backward what he had just read.

Another curious case is that of an imbecile who, in the first place, never failed to go to church, and who on reaching home could repeat the sermon word by word, saying: "Here the minister coughed; here he stopped to blow his nose," and so on.

In another case an imbecile knew the Bible so perfectly that, if you asked him where such and such a verse was to be found, he could tell without hesitation and repeat the chapter.

All these instances are well authenticated, and others equally amazing and true could be added. And just as there is one sense which is sometimes wonderfully acute in persons of work intellect, so, in the case of blind people, the sense of smell or hearing is often very keen.

One of the remarkable cases on record was that of Julia Brace, a female deaf and blind mute, who could distinguish brothers and sisters by smell, and who recognized anybody she had met before by the same means.—*Philadelphia Inquirer*.

Our whitest pearl we never find;
Our ripest fruit we never reach;
The flowering moments of the mind
Lose half their petals in our speech.

—Holmes.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LVI.

UNDER arrest!

In Constantinople!

On Sunday morning!

I wondered if I would get into jail. The beautiful panorama of Constantinople began to dissolve into an underground dungeon where the light of day never smiled upon the mouldy floor.

At the entrance of a dilapidated old shed, not far away, the three officers halted, as the "vagabonds" ahead of me passed into the outside court, thence into the rude building itself. I refused to enter, and again tried to show the officers my passport. I pointed towards the central part of the city. I told them that it was necessary for me to look up a hotel, that I had but a short time to stay in their city and that I wanted to see as much of its wonders as I could, and learn such valuable lessons as the great capital might have for me to take back to my countrymen.

"This is not my place," I said, "I ought to be with the ladies and gentlemen who were with me on the boat and whom you did not detain. They are up in the city. There's where I ought to be."

"You will have to wait here," he replied, placing his hand upon my left shoulder and offering to assist me to the inside of the pigpen enclosure.

"I'll wait," I said. "Anything you want, I'll do."

Suspicioning that they were using these fellows as decoys and without any intention of holding *them*, although I must admit that their looks were not such as would lead the officers to suppose that such a traveler as myself would be attracted by them, I determined to hold back, without being stubborn, and do only what I was compelled to do.

On the inside of the court, or rather inside of the high fence, were others, men and women, who with the prisoners just come, were taken into the low-ceiling structure and told to rest awhile. For what reason I did not know. As there were no chairs, the members of our party deposited their luggage in the open space before the partition or counter, behind which were various employes acting apparently as clerks and watchmen.

I too sat down on my poor little bundle and waited

—for something to happen. All around me, men began to light their pipes,—Turkish pipes,—or cigarettes. In a short time the air was gray with smoke so strong as to make me cough and gasp for fresh air. But I breathed into my lungs as much as I could tolerably endure, then went to a side door, opened it and passed out into the open court, followed by one of the guards.

As the time went on, a number of those under guard came out and were shown to a corner of the court farthest from the gate, to which spot I also was directed to go. For a time I joined the crowd there,

trying to make myself believe that I was contented and that everything would turn out well in the end.

The beautiful morning was passing into the clear bright day of pleasure for the other tourists, and as the sun climbed higher and higher up over the Bosphorus I began to grow impatient in this back-yard reception the city was giving me.

As I was conscious of no wrong-doing, my conscience was clear and if the only requirement demanded of me was a new passport or some special document that must be issued to me by the Turkish Government, I argued to my impatient spirit that the end to my dilemma could not be greatly unpleasant. On the other hand I was eager to go through whatever course of punishment they might have for me, for I believed in the merciful element in human nature, even in Turkey. Various people in Smyrna had told

me of a late decree by the Sultan which compelled every one entering the Ottoman Empire to show at the port of entry a special passport. This, they said, was not easy to secure and would cost the tourist a certain sum of money.

In the hope of learning more definitely regarding this report I had gone to the Turkish consulate in Smyrna, but as it was Friday, the Mohammedan's Sunday, the office was locked. As my vessel was

about to sail for Constantinople, no chance was afforded in which I might again call upon the Turkish consul to arrange for my special passport which I fully meant to secure if it were possible to obtain it.

I was having two Sundays in three days, Friday in Smyrna, when the Moslem's office was closed, and now Sunday, in Constantinople, when possibly the American consulate would be closed. For I meant to lay my case before the United States consul here, if permitted to do so, and seek deliverance from what was now growing into an uncomfortable nuisance.

If my boat had only been delayed a day en route!

But I was here, and there was no use wishing for impossible things.

Eight o'clock came. Nine o'clock, and then ten. With the speed I had usually taken on entering a city of wonders, I might now have been half over it, found a hotel or lodging house, and been listening to a Protestant sermon if such were allowed in the city of Constantine.

Impatient, I at last became angry, but politely so, for I knew that I was either under arrest or that officers were to come at any moment to give me that novel and unwelcome experience. It would not pay me to appear overanxious, neither would it seem right to settle down into absolute indifference, or exhibit to the guards a too tame manner of disapproval. But that I was watched more closely than any others of the "suspects" was easily discerned by me. What increased the intensity of my apprehensions was the absence of any fellow tourist with whom I might have talked, and my few efforts to get something from one of the smokers failed completely. He only shook

his head and drew all the harder on his long, curling pipe, as if to say:

"You're in it! I can't help you. I'm in it, too." Although I was probably wrong about the exact points of the compass the sun now appeared to shine directly from the noon meridian. Still we are held in the tumble-down shack.

For a time I looked over my route of travel, went again, in my imagination, through the enchanted Aegean Sea, back to Athens, where every man was free, and where an American was esteemed a guest of highest honor. I saw again the stately pillars that resounded, from a distance, to the words of eloquent Paul. Below the hill, however, I saw the old prison of Socrates. These two, I said,—freedom and fetters,—are ever close neighbors. To have the one, some one must endure the other.

From my little Bible given me by Dr. Torrey in Glasgow, and written in by Charles Alexander, the world's greatest singer, I read from the Psalms and from the Gospels, and conducted a little service in my own mind, the only one I was to enjoy that Sunday.

But was I really under arrest? Maybe it was some little matter, not absolutely essential, which the officers believed ought to be looked after before I was given my freedom. Possibly they thought I would be dissatisfied without it.

To test the case I walked back and forth, up and down the enclosure, each time going nearer and nearer the gate, but acting as though I did not care to run away. Then I went into the building. I leaned over the counter. I looked up at the ceiling. I looked out of the little dirty window. I hummed a tune, I think it was "Yankee Doodle." Then I took a drink from a jar of water. Next I tried the door on another side, but found that it led into a private room in which were some young clerks and a policeman. I didn't want to see them. But I looked around as if I had been sent to spy on some one, for there was already creeping over me and into my very soul, the queerest, most ghoulisn feeling of suspicion. Others were suspicioning me. These others were suspicioning others. The officers themselves looked uneasy at each other. I myself could not but suspicion every one I saw in that shed. There wasn't a fact or foundation of assurance on which I could build the slightest hope of satisfaction. I was innocent, but it is not unfair to my feelings to say that I would have suffered but little more had I been guilty, certainly no more by reason of any fear of being punished for my guilt. The guilty man would get along just about as well as the innocent. There was no discernment of any difference in the minds or judgment of these officers. They were working by machinery, the machinery that is pulled by a string in the hand of an arbitrary tyrant, and like a "jumping-

jack" their arms would fly up or their legs flop out, not by their own volition, but by the red tape of corruption that went through their senseless heads.

Mingling socially so long with this mixed crowd of Turkish subjects I began to fuse with them. They were a little like me, and I was a little like them. We were both coming together on a common ground, each ruling by his own powers of inherent authority. I was *increasing*, they *decreasing*.

It would be unjust to my self-respect to say that I seemed to be inferior to these. It would be flattering to my vanity to admit that I was the sole officer on guard before this motley crowd of accused and accusers. Already there had come into my spirit the strange

resourcefulness of the patriotic Yankee. I forgot my surroundings and whistled and sung, or walked and turned on my heel as I liked.

I knew that one of these guards in particular had been detailed to look after "the American."

My walk back and forth had been increased to the full length of the enclosure. Several times the officer had followed me part way, as if he feared that I would try to make my escape.

Then I deliberately walked back to my bundle, picked it up and started boldly for the gate. I reached the gate all right and was passing out, when the guard hurried toward me, threw up his arm, or his sword, I can't say which, and commanded me to return.

All rights reserved.

THE JEWS AND THE SAMARITANS

PAUL MOHLER

I USED to wonder why the Jews and the Samaritans were enemies. They were neighbors and they had much the same religion; why should they not be friends? I was glad when we came to this subject in the New Testament Times class, a few weeks ago. It isn't so hard to see, after all, as Brother Hoff showed us.

By turning to 2 Kings 17:24-41, we see that the Samaritans were originally a heathen people, tribes brought from other Assyrian provinces by the king, and transplanted into the land of Israel in the place of the Israelites, who had been removed. At the first, they worshiped their idols only, but when they learned something of the religion of Jehovah, they worshiped both him and the idols.

The Jews did not like their new neighbors. They looked down upon them as an inferior race, and naturally resented their replacing the Israelites. But they did not dare to molest them. It is true that when Josiah broke down the heathen altars of Judah, he also broke down Samaritan altars; but we have no record of a serious conflict between the race until after the return of the Jews from Babylon.

When Nehemiah and Ezra came back from Babylon with the people to rebuild the temple and the city, the Samaritans and other peoples welcomed them, and offered to help in the work, doubtless expecting that the temple would be a "union church" for both races. But the Jews refused; they had come back from Babylon thoroughly disgusted with heathen worship, and more exclusive than ever. They knew that the Samaritans were not of their race, neither had they a pure worship. They doubtless feared a corruption of their worship if the Samaritans should be admitted; so they refused the offer very bluntly, as it seems to us.

We don't know how pure the motives of the Samaritans were when they offered friendship, but we do know what their hatred meant, as the Jews now came to feel it. For the Samaritans were thoroughly aroused. We know what sectarian jealousy is now; it was as bad or worse then. With it in this case was mixed racial and patriotic zeal. If Jerusalem and the temple should be rebuilt, it would become the religious, and eventually the political, center of Palestine, as it had been before, entirely eclipsing the Samaritan cities. You know just about how they felt about that.

All of Palestine was then under Persian rule; the provinces must keep the peace. The Jews could not be hindered without imperial authority. To get this the Samaritans moved cleverly. Concealing their real motives, and pretending only eager loyalty to the king, they told him what a stubborn, warlike people the Jews had always been, and how dangerous to the peace of the kingdom it would be for Jerusalem to be rebuilt. The king saw the point and gave them leave to stop the work. For many years the work ceased, for which the Jews held the Samaritans and their allies to account.

When the building again began, and for many years after, every annoyance that they dared to commit was attempted by the Samaritans. Finally, they built for themselves a rival temple upon Mt. Gerizim, which they claimed to be the real Moriah, as well as the location for the altar mentioned in Deut. 27:4; their copy of the Pentateuch mentioning in that passage Gerizim instead of Ebal. By juggling with place names and manufacturing traditions, their leaders were able to put up quite an argument in favor of their mountain. This was the great point of controversy, even at the time of Christ. It was enough to cause

even more hatred than there was, and would undoubtedly have caused war, had there not been an empire in authority over both.

The provinces dared not engage in war, but they could do lots of meanness on a small scale. One or two tricks that the Samaritans played were especially contemptible. It was the custom of the priests at Jerusalem, during the Feast of Tabernacles, to open the gates for a short time after midnight each night. One night when the gates were open, some Samaritans entered and scattered dead men's bones throughout the cloisters of the temple. This defiled the temple, and made it impossible to go on with the ceremonies of the feast. Could you think of a meaner trick?

At another time some Galileans were passing through Samaria on their way to the feast at Jerusalem, when some Samaritans set upon and killed a number of them. To add to this offense, the Samaritan leaders bribed the Roman governor, Cumanis, to pay no attention to the complaints of the Jews. This led some of the hot-headed Jews to retaliate, and a strife arose so serious that the leaders were carried to Rome for trial. Even at the time of Christ it was considered more safe to go around Samaria than through it.

Knowing all these things, it is not hard to understand the surprise of the woman at Jacob's well when Jesus asked her for a drink, she being a Samaritan woman, and the Jews having no dealings with the Samaritans. It is pleasant to contrast the attitude of Jesus with that of the Jews. Nowhere do we see any sign of prejudice against the Samaritans. See how carefully he dealt with this woman and the people of her village, preaching to them and staying with them several days. Remember also the Samaritan leper and the parable of the Good Samaritan.

It is pleasant also to notice the work that Philip did among them, and their response to his preaching. Today, there are no Jews more zealous for the law than the few Samaritans who remain, and they are the only people in the world that keep the Passover as it was instituted.

Bethany Bible School, Chicago.

WANTED:—MODEL SCHOOL TEACHERS.

CHILD nature in all ages of human history and in all lands seems strangely subject to the environment in which it finds itself. *

The characters of our boys and girls are moulded and take their shape much after the standard of society that surrounds them. Where there is no teacher to train—no moral stimulus to inspire and no model to encourage them to rise above their environment the tendency is to adapt themselves to the conditions that come in touch with their lives.

Some one has aptly said: "The child that is not

trained to look up, will, of its own volition, look down; or the mind that is not stimulated and encouraged in early life to soar, is destined in after years to grovel."

Regardless of its environment, however, the child that comes anywhere from the highest order of civilization or from the lowest scale of barbarism and savagery has within it certain possibilities hidden away, and latent forces lying dormant, which if properly trained and encouraged would develop an intellect that would correspond with that of a Washington, a Shakespeare or a Gladstone.

And again, it may be said that when fully developed, encouraged and refined, that there is divinity enough in every rational child to evolve a character from, that would compare favorably with that of angels, and which needs only to be reached and touched by the magic wand of the true educator to cause it to spring forth and assert itself as readily as does their depraved nature, which by the same law of stimulation and encouragement, tends to lower and degrade them.

Teachers who have the power to bring about such possibilities must themselves be considered as "the offspring of divine nature," and to combine within themselves the grandest union of brain, heart and soul that the world can look upon. As an individual the model teacher is perfectly balanced in all the moral and mental qualities, and is not content with only ordinary results from his work, but bends all his energies—body and soul—to the noble calling of leading and training the children under his care in all the higher paths of life. His very presence in the community in which he labors intensifies and brightens its moral atmosphere, and inspires all who come within touch of his influence to rise constantly above themselves, and to measure up more fully to their own ideals of moral and religious purity.

One of the greatest, and perhaps the greatest misfortune that may come to a community or a state, is that resulting from the employment of teachers whose conception of the true moral standard of life is low and whose own life fails to measure up to the highest ideals of virtue and personal purity.

The school official who is indifferent to these facts and who suffers school property to fall into decay, or employs teachers who fail to inspire in the minds of their pupils a proper regard for themselves, and their surroundings while attending school, most assuredly fails to meet the requirements of his calling.

It is incumbent upon the school official to occupy a place of intelligence that enables him to keep pace with, if not to rise constantly above that of the teacher. Otherwise it is not possible for him to grasp in all its immensity the great problem of education, or to fill properly the responsible and dignified position of a member of the school board.

His capacity for comprehending and being in full

touch with the urgent needs of every school in his district, naturally prompts him to seek out the best talent to teach in said schools. When he fails to find on his list of applications the teachers that measure up to his ideal, let him advertise for the talent needed—at the same time offering a compensation that is commensurate with the service demanded, and I venture to add that he will not fail to get what he calls for.—*Christian Monitor*.

FOOD AND HORTICULTURE.

THE following extract is from a paper presented by Doctor H. E. Barnard, chief of Indiana food inspectors, before the Indiana Horticultural Society, at Purdue:

The horticulturist should be more insistent for pure food laws than any other citizen, because his products are more subject to adulteration. The grain grower is not injured by impure food, because grain products are not adulterated. Neither are vegetables and canned goods, sugars and meat products—at least in a manner that affects the quantity of raw material required for all year's consumption.

But this is not true of the products of the orchard, the vineyard or the berry fields. Flour can only be made by grinding grain, beef by converting grass into cattle, canned corn and beans and peas by putting the genuine vegetables into appropriate packages, but cider vinegar is made without the aid of an apple tree.

What do you think is the loss of the apple growers of Indiana by reason of the sale of fraudulent cider vinegar? I know of one apple grower who allowed 500 bushels of apples to rot on the ground because they were not worth grinding, and the same grower has a hundred barrels of vinegar in his cellar that he cannot market at a price that will recompense him for labor. Two years ago, when the State laboratory commenced work, we found that of 145 samples of cider vinegar but 12 were pure. The rest were made by distilling a sour grain mash and adding burnt sugar to the acetic acid so obtained. Of course cider vinegar was not wanted at 25 cents a gallon when distilled vinegar colored and flavored to resemble cider vinegar could be bought for 6 cents a gallon. It costs 10 cents a gallon to produce cider vinegar; the artificial can be made for 3 cents or even less. I received quotations last week that offered a good article for a cent a gallon—36 cents a barrel.

It is probable that a million gallons of artificial vinegar—25,000 barrels—have been sold every year in this State, displacing the product of at least 250,000 bushels of apples and turning a hundred thousand dollars from the pockets of our fruit growers into the well-lined purses of the rascally manufacturers in St. Louis and Louisville.

Fruit preserves are almost a necessity at certain seasons of the year. Years ago, the standing of the

housewife was estimated by the number of jars of fruit in her cellar. Sad to relate, today she too often depends upon the grocer to furnish her preserves. And if her husband in his wonder at the change in the taste of currant jelly since his boyhood days could only know the origin of the modern currant jelly, he would lose his appetite and go back to dried apples.

Of 113 samples of fruit products put up in glass analyzed by us last year, 93 or 82.3 per cent were impure. The basis of these cheap jellies and jams is apple stock and glucose, which, properly colored and flavored, may bear any label required with as good grace as if it were the really true article.

I have seen currant, blackberry, raspberry, strawberry, grape, peach and apple jelly that was exactly alike in every particular except the label, and of the lot the apple was the only genuine product. Such goods are cheaply made and are sometimes edible, But every jar sold, to that extent, injures the market for the genuine article. And that is one of the reasons why you have had to sell your berries to fruit packers at such low prices. If there was no competition in the shape of artificial foods the true fruit would be demanded—and you know the demand fixes the price.

The horticulturist does not produce a fruit that does not go to market to compete with some substitute. This has been more the case in the past than in the present, I am glad to say, for the new Federal and State laws will check food adulteration and secure for you better markets and better prices and for the consumer the satisfaction of knowing that he is paying for pure fruits and not some manufactured substitute.—*Selected*.

SAVING MONEY.

ONE reason why more money does not go into the savings banks is because the people generally have not taken the trouble to sit down and figure out what a little systematic saving will accomplish. A writer in one of the current magazines declares that it is not difficult for a man who is earning a fair salary to save \$10,000, provided he sets about doing it in a methodical and systematic manner. This sounds like an extravagant statement, perhaps, but it will bear analysis. One may save very little each week and still save considerable in a year and a saving of \$1,000 a year is \$10,000, without interest, in ten years. It amounts to a great deal more than that, of course, when interest is figured. Ten thousand dollars looks like a fortune to tens of thousands of people—to some, we are sorry to say, who ought to look at it as easily within their reach. We fail to realize the benefits of even small incomes because we consider them as so much a month or so much a week, when we ought to figure them in terms of years or decades. Take, for instance, the case of a man whose income averages \$15 a week. Fifteen dollars a week is much or little, according to what the

reader may be receiving. It amounts in one year to \$780. And \$780 is likewise much or little, according to the earning capacity of the one who is passing judgment. But \$780 a year is \$7,800 in ten years. In thirteen years it amounts to \$10,140. With the aid of interest, it certainly ought not to be a very difficult task for any \$15-a-week man to have a bank account of \$3,000 at the end of that 13-year period, and there are men who ought to be able to make the bank account nearly double that amount on the same income. If we assume that a man is actively at work between the ages of 25 and 60 years and that during this period he has an average income of \$15 a week, he will have earned during his working years a total of \$31,200. If he ends in the poorhouse, who has he to blame but himself? Even the day laborer who earns only \$1 a day will have received \$10,955 in the course of his active life, provided he has had steady employment, six days a week. And many a man has saved money on an income of \$1 a day. To say that it can not be done is to say merely that the individual who is doing the talking does not believe it could be done in his particular case. And if he takes that attitude at the outset, his judgment is likely to be vindicated on test.

The trouble with most people who try to save money from their incomes and fail is that they are not methodical and deliberate. Success hinges on adopting a method and sticking to it through thick and thin. The method, to be effective, must take into account ordinary expenses and make provision for emergencies. The amount set aside, whether it be ten cents a day or \$100 a month, should be money that is put away with the understanding that it is to stay "put." Depositing \$10 today, \$1 next week, \$1.50 the week afterward, nothing the fourth week and drawing out \$10 the fifth week does not pay either the depositor or the banker. If anyone reaps any profit from this system of "saving" it is the bank, for it has the use of the money for a month without cost, except the cost of bookkeeping. The interest that is paid on savings accounts is materially affected by withdrawals, and interest, even though it is small, helps to make saving profitable. Where interest is paid semi-annually, as it is by most savings banks, the interest itself earns interest during the second half of the year. The banks and the big business houses count the pennies, so why should not the toiler who is struggling to get ahead financially? Money, of course, is not to be saved without some personal sacrifice, but who is not willing to make sacrifices when he is paid for doing it? It is easily possible for a great many of those who read these lines to save from \$5,000 to \$10,000 in the next ten years if they will only make up their minds to it. There are some who contend that a man earning \$15 ought not to save less than \$5,000 in 15 years, and that if his income is \$30 a week he ought not to be satisfied with

a saving of less than \$10,000 in twelve years. At any rate, in both cases, something ought to be saved. How much that something is will be more a matter of system and individual capacity than of what one's income is.—*Selected.*

FROM TWENTY TO THIRTY-FIVE.

THE danger point in steady-going, ambitious young people's lives, says a writer, is the time between the end of school and the beginning of success in their chosen work.

This time varies, of course, but, broadly speaking, is from twenty to thirty-five.

This is the waiting-time—the time of putting one's knowledge to work, of fitting one's dream to realities.

It is a difficult and disappointing time. When a youth comes out of school he naturally feels that he is thoroughly equipped for immediate success. He is sure he knows what to do, and just how to do it, and feels that success must and will come instantly; and if he be touched with egotism,—which is not uncommon,—he half fancies the world is waiting with bated breath for him to come upon the stage.

But the world is not doing anything of the kind. In fact, he will discover in a few weeks or months that the world was not one bit concerned about what he was going to do.

The world, wise, critical old fellow that he is, has a habit of sitting back and squinting at a fellow to see what he is going to try; and at night he merely pays—often grudgingly—for just what the fellow has actually done; and never can he be persuaded to advance a few honors on the promise of what the young fellow intended to do.

All this is discouraging. It is hard to cut down a fifty-thousand-dollar estimate of one's self to fit a fifteen-dollar job.

It is hard for the young lawyer to sit week after week and hear the wind rattle his shingle but to hear no feet of clients upon his steps. It is hard for the young doctor to sit in his office and think how much better qualified he is than old Doctor Soakum, and yet see all the patients go by his sign to the office of Soakum. It is hard for the young preacher, full of zeal and learning, to begin with a rather critical little church, that pays a very critical salary. It is hard for the teacher to grind along in the village school at forty dollars a month, when she feels qualified to teach in a college. It is hard for the graduate engineer to carry a chain at nine dollars a week, when he is sure he could make a name for himself in building the company's biggest bridges.

In literature, music, and art the returns are even slower.

Yes, it is a difficult time, and a dangerous time. Dangerous because it is hard to wait and remain faithful and sweet.—*Selected.*

NATURE STUDIES

WHEN THE BIRDS COME NORTH AGAIN.

Oh, every year hath its winter
And every year hath its rain—
But a day is always coming
When the birds come North again.

When new leaves swell in the forest,
And grass springs green on the plain,
And the alder's vein turns crimson—
And the birds come North again.

Oh, every heart hath its sorrow,
And every heart hath its pain—
But a day is always coming
When the birds come North again.

'Tis the sweetest thing to remember,
If courage be on the wane,
When the cold, dark days are over—
Why, the birds come North again.

—Ella Higginson.

A LITTLE ABOUT LICHENS.

N. J. MILLER.

FEW lovers of nature have not heard of lichens, plants occupying places where other vegetation cannot gain a foothold. Early spring days are splendid for their observation because of the contrast they make with the bare and apparently lifeless vegetation. Then, too, "on the south side of things" the snow is gone, exposing banks, cliffs and large areas of ground.

A Small Tree Lichen.

This time we tramp to the woods to stay a while with the lowly lichens. The bark of most of the trees is blotched over with pale green forms of various shapes and pigments. Some of these thin, flat forms are mere specks (fig. II), dotting the bark everywhere.

Close observation clearly shows that the leaf-like expansion (I), which the botanist calls the thallus, bears one or more cup-shaped structures (p), each having an opening at the top—structures full of interest to the microscopist.

Other bark-loving forms are larger (IV), as large as a penny, double eagle, or a hand and assuming various shapes. Especially are the trunks of fallen

A Lichen on a Piece of Bark.

trees running over with large lichens. Even the bare ground comes in for its share of them. The stone cliff yonder is pigmented yellow, orange and green with these forms. It recalls a certain meadow with its huge boulder of granite, which I, in my boyhood days, climbed over and over, trying to cut off the green patches, knowing nothing of the important part they play in soil-making.

Since lichens grow on rock and cliffs they there form the first soil. On the underside of the lichen I felt with my finger-tips small bits of stone which the microscopist tells me are incrusts in the hair-like web. The acid fluid formed by these plants, together with rain or percolating water, etc., help to dissolve the rock and remove small bits. This mixing with decayed vegetation forms soil which gives an opportunity for grass, always trying to capture territory belonging to the lichens, to grow.

I always continue my lichen study on the top of the bluff in Mr. Brown's field near by. What a large area of branched lichens, grey, soft, fluffy stuff—

forming bunches like miniature tumbleweeds! This growth though called reindeer moss is a lichen, growing from one to six inches high and covers here compactly over an acre of ground. It suggests the

A Bit of "Reindeer Moss."

large areas one reads about growing in the far northern countries where it affords food for the reindeer.

A lichen, that wise individual, the plant-physiologist, tells me, is not an individual plant but an association of plants so intimately related as to appear as a single individual. If cross-sections are made and viewed under the microscope the colored and colorless portions show something of the relation of the unlike individuals constituting the associations. The green portions are algæ (I-c), plants belonging to a group including the green scums growing in ponds and water-troughs; the colorless (I-h), plants called fungi—an example of the group being the moulds growing on stale bread. The algæ, physiologists say, gain little benefit by the association except acquired territory and a better supply of water during drought, and can maintain an existence without the firm. On the other hand the fungi cannot long exist without the green, the latter manufacturing all the organic food for the firm. In other words circumstantial evidence proves a clear case of slavery, the algæ being the slaves and the fungi the masters.

OUR LITTLE GRAY HELPER.

WE have a little gray helper who cannot hear or make any noise, who can only see sufficiently to distinguish day and night. He wears a little gray coat, and he lives in tiny caves which he burrows out for himself. Our little gray friend has no feet; he crawls. He works busily for us all day in the ground under our feet, coming out at night to get his food.

He is the earthworm, or fishing worm, as children call it, and belongs to the great class of ringed, or jointed, animals. His body is made of from one hundred to two hundred rings. These rings are larger in the middle of the body than at either end. Each ring has on it tiny hooks—too small for you to see—

which take the place of feet. By the aid of these hooks the worm moves along and digs his way in the ground. Try pulling him out of his den and you will see how fast he can hold. Did you ever see a robin brace his feet and tug with all his might before he gets his worm loose?

We have five senses—we can hear, see, feel, smell, and taste. The earthworm can only see, feel, smell and taste. That it can see sufficiently to distinguish light from darkness is shown by the fact that it only comes out for food after it is dark. It can smell a little—we can try burying an onion near its burrow and it will soon find it. Its chief food is dead leaves and stems. It is very fond of onions and cabbages, but its most delicate sense of all is that of touch. Jar the earth a little or blow lightly on it and it will disappear into its burrow.

He has a system of bloodvessels, a nervous system, and a brain, and is our only jointed animal that has red blood. When you first find him he is dark-colored, because his body is full of the earth which he swallows; but keep him out of the earth for awhile and his skin will get pale and clear, and you can see the red blood in two long veins, one down his back and the other along the underside of his body. There are tiny holes, like pin pricks, in his body for the air to reach his blood so as to keep it red and pure. His brain, or nerve center, is in the back of his head not far from his mouth. He can crawl both backward and forward.

Earthworms are most helpful to us. They make long, winding tunnels or streets, some inches below the top soil. These little tunnels are channels for water, air, and the roots of plants to penetrate. Mr. Darwin says that the plow is a very old and very valuable invention, but long before the plow existed the land was regularly plowed and continues to be thus plowed by earthworms.

When they make their tunnel homes—burrows—they fill their long bodies with the earth and carrying it to the top of the ground deposit it in piles called "wormcasts." These may be seen early in the morning over all the garden paths or just after a rain. The worm's soft body will stretch like India rubber and will hold a good deal; besides, there are so many worms busy all the time that each year they bring up tons of earth.

The eggs of the earthworm may be found by sharp eyes near the openings of the burrows along in June. They are done up in a kind of case, or skin bag, about the size of mustard seeds. It would be interesting to hatch some of the eggs in a glass, adding a little moistened earth as soon as they come out. Baby worms are just like parent worms, only smaller, and have not so many rings. As they grow they get more rings by the dividing of the last one.—Margaret M. Withrow, in *Birds and Nature*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

OF the inability of Castro to find a landing place near Venezuela from from which he might direct his interests(?) in that country, a leading daily aptly remarks that like Archimedes he might be able to move the world if he could find something to stand on.

SEVERAL months ago when Mr. Spickler was telling us of his trip through Southern Italy and Sicily the great earthquake in that region added interest to his story. Now the setting of a revolution vivifies the scenes he describes in the experiences he had in Turkey.

WE tell the sorrowful and downcast to look up and forget their troubles. We might help them much in the work of forgetting by telling them of the trials and disappointments of others. Nothing so surely takes us out of ourselves as a wholesome interest in others who with us are experiencing some of the hard things of life.

HAPPY-GO-LUCKY "I-didn't-think" is a seemingly harmless fellow, but if we were to undertake the task we would find it impossible to calculate the real harm he does every day. Besides, he isn't as reckless of consequences as he appears to be. At any rate when we give ourselves up to his captivating influence we always find toward the end of the way that there are regrets and a heartache and much else to pay. Alas, that these do not always nerve us to break with him, but he presents such a pleasing front that only by the greatest determination of will is one able to resist him.

HE must be a weakling and satisfied with a mere crumb who in considering his mistakes finds full consolation in the fact that failures are a characteristic of human nature, that his lack of wisdom is the lack of most of mankind. One does not run much risk

in making the prediction that during the rest of the conflict he will take his place among those who are the true representatives of frail human nature.

MANY have read the interesting snake story told by A. G. Crosswhite in last issue. Who will be the next to give us one from his own observations? It need not necessarily be a snake story, though they are always interesting, just so it has to do with nature and some of her remarkable performances. Suppose the readers adopt a popular fad and give the editor a "shower" of these stories.

THE second National Peace Congress is being held in Chicago at this time (May 3-5). The first National Peace Congress was held in New York in 1907, just before the assembling of the Second Hague Conference. The object of this congress is the strengthening of public sentiment for international arbitration and the discussion of plans looking to the realization of universal peace. Peace lovers have much to encourage them in the rapid growth of the peace sentiment in recent years. The cause of peace is no longer looked upon as the special field of women and weaklings. For several reasons it makes a strong appeal to the really brave and they are coming to recognize this and to lend themselves to it.

"CHARACTER BUILDING THROUGH HUMANE EDUCATION."

"The coming culture's broader view
Life's threefold needs demand,
Coeducation, wise and true,
Of Heart and Head and Hand."

AIMING to strike a blow at the root of crime, for "crime is but cruelty grown up," a bill has been introduced in the Illinois Legislature requiring a certain amount of moral and humane instruction in all public schools. Crime is increasing and morality does not keep pace as it should with mental culture. In searching out a reason for this condition our educators have reached the conclusion that there is a vital lack in our educational system which can be remedied only "by laying more emphasis on character building through the coeducation of heart and head." Already more than one-fifth of the States of the Union are applying this remedy through State laws.

One of the measures of the Illinois bill "requires a half-hour weekly of teaching humaneness to and protection of birds and animals and the important part they fulfill in the economy of nature." Another "prohibits vivisection and restricts dissection in all common schools to prevent as much as possible the dangerous hardening of children's hearts." Still another "requires moral and humane education to be included once a year on program of teachers' institutes and at annual meeting of Illinois State Teachers"

Association." This last is to meet the charge that some teachers have never received humane instruction themselves.

Following we give the views of some prominent educators and others in different parts of the country on the subject of humane education:

The *Boston Journal of Education*:

"This teaching kindness to animals may seem a simple thing; but the more one looks into its merits the more penetrating this spiritualizing influence proves to be, causing a change of conduct, inspiring justice and compassion in the place of selfishness and cruelty."

Col. J. W. Cottrell, Superintendent Detective Association: "With twenty years' experience as an officer, I find in searching for the cause of crime that the lack of humane education is the principal one."

B. J. Tice, A. M., Superintendent of Schools, Mass.: "Fellow-teachers, let us make our teaching stronger and richer. . . . Let us reach out and take in humane education. . . . Too many of us are buried in our textbooks; are mere word-jugglers, fact-peddlers and mind-stuffers. Let us put away these things and teach. Let us become character-builders. Such work will compel people to realize the grandly important truth that teaching is the profoundest science; the highest art; the noblest profession."

Hon. Arba N. Waterman, ex-Judge of Illinois Appellate Court, Chicago: "Civilization in its moral aspect consists in a heightened sympathy with, and consideration for, those men or animals in our power. It is impossible to train a child to indifference as regards the suffering of a helpless dog, and at the same time be mindful of the rights of little children."

George T. Angell, late President American Humane Education Society: "All the criminals of the future are children now, the men who may throw railroad trains off the track, or put dynamite under our churches, or burn half a city some windy night. They are all children now and we are educating them. Shall we give them an education of mercy or not? A thousand cases of cruelty and crime can be prevented by humane education for every one that can be prevented by prosecution."

William T. Harris, A. M., LL. D., former Commissioner of Education, United States: "I am glad to learn of some movement against a practice too widely extended of dissecting animals before children in the elementary schools. I think it well-nigh useless, so far as teaching children a knowledge of anatomy is concerned, and at the same time very injurious to their moral and æsthetic feelings."

Hon. Andrew D. White, LL. D., late President of Cornell University: "In my opinion experiments involving either the infliction of pain or death upon helpless animals in the presence of children should be discouraged."

Rev. Dr. H. W. Thomas, Chicago: "The practice of vivisection in the higher schools of our country, medical and other colleges, has been carried, to say the least, to the borders of abuse, and its introduction to the public schools should be discouraged and condemned by all who have the highest good of the rising generations at heart."

We are glad to know that people in the INGLENOOK's native State are aroused on this important question and we hope the pending bill will become a law. Its measures faithfully carried out will do much to counteract the cruel and the lawless tendencies in the rising generation.

THE other day Rudyard Kipling made a speech to the young men of an educational institution, in which he discussed the value of money. He said: "Look about you and sooner or later you will see some man to whom the idea of wealth as wealth does not appeal. I advise you to watch this man closely, for he will presently demonstrate to you that money dominates everybody except the man who does not want money. You may meet that man on your farm, in your village, or in your legislature. But be sure that, whenever or wherever you meet him, as soon as it comes to a direct issue between you, his little finger will be thicker than your loins. You will go in fear of him; he will not go in fear of you. You will do what he wants; he will not do what you want. You will find that you have no weapon in your armory with which you can attack him; no argument with which you can appeal to him. Whatever you gain he will gain more. I would like you to study that man. I would like you better to be that man, because from the lower point of view it doesn't pay to be obsessed by the desire of wealth for wealth's sake. If more wealth is necessary to you, for purposes not your own, use your left hand to acquire it, but keep your right for your proper work in life. If you employ both arms in that game you will be in danger of stooping; in danger also of losing your soul."—*Interstate Schoolman*.

YOUR TROUBLE.

Who says the times are out of joint? Who thinks the way is growing steeper?

Who fears the worst is yet to come and that the gloom is getting deeper?

Cheer up, you that expect no joys along the paths as yet unbeaten;

Your trouble is probably due to something you have lately eaten.

Who says that men grow worse and worse? Who sits alone in darkness grieving

Because there are no heights to gain, no honors that are worth achieving?

Cheer up, you that in sadness sit, robbed of the hope you had in rising;

The trouble with you probably is that you need more exercising.

—S. E. Kiser; in Chicago Record-Herald.

THE HOME WORLD

HOW TO EDUCATE CHILDREN BETWEEN THE AGES OF THREE AND TWELVE AT HOME

J. H. HARNLY

In Four Parts. Part Four.

KNOWLEDGE that begets confidence and capacity for arduous toil are prerequisites of success. On the farm it is easy to find employment, doing chores outside of study hours, and working in the fields and garden in summer when school is not in session. In the city it is more difficult to provide suitable employment, and yet there are many errands and light work about the house and grounds that the children should be required to perform, and they can be easily taught to assist in many of the duties of the household.

To encourage the child in acquiring habits of industry some remuneration should be given, and then require systematic accounting of all receipts and expenditures, instructing the child in the right use of money. Require that a part, at least, be saved and carefully invested, the father acting as custodian. Introduce the use of commercial paper, acquainting the child with business tactics and the rules of commerce.

Special care must be taken to have boys and girls early acquire a taste for good literature, so that their first impulse, when at leisure, is to enter the library and improve the time in reading. Books of travel, biography and history, especially adapted to the young must be furnished. Of fiction supply only the best. The standard papers and periodicals should also be provided.

Outdoor exercise and games, such as croquet and lawn-tennis, are to be encouraged, but restrained within proper bounds.

A part of the evenings may be given to tests of skill—authors, historical and geographical cards afford interesting diversions.

In the study of history and geography the best illustrated books, maps and charts must be brought into use, and frequent exercises in drawing introduced. Great interest may be aroused by plotting a continent

in the garden, throwing up elevations for the mountains and making depressions for natural bodies of water, following the system of relief maps. The depressions can be filled with water to more fully represent rivers, lakes, seas, and oceans. Cities can be located with blocks, and timber belts represented by twigs stuck into the ground. Natural products and resources may be indicated by placing these articles upon their respective districts. Historical features can also be added with fascinating effect.

The principles of grammar must be thoroughly taught, and illustrated by sentence making. This will naturally lead to the more practical subject of composition. Great stress should be placed upon speaking and writing the English language grammatically and rhetorically correct. The child should be criticised until it acquires this habit. Encourage the writing of letters to relatives and intimate friends, as this will result in great social as well as literary benefit.

The development of the child's musical talent must not be neglected—rudimentary principles thoroughly taught and regular practice insisted upon. In this, as well as other departments of learning and culture, the best instructors only should be employed.

Insist upon courteous treatment of servants and due regard for governesses and tutors. Do not allow children to treat any employee as an inferior. If your servants are not worthy of respectful treatment, you cannot discharge them too soon, and replace them by others. The highest Christian principle of doing unto others as we would be done by can never be successfully taught if we allow ourselves or those under our training to treat the most menial servant with contempt. All knowledge and accomplishments that are not made subordinate to pure Christian ethics, and make this the goal to be attained, must eventually result in dismal gloom and ultimate failure.

Before a child enters its teens the principles of the

Christian religion should have been thoroughly indoctrinated, then, if in later years your boy or girl should stray from the true path, they will turn to it again ere long. "Train up a child in the way he should go; and when he is old, he will not depart from it." My experience in State reformatory work begets this conclusion,—that the wayward boy can be reclaimed if his heredity and early training are not too far below the true standard, but if the youthful offender is the progeny of outcasts, it becomes an almost hopeless task to reform him.

Finally, to arouse the spirit, direct the thought, and stimulate the native genius of our American youth, the art of expression, as prefected by Dr. Emerson, is the most comprehensive of all the diversions of physical and intellectual culture, for it purposes fullest development for greatest usefulness. Many a professional man now in obscurity might have risen to highest rank if his early tutors had been farseeing enough to train his voice and body as well as his intellect. This is the sentiment of Britain's master-mind. Its universal adaptation cannot be questioned, notwithstanding the fact that a conventional idea ob-

tains among a large class of educators that it is only for those with exceptional natural endowments to aspire to remunerative development in the art of expression. Nothing could be more absurd, nor more treacherous to the fullest symmetrical development of our children. As well say, it is useless to teach a child to walk because it does not show muscular signs of becoming a sprinter; that it is a waste of time to exercise the body if you do not aspire to become an athlete; or, that it is all nonsense to attempt to Christianize children that do not manifest excessive spirituality. Let us not be deceived, for the elocutionary art of expression is the most sublime and most ennobling of all the arts, and the least exclusive. It anticipates the highest culture and refinement to which mortals may aspire, facilitating the communication of thought, clothed in its true habiliments, and the right interpretation of classic literature, robbed of none of its inspiring efficacy. It gives due prominence to the development of the divine attributes of man—the emotional instincts—with-

out which education becomes a curse and not a blessing.

LEGAL TENDER

The man who comes up with a double-gauged smile
And talks in an affable way, for a while,
Has probably more than an arm "up his sleeve,"
Some men have a "hook" we are forced to believe;
Just keep an eye on him, but not just for fun,

He will "do" something to you before he is "done."
When you're absent from home, will make love to your wife,
At the least calculation, insure your life,
For depraved human nature is in such a plight,
It is hard for the sons of the saints to do right;
A morbid reflection to offer to view;
"It is true—'Tis a pity—'Tis pity 'tis true!"

This law compensation, we hear of, forsooth,
Gives an eye for an eye, and a tooth for a tooth,
And your great benefactor, before he is through
With granting a favor, will ask one of you;
But there is one exception to this "give and take,"
Which we add to our argument, here, for the sake
Of the proof an exception can give to a rule,
As was taught by some one who had not been at school.
There is this "legal tender," to offer in lieu
Of the "do it for me and I'll do it for you";
A "specie resumption," retiring and mild,
For the noisy "long green"—'tis the smile of a child.
We smile on adults, and they promptly smile back,
And their business and patronage follow the track;
We smile on the man who can grant what we sought,
But we smile on the child, just because it cannot.

There are stately old maidens, whom no man can woo,
Who will literally stand on their heads for a "coo"
From some cute little cub with his thumb in his mouth,
Whose juicy lip keeps his clean bib free from drouth;
There are dignified grandmas who juke, nod, and beck,
And newly-made grandpas who willingly "treck"
A long journey to gain a wee granddaughter's smile,
And their business is left to the "bow-wows" meanwhile.
When Selfishness calls on the world to surrender,
Or you're caught in the grasp of a harsh money lender,
In exchange for the good that is in us, remember
The smile of a child still remains "legal tender."

—H. A. Diehl, in Ohio Teacher.

The human soul longs for freedom, and it is the happy province of this art to assist in its liberation—to break down the bars of prejudice and conventionalism and set emotions free.

To enhance the accomplishment of this result, let the child's soul development commence early in life, before habits are acquired which dissipate its finer physical and emotional sensibilities. Teach it to be perfectly free and easy in all its social relations, quick to express what it feels and thinks and not to suppress its emotions. Men of influence are men of strong convictions and deep feelings, with great physical as well as intellectual power to give expression to their intense thoughts.

Our American youths do not lack so much in knowledge and mental attainments as in faculty and discipline for sublimest aspirations and achievements. This deficiency is certainly traceable to the disparagement—suicidal obtrusiveness of pedantic parents and educators—of the incipient fundamental principles of pure esthetic and ethic culture.

If you sincerely crave the acme of excellence for your children suffer them to come unto the Supreme Teacher who had a mountain for a rostrum, and taught as a man having authority. He will secure to each individual child an inheritance incorruptible—and your travail will not be in vain.

BOHEMIA IS BAD FOR GIRLS.

WHEN, at great sacrifice, you send your girl to study art in New York, full of high hopes, you will save pain and disappointment if you consider beforehand what you are going to get back says Anne Evans in *The Delineator* for May. If your girl is a genius—fortunately for American home-making she seldom is—you will probably never get anything back. She will doubtless stay there. If she is just a girl, like most girls, and you send her into Bohemia, you are going to get back something you never bargained for.

For your information I am going to make three definite charges against Bohemia which I am convinced by personal observation can not be denied:

1. Bohemia degenerates far more talent than it develops.

2. Bohemia induces vicious habits—cigarette smoking and really strong drinking (whiskey and cocktails) among young girls.

3. Bohemia unfits girls, both in taste and character, for family life and family-making.

Two or three years of Bohemia can make more complete changes in a girl's life and character than any other one thing I know of, including the stage, because its influence is more insidious than any other. It offers complete liberty of life and companionship, without guidance, to inexperienced girls. They live in a sort of community set apart, where law, order and all conventions are despised and decried by the older

habitués, who are usually thoroughly Europeanized. They adopt Bohemia's badge—freakish, untidy dress, and strange "original" affectations of manners and speech. The fruits of Bohemia's teaching are discontent and a priggish contempt of home, duty, old friends and ways, a horror of life among one's own people, and absolute refusal of the responsibilities of wifehood and motherhood, on the grounds that respectability is utterly plebeian, and most people would better not have been born, anyway. Perhaps this cheap cynicism is right—for Bohemians. If these things are good to know, Bohemia is the place to send your daughter to learn them.

WHEN THE POCKETBOOK IS LEAN.

POCKETBOOKS have a surprising tendency to become lean if not frequently replenished, and it is often a puzzle to know not only how to win them back to health and fatness, but how to keep the family fed while they are in a state of convalescence. I append a few cheap and easily-prepared menus which may offer some suggestion worth trying. I am presuming that you live on a farm, and that you have milk, butter, eggs, vegetables and fruit of your own. Nevertheless, when your pocketbook is lean you do not want to be lavish with these, for they will sell and fatten that poor pocketbook.

Breakfast: Cereal, apples, griddlecakes, syrup, coffee.

For griddlecakes take one cupful of sour milk, one tablespoonful of sour cream, one teaspoonful of soda, and flour enough to make a thin batter—about a cupful and a half. If you can not afford maple syrup, a cheaper syrup can be made from sugar. Pour half a cupful of boiling water on one cupful of granulated sugar and stir till the sugar is dissolved and the syrup is clear; then boil about fifteen minutes without stirring again.

Dinner: Boiled beef, mashed potatoes, squash, bread, apple-butter, bread pudding.

A cut from the flank is a good piece of beef to buy. It is good fresh, or it can be rubbed with salt and kept a couple of days before boiling. Apple-butter is one of the cheapest and best of sauces. It is a healthful sauce, and one does not tire of it as of the sweeter sauces. It is made by boiling sweet cider down to about half the original quantity, and then stewing sour apples in it till they are thoroughly softened. It takes about three quarts of cider to six quarts of cut apples, and it needs to be cooked two or three hours. No very definite rule can be given, as the different varieties of apples do not cook alike. The bread pudding calls for one and one-half pints of sweet milk, one-half pint of water, three heaping tablespoonfuls of fine bread-crumbs, one egg, three well-rounded tablespoonfuls of sugar, one teaspoonful of salt (or a little less), cinnamon and raisins. Heat the water

and put bread-crumbs into it to soften them, then add other ingredients.

Supper: Cold sliced beef, bread, canned strawberries, gingerbread, tea.

Gingerbread requires one and one-half cupfuls of flour, one-half cupful of sugar, one-half cupful of molasses, one-fourth cupful of butter, one-half cupful of sour milk, one teaspoonful of soda, one teaspoonful of ginger, one egg, pinch of salt.

Breakfast: Oatmeal, bread, apple-butter, potato cakes, gingerbread, coffee.

To make the potato cakes nothing is necessary but to take the cold mashed potato that was left, form it into rather thin cakes with the hands, and brown it in the skillet in pork fat.

Dinner: Cold meat, baked potatoes, boiled onions, bread, apple-butter, corn-starch pudding.

The corn-starch pudding is made from one pint of sweet milk, one egg well beaten, three level tablespoonfuls of corn-starch, two rounded tablespoonfuls of sugar, pinch of salt, one teaspoonful of lemon extract. Dissolve the starch in a little cold milk and put the rest of the milk on to heat. When it is heated, stir the dissolved starch into it, and add the egg, sugar and salt which should have been mixed together. Boil three minutes, stirring all the time. Add the lemon after the pudding is taken from the stove. Serve with a sauce made of milk, sugar and lemon extract.

Supper: Fried potatoes, johnny-cake, apple-butter, cookies, tea.

Johnny-cake can be made without eggs and without shortening. Take cupful of sour milk, teaspoonful of soda, one-half cupful of sugar, and sifted meal enough to make a thin batter. The following recipe for cookies is also without eggs: One cupful of sugar, half cupful of butter, half cupful of milk, two and one-half cupfuls of flour, one teaspoonful of cream tartar, one-half teaspoonful of soda.

The Children's Corner

A LITTLE BIRD TELLS.

Now isn't it strange that our mothers
Can find out all that we do?
If a body does anything naughty,
Or says anything that's not true,
They'll look at you just a moment
Till your heart in your bosom swells,
And then they know all about it,
For a little bird tells.

Now where that little bird comes from
Or where that little bird goes,
If he's covered with beautiful plumage,
Or black as the king of the crows;
If his voice is as hoarse as a raven's,
Or clear as the ringing of bells,
I know not—but this I am sure of—
A little bird tells.

You may be in the depths of a closet,
Where nobody sees but a mouse;
You may be all alone in the cellar,
You may be on the top of the house;
You may be in the dark and the silence,
Or out in the woods and the dells—
No matter—wherever it happens
The little bird tells.

And the only way that you can stop him
Is just to be sure what to say;—
Sure of your words and your actions,
Sure of your work and your play:
Be honest, be brave, and be kindly,
Be gentle and loving as well,
And then you can laugh at the stories
All the birds in the country may tell.

—Anon.

HIS REASON.

WHEN Bobbie brought his report card to papa, there was a little black cross in the section marked "Deportment." Bobbie knew papa's eyes would find that the first thing, and he twisted his small handkerchief into hard knots, and tried to hide part of his chubby head behind the chair in which his father sat.

"What does this mean, Bobbie?" asked his father.

"I was late at school," said Bobbie, who knew that his mother had seen him leave the house in good season each day. "The teacher rang the bell when I was just in the yard, but—but I couldn't run." Bobbie was near to tears, but he was winking manfully.

"Well, that is rather bad," said papa, gravely, "I don't want my son to grow up into a man who is always behindhand. Now, I am going to be very severe. I shall not tell you tonight what the punishment will be, but unless you can show me a good reason why you were late—"

"I can show it!" cried Bobbie. "I can show it! You just wait." He ran out of the room, and soon came running back, holding in his hand the smallest mite of a kitten. It was poor and scraggly and forsaken in appearance. Its large, frightened eyes fixed themselves on Bobbie's papa as if pleading for him. "I can show the reason," urged Bobbie. "This little cat was bound to follow me, and I tried to get away, and I kept putting him over the fence and running very, very hard; but he just jumped over and stuck his claws in my pants until I had to leave him with the lady in the candy shop until school was over, and then I brunged him home. That was the reason," Bobbie finished, all out of breath.

Papa put on his glasses and looked at the kitten. Something in its forlorn, frightened face touched him. "Well, I guess we shall have to forgive you this time," he said. "Nora had better feed him on cream for awhile."

"Then I needn't have that punishment—that one that was too awful to think up?" asked Bobbie.

"No, that is all forgiven," said papa.—*Youth's Companion.*

THE QUIET HOUR

PRACTICAL OR WORTHLESS.

RICHARD BRAUNSTEIN.

THIS is the verdict which will be passed upon any system of religion which may be advocated. Unless its adoption and practice result in a measurable accomplishment now, and a promise of continued and complete accomplishment finally of the gracious purposes of the loving and holy God it must fall out and be disallowed. Ritualism and creedism, as such, must necessarily fail. Only when creeds become directors in practical life are they valuable. Only when ritual is supplemented with ethical obedience is any of the real needs of human life met. To divorce religion from ethics would be to deceive the people. Genuine faith "works by love and purifies the heart." The final accounting will not be according to the length or accuracy of the creed, or the beauty and ornateness of the ritual; but will be on the basis of practical services. The division and destiny of mankind, announced by the Savior in his discourse recorded in Matthew, 25th chapter, turns on "inasmuch as ye have done it," or have not done it: rather than have believed it, and professed it, spoken of it. Neither the mouth, nor the brains are decisive, but the heart and the hand.

The Savior's sayings, "ye are the salt of the earth, ye are the light of the world," mark two crying needs of the world, salting and lighting, and two services to which disciples of all times are called. The salt is to be "rubbed in," and the light to be held closely upon all the duties of life that corruption might be stayed, and life be made wholesome, and clear vision may be had for all work needing to be done, and for the proper doing of it. "As thou hast sent me into the world so have I also sent them into the world" indicates a positive identity of purpose between the Master's life and that of the disciples so far as the end is concerned. We must give ourselves to the work of saving men from sinfulness or uselessness, to goodness and usefulness. No greater damage can befall a man than that his religion be such in its character, or in his apprehension of it, that it covers with excuses his immorality or the world's immorality. A religious slaveholder, or drunkard, or gambler may be forgiven and saved, but his approval would be nothing less than a calamity and a menace. It is only when the voice of God speaks through a life that that

life is a safe example. It is only where religion and morality are united that religion is glorified, or morality is lifted to its proper place. They are joined as root and tree. The life of the saint is not to be separated from the life of society, but rather to work in it for its betterment. It must be so much of the kingdom of God among men, or it is a damaging delusion. Christianity must grip history with a tremendous grip or it fails of its mission.

The beatific vision which Christ gives us is not that of the monk in hiding, nor of the mystic in contemplation and delectation over spiritual anticipations, but is that of the man in practical touch with men, "The pure in heart, the merciful, the peacemakers, the meek and they that mingle their tears with the sorrowing." Religion must be made helpful in all fields of life. It must care for the bodies of men, honored as the temples of the Holy Spirit, and for the business of men as that which concerns his culture of character, and done as a part of the service of God, makes "earthly life a heavenly discipline." The sunshine of God reflected from the Church, must brighten and warm the whole field of life.

A MESSAGE FOR THE TIRED AND SPENT.

OUR Lord was addressing a company of men and women who were most evidently tired and spent in mind and heart. He could "see what was in man," and looking behind the outer vestures of their flesh, he discerned the deep-seated weariness of their spirits. His pity was moved by their plight, and he addressed himself to the removal of the burden; and while he was speaking, two very familiar occurrences came to his aid to help him in his ministry. Looking away up one of the steep roads, I think he caught sight of some laboring beast harnessed to a load which was beyond its strength. And the Lord pointed to this panting and exhausted beast, and turning to the people, he said: "You are like that! You have got a rough and heavy bit of road, and you are attempting to drag burdens for which you have not the requisite strength! Ye labor! The task is beyond you, and you are fainting by the way." And perhaps he turned his eyes away to the lake, and saw one of the boats which so frequently put off from the shore to carry their burdens down to the southern parts. And the boat was overladen, so overladen as to be nigh to sinking!

And again addressing the people, he took up his gracious appeal and said: "You are something like that! You are heavily laden; you have more cargo than you can comfortably carry! Your life is an intolerable load, and you are always in peril of becoming engulfed." Surely these are the two familiar images which our Lord employed in calling the people to rest.

The illustrations are as applicable today as in the day when first they were spoken. If I take my stand at any street corner, and watch the faces of the people as the crowd sweeps by, I am amazed how few there are which tell the story of a secret rest and peace. The majority of the faces are strained and restless, as though the hill is too steep and the burden too heavy. What are they carrying? Some are hauling loads of sins. These sins have been accumulating from their very earliest days until they depress the heart to despair. And some are carrying black sorrows which seem to grow heavier with every passing day. They have not discovered the secret of lightening the burden, and every new morning witnesses an increase of their task. And others are overweighted with petty cares; their burden consists of multitudinous trifles. It is not that any great anxiety lies upon the soul—it is just the accumulation of uncountable worries which now constitute an unendurable load. It is very strange how this burden attaches itself to men. At the beginning it is unnoticed; a little worry seems to have no weight, but little is added to little until the back is broken.—*The Home Messenger*.

"OUR FATHER WHICH ART IN HEAVEN."

In the Lord's prayer all the relations in which you stand to God are found. In it you pray as—

1. A child: Our Father which art in Heaven.
2. A worshiper: Hallowed be thy name.
3. A subject: Thy kingdom come.
4. A servant: Thy will be done in earth.
5. A beggar: Give us this day our daily bread.
6. A sinner: And forgive us our trespasses.
7. A sinner encircled by temptation and evil: And lead us not into temptation, but deliver us from evil.

Three pleas are added—

1. Do this Lord, for it will help on thy kingdom. Thine is the kingdom.
2. Do it Lord for thou are able: Thine is the power.
3. Do it Lord, for it shall be to thy glory: Thine is the glory forever.—*The Expository Times*.

LET US BE KIND.

Let us be kind;
The way is long and lonely,
And human hearts are asking for this blessing only—
That we be kind.
We cannot know the grief that men may borrow,

We cannot see the souls storm-swept by sorrow,
But love can shine upon the way today, tomorrow—
Let us be kind.

Let us be kind;
This is a wealth that has no measure,
This is of heaven and earth the highest treasure—
Let us be kind.

A tender word, a smile of love in meeting,
A song of hope and victory to those entreating,
A glimpse of God and brotherhood while life is fleeting—
Let us be kind.

Let us be kind;
Around the world the tears of time are falling,
And for the loved and lost these human hearts are calling—
Let us be kind.

To age and youth let gracious words be spoken,
Upon the wheel of pain so many weary lives are broken,
We live in vain who give no tender token—
Let us be kind.

Let us be kind;
The sunset tints will soon be in the west,
Too late the flowers are laid then on the quiet breast—
Let us be kind.

And when the angel guides have sought and found us,
Their hand shall link the broken ties of earth that bound us,
And heaven and home shall brighten all around us—
Let us be kind.

—Sacred Heart Review.

THE BROKEN BUCKLE.

It is reported of a hero in Scottish history, that, when an overwhelming force was in full pursuit, and all his followers were urging him to more rapid flight, he coolly dismounted, in order to repair a flaw in his horse's harness. While busied with the broken buckle, the distant cloud swept down in nearer thunder, but just as the prancing hoofs and eager spears were ready to dash down on him, the flaw was mended, the clasp fastened, the steed mounted, and, like a sweeping falcon, he vanished from their view. The broken buckle would have left him in the field an inglorious prisoner, the timely delay sent him in safety to his huzzaing comrades. There is in daily life the same luckless precipitancy, and the same profitable delay. The man who, from his prayerless waking, bounces off into the business of the day, however good his talents and great his diligence, is only galloping on a steed harnessed with a broken buckle, and must not be astonished if, in his hottest haste, his most hazardous leap, he be left inglorious in the dust.—*Selected*.

"God bless our going out, nor less
Our coming in, and make them sure.
God bless our daily bread and bless
What'er we do, what'er endure;
In death unto his peace awake us,
And heirs of his salvation make us."

LIVE as if Christ died yesterday, rose today, is coming tomorrow.—*Luther*.

ECHOES FROM EVERYWHERE

By a vote of 54 to 46 the Missouri House reversed itself and sent to engrossment the Johnson bill to limit absolute divorce in Missouri to the one biblical ground. The bill was amended permitting a divorce after a legal separation of two years.

Teheran, April 22.—The British and Russian diplomatic representatives were received in audience by the Shah today and advised his majesty to proclaim amnesty to all political offenders and to restore the constitution. The Shah promised to reply within a few days.

According to an opinion rendered by the attorney general of Oklahoma any person having liquor shipped in in the name of another shall be liable to prosecution and the express or railway company delivering liquor to any person giving a fictitious name shall also be liable.

It will cost \$25,000 to print the record in the Standard Oil case, recently argued at St. Louis. The work is being done in the Government printing office, the expense to be borne jointly. It will make 21 volumes of 500 pages each, and is said to be the largest legal printing job ever turned out.

The Missouri House has passed the Senate bill making the carrying of a concealed deadly weapon punishable by imprisonment in the penitentiary. The House also passed Senator Wilson's companion bill which prohibits the display of weapons in show windows. The bills now await the Governor's signature.

At Rome, April 21, Wilbur Wright made one of the highest flights he has yet attempted when he sailed his aeroplane at a height of 250 feet. He was alone in his flight, but he soon alighted and took Lieut. Calderara on two flights which lasted 31 minutes. The aeroplane worked perfectly throughout the three tests.

The extension of the railroad system in China is proceeding steadily, if rather slowly. At the present time the total amount of road in active operation is 2,170 miles. There are 806 miles of new road under construction; provision has been made for the construction of an additional 2,232 miles; and 3,286 miles of new line are projected.

In spite of the rapid increase in the number of automobiles and trolley cars, the horse continues to more than hold his own. According to figures published in the last report of the Department of Agriculture, the number of horses in the United States increased from 13,537,000 in 1900 to 19,992,000 in 1908, the total value of the same having risen from \$603,000,000 to \$1,867,000,000. The fluctuations in the average price of horses have been remarkable. In 1893 it was \$61; in 1897, \$37; \$44 in 1900, and \$93 in 1908.

Dr. J. H. Kellogg, of Battle Creek Sanitarium, the largest sanitarium in the world, some time ago gave the following death rates from the sanitarium hospital: La grippe, 827 cases, 4 deaths; scarlet fever, 83 cases, 2 deaths; typhoid fever, 333 cases, 9 deaths; pneumonia, 82 cases, 4 deaths. Not a drop of alcohol was given in any of these cases.

The management of Harper's Weekly and Harper's Monthly announces that after the expiration of existing contracts no more liquor advertising will find place in the columns of either publication. With these two periodicals in line, the high class literary press of America is free practically throughout from association with the liquor trade.

Prince Chun, the Chinese regent, has abolished the ancient custom of discharging fireworks, at the time of an eclipse, for the purpose of frightening off the monster supposed to be swallowing the sun or moon. The recent request of the board of astronomy for an order for the immemorial performance was answered by pronouncing the custom superstitious and never to be repeated again.

St. Petersburg, April 22.—Special dispatches received here say that a detachment of Russian Cossacks has crossed the frontier into Persia and occupies the Persian town of Astara. This movement evidently is the advance guard of the Russian expedition that the Russian government has prepared to send into Persia because of the state of anarchy that prevails in and about Tabriz, where the nationalists are attempting to force the Shah again to grant a constitution to the country.

From extended experiments that have recently been made at Macon, Ga., it has been found that a fine grade of paper can be made from pulp prepared from the okra stem, and a plant for making paper from this source is likely to be erected in that city at an early date. Okra is easily grown in the Southern States, and could be produced in large quantities as a paper-making plant. The plant is an herb belonging to the mallow family, genus Hibiscus.

The situation in Asiatic Turkey is one of extreme gravity. How many thousands have been massacred cannot even be estimated, because the disturbances have been so widespread that it is impossible to secure details of the happenings during the last ten days. The latest estimates of the number killed in the vilayet of Adana reaches approximately 25,000, and thousands have been done to death in the towns of other districts. The state of siege which several of the places are undergoing has brought the inhabitants to the verge of starvation, and each day brings its tales of further atrocities and the depths of misery and despair to which the savagery of the fanatics has brought the people.

From the money derived from the sale of hatchets Carrie Nation has saved a small fortune. She has purchased a large tract of land in Arkansas and will raise pet stock and fruits as well as fruit crops. She was persuaded by "Coin" Harvey to make the investment. Since the sixteen to one campaign Harvey has been living in Arkansas.

Some great records for steam shovel work are being made on the Panama Canal. Recently, during a working day of eight hours a steam shovel, operating in the Empire Construction District, removed 3,941 cubic yards of rock and earth. The shovel was actually at work only six hours and fifty minutes of this time, one hour and ten minutes being consumed in waiting for the cars.

Wilbur Wright today gave an exhibition of his aeroplane in which he refrained from the use of the starting rails. Starting his motors as usual, he maneuvered the aeroplane for about 150 yards along the ground and then shot it up into the air without apparent difficulty or accident. This is the first time he has dispensed with the use of the starting apparatus on the continent.

Under orders of President Roosevelt heads of departments were not required to answer to Congress when requests were made for information. Instead they were ordered to report to the White House. President Taft has issued an order that when information is asked by either branch of Congress the department shall make direct response except where such reply would be incompatible with the interest of the public service.

The fight of the Western Canadian grain growers for government ownership of grain elevators has been transferred from Winnipeg and Calgary to Ottawa, the Dominion capital. A delegation representing 32,000 farmers in the three prairie provinces has gone to Ottawa to present to the Government a petition signed by that many persons asking the Government to establish this system. They declare it will mean an enormous saving annually to Canadian farmers and will furnish them a readier market for their grain.

A device is being placed on the market for preventing a consumer from using more current on his lighting circuit than he has contracted for. When the current consumption reaches the contract limit the lights begin to flicker and continue to do so until normal current is restored. This result is produced by means of a magnet which attracts a spring metal armature. By adjusting the tension of the spring the device may be set to operate at various loads. The mechanism is made to operate on two and three-wire circuits.

The garrison at the Royal Palace, Constantinople, surrendered to the constitutional forces April 25 after heavy losses on both sides. A representative of the commander in chief of the constitutional forces is authority for saying that the Sultan will be dealt with by the Parliament and that there will be an adequate inquiry into the sovereign's alleged complicity in the recent mutiny. Up to the present (April 25) the ministry has not been dissolved, but Constantinople and a number of other places have been declared in a state of siege. Martial law prevails, and while there is some uneasiness among the people, order has been maintained with a strict hand.—The reign of Abdul Hamid II ended April 27 with his deposition and the accession of his brother, Mehmed Reschad Effendi. The latter has been practically a prisoner in the Yildiz

Kiosk for twenty-five years and is hardly known in the world.

At a meeting of the officials of the Cudahy Packing Company and officers from the United States marshal's office relative to the indictments returned against the company in Topeka recently, the packers qualified on a bond for \$50,000. The bond is returnable at the October term of the Federal Court, which probably will be held in Kansas City, Kans. The charge against the packers is that they put one-quarter of a cent revenue stamps on packages of oleomargarine that should have had 10-cent stamps. There were 737 counts in the indictment. The maximum fine in each count is \$1,000.

April 27 Delaware County, Ind., voted dry in a county option election by a majority estimated at 2,800. Muncie, the county seat, gave the "drys" a majority of 213. The result of the election in this county was awaited with great interest, as Muncie is the largest city that has yet to vote on the saloon question. Eighty-two saloons will be closed. The next election in which a struggle is expected, is that in Tippecanoe County next Friday. Lafayette, the county seat, has 101 saloons. Up to the present forty-five of the ninety-two counties of the State have voted dry under the local option law.

If the plans that President Taft is now making mature, he will during the latter part of the summer make the most extended journey that any President of the United States has yet made. It is now his intention as soon as Congress closes to retire to his summer home for a few weeks and then start on a journey into the Western States. On reaching the Pacific he proposes to take ship for Alaska, and will be in so doing the first President to visit that territory. On his return, he will make his way back to Washington by way of the Southwest and South. It is estimated that the trip will cost him between \$15,000 and \$17,000, thus taking out a pretty good slice from the extra \$25,000 on the salary that he receives.

The Arctic and Explorers' Clubs of America will organize an expedition to go north in search of Dr. Frederick Albert Cook, the polar explorer, who has not been heard from in over a year. Dr. Cook has no means of coming back. It is possible that he wintered somewhere with the Eskimos, where he could get plenty of food, but there is an uncertainty about it. According to the prearranged plans Dr. Cook was to return to headquarters at Annoatok, Greenland; down Kennedy Channel, through Smith Sound, and in case no ship arrived he would move to Cape York and thence to Upernavik, expecting to return home not later than September, 1908.

The announcement from Rome that Pope Pius is opposed to women in politics created much interest among the partisans to both sides of the suffrage movement in New York. Miss Mary G. Hay, a leading suffragette, declared that nothing the Pope could say would hinder women from fighting for what they believed to be right. Frederick Nathan, whose wife is one of the leading club women of the country, takes a similar view. On the other hand, Mrs. Gilbert E. Jones, a leading anti-suffragette, applauded the Pope for the stand he had taken. Father Wynne, editor of *The Messenger*, a leading Catholic publication, is of the opinion that his holiness did not mean that women should not enjoy equal rights with men, but that they should not permit their political activities to interfere with the primary duties of the home.

Among the Magazines

THE INDIAN AS A FARMER.

Prosperity has struck the red man, as it has the white. Redheart, among the Nez Percés, farming his several hundred acres with the latest improved machinery, and owning many horses and cattle, is not the exception. Another Northwest Indian making rapid advances is Louis Michita, a Cœur d'Alene, who owns and lives in as fine a ranch house as is to be found in the section, a commodious, two-storied, painted structure with large barns adjacent, the entire premises fenced. Back of Louis' home is a small house in which live the white help employed on the ranch. Between the poplar trees to one side of Louis' house is an artificial pond well stocked with fish.

Another prominent Cœur d'Alene is Tyler Toto, whose prosperity has not yet led him to cast aside the tribal tradition that womanfolk were intended for manual labor. Tyler is very proud of the photograph showing him harvesting wheat with an improved self-binder and sees no reason to apologize for the presence of his wife and mother-in-law who faithfully plod along shocking while he sits and drives.

Many of the Cœur d'Alenes are wealthy, cultivating large tracts of land and reaping rich harvests of grain, oats being the favorite crop. Louis Antelope is one of the richest farmers. He cultivates one thousand acres and has a fine home, together with large sums of money loaned out at eight per cent interest. He has excellent teams and improved machinery. Indian Daniel has nine hundred acres in cultivation on Rock Creek. Indian Campbell cultivates seven hundred acres.

One of the leaders of the red folk in the Northwest is Lancaster Spencer, head man of the Yakimas, who aspires to be the Booker T. Washington of his people. He occupies a comfortable home, one of the attractions of which is a well-stocked library. In one corner is a writing-desk; near it a typewriter on which Spencer is proficient; in one corner a home-made bookcase containing almost two hundred legal volumes.—The Delineator for May.

TARIFF AND THE PHILIPPINES.

The Philippine tariff legislation which President Taft urges Congress to enact incidental to the passage of the Payne bill does not conflict with nor alter the provisions of the latter measure with respect to free trade between the United States and the islands. It is intended to supplement the Payne bill provisions and primarily to prevent a serious falling off in the revenues of the Philippine government by reason of the changed conditions which will ensue through the putting of the free trade plans into effect.

In the original draft of the Payne bill it was provided that articles wholly the growth and product of the Philippines should be admitted into the United States duty free, limitations, however, being placed on the amounts of sugar and tobacco to be admitted free of duty in any

single year.* Subsequently Mr. Broussard of Louisiana obtained the adoption of an amendment eliminating rice from the free list, and this provision of the bill, as amended, stands in the bill as reported by the Senate finance committee. This measure also provides for the free entry into the Philippines of the products of the United States, and there has been some complaint that the reciprocal arrangement, with the limitations on free imports into this country, was not entirely fair to the Filipinos, as the influx of American goods into the islands would shut off goods hitherto imported from foreign countries that afforded sources of revenue through the customs duties.

President Taft and the friends of the Philippines feel that there must be readjustment of the tariff affecting foreign importations into the islands so as to make up as fully as possible for revenues that otherwise would be lost and at the same time afford reasonable protection to Philippine industries. It may be necessary, as stated, to make up some deficiency by means of increased internal revenue duties.

The importance of enacting such legislation in conjunction with that pending for tariff revision is succinctly set forth in the President's message transmitting the proposed law, which, it is interesting to note, "has been drawn by a board of tariff experts," after many open meetings and full conference with the business interests of the islands.—Chicago Record-Herald.

THE VALUE OF DRY FARMING.

After five years of progress dry farming has become established as standing for a certain method of agriculture adapted to the plains where rainfall is deficient. It is easy to raise crops in Iowa, Missouri, eastern Nebraska, and similar portions of the West, where sunshine, rich new soil, and abundant moisture are found. It is quite another thing where weeks go by without a cloud. Scientific farming proposes so to utilize what water does fall that there shall be a reasonable crop production,—not uniformly equal to that of the well-moistured East, not approaching that of the irrigated valleys, but making it possible for the farmer to support his family in comfort on a moderate acreage and returning good interest on the investment. In the States of Idaho, Montana, Wyoming, Utah, in New Mexico and Arizona, in all the western portion of the Great Plains this idea has a foothold and is recognized as a business proposition,—not a miracle nor yet a fancy theory of the schools. It demands personal attention, definite effort, and understanding of the principles of agronomy,—but it is practical, profitable, and gives results that are surprising. Used intelligently, it brings fertility to what was in effect a desert,—and that fact alone means riches of great worth.

Probably no one thing connected with the movement is of more importance than the influence its literature and its advocacy have had in stimulating investigation as

to the best means of caring for all the soil of the plains. Farmers talk of the reasons for certain results; they follow scientific methods that have been tested by experts. Dry farming appeals to them as a good thing for the semi-arid lands and not a bad thing for the man who has usually plenty of moisture. It is a modern adaptation of an old principle, and is so simple as to be within reach of all. When it becomes general it may do much toward making more generous and regular the rainfall of the plains. It is already teaching the dwellers on prairie farms how to secure utmost returns from the gifts nature has bestowed, something the first generation of settlers never did.

In all the discussion of the term "dry farming" much misunderstanding exists. In simple phrase it means a method of farming that shall include deep plowing and frequent pulverizing of the top soil out of as well as during the growing season. It is based on the principle that the moisture falling in rain or snow may sink into the earth if the soil be loosened. Then that there shall be kept above that moistened bed a close, fine blanket of dust that shall prevent evaporation. If the furrows be turned at right angles to the prevailing winds of winter the snow may be caught, and if the pulverizing harrow be sent over the field after every rain, the seed is certain to receive a maximum amount of sustenance. If it does not get enough in one season it may in two, and a crop every alternate year, if a good one, is ample return on cheap land. Of course there must be good soil as a basis, —only irrigation can conquer sand.

To accomplish all this special machinery has come into use. Horses could not pull plows biting deep into the tough centuries-dried soil, so powerful engines that roll majestically along with two dozen plows en train are in their places. Press drills that plant the seed deep; pulverizing harrows that break the surface into powderlike fineness, and other appliances, are used. "First get your moisture, then raise a crop on it," is the formula adopted by one successful farmer. He told how he had plowed twelve inches deep, had harrowed and cultivated,—and then raised thirty-five bushels of wheat, fifty bushels of corn, and generous crops of rough feed on each acre, finally starting a profitable fruit orchard,—all this on a rainfall of less than fifteen inches annually. Year after year moisture-preservation has increased his supply and the soil-bed has constantly grown richer and deeper.—From "The Truth About Dry Farming," by Charles Moreau Harger, in the American Review of Reviews for April.

HOW THE CAUSES OF WAR, WHICH ARE ESSENTIALLY EXTERNAL, MAY BE REMOVED.

Prof. William Hovgaard, of the Massachusetts Institute of Technology, writing in the first number of the Scandinavian Times, the organ of the new American-Scandinavian Society, declares that the causes of war are essentially external and that much may be done to abolish it by bringing about closer intercourse among the nations. He says:

"Difficulties among nations only too often lead to war, while difficulties among individuals, although relatively of as great importance, are generally settled in some peaceful way. This is in spite of the fact that differences in character and other inherent qualities among different nationalities are, at least within the white race, no greater than those existing among individuals belonging to the same nation.

"Nowhere is this more clearly brought out than in the

United States. Under a generous and humane government, which does not use any coercion to bring about this result, a common language is willingly and rapidly acquired by the different nationalities who come to settle in this country. The common language makes an intimate intercourse possible, and through a wisely planned and complete school system all children are cast in the same educational mold. The intrinsic national differences are thus reduced to their true value, and it becomes apparent that they are of small significance compared with the disparities which are due to differences in language, traditions, customs and other external and incidental conditions. As a result of this, we witness the remarkable phenomenon, which has probably never before occurred on such a large scale in the history of the world, that people of different nationalities, which have during centuries repeatedly waged war against each other, come together in this country and live peaceably side by side, and in one or two generations come to reckon themselves as belonging to one nation.

"Hence, we infer that the causes of war are essentially external, and that, if we could bring about a closer intercourse among nations, we should promote a better understanding, and this understanding would breed respect and sympathy. Thus we might hope eventually to establish a more advanced state in the relationship of nations, similar to that which already exists among individuals."

Then, after discussing briefly the various forms of international intercourse,—diplomatic, business, transfer of labor, immigration, visits, cultural,—and their influence in establishing goodwill and understanding, he continues:

"International intercourse has for various reasons increased enormously of recent years, and it may be said, without too much optimism, that war is now a more remote contingency than has formerly been the case, but much remains to be done before war is abolished as a means of settling difficulties among nations. It seems clear, however, that one of the primary conditions for attaining this higher state of civilization is to make international intercourse more intimate and complete, and we should therefore organize and support it where needed and as far as possible remove the obstructions which hinder its development. Now, most of the forms of intercourse enumerated above are self-maintained or are provided for in various ways; only the two last-named forms of cultural intercourse (visits of professors, teachers and other lecturers, for the purpose of imparting knowledge, and visits of teachers and of students of science, art, professions, etc., for the purpose of acquiring knowledge), which are still imperfectly developed, require nursing and support. It is believed that cultural intercourse is on the whole more effective in paving the way for the peace movement than any other form of intercourse, because it acts directly on the mind, and because it is generally free from any relation with causes of conflict among nations. Especially is this true of the two last-named forms of cultural intercourse, which it is the object of the new society to further as far as the United States and Scandinavia are concerned. Professors, teachers, students and others, who have made a prolonged stay in the foreign country, bring home with them a knowledge of and a sympathy for the nation whose guest they have been. This knowledge and this feeling are transmitted to their countrymen, and in the case of teachers to the rising generation. In this way, therefore, will be laid the best possible foundation of future good understanding and sympathy.—Advocate of Peace.

WHAT IS TO BECOME OF THE ORCHARDS?

WHAT is to be the farm orchard of the future? Will there be any? I rode last year through Michigan from near the southern part to the Straits of Mackinac, and as I traveled in a roundabout way I passed through much farming country, and what impressed me most was the fact that apple orchards on farms were disappearing.

The old home orchards that the settlers made haste to set out when they first cleared the land are dying, and that is but natural; *but there seems to be little effort made to replace them.* I did not during this journey see more than half a dozen places where attempts were being made to replace these old trees with new. This is certainly a mistake. No crop that the farmer can raise pays better than the apple; besides the pleasure and convenience of having plenty.

When questioned as to the reason of this neglect I received various replies. Some said that the apple grew too slowly; they wanted their land to raise something that came into money sooner. Others said they were too old; they could not expect to reap much benefit from an orchard.

"But your children would," I urged.

They replied: "If the children want them they can set them out." They forget, though, that some one set out trees for *them!* Others said that they did not have the time required to care for a young orchard; they could not "afford" to give so much time to something that brought in no returns.

What is the trouble? Are we living too fast a life, thinking only of ourselves and the almighty dollar, caring nothing for those who come after us?—*Farm Journal.*

PUMPKINS FOR WINTER.

THE average farmer derives very little benefit from the feeding of pumpkins. They are hacked up, crammed into hogs and cattle for a few days in the fall, at harvest time, and the supply is quickly exhausted and forgotten. The cramming process of this single feed does the stock much less good than if the pumpkins were held in reserve, and added as a balance with the other rations during the winter months, when this kind of feed is not available. Cellar room is seldom to be spared for the storage of a sufficient quantity to feed stock, but the difficulty is easily overcome by the following plan:

Have several shocks of fodder at hand when the pumpkins are harvested. Lay the pumpkins in a row, as high and as wide as you may think best. Spread a little hay over them, set the fodder on each side, to a thickness of three or four feet, and they are ready for winter. As you feed out the fodder, the golden fruit of the vine rolls forth, and you have a balanced ration which adds flesh to your stock and gold to your purse.—*Selected.*

Between Whiles

Addual Sprig Sog.

'Tis dow the thig to sig of sprig
With all its gladsobedess,
With all its birds upod the wig,
With baidis id airy dress,
Therefore I twag upod by lyre
And try with all by bight
To bravely strike poetic fire
Ad voice by soul's delight.

As Browdig says the hill's dew-pearled,
The sdail is od the thord,
Ad thigs are all right with the world—
At least they are this bord;
Tomorrow it bay sdow sobe bore
Or blow bed's whiskers loose;
But let us dot put up a roar,
For what would be the use?

By dose is clogged, by eyes are red,
By throat is sore ad raw,
By joits all ache, so does by head,
By breath is hard to draw,
But sprig is here with all its cheer,
So let us cease to fret,
Ad sig ad sbile ad clig a while
To wi'ter flannels yet.

—S. E. Kiser.

Not Much.

"What would you do if you had sixty-five million dollars?"

"Well, for one thing I wouldn't get off a lot of gush about wanting to die poor."

Correct.—"What's the best thing to induce chest expansion?"

"Medals."—*Louisville Courier-Journal.*

Up-to-date.—"When we take charge of the government," says the wise old suffragette, "we will make some changes in the naval bureau."

"I should hope so!" agrees the enthusiastic young suffragette. "Why, bureaus are hopelessly out of style! We will have a combination wardrobe and chiffonier."—*Judge.*

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

FOR SALE—Barred Plymouth Rock eggs. Pure bred, large, well barred, one dollar for 15. Reduced rates on incubator lots.—Mrs. I. C. Stine, Dallas Center, Iowa.

Sunday Half Hours with Great Preachers

by

Rev. Jesse Lyman Hurlbut, D. D.

How would you like to have fifty-two of the greatest preachers of the world for the past 1,700 years come before you one at a time for fifty-two consecutive Sundays—every Sunday for a full year—and each one preach to you the eloquent sermon which made him famous for all time? The possessor of "Sunday Half Hours with Great Preachers" will have conferred upon him, in the nearest possible manner, this inestimable privilege and benefit. Dr. Hurlbut has selected the fifty-

two most famous preachers of the world, both from the Catholic and the leading Protestant churches throughout the world from the days of St. Augustine and Chrysostom, who lived three hundred and fifty years after Christ, down to, and including John Bunyan, John Wesley, Whitefield, Henry Ward Beecher, William Ellery Channing, and other greatest preachers of the world. It contains 681 large pages, bound in elegant cloth.

THE BOOK OF BOOKS What It Is:
How to Study
By **WILLIAM EVANS, D. D.**, of Moody
Bible Institute. A valuable hand book for
individual or class use. Part I. deals with
the names of the Bible, its inspiration, genuineness
and authenticity, canon, languages, versions, general
structure, etc. Part II. takes up the interpretation
of the Bible and its study as a whole, by books,
chapters, topics, words, etc. 224 pages, with illustrations
and diagrams. Paper, 50 cents; cloth, \$1.00.
Bible Institute Colportage Ass'n, 250 La Salle Av. Chicago

\$400 Prize Cup Won by Colfax County, N. M. In Competition with Entire Irrigated West

Miami Ranch

is located in the choicest part of Colfax county, New Mexico, and it was largely due to the products grown upon and adjacent to this ranch that Colfax County won this valuable cup at the Interstate Industrial Exhibit held at Albuquerque, N. M., last October. Every State was represented—products from land selling as high as \$1,000 an acre were shown—but Colfax County won by many points.

Many other prizes have been won by this section of the country. New Mexico wheat took first prize at the World's Fair in Chicago, while apples raised in an orchard directly adjacent to Miami Ranch won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 an acre.

Miami Ranch

offers you health and pleasures as well as wealth. It's situated in a rich, cheerful valley, surrounded by picturesque mountains. Elk, deer, bear and other large game are to be found in the mountains, while thousands of wild duck and geese inhabit the surrounding lakes. The Rayado River, which flows through this ranch, is noted throughout the central west for its trout fishing.

The rainfall is sufficient to insure big crops. But with the gigantic irrigation system recently installed, there is not the slightest chance of crop failure.

The climate is perfect, the air is pure, and the scenery beautiful. Excellent church privileges, a good school and pleasant neighbors are all to be found on Miami Ranch.

Write for a free copy of our booklet, "Westward Ho." It tells in detail all about Miami Ranch. Tells how and when you can get a round-trip ticket from Chicago for \$30, and from Kansas City for \$25, via the Atchison, Topeka & Santa Fe. Write at once and take your choice of the bargain offers which we are now making on both large and small farms.

Sunflower Stories and Lullabies

By Olive A. Smith.

A collection of stories and verses for young folks. Miss Smith is a writer of considerable ability, contributing to several young people's papers regularly.

The poems and stories found in this volume are among her very choicest productions.

In remembrance of her home in Kansas, the Sunflower State, she has called the collection "Sunflower Stories and Lullabies."

The book contains many such stories as "Mabel's Diamond," "The Story of a Bird," "A Real

Boy." "An Adopted Family," "The Class in Number Seven," and "Sammy." Interspersed throughout are a large number of such poems as "In Chipmunk Town," "The Moon Baby King," "The Wise Crow," "The Meadow Preacher," and "The Bye-Bye Boat." One hundred pages of the most delightful reading. The book is printed from large clear type, on a good quality of paper. The frontispiece is reproduced from a painting by David Emmert. Handsomely and substantially bound, artistic side title, profusely illustrated.

LITERARY ACTIVITY OF THE BRETHREN IN THE EIGHTEENTH CENTURY

Prof. John S. Flory, Ph D.

Every one who has read this book is ready to speak a word of commendation.

"I have read with much interest Prof. Flory's book, 'Literary Activity of the

Brethren in the Eighteenth Century.' It is, no doubt, one of the very best contributions to our historical literature that has yet appeared. The style is transparent and pleasing. The most striking feature of the book is the scholarly conservatism which characterizes every state-

ment. Some of our writers have been disposed to jump at conclusions. This is not true of Prof. Flory. He always gives his readers the benefit of the doubt. The book is just what one would expect of its author, —A Great Book."—P. B. Fitzwater, Principal of Bible Dept., Manchester College.

"I wish to express my appreciation of 'Literary Activity of the Brethren in the Eighteenth Century,' by Prof. John S. Flory, Ph. D. I consider it a very valuable contribution to our church literature. The author is to be congratulated for the thorough treatment of his subject. His style is easy and attractive. It is a readable book and ought to find its way into many homes."—Prof. T. T. Myers, Juniata College, Huntingdon, Pa.

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the north. There is some snow at times but the Chinook winds quickly melts all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. I. J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

EMPIRE COLONY IN "SUNNY STANISLAUS"

The CO-OPERATIVE COLONIZATION COMPANY is now locating a colony of our people in the lower San Joaquin valley, in central California. The new town of EMPIRE, as well as the colony lands, is located on the Santa Fe railroad, five miles east of Modesto, the county seat of Stanislaus County, thirty miles south of Stockton, seventy-five from Sacramento and one hundred and fifteen from San Francisco.

The colony lands join the new town site and are within a few miles of three different railroads. These lands are all under cultivation, and are free from brush, stumps, stones or other obstructions. Two large ditches cross the tract, affording ample water for irrigation of all crops.

Melons and Canteloupes are Profitable in "Sunny Stanislaus."

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and Investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

NEW CHURCH ORGANIZED—NEW RAILROAD BUILDING.

A new Church of the Brethren was recently organized at Empire, with twenty-five members, and other families of our people are expecting to move there soon. The Modesto-Empire Interurban railroad is now being built. For further information address,

CO-OPERATIVE COLONIZATION COMPANY
North Manchester, Ind., South Bend, Ind.
Or Levi Winklebleck, Modesto, Cal.

Children's Meetings, and How to Conduct Them. By Lucy and Nellie M. Carman. With lessons, outlines, diagrams, music, and helpful suggestions. Introduction by Bishop J. H. Vincent. 9th thousand. 12mo. Cloth. Price, \$1.00.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

Missionary Collection Envelopes. Size 2¼x3½ inches, with space for amount, date and name of contributor. Per hundred, postpaid, 15 cents; per thousand, postpaid, \$1.00

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

Meigs Post Cards Reduced One-half

A set of six post cards for Sunday-school workers. Each card is printed in colors and contains a poem by the veteran Sunday-school enthusiast, Chas. D. Meigs.

An appropriate remembrance from a Sunday-school superintendent to his teachers and coworkers.

THE SUBJECTS.

"To My Bible,"A Sermonette in Verse
"Others,"A Peep into the Secret of a Happy Life
"If I Were You,"A Recitation for Rally Day
"A Diamond in the Rough,"The Boy Question
"The Sheep of the Flock,"The Man Question
"The Twenty-third Psalm and the Parable of The Lost Sheep."

Beautiful designs. Something entirely new. Regular price of these popular post cards has been reduced from 5 cents each to 2 cards for 5 cents.

Set of Six Cards, postpaid,15 cents

THREE TIMELY BOOKS for the FLORIST AND GARDENER

MY TEN-ROD FARM, or How I Became a Florist. By Chas. Barnard.

An interesting story of the successes and failures of a florist. Through an accident at the mill Mrs. Maria Gilman became a widow with two children to provide for. This she did by converting her small flower garden into a commercial asset which now furnishes an annual income of two thousand dollars. Attractively bound in cloth. 118 pages. Postpaid, 45 cents.

THE STRAWBERRY GARDEN. By Charles Barnard.

A very practical story concerning the Wellson family and their strawberry garden. How it was planted, what it cost and what came of it financially and sentimentally. The writer is a close student of human nature as well as a practical market gardener. A book of 104 pages, bound in cloth. Postpaid, 45 cents.

A SIMPLE FLOWER GARDEN for Country Homes. By Charles Barnard.

A practical guide. Aunt Louisa assists Frank and Gertrude in beautifying their rural home. How to start a flower garden, what it will cost and how have flowers all the year round. This little volume tells you just what you should do in each month of the year. 76 pages. Bound uniform with "My Ten-rod Farm" and "The Strawberry Garden." Postpaid, 45 cents.

\$400 Prize Cup Won by Colfax County, N. M. In Competition with Entire Irrigated West

Miami Ranch

is located in the choicest part of Colfax county, New Mexico, and it was largely due to the products grown upon and adjacent to this ranch that Colfax County won this valuable cup at the Interstate Industrial Exhibit held at Albuquerque, N. M., last October. Every State was represented—products from land selling as high as \$1,000 an acre were shown—but Colfax County won by many points.

Many other prizes have been won by this section of the country. New Mexico wheat took first prize at the World's Fair in Chicago, while apples raised in an orchard directly adjacent to Miami Ranch won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 an acre.

Miami Ranch

offers you health and pleasures as well as wealth. It's situated in a rich, cheerful valley, surrounded by picturesque mountains. Elk, deer, bear and other large game are to be found in the mountains, while thousands of wild duck and geese inhabit the surrounding lakes. The Rayado River, which flows through this ranch, is noted throughout the central west for its trout fishing.

The rainfall is sufficient to insure big crops. But with the gigantic irrigation system recently installed, there is not the slightest chance of crop failure.

The climate is perfect, the air is pure, and the scenery beautiful. Excellent church privileges, a good school and pleasant neighbors are all to be found on Miami Ranch.

Write for a free copy of our booklet, "Westward Ho." It tells in detail all about Miami Ranch. Tells how and when you can get a round-trip ticket from Chicago for \$30, and from Kansas City for \$25, via the Atchison, Topeka & Santa Fe. Write at once and take your choice of the bargain offers which we are now making on both large and small farms.

Farmers Development Company, Springer, New Mexico

FOR LAND SAKES

come to **Reedley, California** where you can raise all the oranges and lemons you want and make a fortune at the same time. Where snow is practically unknown. Located in the heart of the famous **San Joaquin Valley**, the home of the raisin, peach, pear, apple, fig, nuts and vegetables of all kinds. An extra fine place to go into the dairy or chicken business. Have fine **alfalfa** land and there are hundreds of tons raised here. Located on two railroads and on the banks of the Kings River and always in sight of the stately Sierra Nevada Mountains. Nearly perfect climate. Come to California where you don't freeze to death. We always use the Golden Rule in all our dealings and it will pay you big to see us before you locate. For further particulars address

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

NEFF'S CORNER

Just about the time this appears in print Clovis will celebrate the second anniversary of her existence. She is now a county seat and has a population of about 3,500. I have been here 21 months and in that time property values have increased 400 to 800 per cent, owing to location. Another railroad is building toward the town, and for it also Clovis will be a division point. We expect a population of 10,000 within three years and a proportionate increase in property values. I have charge of 23 rent houses, but turn many applicants for houses away. Houses are still building on every hand and they are usually rented in advance and tenants moving in before they are finished. Being here on the ground and acquainted with the situation, I am in a position to pick up a bargain now and then. If you have funds to invest, it will be worth your while to write me. Address

J. A. Bowers' apple crop of 1907 netted \$1,000 per acre, and in 1908, \$700 per acre.

E. A. Blair gathered from seven and one-half acres of apples 3440 boxes of fancy apples which netted \$5,500.00.

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

No. 19.

STARBOARD AND PORT

JOHN S. FERNALD

THE recent collisions between vessels on the Atlantic seaboard may serve as the occasion for a short review of one of the principal devices adopted by maritime nations to reduce the chances of such disasters, namely, the red and green lights carried on the opposite sides of all seagoing vessels, whether propelled by sail, steam or other power. The present terms, "starboard" for the right side, and "port" for the left, originated among the early European seafarers, the former coming to us in nearly its old-time form, and the latter materially changed. The Italian *questo borda* and Portuguese *ista borda*, meaning this side, became contracted to *sto borda* and starboard, while Italian *quello borda* and Portuguese *illa borda* became *lo borda* and larboard. The similarity of sound of the two words, starboard and larboard, led to many errors with resulting disasters, and the name of the left side was changed to "port," from the Italian *porta la timon*, carry the helm, in reference to porting the arms in military drill.

As shipping multiplied on the seas and along the coasts, the method was developed of using different colored lights to designate the different sides of a vessel, and to show approximately the course on which she was sailing. At first each nation worked independently, and more or less confusion resulted, but the matter was finally adjusted on an international basis, and now every seagoing vessel is obliged to carry a white—uncolored—light at the masthead, a green light on starboard side and red light on the port. These lights must be displayed continuously from sunset to sunrise by every vessel when under way. The side lights are carried in "lantern boxes," made of plank, and so arranged that each light shows only on its appropriate side. Each box consists of an oblong wooden flooring with an inboard wall and aft end. The lantern face forms a quarter segment of a circle, of red or green glass, and the opposite sides of metal rest in the angle formed by the inboard and aft walls of the lantern box. The lantern boxes are generally

lashed to the shrouds of sailing vessels, or placed on the bridge or paddle boxes of steamers, though conditions may sometimes require other positions in order to show the lights to the best advantage. From a point dead ahead both lights can be seen, but from either side but one is visible, until a point at right angles to the vessel's course is reached, when none can be seen except the white masthead light.

In one of the "Rollo books," written for the youth of two generations ago, Uncle George explained to the youthful hero an easy way to remember the color of the lights. "You can easily remember," he said, "that port wine is red, and for the other color just think how green you are about all nautical matters."

The "rules of the road" at sea follow, in general, the land rule in force in the United States, "keep to the right," but, owing to varying conditions of winds, tides, channels and other complications there are many exceptions. While many of the rules are self-evident, and present the only possible way to safety, vessels are often in positions where there might be a choice of two or more methods, either of which would prove safe if both captains acted from the same viewpoint, but leading to disaster otherwise. To meet these cases a code of international maritime rules has been adopted, embodying many arbitrary rules, but all mutually agreed to by those who "go down to the sea in ships" or who have the making of the laws governing navigation.

Owing to the great ease with which they can be handled, steamers must give the right of way to sailing vessels, and for the same reason a sailing vessel with a free wind must keep clear of one working to windward. These, together with the rule for steamers each with plenty of room to keep to the right, may be termed self-evident rules. Among the arbitrary regulations, decided on and agreed to for the good of all, may be mentioned the rule that a sailing vessel with the wind on her port side must keep clear of another with the wind on her starboard. It is no

easier to change the course of one of these vessels than the other, but this rule being agreed to and understood by all proves satisfactory and safe.

As many persons can commit to memory and retain longer anything in verse than in prose, the following verses, written many years ago by Thomas Gray, are familiar to all who have to do with the handling of vessels of the high seas:

When both side lights you see ahead
Port your helm and show your red.
Green to green or red to red,
Perfect safety, go ahead.
If to your starboard red appear,
It is your duty to keep clear;
To act as judgment says is proper—
To port, or starboard, back, or stop her!
But when upon your port is seen
A steamer's starboard light of green,

There's not so much for you to do,
For green to port keeps clear of you.
But both in safety and in doubt
Always keep a good lookout;
In danger, with no room to turn,
Ease her! stop her! go astern!

The landsman frequently gets confused in hearing or reading steering directions. As applied to the sides of a vessel and to nearly all other things nautical, "starboard" means right, and "larboard" or "port" left. In the olden times when vessels steered with tillers the order "starboard your helm" meant to carry the tiller across to the starboard side, which turned the vessel's course to larboard. The use of modern steering gear has not led to a change in such orders and "Port your helm" in the second line of the above stanza means in landsman's parlance, "Turn to the right."

THE JEWS AND THE GREEKS

PAUL MOHLER

AMONG those great men who have helped in a large way to carry out the plans of the Lord for the salvation of the world, one of the greatest is Alexander the Great. Alexander was born B. C. 356, and succeeded to the throne of Macedonia when twenty years old. He immediately completed the conquest of Greece, which his father had begun; then, believing Grecian civilization to be the greatest in the world, he set out to conquer Asia and establish therein the laws, religion, language, arts, and in short all the elements of Greek civilization. It is exceedingly interesting to follow this movement and see how far it aided in the spread of the Gospel, nearly four hundred years later.

As for the extent of Alexander's conquests, it seems to us a marvelous thing, in view of the smallness of the force with which he set out, 34,500 men. For with this army, and its natural increase from Greek colonists whom he picked up, and captive people whom he compelled to aid him, he conquered the Persian empire, including all of Asia Minor, Phenicia, Syria, Palestine, Babylonia, Persia, etc., as well as Egypt, and a part of India. Had Alexander lived, no one can say what would have been the limit of his dominion, but he died at the age of thirty-two, and his dominions were divided among five of his generals. Upon this division, Judea, with Jerusalem; fell into the hands of Ptolemy Lagus, to whom was given Egypt. From this time on until the Maccabean independence, the Jews were under Grecian rule, first the Ptolemies, then the Antiochs.

But it is not the Green government that interests us; it is the Greek language. This is still considered to be the most perfect language the world has ever

seen. Compared with Greek, the languages of Asia and Africa were primitive, poor and weak. Following the army of Alexander, came great numbers of Greek colonists, who settled in the conquered territory, bringing with them, of course, their language, which was from the first the official language, and gradually became the language of a large proportion of the people even in Judea. With the language, came something of the Greek learning and culture, so that it is said that Alexander taught Asia to think. Certain it is that there followed with the Macedonian conquest, a great intellectual uplift to all the nations touched by its influence. And while the conquered regions were divided after the death of Alexander, each portion was developing itself in Greek civilization, so that when all were united under Roman rule, there was laid open a vast region, having a common language, and under a common rule throughout, in which it was easy for the missionary Christians to preach the Gospel of Christ.

Perhaps here is the place to tell of the origin of the Septuagint or Greek Old Testament. The Ptolemies, or Greek rulers of Egypt, were as a rule, very kind to the Jews, inducing many of them to settle in Egypt. Here, the Jews were thrown in close and intimate contact with their Gentile brethren, and a mutual esteem grew up, which resulted in a desire on the part of the Greeks that the Jewish sacred writings should be included in the great Alexandrian library, that they, too, might have access to them. Accordingly, first the books of Moses, and later the remainder of the Old Testament, were translated into Greek. By the time of Christ, this was the form of the Bible

in common use; and it is from this that the Lord himself frequently quoted, and not always from the original Hebrew. This stamps it as authoritative to us, although the thorough Bible scholar still finds it necessary to know the original Hebrew that he may be sure of some texts.

Now think how much easier this made it for a knowledge of the law and the prophecies to be common throughout the world at the time when the Gospel was given, and how much more readily the Gospel was understood and accepted on that account, and you will see readily the value of this Septuagint translation as well as of a universal knowledge of Greek.

But this was not all the world gained by Alexander's conquest. Greek having become a common language, the New Testament was written in Greek. We are not sure that all the books were first written in that language, but the oldest copies in existence are. Our English is called a rich language, but even it falls far short of the Greek as a vehicle for expressing the great and noble, as well as the more delicate thoughts and emotions. Our American Revision is considered to be the finest translation of the Holy Scriptures that has ever been made in any language; but even yet, when we want to feel the force and beauty of the New Testament, we must read in the Greek. To the Greek conquest, therefore, we owe the beauty and perfection of the New Testament Scriptures, as well as the speed with which it was carried throughout the Roman world.

Perhaps you don't like to think of the Lord as using warriors to carry out his purposes, but this is not the first of such instances. There is no question whatever to the Bible student as to the use which God made of great conquerors, such as Sargon, Nebuchadnezzar, Cyrus, and others. While Alexander is not named in the prophecies, there is no question at all of his being the he-goat spoken of in Daniel 8 and 11:3-4. Perhaps a word of explanation here would help. While Alexander's dominions were divided among five generals, they were really made into only four kingdoms. This is exactly in accord with Dan. 8:22. It should also be noted that Antiochus the Great gained control of Judea after it was taken from the Ptolemies, and oppressed them cruelly as did the king mentioned in Dan. 8:23-25.

There is a story told by Josephus that is very interesting and that may be true. It is that when Alexander came up toward Jerusalem to destroy the city, the high priest set out to meet him with a great procession of priests in their priestly garments, and citizens in white robes; for he had been told in a dream that he had nothing to fear. When Alexander met this procession, and saw the high priest in purple and scarlet clothing with his mitre on his head, having the golden plate whereon the name of God was engraved, he approached by himself and adored that name and first saluted the high priest. When his

followers saw this, one of them asked him why he should adore the high priest. He answered that he "did not adore him, but God who hath honored him with his high priesthood; for I saw this very person in a dream in this very habit when I was at Dios in Macedonia; who when I was considering with myself how I might obtain the dominion of Asia, exhorted me to make no delay but boldly to pass over the sea thither, for that he would conduct my army and give me the dominion over the Persians." Josephus continues: "And when he had said this to Parmenio, and had given the high priest his right hand, the priests ran along by him, and he came into the city. And when he went up into the temple, he offered sacrifice to God, according to the high priest's direction; and magnificently treated both the high priest and the priests. And when the Book of Daniel was shown him, wherein Daniel declared that one of the Greeks should destroy the empire of the Persians, he supposed that himself was the person intended."

Whether all this is true or not, may be doubted, but we do know that there seemed to be a strange weakness in all of Alexander's enemies from the very beginning, and it is certain that he granted great and special favors to the Jews and that they honored him greatly, even naming many of their children after him.

I have added this quotation in part that those who have not read anything from Josephus may see how interesting it is. In your shelf of histories, don't forget to place a copy of Josephus, the great Jewish historian.

188 Hastings St., Chicago.

I MYSELF.

This only grant me, that my means may lie
Too low for envy, for contempt too high.

Some honor I would have.

Not from great deeds, but good alone;
The unknown are better than ill known:

Rumor can ope the grave.

Acquaintance I would have, but when 't depends
Not on the number, but the choice of friends.

Books should, not business, entertain the light,
And sleep, as undisturbed as death, the night.

My house a cottage more
Than palace; and should fitting be
For all my use, no luxury.

My garden painted o'er
With Nature's hand, not arts: and pleasure yield,
Horace might envy in his Sabine field.

Thus would I double my life's fading space:
For he that runs it well twice runs his race.

And in this true delight,
These unbought sports, this happy state,
I would not fear, nor wish, my fate;

But boldly say each night,
Tomorrow let my sun his beams display,
Or in his clouds hide them: I have lived today.

—Abraham Cowley.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LVII.

I OBEYED, but not until I had caught a good glimpse of the bay now swarming with countless keels,—gondolas, sanpans, sails, launches that ran like eels, little boats and big boats, all gliding about as if in their own path and run by the same central power. On the Asiatic side, in easy view, lay Scutari. Yonder Asia. Here Europe. I could easily have swum across.

"All right!" I cried, walking rapidly back toward the guard.

I expected my freedom at any moment, and I began to show a spirit of good humor because of the anticipated boon.

The several officers, with coats buttoned tight around their waists, now came out of the waiting rooms, got the various men to their feet, and with them and two women I was again marched away.

Everything seemed too interesting to me as I looked upon the quaint curiosities in every direction, to suppose that any great evil was about to fall upon me. As we passed through the crooked streets, narrow and solid with houses and shops, I looked first at the buildings on each side, then at the incongruous squad ahead of me, and hardly knowing whether to be serious or humorous, I paid little heed to the crowds of men and children who rubbered at us, but mostly at me as I stumbled with the others over the sharp-edged stones. Responding to the gaze of the curious, my officers might have strutted like heroes with their prisoner, but thanks to their kind and gentle manners, they walked at such time rather with me than as if guarding me.

Having read in history that Turkish prisoners, whether innocent or guilty, were often thrown into a common prison for months and years, I began to study the characters of each of those who trudged, unwillingly, to their destiny. I wondered if the two women would be thrown into the same place with us. Did the one carelessly wearing a mantle believe in the Mahomedan faith? If so, I wondered if it would be right for any of us men to speak to her, or to look at her when unveiled, a crime punishable by death in certain places in Turkey. I wondered what kind of food we would have and if these women would be given the same as we men received. Would we have

the same kind of clothes to wear,—our own, or did prisoners wear a peculiar striped cloth?

We were now climbing a steep hill, the rough cobblestones almost too slippery to step upon, and as we turned many corners and seemed to change our direction at the whim of the leader, I had a fine opportunity to study the faces and figures of those ahead of me.

The first "suspect" in front of me was probably a half-breed or Turkish Moor with head wrapped in a black and a white cloth. He had the Turk's thick lips, as also the solid chin. His eyes were dreamy black, deep-set, and constantly busy with an idea originated by his own independence. But for the lowly life the man had been compelled to lead, at hard labor, his tall, straight body, responding at will to a fine set of muscles, he would have passed easily for a gentleman of cultured means. These two points, the ability to think and the ability to move, marked him as the Moor. He had possibly embarked from some place on the African coast, and was coming to Constantinople for the first time in his life to ply his trade with others of his kind. But for his prominent jaws and haggard expression, which gave him a murderous look I should have selected him as my "roommate," in case of necessity. But I feared to take him as my chum.

Next ahead of him was a young fellow about twenty-five, wearing a curled, black moustache. His right leg was about an inch shorter than the other, and as he was bending under a bunch of luggage wrapped in a large blanket, he made a picturesque picture that caused even us "suspects" to smile. In his left hand he carried a short, stiff cane or club, and in endeavoring to keep up with the "crowd" he sometimes made the cane answer as a substitute for his shorter leg,—not having time to set it down and take it up again,—in keeping step with his longer leg. His right held to the end of the bundle that was about twice his own size. On his head was the regulation Turkish fez. Though his features were beyond identification, he was evidently a Turk. Being a Turk I did not care to select him as my chum.

The third and fourth were just ordinary types to be

met with on deck passages along the Mediterranean. They were very poor and lived by the simplest kind of toil, having no ideas of their own, and I regret to say, none that they had borrowed. They just existed. What they had done that led the Turkish police to put them in our band, they did not know. What was about to happen to them, they did not care. They just walked after the officers like sheep after another sheep, turned the corners to the left when the leaders turned left, to the right, when the leaders turned to the right, exercising but one care, that of avoiding tramping upon the big bunches of dogs,—lazy, dirty, skinny dogs,—that piled up in the sun on every corner and five times between. One of these dogs, falling asleep, had rolled over right under the foot of one of the officers. This the dog failed to notice, and went right on sleeping. When the two men reached this spot they both turned out and shied off fully a distance of ten feet, as if the dogs lying there, too lazy to eat beefsteak, had been lions.

I was half mad at these simpletons when they turned into a narrow court, followed the men through a *big iron gate* and went straight on just as though the gate had been made of ivy. Of course, all the rest of us had to follow, whether the huge gate would shut behind us, or not. The passage grew darker and darker. The light could scarcely get through the narrow walls. Turning here we rounded a sharp corner, and then in my frightened imagination I saw a "Bridge of Sighs," like the one in Venice, only we were walking beneath it and not being rowed, for the last time, in a gondola.

Somewhere along here the two women disappeared. I made no inquiries, but kept right on.

We were reaching now the end of the passage, where at the door of a big building, whether of stone or *iron*, I couldn't have told, the leaders halted, motioning to the conglomerate party to enter the door.

Each then went to his own place.

I found myself alone in a rather clean, nice room, in the center of which was a big desk, on which were no papers, but one solitary ink bottle and a pen. Not long after, a pleasing looking gentleman, in full Turkish dress, appeared in the door, motioning me to come that way.

He led me through an ample court to the other side of the building, taking me to the door, and stopping on the outside, gestured me to enter.

As I entered the large room or office I believed I was in the chief magistrate's quarters, or police court. A gentleman led the way to the desk in the center, behind which sat a Turk whose demeanor showed he was a judge or attorney of some kind.

It was the most peculiar moment of my experience. I was among foreign policemen. I was in an oriental

court, about to be tried or sentenced, or sentenced and tried, or both.

As before, these officers, whatever position they had in the city, and whatever they were minded to do to me, showed me a kind of deference that made me rather like them. Still, that disposition on their part only increased my anxiety, for while I believed that the sole trouble was regarding my passport, my mind was fertile in conjuring up a score of possible harms that could be inflicted upon a helpless foreigner. I had been careful, after writing my letters at Smyrna, to mail them in the German or Austrian postoffice, for I had been warned about using the Turkish post, the mail of which was constantly being opened, rifled and confiscated. But as I had written plainly about the conditions in Anatolia, and perhaps had used strong language, the inspectors who might have opened my mail might have misunderstood some of my statements. Although having been dropped in the German postoffice, the Turkish officials suspecting my sincerity, could possibly have compelled the foreign office to turn any suspected mail over to them. I was no plotter against individuals or governments, and I made up my mind to stand by all that I had said and done regardless of results.

Just inside the door, coming from the side of the office, was a little Maltese kitten, making right for me, its little furry tail waving welcomes to me as its little pink mouth mewed for me to take it up into my arms.

That little kitten was the key to the situation. It broke the ice on my Turkish ocean of fear. But what surprised me was its exact resemblance in size and color and disposition to the kitten I had befriended in Smyrna. "Kittie!" I called, as I laid it close against my bosom and held its fat little body tight in my hands. It called back to me, looking into my eyes with as much confidence and love as if I had been an old friend. It could not have been the kitten I had rescued from the cellar in Smyrna, for that one had been left in the care of one of the students. In my room in the dormitory there I had made a box for it with dishes placed for its food. It was to be fed milk and meat each day several times until I returned. For this expense I had given the boy some money, promising him more on my coming back from Constantinople. Above all I had instructed him to be good to it and to see that it did not suffer the least want. He had faithfully promised me to do just as I wished him to do and assured me that my protegee would be in fine shape when I next saw it. He had been commended to me by one of the professors and I rested easy in the belief that the Armenian would do as he promised, with the offer of coin for his trouble, and that my little kitten would welcome me after I had been in the capital.

With the kitten in my arms thus I walked towards the desk of the judge, taking my position directly

before the august personage sitting on the other side.

He had seen me pick up my little friend and smiled as I brought it with me, marvelling that a stranger had captured instantaneously its confidence and friendship.

Then and there, I believed I had won my case.

DIALECT.

M. M. WINESBURG.

IN writing dialect, how many writers really write it as it is spoken? Take for an example the darkey vernacular; how many different ways one can see it written, and not as the darkey speaks it, either.

I have heard the darkey vernacular spoken, from the Ohio River to the Gulf of Mexico, and I don't think I ever heard one say "Ah" for the personal pronoun I. They usually say "I'se," with the accent on the I. Also, I have yet the first time to hear a darkey say "suh"; it sounds more like "sah" or "sair," although it would be rather hard for anyone to write correctly the rolling, guttural sound as the darkies pronounce it.

Then, I have read articles, that claimed that the whites of the darkies' eyes had a bluish tinge, where in reality the whites of their eyes have a yellowish look, and in the pure blacks more of a reddish yellow than in the half-caste, but that yellow tinge shows up in the eyes of all.

About all of the darkies say "I'se," "sholy does," "done shuah," "fo shuah," "yo," and "suttenly am." And it is also common to hear among either the whites or blacks in the far South, the words, "yo'all" and one hardly ever hears anyone say yes, it's "eyah." This is as near as I can write their peculiar way of saying yes. "Two bits" for a quarter of a dollar, and "a little bittie thing" for anything very small, and a darkey always says "chillens" in speaking of children. But very few darkies talk as bad as some writers make them talk, though they do roll their words wonderfully.

MELON GROWING IN THE SOUTH.

J. I. MILLER.

PERHAPS few people in the North realize what the melon industry is in the South; in fact they do not have the faintest idea. The melon is just as much at home in the South as the cotton or the sweet potato.

The first and greatest of all things to consider is the location for the melon patch. Where the land is low and flat and does not have sufficient natural drainage the land is usually plowed in lands from eight to ten or twelve feet wide. The ordinary turning plow is used. The man that does the plowing begins in the centre of the land (commonly called beds) and turns the ground to the centre and plows and replows until he has the centre of the bed from one to two feet

higher than the dead furrow between the beds. These furrows carry off the water and afford excellent drainage.

After the ground has been bedded up sufficiently high, one method of fertilizing is to split the centre of the bed by throwing two furrows apart with the turning-plow, then filling furrow with well composted barnyard manure or a liberal supply of commercial fertilizer sowed in furrow, then throwing the ground back in furrow with plow.

Seed.

Then the best of varieties are selected and seed usually ordered from some reliable seed house. The seed is planted in hills from eight to ten feet apart in the row. Soon as the vines have six or eight leaves the cultivating begins and a warfare is kept up until the vines cover the ground. The mode of cultivation is much the same as that of corn, except more shallow. During the stage of cultivation more fertilizer is often applied.

Size of Patch.

One, two, three, or four hills make a melon patch, that many acres make one, twenty acres make one, forty acres make a larger one and a good-sized patch. Last summer we read in the paper with some interest about a melon patch in Texas containing five hundred acres. We can not remember how many car loads of melons were shipped from the five hundred acres.

Sizes of Melons.

Melons that weigh from thirty to sixty pounds each usually sell best in the markets, though some of the best varieties, such as the "Florida Favorite," and "Cleckly's Sweet" and a few other varieties are small melons and seldom weigh more than twenty-five pounds while the "Black Diamond" and "Duke Jones," also the "Augusta Rattlesnake" and "Colbs Gem" weigh as much as seventy to eighty pounds each. The largest we ever helped to eat that we remember of that we knew its actual weight was seventy-eight pounds. A melon weighing thirty or forty pounds is not considered a large melon in the South.

Price.

The first that come in the market, usually the latter part of May, sell for about two cents per pound, later one cent, and sometimes for half cent per pound and sometimes for less. We have on different occasions been invited to a neighboring patch (after they sold all they could) to help ourselves and have hauled melons home by the wagon load that weighed from twenty to thirty pounds, eaten what we could and fed the balance to our hogs and chickens.

Perhaps it might interest some of the readers to know what the outcome is in growing melons, so I give a few facts.

Facts.

Two of my neighbors in partnership sold \$500 worth of melons that they raised on three acres. One of the men told me later that he planted one acre a few years ago, and sold something over \$149 worth of melons and all the expenses were less than \$49. \$100 net profit is usually realized per acre. Another man who lived a mile from us had two acres in watermelons and they ripened late in the season when the markets were glutted and he told me he sold nearly \$200 worth. Then he gave us an invitation to "help ourselves" and we hauled a two-horse wagon load home and they were first-class as to quality. The foregoing applies to watermelons. But as much can be made growing muskmelons or cantaloupes. We have never engaged in watermelon culture save for family use, as our space for planting is too limited, and we have always succeeded best with muskmelons.

We had a good crop of muskmelons a few years ago, on less than one-thirty-fifth of an acre, raising over four hundred muskmelons. This may seem like a big yield to some of the Nook readers, but it is true all the same, and we have raised a number of crops that yielded just as well, but we measured the ground on this one occasion only.

Conclusion.

We have often thought that were we to live in the North again and plant melons and care for them as we do here we could grow melons there, too.

When I was a boy in Pennsylvania fifty years ago, we as well as our neighbors, would plant our melons in the same field and same hill with the corn, and when we got a melon five or six inches in diameter we thought we had a "big one."

Perhaps this may find its way to the Nook readers before it is too late in the season to plant melons in the North. If so I would like some of them to try the southern method of growing melons and report results.

Should any of the Nook family have any subject in view they would like an article on "from the South?" they will confer a favor on me by letting me know. There are many subjects I could not do justice and would not undertake, but will be glad to give an article on anything that I know something about. My main object in writing is to be sure and tell the truth.

This article is sent by request, and I thank the one who asked for it.

Roanoke, La., April 17.

**WORLD'S BIGGEST BAROMETER.**

THE biggest barometer in the world is in the City of Faenza, Italy. It is a monument to Torricelli, inventor of the barometer who was born in that city just three hundred years ago. The scale of this barometer is on a basis of feet where the ordinary barometer is measured in inches. The liquid column is 37 feet high at normal. It was intended to use a 32-foot column of water, but this was abandoned because water evaporated too quickly. Then glycerine was tried but with this liquid the normal height was only 27 feet. When a lighter one is made available a taller barometer may be constructed. Pascal made barometers of water and wine mixed. Zophar Mills of New York made a glycerine barometer and Jaubert set up one of water in the famous Tour St. Jacques, the weather bureau center of Paris.—*Detroit Free Press.*

BROKEN DREAMS

RICHARD BRAUNSTEIN

I have dreamed some pleasant day dreams
 Slumbering peacefully.
 But then awakened quick, to find
 The dreams were fantasy.
 Tho' oft to finish out the thought
 I've tried, and tried in vain,
 The broken thread of vanished dreams
 We never find again;—
 The broken thread of vanished dreams
 We never find again.
 I have dreamed some pleasant day dreams
 Under a shading tree,
 But the castles that I've builded
 Ne'er op'ed their doors to me.
 In after years their ruined towers

I've tried to build with pain,
 But tumbled castles of our youth
 We never build again;—
 The tumbled castles of our youth
 We never build again.
 After from dreaming we're 'wakened
 There's naught but pain ahead,
 The whole of our human effort
 Is toil for daily bread.
 But each has, when toil is ended,
 A grave 'neath moonlight beams,
 And there, where mortal never 'wakes
 We'll finish out those dreams;—
 And there where mortal never 'wakes
 We'll finish out those dreams.

THE INDICTMENT OF STRONG DRINK.

WHAT a vast throng is marching along this gateway of woe, and sorrow, and contention. There are to be seen all classes and conditions of men and women. Those who are wrecks drifting on to despair and death. Those who get on a debauch periodically. The moderate drinker. And the one who is just beginning to drink. But, no matter what the condition, all those who march with the drink brigade are on the way to the serpents' den for at the last "it biteth like a serpent and stingeth like an adder." The entire brigade is going downward. Strong drink never has lifted men up. No man has ever become a better husband and father because he took to drinking. No man ever became a better citizen because he drank more beer or whisky. No man ever became a better workman because he drank liquor.

Whence come the recruits for this brigade? The march is very rapid. The strongest are going the pace that soon ends in the drunkard's grave. New recruits must take their places. Where are they to be found? A speaker, addressing a Sunday school, asked: "Boys, these men we see on the street, in the stores, in the church, and in the Sunday school will soon get old and pass away. Who will take their places and be the men when they are gone?" After a moment's pause they answered, "We boys." "Very true," continued the speaker. "Now, boys, you have all seen men who drink too much—drunkards, we call them. They will soon be old and die, too. Now, boys, tell me, who do you think will take their places and be the drunkards then? Promptly came the startling answer, "We boys." We boys! The thoughtless answer roused the whole school. Could it be possible that this was to be true? Alas, yes—not true of all the boys, but some of them. Every drunkard was once an innocent child. The whole army of drunkards has been made out of innocent children. It has been very carefully estimated that in order to keep up the supply of drunkards as it has been the past five years, every fourth family will have to furnish one bright, innocent boy.

There are no saloons in this country in the eyes of the law. Men are granted license, not to open a saloon, but to keep a dramshop. The dramshop is kept for the purpose of dram drinking. Dram drinking makes drunkenness and drunkenness causes destitution. The worst bargain ever made by American governments is the agreement by which they grant men the privilege of keeping a dramshop for a small fee.

Carroll D. Wright, one of the very best statisticians, after carefully counting the cost, says that for every dollar received from the liquor traffic the government has to pay \$21 to take care of its products.

We are just learning how to keep accounts with alcohol. The eight "white States" that have voted whisky out of their bounds have done so because they have just begun to charge up to whisky the very things

that the writer of Proverbs charges up to it: "Woe, sorrow, contention, complaining, wounds without cause, redness of eyes."

In answer to the question, "Does it pay?" the people of Illinois, Missouri, Indiana and Ohio are driving out the dramshop so fast that it is almost impossible to keep count of the "white counties."

The 77-hour lid enforcement recently in St. Louis reduced the arrests for drunkenness from 182 the week previous to 24. The excise commissioner says: "Facts are facts. There is no doubt that closing the saloons is morally a good thing. The police records for the past two days show it. There have been fewer arrests for drunkenness, naturally, but on top of this there have been no shooting scrapes, no people cutting one another—in fact, fewer arrests for crimes of any sort." If closing the dramshop for 77 hours reduced all kinds of crime, why not close it all the time?

The wife stood before the court when her husband was being sentenced to be locked up for being drunk the third time. The judge turned to her and said: "Madam, I am sorry for you, but I must lock up your husband." Her reply contained a tremendous truth when she said: "Your honor, wouldn't it be better for me and the children if you locked up the dramshop and let my husband go to work?"

Uncle Sam receives almost two hundred millions a year revenue from alcohol. Let us be thankful for a decrease in the receipts for the year ending June, 1908, of more than fifteen million dollars. Dr. Cowan says: "Every barrel of this alcohol on which Uncle Sam collected the revenue contained an accident, a boiler explosion, a head-on collision of trains, a wrecked steamer, an elevator smash, etc." No one has yet been able to count the murders, the suicides, the divorces, the wrecked homes, ruined manhood and womanhood and the broken-hearted mothers that came from those barrels of liquor.

We have denatured alcohol, but deadderized wine or beer, and deserpentized whisky is a delusion and a snare, for "at the last it biteth like a serpent and stingeth like an adder."—J. G. Reynolds.

THE TERRIBLE SMILE.

O. W. HOLMES said if he had the "terrible smile" which is sometimes seen on the faces of people who cultivate the habit of seeming always to be smiling, he would have a surgeon remove the muscles that make the artificial smile possible. Mrs. Kellogg, editor of *Primary Education*, disapproves of dramatic cheerfulness, and makes a good point touching that mechanical smile. She says:

We hear of a "kindergarten smile"—why not a primary teacher smile? They are one and the same when they are forced and both pitiable enough. How can one detect whether the smile be true or made up,

whether of the heart or of the muscles? It tells itself.

How must the little children feel under the relentless influence of a false, make-believe vivacity? How utterly weary they must be of the rarefied atmosphere of high-wrought cheer to which the determinedly vivacious teacher lifts them and pitilessly holds them day after day! How they must long to be let alone!

"Good morning, dear children. I hope you are all very well this morning. Shall we sing a song to show how happy we are?" This in a high-pitched rattling, tin-pan voice, equally devoid of agreeableness and sincerity. The dramatic teacher in the happy role then breaks into a jingling motion-song and sweeps the children along with her till they lose their breath in the swift current of over-happiness. Without a second for the song to leave an influence upon the happy victims, the teacher pounces upon another delightful thing to *do*, and the children are whirled into a game or an exercise as if carried along by pitiless machinery that had been set going and couldn't be stopped. From this they dashed into a reading, writing, or made-to-order "observation" lesson, with that never-dying vivacious voice, that will not, *will not* stop, still ringing in their ears.

And all this is to make the children happy, alert, spontaneous, wide-awake! Does the child mind need rest and quiet and time to unfold as do plant-buds? Must the teacher keep up an everlasting drum-beat for the development of the child-soul? If the primary teacher could believe that the spirit of harmonious, happy work in the schoolroom must be first of all the radiation from her own soul, and that this spirit is best fostered by the low, kindly tone, the genuine smile, the timely word, the timely touch, and the *timely silence* that falls like a healing balm, she would learn some of the best things she can ever know about the training of children.

The American child with fearful inheritance of nervous rush needs the cooling, quieting touch on the restless pulse far more than he needs the prod of the vicious spur.—*The Western Teacher*.

NATIONAL FLOWERS.

ALMOST every nation has its particular floral emblem, which has been adopted as commemorative of some historic occurrence or in recognition of a religious or romantic legend. The fleur-de-lis, says a writer in *Godey's Magazine*, is intimately entwined with the monarchical history of France, and, according to an old tradition, was first employed as an armorial bearing by Clovis I, and represents the lily presented by an angel to that monarch at his baptism. Others have held that it was first adopted by Louis VII of France, in allusion to his name, Louis Florus. More practical persons see in it the triangular spear-head of the soldiery.

While the aristocratic white lily is the adopted

symbol of the legitimist house of Bourbon, the violet is the partisan flower of the plebeian Bonapartists. There are several explanations, one of the most plausible being this: At the time of Napoleon's banishment to Elba his followers believed in his return, so it became a saying that "the Little Corporal will return when the violets bloom in the spring." One of Napoleon's nicknames was Corporal Violette.

The rose is associated with the history of England, one of the most bloody wars being dubbed "The War of the Roses," the white rose being the chosen flower of the house of York, and the red rose that of Lancaster, the two royal houses.

The lotus appears on all the sculptured relics of Egypt. It is the sacred symbol of eternity, and is Egypt's national floral emblem.

The lily is the flower favored by Italians, while Saxony claims the modest mignonette; Spain, the burning scarlet of the pomegranate blossom; Canada, the brilliant foliage of the sugar maple; Prussia, its beloved linden, and Greece, the purple-eyed violet of the woods. The lowly thistle, which grows so abundantly on the barren moors of bonnie Scotland, is introduced into the armorial bearings of that country, while the emerald green of the shamrock is dear to the heart of every loyal Irishman. This plant is so true to its native soil that it dies when transplanted to an alien land. The homely leek has from time immemorial been the emblem of the rugged Welshmen. Germany claims the lovely blue cornflower, the favorite of Kaiser Wilhelm; and almost every nation has appropriated some floral symbol which emblemizes a sentiment or which grows in very great abundance in its native land.

Being a commercial and material nation, America has paid but little attention to the choosing of a national flower. Every now and then the question is agitated, and the children of the public schools of the different States have from time to time signified their predilection for certain blossoms by the casting of votes. Not nearly all of the States have made a decision so far. The rose finds favor in New York State, the peach blossom in Delaware, the pine cone and tassel in Maine, red clover in Vermont, the moccasin flower in Minnesota, the rose in Iowa, the syringa in Idaho, goldenrod in Alabama, columbine in Colorado, bitterroot in Montana, goldenrod in Nebraska, wild rose in North Dakota, mistletoe in Oklahoma, goldenrod in Oregon, and the sego lily in Utah.

By the forgoing list it will be seen that the goldenrod and rose are the favorites, and have been duplicated in several States. This is not quite as it should be, for every State should have its own flower as a distinctive badge.

The love of flowers is as universal as love of birds. There is variety enough for every State to have one flower for its own.—*Round Table*.

NATURE STUDIES

THE CUNNING OF MRS. "BOB WHITE."

A. G. CROSSWHITE.

My half-holiday was rapidly drawing to a close and I was returning home feeling rather blue at my poor success at hunting, knowing that my first greeting would be, "Where is your game?" or some such taunt, for I was going in empty-handed, notwithstanding I had seen lots of game and had scattered the shot around in good style. But I wanted *quail*—the kind that is gentle and sits around in coveys and lets you kill a half dozen or more of them at a single shot.

The tame kind was not to be found, however, until I was nearly home, when all of a sudden I heard a little "twee, twee," near me and saw a number of baby "Bob Whites" running here and there through the tall grass. Ah, thought I, I'll catch some of these little fellows and carry them home for pets. So away I went after the small game, but one after another finally gave me the dodge and the next thing I saw was the mother bird, which, though very near me all the time, no doubt, had been unnoticed until this moment, for my mind was preoccupied with the thoughts of caring for these frail little pets properly, to secure the best results,—how much water? what kind of food? where keep them? etc. She seemed to shame me for making such wicked plans on such dim uncertainties. How many times had I heard the warning, "Never count your chickens before they are hatched." I immediately left off both pursuit and reverie; for here was the poor mother bird right at my feet, twittering and fluttering as though I had accidentally got on one of her feet and disabled her.

Through pity for her little innocent brood, I thought to pick her up and see what was the extent of the injury, but she was just an arm's length out of my reach, still fluttering and limping along for all the world as if she would soon give up the struggle.

Thus I followed her for half a quarter, it seemed to me, just barely missing her every time I reached out my hand. All of a sudden she rose, triumphantly, and soared away toward her scattered family with as much ease and pride as was ever exhibited on the field of battle when a general knows that he has won a decisive victory over his opponent. Then I understood it all. This was her ruse to decoy me away from her brood until they could successfully seclude themselves from their big enemy with his big gun. Had they known

how much powder and shot I had wasted that afternoon, that old deceitful mother could have kept scratching for worms, and the little ones would not have been scared out of a month's growth.

The application was reserved for more mature years. It finds a parallel in the the strategy by which Ai was taken and in the much greater conflict now going on between the friends of temperance and the saloon element. The hydra-headed monster has backed off for a purpose. His scattered and demoralized forces are quietly and secretly mobilizing their forces and an onslaught may be expected at any time. This and every other evil which the Christian is called upon to combat calls to mind the beautiful verses:

"My soul be on thy guard;
Ten thousand foes arise;
The hosts of sin are pressing hard,
To draw thee from the skies.

"Ne'er think the battle won,
Nor lay thine armor down;
Thine arduous task will not be done,
Till thou obtain thy crown."

Flora, Ind.

DO QUAIL EGGS HATCH SIMULTANEOUSLY?

WM. MOHLER.

A LITTLE chicken when hatched is a helpless little thing. It is quite different with a young quail. They come out of the egg so strong that they have the reputation of being able to run before the shell is off their backs. The only thing wrong with that story is that the shape of the egg is such that the little quail can slip out quite easily when the time comes. They come out of the shells so strong that I fear the old mother quail would have much trouble in keeping them all in the nest until the eggs were all hatched if it were not for a wise provision of nature that all of the eggs hatch at about the same time.

When I was a boy of twelve I was gathering sheaves, when the cradlers frightened a quail off her nest that she had made by an old tree stump. In those days the grain in stumpy fields was cut with a grain cradle, a tool that to many a western boy would be quite a curiosity. In the nest were thirteen eggs. Boiled quail eggs, I thought, were something very nice, so I broke one of the eggs to see if they were fresh enough to use but I found them just ready to hatch.

I left the nest and I soon gathered the sheaves to the far side of the field, when I returned.

During the time I was away, which could not have been longer than thirty minutes, every egg hatched. When I approached the nest the old bird flew and went tumbling through the stubble as if she had broken a wing, uttering a peculiar cry. The young quails went running in every direction. If they would have had days of practice they could not have hid themselves more effectually. I could find but three of them.

Years afterwards when I had nearly finished mowing a field of clover I cut through a nest of eggs just ready to hatch. All but five of the eggs were destroyed. These I put to one side, intending to put them under a sitting hen as soon as I finished the field. Before I had made the first round all five of the eggs hatched. The little quails remained by the empty shells,—they had plenty of strength to run away, but there was no mother quail near, with her warning cry to tell them that I was a dangerous being. They did not try to run away. I gave them to my little sister in whose care they were as gentle and confiding as an incubator chick.

If I had suspected that the five eggs would have hatched so soon I certainly would have watched to see if a setting of quail eggs hatched simultaneously.

Walton, Kans.

THE CURLEW AND ITS YOUNG.

THE favorite haunt of the curlew is the seashore. During the flowing of the tides they may be seen in the fields near by, snapping up worms and insects that come in their way. But no sooner does the tide begin to ebb than they fly in a direct line to their feeding-grounds, where they hunt most industriously for the small molluscs, sand-worms, and water-insects. They plunge their long bills into the sand, to a small portion of which they communicate a vibratory movement; the worms, disturbed in their underground dwellings,

come up to see what is the matter, and are at once snapped up.

They are bold and vigilant in the protection of their young, flying around the intruder and uttering all the time their plaintive cry—*courlie*, *courlie*, whence their English and French name.

The young ones dart about in search of food as soon as they leave the shell. The little downy fellow can be seen around standing up sharp and perky to show that he is quite able to take care of himself.

Sir W. Jardine, who spent much time in observing the habits of shore birds, says: "They retired regularly inland after their favorite feeding-places were covered. None were so regular as the curlew. The

more aquatic were near the sea, and could perceive the gradual ebb of

the tide; the curlews were

far inland, but as soon as

we could discern the

top of a sharp rock

standing above

water, we were

sure to perceive

the first flocks

leave the land,

thus keeping

pace with the

change of the

tides. They

fly in a direct

line to their

feeding-

grounds, and

often in a

wedge shape; on

alarm, a simul-

taneous cry is ut-

tered, and the next

flock turns from its

course, uttering in repe-

tition the same alarm-note.

"Of all the shore birds," says

Charles St. John, "there is none so

difficult to approach as the curlew. With the most

acute sense of hearing, their organs of smelling are

so sensitive that the moment you get betwixt the wind

and their nobility, they take wing, giving the alarm by

their loud, shrill whistle."—*Pleasant Hours*.

❧ ❧ ❧

THE Dragon's blood is considered to be one of the longest-lived of trees; it is a native of the island of Teneriffe. The finest specimen known is the giant tree of Oratava, and is said to have been seen in the year 1400, when it was as large as it is now. This tree is named from its product—the astringent resin known as dragon's blood, a substance formerly used in medicine, but now chiefly known as a red varnish.

USING OUR GIFTS.

"THINGS are not what they seem,"—at least not always. Just now we are called upon to surrender a "notion," long and widely held, that appears to have nothing more stable for its foundation than mere seeming. Anyhow our enlightener would have us think so. The theory exploded is that persons bereft of one sense are more or less compensated by the increase of acuteness in one or more of the remaining senses, and the learned man who touched off the explosion is one, M. Kunz, director of the Institution for the Blind at Illzach-Mülhausen, Germany.

The results of his tests are given in these dry, uncompromising statements: "As regards perception of the direction of sound, there is no difference between the seeing and the blind. The average distance at which sounds could be heard was essentially the same in both classes. The delicacy of the sense of smell was rather in favor of the seeing. It is generally supposed that the palp of the forefinger of the right hand, which is used by the blind in feeling the points in Braille's system of teaching the blind to read, must be very sensitive; but this was found not to be the case."

Of course we know that a theory of this kind cannot be established on a single series of experiments. Another scholar of equal ability, by another series of experiments, could perhaps confirm the former belief on the subject. We are of the opinion that it will require some time and numerous tests before the position of M. Kunz is generally accepted. However, for present purposes we would like to have our readers swallow the new idea whole,—seize on it without the least hesitation or questioning, as many people are disposed to do with every new thing that comes along.

Then, we are ready for our bit of moralizing, for surely the reader has guessed that that is the purpose of our mentioning Professor Kunz's discovery

here. The thought is this: We are all living on a miserably low plane compared with that on which the full use of our natural gifts would place us. The sensitive, knowing touch of Helen Keller is ours, but we have not given our Maker any acknowledgment of the wonderful gift. We stumble along with awkward steps when we might move swiftly with the greatest ease and grace. We look with unseeing eyes and listen with stopped ears and make contact with unfeeling touch. And may this not be true in a spiritual sense? Is it not true that we are often entangled in the toils of sin when there is at hand the power to climb to transfiguration heights? Is it not true that we cower and fall before temptation and persecution when we might endure, "as seeing him who is invisible"? Is not our low spiritual life due to a failure to use our spiritual gifts rather than to any lack of such gifts? Truly, we are living at a "poor, dying rate."

ONE CAUSE OF DESTITUTION.

It is an indisputable fact that in general much of the destitution prevalent in large cities is due to improvidence. Careful examination into particular cases of destitution is pretty sure to bring to light habits of shiftlessness and wastefulness which if followed by all people would make us a nation of paupers. The forms of destitution which charity workers invariably meet every winter in caring for thousands of able-bodied men belong to this class. The men work in lumber and railroad construction camps and elsewhere during the busy season and earn enough to keep them above want for the whole year, but when they reach the city the money is soon gone. Charity workers are discussing the problem of having some one take care of the earnings of these men, but it is not probable that an acceptable solution of this nature will be found very soon. On the other hand it is hard to teach habits of economy and thrift to this floating population in any other way. The conclusion is that we shall have abundant opportunities to exercise our charity, patience and perseverance for some time to come. At the same time let us teach the lessons of industry and economy to the rising generation and it may be we can thus lessen the burdens of those who come after us.

FOR A PATRIOTIC CELEBRATION.

A LEADING publication which stands for high religious principles as well as real patriotism asks why a movement cannot be started in the United States "to celebrate the Fourth of July in real patriotic fashion." The question is a timely one, for there are few people who can say anything in favor of the present method of celebration either as a patriotic or a sane observance, and considered as the expression of a Christian nation it is still more disgraceful. The fact that there has as yet been no successful reform in this line may

be due in part to the failure to begin a movement in time to offset the preparations for the old order of celebrating. It is none too soon to talk of plans now and to get them well started toward a successful realization.

The paper quoted above makes the statement that the money used to buy dangerous explosives would give every town and city in the United States a beautiful public hall that could be used for civic righteousness. But when we compute the cost of the present method of observing Independence Day we cannot stop at its cost in dollars and cents. There are the hundreds of lives that are lost and the hundreds more that are maimed which must not be left out of the accounting. And to all this we must add the effect of the distracting noise upon the nervous and timid and the misleading impression given to the young of the significance of the day.

Whatever plans are entered upon they ought to be concerned with the right education of the people on the subject of patriotism, and they ought to work successfully without the cost of life or happiness to anyone.

A SUGGESTION TO TEACHER.

If teachers mean by examination
To show the scholar's information,
Why do they carefully seek out
Such difficult things to write about?

These are the questions, as a rule,
The teachers ask us in our school:
"What time's the clock in Congo State
When Persian clocks are striking eight?"

"Halve the square of seventy-three
And what will a tenth of sixteen be?"

"What was the reason Charlemagne
Sent his great-grandaunt to Spain?"

"Explain what came of the Gothic war,
And what the Turks were fighting for
When Venice conquered Charles Martel
And ancient Constantinople fell."

"Name the products of Peru,
And all the rulers of Timbuctoo."

"Point out the errors in the words,
'Green cheese ain't not made of curds';

"'Him was not the friend of he';
'He hadn't ought to written me.'"

Now, for instance, we'll suppose
They wish to show what a fellow knows;

Then they'll be glad for a few suggestions
As to a set of useful questions:

"What did one Columbus do
In October, 1492?"

"Will some bright scholar kindly say
Which is 'Independence Day'?"

"What little girl will be so candid
As to tell us when the Pilgrims landed?"

"The war of 1812, my dear,
Was fought in what particular year?"

"Kindly tell us, if you will,
What nations fought at Bunker Hill?"

"Who cut down a cherry tree,
And helped to make a nation free?"
"Name a certain English Queen
Who still upon her throne is seen."

If teachers only had the tact
To hit upon the proper fact,
Recitations then would be
More creditable to them and me.

—Selected.

THE AMUSEMENT CRAZE.

I WISH to protest against the idea that the women of this country must be amused. It begins in the kindergarten. The children are amused all day. When they get home they must continue being amused. When they get into the grades they begin to rush—hurry to school in the morning, hurry home at night and hurry off somewhere to be amused. They do some good work (maybe), but there is something doing all the time—clubs, frats, class parties, plays—something all the time for amusement. They get out of school and go to college and spend four years more in the same way, or else they go into society and whirl around there. Perhaps they go to business—then it is hurry all day—hurry home in the evening and get ready to go to concert, lecture, theater—something to amuse. Perhaps they get married. Once in a while you see a woman who really enjoys her home and family, but the most of them are discontented, there is constant unrest. They go to clubs, church, society, concerts, lectures, theaters, etc. They seem never to be able to enjoy their own society. Life is like a whirlpool, and I am glad I am near the edge. I do not believe these women are any happier than my grandmother was. She never heard of a club and she never went to a theater. She had very few books, but she read her Bible and enjoyed her home and family. She could sit down and fold her hands quietly and did not need outside amusement. The people of this country need to be taught how to amuse themselves—and how to rest.—*Mrs. George Grinnell, Iowa, in Woman's National Daily.*

LOOKING to the progress in peace measures of the last hundred, and especially of the last twenty, years the hope may well be entertained that disarmament will become a reality, and that the people may enjoy not only the blessings of peace, but the blessings of peace without the crushing burden of preparedness for war.—*Secretary of War Dickinson.*

Give fools their gold and knaves their power;
Let fortune's bubbles rise and fall;
Who sows a field or trains a flower
Or plants a tree, is more than all.

—Whittier.

THE HOME WORLD

WHEN ELEANOR AWOKE

HATTIE PRESTON RIDER

"I HAD the strangest dream last night," said Aunt Mary, as she poured the coffee. "I can laugh at it now, but it was not in the least amusing then. I thought I was wandering up and down the city trying to find my home, the location of which had entirely slipped my memory. I went to half a dozen familiar places, but the people there treated me so coldly I had no heart to ask their help. I set out for my most intimate friend's, and presently recollected that she was spending the winter in the South. I knew that I must keep moving on, which I did, often walking directly through the houses of strangers. As I passed into one living-room, a woman came out from the adjoining bedroom, closing and locking the door behind her.

"'I've shut the poor soul in there, till her people come to take care of her,' she said to me, anxiously. 'She is bound to run away, and even now, she will not give up her sunbonnet.'"

"I returned the woman's look with one of equal misgiving. What would she say, I wondered, if she knew my own mental predicament! Then suddenly it occurred to me to try and recall the address on my letters. Like a flash the street and number returned; and, I suppose, the lifting of the mental strain caused me to awaken, for instantly I opened my eyes on my own blessed room gray in the early dawn, and your uncle sleeping peacefully beside me. The reaction of relief made me feel almost faint."

Eleanor laughed heartily. "After this, aunty, when you go to bed, you'd better fasten a card with your address round your neck, as they do to babies," she said.

"It gives me a little heartache, even yet," Aunt Mary protested; "though by daylight it seems ridiculous enough. We are so prone to look upon all ordinary blessings like our reasons, the sunshine, or the fresh air, as too common to thank God for! But another thought, most comforting, came to me as I lay there getting my spiritual balance; some time we shall wake up, and find that all the worries and bothers

which beset us now are simply an unhappy dream; in a word, that *only good lasts*."

"When we get to heaven, I suppose you mean," Eleanor supplemented.

Aunt Mary nodded. "Of course; but not necessarily after death. There's a deal of peace and happiness for us in this life, when we wake up to the fact."

"That's Christian Science," said Eleanor, superciliously; "and I never could be a Christian Scientist, aunty."

"Nor I," Aunt Mary agreed, "because I could never believe anything my reason disapproves. Yet, if notwithstanding their absurd theories on the subject of matter and material laws, I find a grain of helpfulness in their teaching, I shall appropriate it. If they have wakened to that particular truth that God's omnipotence must make good,—which is his very nature and presence itself—to triumph eventually in all things, then I am going to use that truth, too, every day and moment of my whole existence. One is not obliged to absorb the whole of a theory, to get benefit from it. And tell me, Eleanor dear, was there ever a vexation or difficulty in your life or mine, that was not sometime cleared up for us?"

Eleanor looked at her aunt in wonder. "There was that spoiled pudding, yesterday," she suggested, relaxing into sudden mischief.

"Well, we had canned peaches to fall back on, hadn't we?" was her aunt's merry retort.

Eleanor's face fell with some swift recollection.

"You've forgotten my long struggle to get a position, aunty," she said, bitterly. "Your pretty philosophy doesn't seem to work, on that!"

Aunt Mary sobered instantly, but the look of inner peace, like the clear reflection in a deep pool, never once left her eyes.

"No, my child," she said, tenderly, "it has been the undercurrent of my thoughts all through our little talk, and I have been wondering if the reason for this delay in your finding work doesn't, perhaps, lie at your door and mine. My pudding was heavy because

the baking-powder I used had lost its strength. May it not be that the poor quality of our faith in God's goodness has kept success from you? Certainly it is not your lack of honest effort."

A glow of impatient color came in Eleanor's cheeks. She was not of the easily teachable sort.

"But how can one have faith in what one hasn't proved or seen proved?" she asked, a trifle unsteadily. "That's the only faith I could understand."

"It is a very comfortable sort, when one has acquired it," Aunt Mary answered; "but there's another, and, I think, a far better: the kind Jacob had, when he wrestled all night with the angel, declaring, 'I will not let thee go, except thou bless me!' That's the germ of truth which the Christian Science people, and the New Thought and the faith cure and the Emmanuel people have waked up and found; that the temperance people and the workers of all the splendid reforms of this most beautiful age of history, are coming to see, that *good is God's own mighty Self working*, and before it all evil and difficulties, even including our own little private ones, must fall. Let's wake up, too, Eleanor dear, and make ourselves the possessors of this faith, by force as Jacob did, if need be!"

Eleanor did not answer, but sat quite still, staring at the white tablecloth. All her hard-working, hindered young life, it seemed to her, she had fought with and been conquered by this demon of doubt. Was it possible that, some day, she would waken as from a dream, and find all its hardness powerless to harm her, in the light of God's love? Aye, furthermore, *was it her business to awaken herself, now?*

Aunt Mary rose, and gathering a handful of dishes, started with them toward the kitchen. The telephone rang as she disappeared.

"Will you answer it, dear?" she called back. "The bread is rising skyward."

Like one still half-dazed, Eleanor complied. She returned in a few minutes, electrified, with an awed, shining face.

"Aunt Mary!" she cried, catching that person by the elbows, "was it you, or a prophet speaking, just now? The principal of Auburndale has just telephoned that the trustees have been looking up my references, and I am to come over this afternoon and sign their contract." Her eyes filled with tears, though a rainbow smile broke through them. "Aunt Mary, I—guess I'm—getting a little faith in God's omnipotence, after all!"

Aunt Mary patted the bright head, now sunk on her plump shoulder. "I knew you would," she said, heartily. "We are all learning, and there's such a beautiful, beautiful lot to learn. The faith of comfort is only the fruit of the faith of striving, dear heart, of the aggressive faith that pushes to the very foot of the Throne of Grace, holding up the earnest hands that

are the only kind God has declared himself willing to fill; so I'm sure,"—with a sudden, cheery laugh—"that hereafter, little girlie, you and I will see to it that both our faith and our baking-powder are fresh and strong!"

A MOTHER'S CARE.

I do not think that I could bear
My daily weight of woman's care,
If it were not for this:
That Jesus seemeth always near
Unseen, but whispering in my ear
Some tender word of love and cheer,
To fill my soul with bliss!

There are so many trivial cares
That no one knows and no one shares,
Too small for me to tell—
Things e'en my husband cannot see,
Nor his dear love uplift from me,
Each hour's unnamed perplexity
That mothers know so well:

The failure of some household scheme,
The ending of some pleasant dream,
Deep hidden in my breast;
The weariness of children's noise,
The yearning for that subtle poise
That turneth duty into joys,
And giveth inner rest.

These secret things, however small,
Are known to Jesus, each and all,
And this thought brings me peace.
I do not need to say one word,
He knows what thought my heart hath stirred,
And by divine caress my Lord
Makes all its throbbing cease.

And then upon his loving breast,
My weary head is laid at rest,
In speechless ecstasy!
Until it seemeth all in vain
That care, fatigue, or mortal pain
Should hope to drive me forth again
From such felicity!

—Presbyterian.

ONE WAY TO BRING UP BOYS.

JOHN G. PATON, missionary to the New Hebrides, gives this charming glimpse of the home influence that made him what he was:

"Our home consisted of a 'but,' and a 'ben,' and a midroom or chamber called the 'closet.' The one end was my mother's domain and served all the purposes of diningroom, kitchen and parlor. The other end was my father's workshop, filled with five or six 'stocking frames,' whirring with constant action of five or six sets of busy hands and feet, and producing right genuine hosiery for the merchants of Hawick and Dumfries. The 'closet' was a very small apartment betwixt the other two having room only for a bed, a little table, and a chair, with a diminutive window shedding light on the scene. This was the sanctuary of that cottage home. Thither daily, and often many

times a day, generally after each meal, we saw our father retire, and 'shut to the door'; and we children got to understand by a sort of spiritual instinct (for the thing was too sacred to be talked about) that prayers were being poured out there for us, as of old by the high priest within the veil of the most holy place. We occasionally heard the pathetic echoes of a trembling voice pleading as if for life, and we learned to slip out and in past that door on tiptoe, not to disturb the holy colloquy. The outside world might not know but we knew whence came the happy light that was always dawning on my father's face; it was a reflection from the divine presence in which he lived. Never, in temple or cathedral, on mountain or in glen, can I hope to feel that the Lord God is more near, more visibly walking and talking with men, than under that humble cottage roof of thatch and oaken wattles. Though everything else in religion were by some unthinkable catastrophe to be swept out of memory or blotted from my understanding, my soul would wander back to those early scenes, and shut itself up again in that sanctuary closet, and, hearing the echo of those cries to God, would hurl back all doubt with the victorious appeal, 'He walked with God; why may not I?'

Paton speaks also of "that blessed custom of family prayer, morning and evening, which my father practiced probably without one single omission till he lay on his death-bed, seventy-seven years of age. Even on the last day of his life, a portion of Scripture was read, his voice was heard softly joining in the psalm, and his lips breathed the morning and evening prayer, falling in sweet benediction on the heads of his children, far away, many of them, all over the earth, but all meeting him there at the throne of grace. None of us can remember that any day ever passed unhallowed thus; no hurry for market, no rush to business, no arrival of friends or guests, no trouble or sorrow, no joy or excitement, ever prevented at least our kneeling around the family altar while the high priest led our prayers to God, and offered himself and his children there. How much my father's prayers at this time impressed me, I can never explain, nor could any stranger understand. When on his knees, and all of us around him in family worship, he poured out his soul with tears, for the conversion of the heathen world to Jesus, and for every personal and domestic need, we all felt as if in the presence of the living Savior, and learned to know and love him as our divine Friend. As we rose from our knees, I used to look at the light on my father's face, and wish I were like him in spirit, hoping that, in answer to his prayers, I might be privileged to carry the blessed Gospel to some part of the heathen world.

"The very discipline to which our father subjected us was a kind of religion in itself. If anything serious required to be punished, he first retired to his closet

for prayer, and we boys understood that he was laying the whole matter before God; and that was the severest part of the punishment for me to bear! I could have defied any amount of mere penalty, but this spoke to my conscience as a message from God. We loved him all the more, when we saw how much it cost him to punish us; and, in truth, he never had very much of that kind of work to do upon any one of the eleven—we were ruled by love far more than by fear."—*Selected.*

"I JUST KEEP STILL."

"How is it, Rob," asked one boy of another, "that you never get into scraps, like the rest of us?"

"Because I don't talk back," answered Robbie, promptly. "When a boy says a hard thing to me I 'just keep still.'" Many a man whose life has had in it a good deal of trouble and opposition would have saved much if he had learned in his childhood the lesson which this little fellow had mastered—that of "keeping still." If the hard word hurts, it will not make it easier to make an angry reply. If you do not answer at all, it stops right there; if your tongue cannot be restrained, nobody knows what the result may be. It doesn't so much matter what your playmate says, so long as you keep your temper and hold your tongue; it is what you reply to him nine cases out of ten, that makes the quarrel. Let him say, and be done with it; then you will find the whole annoyance done with much more readily than if you had "freed your mind" in return.

"Just keeping still" is one of the things that saves time, trouble, and wretchedness in this world. The strong character can be quiet under abuse or misrepresentation, and the storm passes by all the sooner. Patience sometimes serves a man better than courage. You will find, again and again, that the way to "keep out of scraps" is to keep still.—*Exchange.*

LITTLE HELPS TO HAPPINESS.

It is all very well to understand to a nicety just how many eggs to put into a pudding, and how much vinegar to put into a salad; but it is far more useful to know how much sugar and what sort of honey to use in the dish of matrimony. In fact, after the first few months, some married people seem to think that no sugar at all is necessary, says a discriminating writer in the *Philadelphia Press*.

There is a recipe for making a continuous honeymoon out of matrimony which very few people seem to know. If the knowledge of this were more universal, there would be fewer divorce courts.

In the ten years of the average married life, fewer compliments pass between man and wife than are passed in the ten months preceding the wedding. Yet nobody is so susceptible to small compliments as a woman who is busy around her home. No one likes to hear pretty nothings in home life more than the

masculine creature. Much as he likes to say pretty things, he likes better to hear them. Husbands and wives really do think nice things about each other. Why not voice these nice things daily?—*Exchange*.

ODDS AND ENDS.

ONE of the best preventives of fatigue on the part of the housemother is to see that there are walks of some kind leading from the house to the outhouses, and from the doors to the gates. If nothing better can be done, do the best you can; a load of flat rocks will greatly aid in abolishing the scrubbing brush.

If you do not live near a "sugar bush," you can still have maple molasses for your breakfast cakes. Dissolve a pound block of maple sugar in water enough to make a syrup, and boil until it is "syrupy."

For burns, put a piece of unslacked lime in a vessel of water—a piece the size of a large egg will be enough for a quart of water. Let it stand until the sediments settle, and then carefully pour the clear water into another vessel. Beat into this enough linseed oil to form a creamy emulsion, then bottle and keep for use. This will draw out the fire, and remove the pain, while it is healing.

When putting aside any old garment of white cloth, cut or tear out all good pieces, saving even small scraps of smooth cloth, iron out smooth and put aside in rolls. The garment should be clean, of course, and the roll of scraps should be put into a self-sealing fruit jar, where it will always be ready for any emergency.

To remove the coating from the inside of a tin or copper teakettle, fill it with water and drop into the water a piece of sal soda as large as a large egg, and let the water boil for an hour or so. The shell-like coating should peel off, and the inside of the kettle be washed.

A great many otherwise cleanly housewives never think to wash out the teakettle, or to empty out the pieces of brown limy formations that fall from the inside while boiling. Water continually boiled in a dirty kettle can not possibly give delicate flavored beverages.

The Children's Corner

THE CROW THAT WASN'T AFRAID.

"I BELIEVE they laugh at my scarecrow," grandpa said.

"Yes, they do. I heard 'em," Perley cried. "They got together in a regular conflagration (Perley meant congregation), and laughed out loud—oh, very loud—Caw, caw, caw."

Grandpa smiled. But it got to be no smiling matter at all. Things began to look serious indeed out in the

corn-patch. At last grandpa hit upon a device. He came into breakfast one morning looking quite satisfied and happy.

"I've got 'em now," he remarked complacently.

"Got who, David?" dear old grandma asked.

"The crows—every mother's son of 'em. Let 'em dig up my corn-rows now, if they want to. I've spread that blue umbrella out there in the middle of my corn-patch, looking like a giant mushroom."

"Or a circus tent," put in Perley, gleefully. He had been walking all round the corn-patch in a triumphant procession of his own.

"I guess they'll laugh out o' the inside o' their mouths now!" he exulted.

But that noon, at dinner time, Perley came in out of the blazing sunlight with his little red, moist face drawn down lengthily. He waited until grandpa asked the blessing and filled all the plates.

It was hard work to "break it" to grandpa, but when you have a thing to do, you had better do it before you begin on your mashed potatoes and chicken.

"Grandpa," he said, solemnly, "there's a crow sitting under that umbrella down in the corn-patch. I saw him. He looked real cool and comfortable out of the sun."—*Exchange*.

THE BOY THAT KILLED A DRAGON.

A LITTLE boy four years old was much impressed by the story of "St. George and the Dragon," which his mother had been reading to him and his sister, and the next day he said to his father: "Father, I want to be a saint."

"Very well, John," said his father, "you may be a saint if you choose, but you will find it very hard work."

"I don't mind," replied John; "I want to be a saint, and fight a dragon. I am sure I could kill one!"

"So you shall, my boy."

"But when can I be one?" persisted the child.

"You can begin today," said his father.

"But where is the dragon?"

"I will tell you when he comes out."

So the boy ran off contentedly to play with his sister.

In the course of the day some presents came for the two children. John's was a book, and his sister Catherine's a beautiful doll. Now, John was too young to care for a book, but he dearly loved dolls, and when he found that his sister had what he considered a much nicer present than his own, he threw himself on the floor in a passion of tears.

His father, who happened to be there, said, quietly: "Now, John, the dragon is out!"

The child stopped crying, but said nothing. That evening, however, when he bade his father good-night, he whispered: "Papa, I am very glad Catherine has a doll. I did kill the dragon."—*Selected*.

THE QUIET HOUR

SPIRITUAL GROWTH.

S. S. BLOUGH.

God, the creator of all things through Jesus Christ, has wisdom to work out that which he has begun. It is not his purpose to work out in minute detail the entire existence for each individual being. He has, however, purposed certain results for what he has made, and for their accomplishment has laid down definite laws and principles. He comprehended the whole realm of creation and beheld the final results according to his divine purpose, and, by these laws and principles, arranged for them all. These laws and principles are much alike, in the spiritual as in the natural realm.

One of these is the law of growth. There is a strong analogy between the growth of children, animals or plants, and the growth of a soul. When a child is born there is much joy, but what concern when it is discovered that it is not growing or, still worse, is losing in weight or size. We sow seeds, set out trees, shrubs and plants, and are greatly distressed when they make no appreciable growth or when they sicken and die. We do not expect full growth at once, nor that they bear the full amount of fruit immediately, but we do expect them to grow. We do everything possible to help them grow.

How different often are our expectations of a new-born soul and our attentions to it. There is great rejoicing when a soul is born of the Spirit. This is the most important, but we often forget that it is not all. There can be no development except there be life. There can not be a full fruit-bearing state except there be growth. There can be growth only in accord with the divine law that underlies spiritual development. One can not grow in grace by an act of the will, much less by the will of others. He may will and worry and agonize continually, but it will not avail. He can only fulfill the conditions of growth. These conditions being fulfilled, the full growth will surely result.

In Eph. 4: 13-15, the fact of growth is beautifully brought out in the words, "till we all attain . . . unto a full grown man . . . that we be no longer children; but may grow up in all things unto him." Here we learn that it is expected that we grow. The Apostle Peter, in 1 Pet. 2: 1-5, gives clearly the conditions of growth. The new-born soul is like a babe. It

needs food. As the healthy babe has a taste for the food which nature has prepared, so the truly converted person has a taste for the sincere milk of the Word. This then is the first step. Taste is a test of character. The new birth gives a new taste. He is fed by the sincere milk of the Word. Given right appetite more than milk is soon required. Prayer and Bible reading, once so distasteful, now become most precious. Next the stronger parts of the Word come into use according to God's law of growth. There is a strong desire for fellowship of the Spirit and he in turn intensifies growth.

In the plant world, many things hinder growth. A vine entwines among the branches of a tree. It may be good for the vine but is injurious to the tree. From my window, I see a small tree between two large ones. The larger trees steal from it the substance and moisture in the soil, while keeping from it sunshine and rain. It is not only making practically no growth but is actually slowly dying. Worms at the roots, blight on the branches, decay at the heart, these and other hindrances must be prevented. So also in childhood, impure food, lack of food, filth, disease, hinder growth and thwart or delay strong full-grown manhood.

This is doubly true in the spiritual life. If we would grow, there are some things we must lay aside. Peter expresses the truth by admonishing to put away all wickedness, guile, hypocrisies, envies, and evil speakings.

Worldly indulgences surely make Christians worthless. Those who indulge them lose their influence, as also the spirit of consecration. Oh, how many souls are stunted for the lack of practicing a proper amount of riddance in things injurious to growth. Feelings of hypocrisy and envy not only hinder growth, but wither character, and as for evil speakings and surmising, "If there be any virtue, if there be any praise, think of these things." If we will, we come to the Word through the Holy Spirit, and through the Word to Christ, for taste, appetite and the life which will put aside all malice, guile, hypocrisies, envies, evil speakings. And by thus doing, we enhance spiritual growth. Thus looking toward perfection, by the law of growth, we will finally be perfected unto the full manhood in Christ Jesus.

Batavia, Ill.

THANKFUL FOR THINGS I MISS.

An easy thing, O Power Divine,
To thank thee for these gifts of thine!
For summer's sunshine, winter's snow,
For hearts that kindle, thoughts that glow.
But when shall I attain to this—
To thank thee for the things I miss?

For all young fancy's early gleams,
The dreamed-of joys that still are dreams,
Hopes unfulfilled, and pleasures known
Through others' fortunes, not my own,
And blessings seen that are not given,
And never will be, this side heaven.

Had I, too, shared the joys I see,
Would there have been a heaven for me?
Could I have felt thy presence near,
Had I possessed what I held dear?
My deepest fortune, highest bliss,
Have grown perchance from things I miss.

Sometimes there comes an hour of calm;
Grief turns to blessing, pain to balm;
A Power that works above my will
Still leads me onward, upward still:
And then my heart attains to this—
To thank thee for the things I miss.
—Thomas Wentworth Higginson.

APPALLING.

The Independent of January 28 publishes a straw vote taken lately in a theatre in Lyons, France, on the question of divorce. The occasion was the presentation of a play on divorce written by M. Paul Bourget of the French Academy.

The vote stood as follows:

	Men.	Women.
For divorce as regulated by the laws of France,	55	16
By mutual consent,	73	48
By consent of either party,	60	3
Against divorce,	139	3
In favor of free unions,	341	139
	668	209
		668
Total,	877	

The poll shows that in favor of free unions or divorce by mutual consent or by the consent of either party were: 474 men, 190 women, or a total 664 out of 877. That is, more than three-fourths of the entire audience polled. The vote also shows that more than half the voters are in favor of free unions. As indicating the trend of opinion in France this revelation is appalling and points ultimately to the destruction of the home unless the people can be Christianized. We say Christianized advisedly, for the vote shows that though France is claimed as a Catholic country multitudes of the people are rank heathen.

But it is quite incredible that this vote fairly represents the average sentiment of the French people.

It should rather be interpreted as truly indicating the opinions of the theatre-going public. So interpreted it is an awful commentary on the influence of the French theatre on the public mind. Doubtless if a similar vote could be taken here in New York or in any large American city among the habitués of the theatre it would be found that a surprisingly large number hold views as loose and immoral as those of the 664 given above. It is true of course that the people make the character of the theatre as much as the theatre makes the character of the people. But even so the above statistics are a terrible arraignment of the modern theatre. Its continual pandering to sensuality makes appalling havoc of character.

What a similar poll of theatre-goers in America would disclose we cannot be sure. But of one thing we feel very certain: such a poll of 877 men and women who are wont to be found regularly on Sabbath in the house of God would not disclose one single vote in favor of "free union." A church vitalized with the spirit of Christ is the bulwark of the home.—*The Bible Record*.

THE BEST PEOPLE.

AFTER all, the best people in the world are sanctified people. They fear God, and walk humbly before him. In their hearts there is neither bigotry nor bitterness. They find good in Christians of all grades of experience, and lament what they cannot commend. They are magnanimous as well as humble, and grateful as well as charitable. Their measure is found in the thirteenth chapter of 1 Corinthians, in the apostle's description of love. Whatever is there said of love may be said of him who loves God supremely and his neighbor as himself. In such an one there is not an element of self-righteousness, pride, or vainglory—nothing forced or artificial—nothing that repels. For him or his profession no apology is requisite. His holiness needs no vocal proclamation. The light of it shines forth with steady and increasing ray. His faith excludes boastfulness and censoriousness, while his love delights in goodness, and leads him to rejoice in every observable token of prosperity in the Church of God.—*From "Sanctification."*

QUARREL NOT AT ALL.

QUARREL not at all. No man who resolves to make the most of himself can spare time for personal contention. Still less can he afford to take all the consequences, including the vitiating of his temper and the loss of self-control. Yield larger things to which you can show no more than equal right, and yield lesser ones though clearly your own. Better give your path to a dog than be bitten by him in contesting for the right. Even killing the dog would not cure the bite.—*Pittsburg Christian Advocate*.

ECHOES FROM EVERYWHERE

Representatives of the anthracite mine operators and the United Mine Workers of America have signed the scale which insures industrial peace for another three years

A rate war on import traffic is on among the trunk lines from the Atlantic seaboard to Chicago and other middle Western territory. The new tariffs make a reduction of one cent per hundred, and it is thought that the cut may be extended to domestic traffic.

Exempting cities of less than 5,000 population and excepting the months of November and December, the Missouri Senate passed the House bill limiting the hours females may be employed in mercantile establishments, restaurants, laundries, etc., to 58 hours per week.

Some of the eastern railroads propose to make a summer rate of \$26 from Chicago and St. Louis to Atlantic City and other seaside resorts and return. On this basis the Erie may make a rate of \$24 to New York and return. This will bring on a fight for summer tourist travel.

Two more California cities, Berkeley and San Diego, have just adopted the "commission" plan of municipal government. This plan was evolved at Galveston, merely as an emergency measure at the time of the tidal wave disaster there, but it has remained to be taken up by numerous other cities as a permanent reform.

Addressing the thirty-third annual convention of the Missouri Institute of Homeopathy President F. M. Martin came out as an advocate of prohibition. Dr. Martin said alcohol as a drug is unnecessary. He said that hot milk, hot tea or hot water should be used instead of whisky as a stimulant and that physicians should never prescribe intoxicating liquors.

A world's conference will be held in London from July 18 to 24 for the purpose of establishing a permanent Word's Prohibition Confederation. The Twelfth International Congress on Alcoholism will be in session in the same city at the same time, so that between the two meetings, London should entertain this summer a large proportion of the most prominent temperance advocates in the world.

Every day in New York City about twice as many passengers travel vertically by elevator as travel horizontally by elevated, subway, and trolley car. Figures given in a paper recently read before the Electrical Engineering Society of Columbia University show that the 8,000 passenger elevators in the Borough of Manhattan carry approximately 6,500,000 per day; whereas the last report of the Public Service Commission states that the number carried daily by the surface, elevated, and subway cars in the entire city of New York is 3,500,000.

On the request of Gov. Hadley, Senator Warner introduced a resolution in the Senate which directs the Interstate Commerce Commission to investigate the rate situation in Missouri. The resolution proposes to have the commission test the accuracy of the statistics furnished the court by the 18 Missouri railroads and upon which Judge McPherson nullified the 2-cent passenger rate in the State.

Beginning with April 12, all Mexican public schools included in their course the study of temperance, which is the result of the efforts of Miss Nellie Burger, who was sent to Mexico recently by the American Women's Christian Temperance Union. Through the department of education, Miss Berger arranged to have the course included in the studies of the public schools, and the Mexican educational department is taking a great deal of interest in the new branch of study.

Some surprising facts were learned by members of President Taft's cabinet when they discussed the North situation at length. It is feared that a scandal will develop in the census department of which North is director. North has made two different statements to the President. He is accused of having awarded a contract for \$250,000 for adding machinery to a man who owns no factory and that regular manufacturers will furnish the machinery at a much lower price.

Cipriano Castro, former President of Venezuela, is reported to be consulting with lawyers in Paris with a view to bringing a damage suit against the French government for his recent expulsion from Martinique. As the government has the power to expel foreigners at its discretion, Senor Castro, it is said, purposes basing his action on the fact that he was forcibly placed aboard a ship at Martinique and compelled to return to France without being given the option of choosing his destination.

The American Sugar Refining Company of New Jersey and the New York corporation of the same name lately paid into the treasury of the United States \$896,000, completing a payment aggregating over \$2,134,000, in settlement of all civil claims arising out of the fraudulent weighing of sugar on the docks of the refineries in Brooklyn and Jersey City. The companies further agree to give up their right of appeal. The settlement was made upon the advice of the companies' lawyers, who say that the settlement seemed wise because of the fact that the government had threatened otherwise to bring further suits for amounts reaching nearly \$9,000,000. The settlement, while it discharges all the civil claims made by the government against the companies, does not prevent the bringing of criminal prosecutions against the men responsible for the use of the fraudulent device through the use of which false weights were recorded.

During the month of April 3,984 cars of oranges passed through San Bernardino, Cal., destined for the east. Each car contained 384 boxes with about 175 oranges to the box or 268,800,000 oranges, valued at about \$4,000,000. This breaks all previous records.

Although having paid a fine of nearly \$2,000,000, the Waters Pierce Oil company can neither sell oil in Texas nor leave the State. A receiver on behalf of the State is in charge of all the property of the company and is conducting an oil business. The profits go to the company. This state of affairs may continue indefinitely or until the State can sell the property to good advantage.

Three spans of the new city concrete bridge across the Illinois River at Peoria collapsed and fell into the river. The first span to fall was the one next the bascule lift section. There was no one on the structure at the time except the watchman. Had the collapse come later a number of casualties would undoubtedly have resulted. The bridge has been in course of construction nearly three years and has cost \$225,000. Three weeks ago the structure with the exception of the Tazewell County span was opened to traffic.

A magnificent statue to the memory of Henry Wadsworth Longfellow, America's most popular poet, was dedicated with imposing ceremonies in Washington May 7. The occasion was the more notable because of the presence of the President of the United States, men distinguished in letters and by practically all of the living relatives of the poet. The statue is the first erected at Washington to mark services rendered to our national literature. It is of heroic size, of pure white Parian marble, and the pedestal is of reddish brown marble. William Couper of New York is the sculptor. Chief Justice Fuller presided at the unveiling exercises.

Dr. Hugh M. Smith, United States deputy commissioner of fisheries, is receiving an avalanche of letters from almost every part of the country containing requests for small fish, fish eggs, etc., to be placed in streams, ponds, lakes and private preserves. As the result of special efforts in the hatchery work this year, the output of fish and eggs in the year just closed was greater than ever before in the history of the bureau, reaching a total of 2,871,456,280. Of this number 2,413,809,225 were young fish distributed for the stocking and re-stocking of public and private waters, and the remaining 457,647,055 were eggs delivered to State and foreign hatcheries. The output of young fish exceeds the greatest previous record for any one year by 376,000,000.

Correspondence between Abdul Hamid, the deposed Sultan, and the leaders in the recent uprising, found in the Yildiz Kiosk, proves conclusively that Abdul Hamid planned a massacre on April 25 of the Armenians living in Stamboul and of Young Turks who had been employed to form later new rules for the conduct of governmental affairs. The plot failed owing to the capture of Constantinople by the Young Turks forces on April 24. The correspondence shows that Abdul Hamid planned the massacre in the hope that it would arouse the fanatical Mohammedan population and tend to popularize the reactionary movement. The new evidence furnishes another link against the deposed Sultan in his coming court-martial and may result in a death sentence being imposed.

By a vote of 106 to 20 the Illinois House passed the Breidt bill amending the indeterminate sentence act so that juries shall fix the maximum term of imprisonment for convicted criminals. The measure is the one advocated by State's Attorney John E. W. Wayman of Cook County and by the Illinois State's Attorneys' Association. It has been passed by the Senate and now it goes to the Governor for approval or veto.

May 4 Pedro Rojas, the newly-appointed minister from Venezuela, was presented to President Taft at the White House by Secretary Knox. His recognition completes the formal re-establishment of diplomatic relations between Venezuela and the United States, broken off almost a year ago as a result of the refusal of President Castro to arbitrate disputes between the two countries. In presenting his credentials Minister Rojas brought expressions of good will from the President of Venezuela to President Taft, which were heartily reciprocated by Mr. Taft.

By a ruling of the Supreme Court of the District of Columbia, made by justice Stafford, a writ of mandamus is denied the Alsop Process company of St. Louis against Secretary of Agriculture Wilson. This decision means that Secretary Wilson is wholly within the law in declaring that "bleached flour" is against the pure food law. The order against bleached flour, issued five months ago, takes effect June 9. It is understood that the manufacturers of the bleaching apparatus and some of the millers manufacturing bleached flour will continue the business after June 9 and will appeal to the President against the interference of the Secretary of Agriculture. This will result in throwing the case into the hands of the referee board, whose continued activity has just been approved by the Attorney General.

Chicago has strengthened its claims as a health resort during the first four months of the present year. In spite of adverse weather conditions its death rate of 15.1 per 1,000 is 6 per cent below the average for ten years and 4.6 per cent under the figure of 1908. This, too, in the face of the fact that the city's mortality figures for former years were among the lowest in the country. A total of 11,049 persons died during the four months, 314 less than a year ago. The greatest part of this saving was among children under 1 year of age, there being 299 fewer deaths at this age than a year ago. More than 22 per cent of the total mortality was due to the impure-air diseases. Pneumonia caused 2,248 deaths, bronchitis 100, and influenza 114—a total of 2,462. In the same period last year there were 2,805 such deaths, or 343 more than this year.

Believing that the low standard of skill and technical knowledge possessed by the average chauffeur is responsible for many of the evils caused by automobiles, the board of city magistrates, of New York, in its annual report for 1908, just issued, recommends that a systematic plan be instituted whereby duly appointed boards of examiners should certify to the skill of automobile drivers, such certification to be a prerequisite to issuance of a license. A special license bureau, it is recommended, should be established in the office of the Secretary of State. "No chauffeur should be allowed to drive an automobile without carrying on his person or in his car a license issued by a duly established bureau," says the report. "The license should show specifically all identification marks on the chauffeur and should further bear his photograph of recent date."

Among the Magazines

CHINA'S BENEVOLENT DESPOT.

The law in China provides that the Emperor shall appoint his successor from the most worthy of his descendants or next of kin, but since the beginning of the last stage of the reign of the Great Empress Dowager—from 1898 until her death—the only law in China has been the Empress Dowager herself. She could have said with greater truth than the French Louis, "L'etat, c'est moi"; and, so far as will ever be known, it was by the sole act of her "excellent will" that the brother of the late Emperor, Kuang Hsu, was made Prince Regent, an office which constitutes him absolute ruler of China during the minority of his son. This son, the baby Emperor by a process of double adoption, was made successor to Tung Chih, the son of the Empress Dowager, who died in 1875, and "heir" to Kuang Hsu, who was himself the adopted son of Tung Chih's father. This eliminated Kuang Hsu from the imperial line on the ground that he was of the same generation as Tung Chih and hence could not worship him as an ancestor. It was this that the Great Dowager tried to do in 1898, when she de-throned the Emperor and appointed the son of Prince Tuan successor to her son, Tung Chih; but the world objected, and she yielded. Now her wish has become a fact.

This is all very strange and complicated to the Western mind, but it was the "excellent will" of the Empress Dowager; and the power which her Imperial Majesty wielded, if one ignores the simple force of her own gigantic personality, is best explained by Mr. Ku Hung-ming, who, in a brave but mistaken defense of her position against attacks in the foreign press, says: "By the first fundamental law of state in China, resting upon the principle of absolute obedience of children to parents, the supreme authority in the Chinese body politic of H. I. M. the Empress Dowager, as Mother of the nation, or country, admits of absolutely no question or doubt." And that a majority of the people in China were in harmony with this opinion is also undeniable.

When the Great Empress Dowager of China died, she not only bequeathed the throne to a ruler of her own selection, but she also left in control of the various boards of government, men of her own choice. Some of these were acknowledged to be among the most progressive of China's statesmen. The personnel of the Wai Wu Pu, or Board of Foreign Affairs, was especially satisfactory from a foreign standpoint, having as its active head a man who had proved himself to be a staunch friend of reform, and one upon whom China and the world could rely for sane and enlightened judgment in all government affairs. This man was His Excellency Yuan Shih-k'ai.

I asked one of the members of the diplomatic body in Peking for his opinion of the great viceroy.

He answered me indirectly. "Governor Yuan was of humble origin, you know," he began. "He was born in

the province of Honan—that province south of the Yellow River which is almost annually flooded by that great muddy stream called 'China's Sorrow.' As a boy he studied the Chinese classics and such foreign books as had been translated into the Chinese language, but he has never studied a foreign tongue nor visited a foreign country. And this, I think, is the first element of his greatness,—that, without any knowledge of foreign language, law, literature, science of government, or the history and progress of civilization, he has occupied the highest and most responsible positions in the gift of the empire, has steered the ship of state on a straight course between the shoals of conservatism on the one hand and radical reform on the other, until he has brought her near to the harbor of a safe, progressive policy."—Eleanor Franklin Egan, in the May Everybody's.

WOMAN AND THE BALLOT.

Few things can appear more curious to a dispassionate observer than the foam of discontent seething up amongst women at the present day. Any discontent, if it be strong enough, will produce revolution; but a not uncommon result of revolution is a recoil into a more despotic absolutism than any that existed before the rebellion. It is possible that such a result will follow on the present revolt of womankind; meantime, coupled with another equally prominent feature of their sex in the present time, it is certainly one of the most curious of our social phenomena. We have studied it as such with some degree of attention, and we have come to the conclusion that, despite the prominence of its school, it is not altogether so original as it believes, and it does not very clearly know what it actually aims at and requires.

"Equality with men," we are answered. But this is exceedingly difficult to define. Of course it is perfectly easy to pass jests upon, and concoct witticisms out of, such a subject; they suggest themselves by the million. The harder effort is to avoid the attractively and facetiously ludicrous side of the subject and write upon it seriously. All jests apart, it is something difficult to define—this equality with men that is the female cry of the hour. If equality in privileges be taken, equality in liabilities must be enforced also. Are women to go to this extreme?—to become soldiers if they become surgeons; to become sailors if they become statesmen? We doubt if they are prepared to reach this length; but unless they are, the desire for "equality with men" is only another phase of the desire for every privilege and the exemption from every penalty.

We can thoroughly sympathize with the impatience of a clever woman at seeing herself excluded from an arena of public life in which some masculine fools and many masculine mediocrities succeed. We are fully prepared to admit that here and there may arise a woman of such brilliant abilities that she would be fully capable of governing an empire or manœuvring an army. But such

women come once in five centuries; and this question is not of exceptional, but of all, women. The equality demanded is not for the few, but for the many. It is of the admission of the many to its rights and exercises that we have to treat; not of the admission of the two or three great women who may adorn a century, and who, be it noted, generally contrive to do well for themselves and rarely are participants in the cry of which we have heard so much in late years. Where real genius appears it levels sex; but this is at all times rare, in women rarest, and it is of the vast mass of "the general" that we speak. Maria Theresa, Catherine, Manon, Roland, Hypatia, Corinna, Sappho, will always make their own mark on the world's history; but the plea now raised is for the admission of all women—on the simple score of womanhood—to the possession of the paths and thrones of men.—From a posthumous paper by Ouida in May Lippincott's.

DISEASES CAUGHT FROM ANIMALS.

The general acceptance of the germ theory of transmissible disease has set on foot inquiries on every side regarding the sources of such diseases. If they are due to the growth and multiplication of minute organisms in the human body, those organisms must come from some definite place; it is not sufficient to say that the disease is "in the air," still less to dismiss it as an inexplicable visitation of Providence. That animals and insects are fertile sources of disease-germs is pointed out by a writer in *The Medical Record* (New York, February 13), who says:

"A revolution of our ideas as to the transmission of disease has taken place. It is now known by every one that insects convey numerous complaints to man, perhaps almost all the tropical maladies, including malaria, yellow fever, and sleeping-sickness. Plague is believed to be transmitted to man chiefly by means of rats or their fleas. Tuberculosis, despite the dogmatic statement of Koch, is in certain circumstances conveyed to the human race, mainly to children, by the agency of cattle. More than this, the opinion has been rapidly gaining ground of late years that domestic animals are responsible to some extent for spreading several infectious diseases. The cat has been under suspicion for many years, and it has been alleged, with foundation for the statement, that the parrot has passed on disease to some of those who have come into close contact with him.

"Cohen has said, in his 'System of Physiological Therapeutics,' that the lower animals, such as cats, dogs, horses, cattle, and chickens, occasionally suffer from a pseudo-membranous affection of the upper respiratory passages simulating diphtheria and from this infection has been claimed. He, however, states that it is rare that true diphtheria bacilli are found in these animals, although they have been found susceptible to the disease experimentally produced. Osler is of much the same opinion, and so are, perhaps, the majority of veterinary experts. The point really that requires solution is this: Does the cat contract diphtheria, a disease to which cats are subject, from a person suffering from the complaint or does the animal merely act mechanically as a carrying agent?

"Recently, Dr. Caroline A. Osborne has endeavored to answer these questions in a small book entitled 'The Cat, a Neglected Factor in Sanitary Science.' From this we learn that, as mentioned before, Osler and Cohen, together with the larger number of veterinary authorities, hold that the cat does not contract diphtheria from the human subject, nor do they think that it transmits the

disease to man, at least they argue that the proofs to this effect are very slight. On the other hand there are many authorities who contend that cats suffer from true diphtheria and also convey it to men. Klein is said to believe that diphtheria is a natural disease of the cat and it has also been asserted upon responsible authority that during widespread epidemics of diphtheria, a similar affection may be found in cats, pigeons, fowls, etc. Dr. Louis W. Sambon, the distinguished authority on tropical diseases, read a paper before the British Royal Society of Medicine, published in *The Lancet*, April 18, 1908, in which he supported, by statistics, the theory that diphtheria is transmissible between man and the lower animals.

"Even if diphtheria is not contracted by cats it seems to have been proven in a sufficiently conclusive manner that they will carry the infection and are therefore a source of considerable danger. Cats are known to suffer from other diseases which are transmissible to man, such as scabies and ringworm, and a cat with mange is a fertile agency of infection to the domestic animals of a neighborhood."—*Literary Digest*.

WHY IT PAYS TO THIN FRUIT.

THERE are more people who advocate thinning fruit than there are those who practice it, chiefly because most people have not the courage to pull fruit from their trees. Yet thinning is one of the most paying operations in the fruit garden if done judiciously.

Except to cut off some of the fruit spurs, it seldom pays to thin cherries. In the Pacific Northwest apples and pears are quite frequently thinned; in other sections rarely. Repeated experiments have shown that it pays to thin these fruits if the trees are heavily laden even though it may cost fifty cents or over to thin a large tree. Much, however, depends upon the fruit-bearing habit of the variety. Some sorts, as Rhode Island Greening, usually set but one fruit from a cluster of blossoms, and may need little or no thinning; other varieties that set fruit very thickly, as Wagener and Oldenburg, are much benefited by thinning.

Grapes and all the brambles are commonly thinned by reducing the amount of bearing wood when pruning, but thinning the bunches or clusters of fruit has not proved beneficial. The berries of bunches of grapes grown under glass are usually thinned, to prevent crowding and to increase size. If the ends of bunches of currant blossoms are clipped off with shears, the size and quality of the berries are increased. Bunches of strawberries under glass are severely thinned, but in the field the only practicable method is to limit the number of plants, or it may sometimes pay, when exceptionally choice fruit is desired, to reduce the number of fruit stalks.

Fruit is thinned in two ways: by reducing the bearing wood in pruning, and by picking off part of the fruit when it has set. The fruits most commonly thinned by pruning are those that bear on one-year-old wood, as the peach, apricot, raspberry, blackberry,

dewberry, grape, and the brambles; and, to a considerable extent, Japanese varieties of the plum. The new wood, which is the bearing wood, is shortened, and it is best not to do this until all danger of winter injury has passed. Thus the laterals of the brambles are not shortened until after the buds have started and the extent of winter injury is easily discerned. After a severe winter it may be best not to shorten the bearing wood of peaches and apricots until the blossoms have appeared; then one can judge best how much fruit to thin off by pruning.

Fruit plants that bear mainly on spurs, as the apple, pear, plum, and cherry, are thinned with the pruning shears by cutting out weak or crowding spurs. The thinning of fruit spurs has received little attention in American fruit gardens; in Europe it is just as much a part of the annual pruning as the removal of crowding branches. When an amateur fruit grower wishes the choicest fruit, and can afford to devote some time to the attainment of his ambition, his pruning will become more minute and specialized; its unit will be the spur, not the tree.

The second method of thinning fruit, that of removing superfluous fruit, is usually necessary in addition to the thinning by pruning, except with the small fruits. The time when it should be done varies with different fruits, but in every case it should be after all danger from losing fruit by frost and the June drop has passed. A tree that is very heavily laden in May may carry but a thin crop in June after the drop. Some varieties drop more than others; the Italian prune is a noted example of a "self-thinning" variety. Much will be gained if it can be done safely before the pit or seeds begin to harden, when a considerable drain is made upon the vital forces of the tree.

Peaches, apricots, nectarines and plums are commonly thinned when the fruits are one-half to three-quarters of an inch in diameter, or about the size of a hickory nut. Thin so that the distance between the fruits, when ripe, will be from two to three times their diameter. This means that peaches are usually thinned to five or six inches apart, and plums to four or five inches apart at the time of thinning.

When thinning fruits that bear on spurs, remove all the fruits from some spurs, and if necessary, thin the fruits on the other spurs to one. The object of this is to give half of the spurs a chance to make fruit buds for next year's crop, which they may not be able to do if supporting one or more fruits. The only way to prevent "off years" is to limit in this way the number of spurs that bear, coupled with good culture otherwise. There is no reason why all fruit trees should not bear annually if given good care and not allowed to weaken themselves by over-bearing. But certain varieties of some fruits, especially the apple, have gotten into the habit of bearing alternate years, and it is difficult to overcome the tendency.

Remove weak, diseased, and wormy fruits regardless of their position on the trees, and burn or bury them. All thinning should be done by hand. Some people thin fruit by knocking it off with poles, but by the time the thinning is done two-thirds of the crop may be on the ground. Several hours may be needed to properly thin a large peach or apple tree; at the rate of fifteen cents an hour it may cost from twenty five cents to seventy-five cents per tree. If this adds one dollar to five dollars or over to the value of the fruit, as it may, the expenditure is certainly justified.

When the trees carry a light crop, no thinning may be needed. If certain branches on an apple tree are loaded, and others not, thin the fruit very little, as it is better to have the branches bear alternate years than to have the whole tree barren every other year. Much can be done to conserve the strength of the trees of some varieties by successive pickings. Early varieties of early apples and pears, for example, should have part of the fruit gathered when nearly mature, leaving the remainder on the trees. The early gathered fruits will ripen well in a cool place. Some varieties of pears, especially those used for canning, may be picked when little over two-thirds grown, and will ripen into good canning fruit. The Keiffer is occasionally handled in this way.—*S. W. Fletcher, in The Garden Magazine.*

Between Whiles

Domestic Tragedy.—"For goodness' sake, Harriet, why so sad?"

"The cook's left, but that isn't the worst of it; she took with her the recipe-book for all the things John's mother used to make."—*Brooklyn Life.*

Little Victor had been naughty and his father had seen fit to administer a spanking. A few minutes later, when his papa had left the room and the little fellow was alone with mama, he exclaimed between his sob, "I don't like papa." His mother, of course, told him that was very wrong and that he would have to be punished again if he talked like that. "Well," he added, looking up quickly, "I like papa all right, but I don't like his acts."—*The Delineator for May.*

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

FOR SALE—Barred Plymouth Rock eggs. Pure bred, large, well barred, one dollar for 15. Reduced rates on incubator lots.—Mrs. I. C. Stine, Dallas Center, Iowa.

Real Art Mottoes

These "Real Art" cards are by far the finest specimens of lithography we have ever offered. The stock has but recently been imported from Germany, hence the line is entirely new. They are lithographed on heavy glazed stock, size 16x20 inches and represent the best in modern art. The subjects consist of bouquets and vases of Roses and other flowers. Suitable for the home, office, school room or Sunday school.

We can furnish "Real Art" mottoes in Eight designs and Fourteen texts as follows:

50. The Lord Is Thy Keeper.
51. He Careth for You.
52. In Me Is Thine Help.
53. Shew Piety at Home.
54. Lead Me in Thy Truth.
55. I Will Never Leave Thee.
56. Looking Unto Jesus.
57. Ye belong to Christ.
58. God is a Refuge for Us.
59. Seek and Ye Shall Find.
60. God is Our Refuge and Strength.
61. The Lord Bless Thee and Keep Thee.
62. Thou Wilt Shew Me the Path of Life.
63. Who daily Loadeth Us With Benefits.

The illustrations presented herewith can give but the faintest idea of the beauty and quality of the "Real Art" line. These same subjects have sold in art stores the country over for 35 to 50 cents each. We are pleased to announce a price so low as to place the best mottoes within the reach of every one.

OLIVE BRANCH OF PEACE

AND GOOD WILL TO MEN

Elders S. F. Sanger and D. Hays

An interesting history of what the Brethren and Mennonites endured during the Civil War period because of their Anti-war principles.

"Upon the whole, the object in publishing this little volume especially as it relates to the Civil War is threefold: 'First, to give a true and faithful record of the sufferings and experiences of these Christian People.

"Second, to testify to God's goodness in protecting them.

"Third, to strengthen the faith of Christians who may yet be required to suffer persecution for the sake of Christ and his Gospel of good will to men.'"

One of our agents reports: "I took 12 orders for the book in one hour. It sells on its own merit." Ask for terms to agents.

Bound in cloth. Two hundred and thirty-two pages. Back and side title stamped in gold. Illustrated. Do not fail to order a copy.

Price, postpaid,75 cents

From the Ball Room to Hell

Is there any harm in dancing? There can be but one answer to this question,

facts are facts. This little book, written by an ex-dancing master, will give you more facts about dancing than can be obtained elsewhere. It places a dark picture before the dancer, and one that is very convincing. It explains the natural and necessary effects of modern waltzing and why

thousands of girls are ruined every year through its influence.

Webster's Imperial Dictionary

New and Up-to-Date. Reset from New Type. Thousands of New Words. This is the Only New and Complete Webster Dictionary issued since 1890. For it is the Only "Webster" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the Best and Most Practical, as well as the Latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations.

Full Sheep Binding with Patent Index.

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the north. There is some snow at times but the Chinook winds quickly melts all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. I. J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

EMPIRE COLONY

IN "SUNNY STANISLAUS"

The CO-OPERATIVE COLONIZATION COMPANY is now locating a colony of our people in the lower San Joaquin valley, in central California. The new town of EMPIRE, as well as the colony lands, is located on the Santa Fe railroad, five miles east of Modesto, the county seat of Stanislaus County, thirty miles south of Stockton, seventy-five from Sacramento and one hundred and fifteen from San Francisco.

The colony lands join the new town site and are within a few miles of three different railroads. These lands are all under cultivation, and are free from brush, stumps, stones or other obstructions. Two large ditches cross the tract, affording ample water for irrigation of all crops.

Garner Schoolhouse, One Mile West of Empire, Where the Brethren Hold Services.

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and Investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

NEW CHURCH ORGANIZED—NEW RAILROAD BUILDING.

A new Church of the Brethren was recently organized at Empire, with twenty-five members, and other families of our people are expecting to move there soon. The Modesto-Empire Interurban railroad is now being built. For further information address,

THREE TIMELY BOOKS for the FLORIST AND GARDENER

MY TEN-ROD FARM, or How I Became a Florist. By Chas. Barnard.

An interesting story of the successes and failures of a florist. Through an accident at the mill Mrs. Maria Gilman became a widow with two children to provide for. This she did by converting her small flower garden into a commercial asset which now furnishes an annual income of two thousand dollars. Attractively bound in cloth. 118 pages. Postpaid, 45 cents.

THE STRAWBERRY GARDEN. By Charles Barnard.

A very practical story concerning the Wellson family and their strawberry garden. How it was planted, what it cost and what came of it financially and sentimentally. The writer is a close student of human nature as well as a practical market gardener. A book of 104 pages, bound in cloth. Postpaid, 45 cents.

A SIMPLE FLOWER GARDEN for Country Homes. By Charles Barnard.

A practical guide. Aunt Louisa assists Frank and Gertrude in beautifying their rural home. How to start a flower garden, what it will cost and how have flowers all the year round. This little volume tells you just what you should do in each month of the year. 76 pages. Bound uniform with "My Ten-rod Farm" and "The Strawberry Garden." Postpaid, 45 cents.

J. A. Bowers' apple crop of 1907 netted \$1,000 per acre, and in 1908, \$700 per acre.

E. A. Blair gathered from seven and one-half acres of apples 3440 boxes of fancy apples which netted \$5,500.00.

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

No. 20.

AMONG THE SIERRAS

D. L. FORNEY

THE Sierra Nevada Mountains on the western slope of the great American continent afford the student of nature an expansive field. Numerous are the parties who leave the heated valleys in the summer and go to the mountains for recreation or adventure. A cooking outfit, tents, food supplies and camp equipage, brown khaki suits for men and women, camera and fishing tackle are part of the necessary outfit for a mountain trip. Mountain roads to the lumbering camps can be followed some distance from the railway station. Then the main road must be abandoned and the trail taken up. King's River canyon is to be reached only by trail either on foot or on pack saddle.

This canyon is said to possess some of the finest scenery in California, even rivalling in some respects the world-famed Yosemite. Government is now constructing a wagon road into King's River canyon and when once it is more accessible and its wonderful scenery is known it will become one of the noted resorts of the State.

The Grant National Park where are many of the big trees is on the road to this canyon. Here many people from the valley camp for a week or two and even longer during the heated season, with the finest of spring water and plenty of shade. The fauna and flora of this part of the Sierras are a grand field for the student of nature. The birds, squirrels, chipmunk, deer, mountain lion, rattlesnake, and a variety of fish in the streams and lakes are also field for the sportsman. Trees are in wonderful variety and some of the largest in the world. Ferns as tall as a man and berries and nuts in abundance.

The commercial spirit has also invaded these mountain forests. Lumbering firms have denuded large areas of the largest and finest trees. Immense red woods (gigantea sequoia), pines and other trees have all fallen before the woodsman's ax and saw.

The Hume-Bennett Lumber Company of Fresno, California, have immense mills far back in the mountains. Some wonderful engineering skill is displayed in the collecting and handling of logs as well as disposing

of the sawed lumber. From the mills in a mountain basin to the railway is a distance of about fifty miles.

As the lumber is sawed it is placed on small, narrow-gauge railway cars. Three of these coupled together are drawn up a steep incline to the power house. Here the cable is detached and hitched to the other end of the train, when it is slowly let down the opposite side of the mountain grade. Each incline is perhaps a mile in length. And as the cable plays out to the very end of the incline a passenger on one of these cars if of a nervous or excitable nature is likely to feel his nerves tingle as he thinks of what might happen should the

"Over Trestles, Through Cuts and Around Curves."

cable break and the entire train and occupants go plunging down the mountain slope. Once down the incline a longer train is made up, a small engine is attached and an eight-mile run is made still farther down the mountain over trestles, through cuts and around curves till Millwood is reached. Here the

lumber is unloaded, tied in bundles and placed in a V-shaped trough which also carries a stream of water, now over trestles, through gulches or canyons to Sanger, a distance of forty miles. Here on the regular line of railway are located extensive drying yards and mills where the lumber is made up into every class of building material and sent to every part of the country.

About 75,000 feet of lumber are sawed daily at the mills in the mountains, but on account of the heavy snowfall in the mountains only about six months of the year are available for active work in the lumber camp.

Reedley, Cal.

FRIENDSHIP.

MAUD HAWKINS.

THERE is a friendship which endureth forever and a Friend that "sticketh closer than a brother." True friendship is deep, pure and sincere, but there is a friendship that "biteth like a serpent and stingeth like an adder." Is he your friend who entices you in the dram-shop? You do not wish to go, but you do not wish to lose his "friendship" by refusing. Hence you walk to your doom like a lamb to slaughter. Better to lose his false friendship than to lose life, honor, and good name.

He is not your friend but your worst enemy. He is cunning and low and seeks to ruin you and bring you to his level by flattery and persuasion. Shun him! You can live without his friendship but you can not live happily without your good name. In his heart he will love and respect you more if you refuse him firmly and turn about and invite him to come with you to your home or some equally ennobling place to spend the evening. If you follow him he will consider you as a silly dupe and will probably sneer at you or about you to his friends, boasting how "easy" you are. Show him that you have a mind of your own, that you are a greater man than even he is, that you will be neither bribed nor flattered. Show him that you are sorry for him and are determined to help him, and he will soon come to feel that you are his superior and will look up to you, which is better than for you to look down to him. This done you have saved yourself and rescued a brother from ruin.

Do not be afraid of being called a coward if you refuse to go with him. Turn the laugh on your false

friends and regard them as cowards, who dare not refuse. At all events, it is better to be sneered at by a few than to be shunned by all honest, upright persons.

Towanda, Pa.

HOT SHOT FROM A WOMAN.

SOME member of the Michigan Legislature introduced a bill to compensate the men put out of business by the local option law.

The newspaper item relating to the bill caught the eye of a woman, whose bitter experience made the item

particularly interesting to her. Signing herself "A Pauper from the Liquor Traffic," she wrote a letter to the *Detroit Journal*, in which she said a few things.

Among the things she said were these:

"I did not think that the people sent a man to Lansing with cheek enough to introduce such a bill. Instead of the taxpayers compensating the bloated liquor barons, a bill ought to be

"Millwood."

introduced confiscating what they have accumulated out of the accursed traffic in the past ten years, and this money ought to be given back to the criminals, the starving wives and destitute children they have made.

"Twelve years ago I married a mechanic in a town in Sanilac County. He was bright and intelligent and capable of earning \$600 a year. He got into the habit of going to the barrooms, first for company, and then for drinks, until I had to take in washing to support myself and children.

"After ten years of poverty and misery, two months ago he died of delirium tremens. He never was a bad man, but was lured to his doom; and I at middle age am left a pauper with two children to raise. There are a dozen men in this village that will soon follow him to their graves. Only for liquor we would have been the happiest couple in the country.

"About the time I got married, a chum of mine married a bartender. He afterward got a saloon of his own, and eight years ago he purchased a building that he turned into a hotel for \$1,500. It cost \$500 to make the changes. This building for liquor purposes he says is worth \$10,000. He has also bought a farm, has a racehorse, two bulldogs and an auto. His wife

has four silk dresses and a sealskin sacque. In ten years he got \$300 of my husband's earnings.

"Now, if local option is carried in the county, he wants compensation. He no doubt wants about \$8,000 on one hotel and a pension of about \$1,000 per year for not having a business to make maniacs, drunkards, suicides, tramps, orphan children, destitute wives and starving widows.

"The first thing that we know hangmen will be wanting compensation for lost business in States where capital punishment has been abolished. I will send the price of my next day's washing to help purchase a coat of arms for the fellow who introduced the bill with the compensation clause in it. A Representative or a Senator who would vote for such a measure could not get the votes of three honest men in one State."—*Illinois Issue.*

BUILDING A CHICAGO STREET CAR TRACK.

II. A. BRANDT.

A RIDE on the average Chicago surface street car reminds one of nothing so much as the old-fashioned country hay-ride, especially if the road was rough and the horses high spirited. The best place to get the benefit to the full is to take passage in one of the dinky trailers which are the remnant of some prehistoric age in streetcar-dom. These trailers are hitched on behind larger cars and being small and not over-substantially built respond beautifully when run at full-speed, so that one is bound to get the hay-ride experience to the music of rattling windows and screeching wheels.

Of course the down-town cars and tracks are of an up-to-date class, and these are rapidly being extended out over the main streets of the city. Of late the "pay-as-you-enter" cars have been introduced and these superb cars—perhaps as heavy as those used on interurban lines—glide smoothly and swiftly over the reconstructed tracks and one cannot help but be glad for the passing of the old order and the coming of the luxurious new cars. The great secret, however, of easy and pleasant street car riding is in the condition of the track and the solidity of the roadbed. What it costs in labor and money to put down a first-class city street car track is perhaps not fully appreciated except by those who pay for it. The city street car track is not very conspicuous and to the average man their mode of construction is only a matter of conjecture.

Except where the lines are to be extended, the first thing to be done is to remove the old tracks. The first men on the scene in this process of rebuilding are those who remove the pavement, brick or rock from between and on either side of the rails. The next agent of destruction is the man who saws the old rails up in convenient lengths for removal, for you must know that the rails are not bolted together as on the railroad lines, but on the contrary are welded

together. The rails and ties are now taken out of the way and the ballast of the old roadbed hauled off. When ready to begin laying the new track the old roadbed has given way to a trench, at least two feet deep, and of proper width for laying the new track.

Now all is ready to lay the new line in the bottom of the trench. When this is done the new track is blocked up and aligned. In ordinary railroad construction the road is gradually worked in shape as the ballast is put down, but in the case of the street car lines the track must be laid perfectly before the roadbed is put down because the ballast used is simply cement mixed up and filled in around the tracks.

The track being now perfectly straight and of proper grade, the next step is to fill in the cement roadbed which is composed largely of crushed rock with enough cement and sand to fill in between. This cement bed is filled to a trifle above the ties so that the latter are completely buried in cement. As soon as the cement bed has set sufficiently a thin layer of loose sand, perhaps an inch in depth, is filled in between the rails and on this is carefully laid the real pavement of rough cut rocks somewhat larger and similar in shape to the ordinary brick. This brings the roadbed up as high as the rails so that all that is visible of the latter is the track for the cars and the broad flange on each rail that answers for a track for the wagon wheels. Since most of the heavy hauling and driving is done on the car tracks this specially wide flange on the inside of each rail makes an ideal road for the wagons.

The road is now ready for the finishing touches. From a large tank one man carries bucket after bucket of hot asphalt and pours it over the rock pavement, carefully filling all the cracks between the rocks, while immediately behind him comes a man sweeping sand and pebbles over the warm asphalt. The sand and pebbles fill in any other irregularities in the pavement and give it the appearance of a neat walk just freshly sanded. Up to this time the rails have been only bolted together and wherever there is a joint of this kind it has been left exposed so that the rails can finally be welded together, and when this is done and the exposed places paved over the track is ready for service.

When one walks along these reconstructed car tracks, so smoothly and neatly paved, with the rails just shining out of the pavement on either side, he can little guess the labor and expense incident to such improvements unless he has seen the detailed process of construction. On a street car line of such substantial building in the new and smoothly-riding "pay-as-you-enter" cars street car riding is no longer an exciting experience notable for its jolts and jerks, but a real pleasure.

Chicago, Ill.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LVIII.

"ARE you an American?" asked the Judge.

Pressing the kitten more tenderly, I assumed the most soldier-like attitude, leaning forward slightly, and resting on the ball of the foot, showing every inch to full advantage of the stature upward I had been growing for some years.

"Yes, sir, I am" I answered, in a clear voice, inspired as much by the kitten as by my bravery, expecting other questions of a similar nature to follow.

That was the sole question of my judge as he sat on the Ottoman bench of law in the city of Constantinople on a Sunday morning in August.

His question contained but four easy words. My answer was complete in four.

For a brief moment we looked candidly into each other's eyes. This silent pause was probably a studied one, to increase the dramatic effect of the situation that was, as we must remember, an international one. Those standing by or employed in the court felt its influence, and I know how artfully the sagacious Judge had made me feel its potent power.

He was about to pronounce a sentence. The pause would lessen its severity.

I had no speech prepared and was ready to help on with the "case" only as I was questioned, or to summon any argument in my defense that might come to my mind at the time. The utmost frankness manifested by me towards the Court seemed to win me favor, and I expected at any moment to hear him say, "It is all right. You can go now. Your passport will protect you."

He talked to the men about him, both those who had led me from the boat to his presence and others who assisted him in his work, in Turkish.

After this, he commanded one of them to do some-

thing. It was to take me to another department of what I shall call the courthouse, for I did not ask the name of the building. The man came up to me and blubbered something with his mouth and hands, trying to tell me that I should walk along with him. In his hand he held a slip of paper on which the Judge had made some memoranda and handed it to him as he bowed me from his presence.

Back through the same door, down the court, thence into a room on the right, I was taken, where I was asked by another official to be seated. Here some more questions were asked, mostly regarding my passport, though my use of French and his use of English were too difficult to handle in technical conversation.

I understood him to say that he was compelled to keep me there,—or my passport,—and when he showed me some money held in his hand, I could not tell its significance. Having heard of the corruption of Ottoman courts I was at a loss to know whether he meant to say by its exhibition that a small or large sum from me would make my chances better, free me entirely, or whether he was asking me by

this means to pay a fine for some alleged offense of which I might be unwilling to admit my guilt.

Putting all of the incidents together, the whole affair made it appear to me that these officials were honest with me and that they were acting according to law, and that the law had pronounced the word "GUILTY!"

If a trial had really taken place—if the Judge's question, and the prisoner's four-worded reply constituted the trial, both prosecution and defense, then I was unwilling to be drawn farther into the meshes of Moslem diplomacy.

To find out these things and to gain the liberty that

Police from U. S. Consulate
Who Rescued Mr. Spickler.

was being denied me, I appealed to my United States consul.

"I wish to bring this case before my United States consul," I said, in grave tones of voice. "I wish you would send for him at once."

He did not call a messenger or go to a telephone, so I simply said, "Let me go to the United States consulate. My consul will arrange this with your government."

In the bleak chamber was a square-shaped chair or stool upon which I sat, to wait, on my own initiative rather than by his leave.

He drummed on the bare desk before him, and passed a few words with a page standing by the door.

He was again trying to talk to me when two guards entered and took their positions near me, awaiting their command from the official in this department of the police court. Better servants of a superior officer I never saw before. Without the least indication of sympathy or of prejudice in their faces, these two guards, armed for peace or for war, to let go or to bind, awaited the words of the man behind the desk. If he had said, "Bind him hand and foot," they looked as if they would have done so, or given up only after a death struggle. If he had said, "Let the gentleman pass," they would have stood aside like figures run by clock-work.

They asked for my passport, the sole defense of my liberty and of my life in Constantinople.

"My passport!" I exclaimed, "why, that's equal to my life."

But the Turkish gentleman tried to tell me that it would be in good hands, and when I proved my identity and had become possessed of the second passport issued by his government, I could be at liberty and have my own passport back.

It seemed like denying my citizenship, and I felt like doing something desperate. But what could I do?

Just then two big, handsome Turks, in gorgeous uniform, armed with long swords and heavy revolvers, with ample cords of gold lace about their necks, walked into the chamber, and in a quiet but determined manner, came straight towards me, trying, as I thought, to look kindly at the victim they were about to make away with.

"Just like them," I thought, when I saw the glittering medals on the left breast of one of the giants, "the Sultan has honored these men for obedience in taking the lives of Christians."

They spoke better English and after talking with the Turk they told me that I had just been fined the sum of two dollars, and that they represented the U. S. consulate.

"Fined! For what?"

The officer behind the desk had intimated that much to me. He had even asked me for the money, but I misunderstood him. I knew that the affair was serious

enough in its nature for me to call my consul. He had looked at these men, and then at me, when they entered, in a manner signifying their having come because I had demanded it, a privilege exercised by all American citizens.

"You have been fined because you came into the city without a pass,—a *teskere*. Your United States passport alone will not admit you here."

I was about to ask another question when one of the men said: "Come with us," taking from my hand the passport I had deemed up to this moment inseparable from my person. I went.

All Rights Reserved.

INTERESTING DEMONSTRATION OF WIRELESS TELEPHONE WORK.

WILLIAM A. MEARS, western manager of the Collins Wireless Telephone Company, of Newark, N. J., recently gave a demonstration of the uses of that invention that was calculated to have caused his being burned as a witch had he lived in Salem, Mass., a hundred or two years ago.

He had constructed a large loop of wire about four feet in diameter. The wire was heavy and well insulated, and to it was connected, by ordinary telephone wire about six inches in length, an ordinary telephone receiver.

To the demonstratee was given this hoop and receiver to which no wires were attached, and with it he walked about Mr. Mears' offices and the halls of the Citizens' National Bank building, hearing every word spoken in an instrument in a closed room many feet distant.

These words were transmitted over a molecular circuit, the wires of the hoop being tuned to those in the instrument.

Mr. Mears promises to reduce the size of the hoop to that of a watch, so that the result easily can be carried in the pocket and become practicable for use by a foreman in any big establishment, who thus can direct his men at any place in the premises.

Another thing planned by Mr. Mears is the establishment of a wireless institute in Los Angeles. This will afford young men the opportunity to qualify for positions as operators of both wireless telephone and telegraph instruments.

Lectures will be given by such authorities as Francis B. De Witt, formerly of the United States submarine service; A. F. Collins, inventor of the wireless telephone; R. C. Shepard, chief electrician of the naval training station on Goat Island, and William Dubilier, chief electrician of the Collins Wireless Telephone Company.—*Selected*.

"THINKING themselves better than they really are is the only means that some people have of maintaining self-respect."

THE SCRIBES AND PHARISEES

PAUL MOHLER

WHEN Alexander and the Greek rulers that followed him began to introduce Greek culture throughout western Asia, they found one little province that resisted strenuously. Judea did not wish to change.

After the return of the remnant of Jews from Babylon and Nineveh, Ezra and Nehemiah were careful to teach the law of Moses to all the people and to see that it was obeyed. The scribes that followed Ezra and Nehemiah continued teaching the law and adding to it such regulations as seemed to them to be necessary to the literal observance of the law. This teaching thoroughly grounded the Jews in their own religion and customs. When the Greeks came, therefore, with new customs, the most of the Jews refused to change.

In many respects, Grecian culture was superior to the Hebrew. The games appealed to the wealthy classes, and the Greek rulers were careful to win as many of that class as possible, so it was not long till there was quite a strong party of "Hellenists" (Jews who favored the Greeks) in Jerusalem. At the same time, those who refused to be "Hellenized" stuck closer than ever to all that was Jewish. The Jews have always been among the stubbornest people in the world, and so the Greeks found them.

Alexander and the Ptolemies, or Greek-Egyptian rulers who ruled Palestine after his death, were patient with the Jews; but about two hundred years before Christ, Palestine fell into the hands of the Antiochs, or Greek rulers of Syria. They were not so kind. From that time on, there was constant pressure against the Jewish language, customs, and religion. This reached a crisis when Antiochus Epiphanes issued a decree that religion should be uniform throughout all the land. This brought on a rebellion under Judas Maccabæus, who, with his successors, won independence for the Jews. During all this struggle, there were, of course, the two parties of the Jews: those who were willing to follow the Greeks, and those who were not. The Hellenist, or Greek party, was favored by the Antiochs at all times; and Antiochus Epiphanes even went so far as to remove the high priest who opposed him, and replace him with a Hellenist. These Hellenists were the first of the Sadducees.

Of those who resisted the Greeks, there were many who clung very closely to the Judaism taught by Ezra. These were called Chasidim or "pious" ones. They were severely persecuted by Antiochus, but stood firm.

The Chasidim, themselves, soon divided into two parties, the Essenes and the Pharisees. Of these, the Pharisees became the more influential. They took an intense interest in the religious affairs of the

nation, and of course supported the Jewish leaders during the revolution, and the Jewish kings afterward. The time came, however, when they took offense at some of the policies of the king and turned against him. At one time, indeed, they were in control of the government, and at all times they were powerful in the sanhedrin; but cared little for politics except as it affected their religious observances.

One might think that the Pharisees and the Sadducees were on good terms because of their united opposition to Jesus; but they were not. They were simply agreed in fighting a common enemy. It would be hard to find two parties more diverse. The Sadducees were the liberal, wealthy, worldly, pleasure and power-loving class. They corresponded to the "worldly Christians" of today. They were more interested in politics than in religion, and were, indeed, entirely skeptical on many points of the Jewish religion as we understand it today. They did not believe in angels, spirits, the resurrection of the dead, or in God's influence upon human actions. The Pharisees, on the other hand, were intensely religious. They were exceedingly careful to observe the traditions of the elders, as well as the Mosaic law.

Many of them were undoubtedly really pious, and all of them practiced great self-denial; but their very system of observances tended to produce hypocrisy. They looked into the law of Moses and there saw some such commands as the general Sabbath observance law, and the special prohibition against plowing or reaping in Ex. 34:21. Such rules were much too general for them, so they must decide on just what kinds of labor could be called plowing or reaping. They very soon decided that to pluck a few ears of grain would be reaping; so they felt sure of their ground when they accused the disciples of Jesus of breaking the Sabbath when they pulled a few ears to eat on the Sabbath day. Understand that it was not the Sabbath that they kept so much as it was the law concerning the Sabbath. For example, the rabbis said that it would be unlawful to tie a knot in a cord or rope on the Sabbath; but they made exceptions in the case of a woman's wearing apparel. A woman was allowed to tie the strings of her cap, girdle, shoes, etc.

Now it was unlawful to tie a knot in the rope over a well, but since it was lawful to tie a girdle, it was also lawful to tie the pail with a girdle. Do you see the point?

Then again, the law prohibited them from lighting a fire, baking or boiling food on the Sabbath. Therefore, to have hot food for the Sabbath meal, they had to

have it hot at the beginning of the Sabbath, and to keep it hot until wanted. To do this, they were careful not to increase the heat in it, as that would be "boiling." Now it was very carefully decided in what kind of materials it might be wrapped to keep it hot. They could wrap it in clothing or flax-tow, or pack it among fruits or pigeons' feathers. They must not pack it in salt, chalk, sand, or manure. One rabbi even declares flax-tow unallowable and permits only coarse tow. It is easy to see that there is likely to be just as much if not more real "Sabbath breaking" in executing these dodges than in doing the thing expressly forbidden.

These are but samples of the innumerable restrictions of the Pharisaic teachings, all of which were directed more toward a careful observance of "the law" than of promoting real righteousness. It is not to be wondered at that Jesus had their opposition. He was so wonderfully sure in striking to the heart of every moral and religious question that he could not help laying bare their hypocrisy. It was inevitable that they should disagree; and they were so exceedingly jealous of their religious leadership, that they were certain to press the conflict to the bitter end.

Today, among the Jews, the terms "Pharisees and Sadducees" are unknown, but the Jews are again divided, and along much the same lines. Today, we have "Reformed Jews" and "Orthodox Jews"; the first corresponding to the Sadducees and the second to the Pharisees. And if I had space, I could tell you of just as strange forms of hypocrisy as any that Jesus saw.

Bethany Bible School, Chicago.

"THE HOME OF SHREDDED WHEAT."

DALLAS B. KIRK.

THE Natural Food Company have their plant in one of the most beautiful sections of Niagara Falls, on Buffalo Avenue. It occupies ten acres and has a frontage of nine hundred feet on the upper Niagara River. The lawn in summer time is beautiful with its rich flowers and close-cut grass.

The size of the main building is 463 by 66 feet and has a floor space of about five and one-half acres.

On going into the grand entrance hall the visitor is met and told to register his name and address in a large book, having the "loose leaf" system.

Then you can sit down at any one of the various desks where pen, ink and post cards of Shredded Wheat building are all furnished free and address as many of them to your friends back home as you wish to remember.

Stamps are sold here and one of Uncle Sam's mail boxes stands at the entrance to accommodate the one hundred thousand visitors who visit this place each year.

If you care to read, a number of the late leading magazines are within easy reach on the reading tables. The total cost of this building and its equipment was two million dollars. It contains thirty thousand lights of glass and three hundred miles of electric wire.

Visitors are welcome any day in the year except Sunday.

In due time you will be notified that the visiting party, which was seeing the process of the making of Shredded Wheat, when you first entered the building, has returned with the free guide from its tour of inspection and that it is now your turn to see the different departments of this large pure food establishment.

Being told to enter the elevator at the rear of the entrance hall, you, in company with a number of other people from different parts of the United States, start on your indoor journey. The cage filled, the uniformed elevator boy in his position, the guide stepping in last, you find yourself going to the top story.

When the elevator stops the guide leads the way out onto the roof garden. From this observatory he shows you the paper mill and power plant on the left and directly in front of you is the Niagara River, one mile wide. Here it is still and peaceful looking.

The guide now conducts the party back into the building which is made of three thousand tons of steel and four million brick.

The guide is always full of interesting talk and carries a megaphone along with him to talk through, but let us forget him and our cosmopolitan traveling companions and follow the different stages of the wheat in the making of Shredded Wheat Biscuit.

This company says, "Government inspection is good, but public inspection is better—we invite both."

The wheat you will now see going through the cleaning machines, twenty-two in number; then it is steam-cooked for thirty-five minutes in large steel cylinders. During all this time the outer coat of the wheat grains remains unbroken, thus retaining all of the nutritive elements of the wheat. No flavoring whatever enters into it, not even common salt. After cooking it is soft and the grains are somewhat larger than normal size. It is now fed slowly into a machine which dries it and takes the surplus moisture out. The drying machines extend through two floors, the cooked wheat entering at the top and moving downward between two large perforated iron cylinders, the warm air being forced through the holes in the cylinders.

Next it is allowed to dry on large wooden frames preparatory to shredding. It is now fed into the hoppers of the shredding machines, the two rows of these machines covering a floor distance of eighty-eight feet in length and containing thirty-six pairs of rollers. These rollers draw the wheat kernels out into long, porous shreds, which drop upon an endless belt, forming layer upon layer until there is enough to make the

usual thickness of the biscuit. This belt takes the layers of shreds to a cutting machine which cuts them into oblong cakes which fall into a pan with forty-seven other biscuits.

The pan is then placed in a large drum which looks something like a Ferris wheel, and this steel-armed wheel with its immense load of biscuit revolves around in a large oven. There are a number of these large ovens. After leaving this oven the biscuits are placed in another one which completes the baking process. Now they are taken in large pan racks to the large packing tables where sit the packing girls on chairs with backs. The girls are allowed the privilege of exchanging places whenever they want to. The packers put the biscuits in cartons and place them on an endless chain which takes them to a machine that turns back the flaps, glues them and seals the joint of the package with a strip of paper. It is now ready to be packed into wooden cases. These boxes are nailed together by a machine driving six nails at a time.

The most conservative visitor will agree with the makers of Shredded Wheat that "shredded whole wheat is the cleanest, purest, most easily digested, most nutritious cereal food made."

There is hardly a village in the United States but that has Shredded Wheat for sale, so widely known is this food.

The Triscuit or Shredded Wheat Wafer which easily leads and takes the place of the white flour cracker is made here also, by an electric process which is marvelous to behold.

Next you are shown the auditorium which is used for lectures and entertainments, with a seating capacity of six thousand.

At the time I was there some German musicians were holding their convention in this lecture hall and the guide only allowed us a peep through the glass doors.

The girls' dining room is on the fifth floor and overlooks the river. Free dinner is served each working day by the company.

The twenty-two wash rooms are also inspected and found in a good sanitary condition.

Next you are told to seat yourself at a small table (there are quite a number of these tables, each seating four persons) and a brief lecture is given on Shredded Wheat, illustrated by a large chart. This over, a waiter brings you a dish of Shredded Wheat served with fruit and a Triscuit served with cheese.

After eating this wheat product you are told that the company will send you after you get home a cookbook, and true to their promise, "The Vital Question" cookbook will arrive in due time. It contains a concise treatise on the "Principles of Cooking" and recipes for serving Shredded Wheat and Triscuit; with a number of colored plates.

All visitors have this standing invitation: "If ever again you are in this vicinity call in, and tell any of your friends who may be planning a trip to Niagara Falls that they will be welcome at the 'Home of Shredded Wheat.'"

Pentz, Pa.

HISTORICAL INTEREST IN COIN COLLECTING.

NUMISMATICS is defined as a science which has for its object the study of coins and medals. "In so far as it concerns ancient coins, numismatics is a branch of archæology; but as, in its broadest scope, it includes the coins of all times and peoples, it is a distinct science, wider in its field than any of those branches of investigation which it serves to elucidate and expand."

Many of the present-day collectors have not entered into the scientific study of coins, in part or as a whole, but are, nevertheless, classed as numismatists, as that term is sufficiently elastic to cover all who are interested in collecting coins from the artistic, the historical, or simply the mint-mark standpoint. Whatever may be the object of the collector, the result is bound to be educational, and collecting is therefore to be encouraged.

Before coins were invented gold and silver were used in settling accounts, but this method required the use of scales to weigh these metals. The invention of coins did away, in a measure, with weighing. Absolute accuracy in weight and fineness for every coin issued is not possible, hence the law allows, in the manufacture of a coin, a certain tolerance both of weight and fineness.

Token coins have a nominal value greater than the metallic value, and involve a profit to the government; in the United States the silver, nickel and bronze coins belong to this class. There are also metal tablets, resembling coins, known as tokens, issued by individuals—as, for example, the old copper Canadian token, which circulated freely throughout Canada during the nineteenth century; small change became scarce in Canada, and merchants issued these copper coins, twenty-five varieties in all, to supply the deficiency. Some of them bore the words "Ships Colonies and Commerce," and a full-rigged ship showing the British flag flying from the masthead; some varieties have the United States flag, the dies for which were made by a firm of New York engravers. None of these tokens are rare, but those bearing the United States flag are held at a slight premium.

Very few people know that the motto "E Pluribus Unum," which has appeared on various United States coins, and is still used on the silver dollars and five-cent pieces, was never authorized by law to be used. "In God We Trust," the motto used on the minor coins, was originally stamped on them without government authority..

"E Pluribus Unum" was first placed on a copper coin struck at a private mint at Newburgh, New York, in 1786, and the following year a New York goldsmith coined a "sixteen-dollar gold piece" on which was stamped "Unum E Pluribus." The United States mint was not established until 1792, and prior to that date the copper coins issued bearing "E Pluribus Unum" were made in England. There was no legislation authorizing the use on our coins of either motto before or after the first mint was established. In 1866 the words "In God We Trust" were placed on the two-cent piece by direction of James Pollock, director of the mint at Philadelphia, and subsequently on the silver half- and quarter-dollars by this mint; so it may be said the Philadelphia mint established the theological status of this country regardless of the constitutional attitude.

As early as 1787 New Jersey issued various copper coins bearing the motto "E Pluribus Unum," following the example set the previous year by the private mint at Newburgh, New York. Prior to this date the "Nova Constellatio" cents were coined and circulated; they are very plentiful and not especially valued except as they may be desired to complete a set.

The cent piece of 1801 in ordinary condition is worth about fifty cents, and if in very good condition, is worth much more. The half-cent of 1826 in very good condition is worth only ten or fifteen cents.

Recently a dealer in coins made a special offer on "large U. S. cents, plain dates, 1798, 1802, 1803, 1807, 1810, 1812, and 1814," the entire lot for seventy-five cents. These coins are valued at twelve cents each. An 1877 United States cent, proof, and very rare, was offered at the same time for one dollar and a half.

Collectors making a specialty of copper coins can make no mistake by taking advantage of these special offers of reputable dealers.—*Selected.*

THE FARM TEAMS.

THERE is nothing that so certainly indicates the enterprise and thrift of a farmer, or the lack of these essentials, as the condition of his team. If the work horses are strong, well kept and well groomed it is safe to set their owner down as a successful husbandman; but if the horses are thin, unkempt, and unfit for the strain put upon them, one may look for their corollary in broken-down fences, poorly-tilled fields and decaying farm buildings. These conclusions are no greater than are needed to prove the rule. A team strong enough to do with ease the work required of it, costs no more for maintenance than one unfit for its tasks; and by the simple process of arithmetic it is easy to prove that a strong, mettlesome span of horses will draw more loads and plow more furrows in a given time than a run-down, worn-out team. Therefore, aside from any consideration of pride in horseflesh

which one may have in a fine pair of horses, they are preferable from an economical standpoint.

The same reasoning will apply to the driving horse as well. There is no economy whatever in the use of a rat-tail, worn-out plug or a spavined "has been" that looks for all the world like an animated bag of bones. And yet we occasionally come across men who seem to think so.

But there are other considerations besides horse pride and the economical side. The boy does not live who if normally developed does not have a genuine affection for, and a just pride in, a good horse, especially if it be one he has had a hand in raising, and there is nothing so discouraging to such a boy as to be obliged to work with worn-out, disreputable-looking horses. As soon give an ambitious boy a dull ax or hoe, a broken fork or rake to work with, and expect to see the light of ambition shining in his face, as to hope to keep him interested in farm life by obliging him to work daily with a team that ought by rights to be in the hospital. In fact, we have known more than one boy who rather than work with broken tools with which he was expected to do a man's part, declined to remain in the service of such an employer; and who can blame him? Boys are particularly sensitive, and they are oftentimes deeply humiliated and made rebellious by the jeering remarks of their young friends with respect to the "crowbaits" they are obliged daily to use.

Those who make frequent visits to large cities where heavy team horses are in constant use, are often struck by the pride the driver has in his outfit, and his genuine affection for the horses that are his daily companions. If he is drawn up to the curb for a few minutes, you will be likely to see him with brush or cloth stroking his horses or polishing their harness, and it is indeed a rare thing to see a whip used, and more rare to hear harsh or loud words addressed to the horses. The acts of cruelty which come under the attention of the humane society are practised for the most part upon the miserable beasts that have fallen into the hands of the huckster class.

But as much as he loves and cares for the work team, the right kind of a boy will give vastly more affection to the bright-eyed, clean-limbed, quick-stepping roadster. Perhaps it is a horse that has been his since it was a day old. He has trained and petted it until he loves it like a brother, and he would as soon think of abusing that brother as of being unkind to his four-footed friend. The chance of a boy leaving such a friend for a long-day job behind a counter in the noisy town is slim indeed.—*Farm Journal.*

THE distiller rides in a steam yacht, the wholesaler in an automobile, the retail dealer in a carriage, but the consumer of the liquor is pulled round by the hair of the head by a policeman.—*Atchison Globe.*

NATURE STUDIES

Song of Baltimore Oriole.

BIRDS, THEIR HOMES AND THEIR BABIES.

ARMELIA L. COLWELL.

ONE bright morning we heard a loud, cheery call, cheer-up, cheer-up, and knew at once that our Baltimore Oriole had returned for the summer. He is a prince in a house of princes. The family to which he belongs is remarkable for plumage, note, nest, eggs, and habit. But Lord Baltimore shines in every one of these particulars, for in plumage, song and nest, he is an especially remarkable bird. His name Lord Baltimore Oriole was given him because when in 1628 George Calvert, Lord Baltimore, landed in this country he admired the colors of the bird and adopted it for his coat-of-arms. Some call him firebird, because of his bright, orange color, which is like a streak of fire as he flies. Others call him hang-nest, from the way he hangs his nest. We like best to think of him as Lord Baltimore Oriole. This name fits him best.

We always greet him with great joy on his return to the large maple, in our yard, where, for many years, there has been a nest. We place strings of cotton and worsted of every conceivable kind in the trees, and on shrubs and even on the porch, and then watch how eagerly Lord and Lady Baltimore Oriole will come and get every little piece and carry away to weave into their pocket-shaped nest, which is one of the most wonderful examples of bird-weaving in existence. It is made of separate threads, strings, horsehairs, or strips of bark, closely interwoven into a sort of sack, and so firmly knit together that it will bear a great weight. They secure it firmly to a high, slender, swaying branch of the old maple. A cat may look at it but never reach it. And, as Mama Oriole sits on the nest which almost closes over her head, we fancy hearing her sing:

"Rain beat! Winds blow!

Cats come! Cats go!

Safe in the nest of the maple tree."

And Lord B. Oriole sings gaily to cheer her up until the four wee babies appear. Then it takes almost his entire time to supply them with food. On an

average of every fifteen minutes daily from dawn till dark both parents visit the nest, bringing earthworms, grasshoppers, locusts, beetles, the larvæ insects, chokecherries, or other small fruits, to be crammed with sharp little thrusts into the ever-hungry mouths.

One June afternoon there was a great outcry among the birds. The three pairs of robins which had their nests nearby, called loudly, the little brown sparrows with their wee babies in the porchvine, chirped in shrill distress, and even the little brown ground-sparrows with babies in a wee nest in the Sweet Williams, flew up on the tree to see what it was all about. Papa and Mama Oriole were scolding, and coaxing, at the top of their voices, at three little baby Orioles, which they had coaxed out on the limbs of the tree. They were trying to get them to fly and would fly against each one, and push them off to make them fly, which they did. From one tree to another they went until at night three of them were some distance from their nest in a large maple, while one remained in the nest until the next day, when we found him on the ground, from which he seemed too weak to fly. Three times we set him up in a tree, and each time Mama Oriole would fly against him, and knock him to the ground, from which he was unable to fly. The parents would go to him and hold up a tempting morsel to coax him to fly or walk, but he could not. We took him and set him on our hand and took a picture of him, and put him in a safe place where both parents fed him, but the next day he was much worse, and before night died, and we have been wondering ever since what caused his death.

Wellsburg, New York.

THREE GEMS IN FEATHERS.

ALL spring and summer there is a mite of a bird that trills loudly among the trees in town, or about country homes, and sometimes in the woods and along the winding, bush-fringed streams. When you get it in the field of your glass, you find that it is a beautiful golden-yellow, with reddish-brown lines penciled

on its breast, running lengthwise. A pretty birdlet it is—a Lilliputian in plumes.

You must not mistake it for the American goldfinch, which has a plumper form, wears a coat of lighter yellow, and has put on a black cap, while his wings are also black. There is no black whatever in the dress of the little bird we are describing.

It is called the summer warbler, often the yellow warbler. The most familiar of all the wood warblers in central latitudes, it sometimes builds its nest in the trees that border our streets. Its nest looks like that of the goldfinch, being placed in a small crotch of the limbs and woven with soft material, felted together quite compactly. However, the warbler nests a good deal later than the goldfinch, which waits until about July.

Have you ever rambled through a bushy spot and heard the clamor of the famous yellow-breasted chat? If there is an odder bird than this warbler, I should like to know where you would find him! Warbler? It is the strangest thing that he should be classed with the warbler, when he does no more warbling than a crow. Indeed, he does not sing at all—he simply croaks, and screeches, and squeaks, and caws, and scolds. But that is enough. His various calls are only noise, not a note of music. He utters them when you come near his haunt, especially if his mate has a nest in the vicinity.

I said, when you come near his nest; but sometimes he gives his bugle-call when you are far away; then, if you go where he is, you will be almost sure to find a nest. You must hear him to appreciate his clownish calls and performances. Now he caws like a crow, now he croaks like a frog, then utters a wild medley of sounds that are strictly his own. One of his original tricks is to dart out into the air, then swing down to the bushes in a series of terraces, with his wings held almost straight up, shrieking all the while at the top of his voice.

His nest is quite a large affair for a warbler, being built in the bushes and having grass, leaves, and grape-vine bark in the walls. The chat is the largest of our warblers.

It is when you ramble in the lowlands, especially along the streams where thick grass and bushes thrive, that you often hear the blithe song of the Maryland yellow-throat, which is another member of the great warbler fraternity. Shall I translate his song for you? "Te-whit-te-ty! te-whit-te-ty! te-whit-te-ty!" Isn't that plain? It is as plain as Hebrew to most of you,

isn't it? But that is what he says, whatever may be his meaning.

A yellow breast, olive-yellow upper parts, a black mask over the eye, with a white or grayish border above it—by those markings you can distinguish this little bird. Its alarm-call is a harsh little "chep," sounding almost as if the bird had caught a cold in his throat. The nest is placed on the ground, amid the grass and weeds, and is very hard to find, for the owners are adepts at concealing it and at keeping their secret to themselves.

Now we have described three familiar warblers, such as breed in our central latitudes, and may therefore be studied throughout the summer.—*Lutheran Young People*.

HOW BIRDS FLY.

THE most remarkable thing about birds, to my mind, is the wonderful way in which they sail through the air, which is accomplished by the peculiar skeleton structure and the lifting power that resides within the feathers.

While the bones of all other animals are solid, the center being a cone of marrow, in birds there is a great lightness, with no loss of strength, by the bones being hollow and braced, as it were, by numerous little ducts, through which heated air is in constant circulation.

You have, no doubt, looked with wonder at the hawk, buzzard, and other birds also, as they were gliding through the air with only an occasional flap of the wing. If one of these sailing birds be taken, and certain experiments made, it will be found that the bones are not only hollow and extremely light, but that they are very warm to the touch.

If the end of the wing be lopped off, and the bird's windpipe closed it may still be seen to breathe. By this experiment we find that both heart and lungs are directly connected with the bones, and that the heart not only pumps the blood, but air, which it beats, through the bony channels and feathers.

We find also the normal temperature of birds is ten degrees greater than in mammals, and this may be increased at least ten degrees more at the will of the bird.

This produces such rarefaction of the air within the bones as to give great buoyancy, and this, with the lifting power, which I have already said resides in the feathers, gives it its power of flight.—*Selected*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

WE get a good idea of how active this life is designed to be when we consider that the most precious things it offers,—as faith and love,—can be possessed and enjoyed only in the proportion that we make active use of them.

DID you ever think about it, that the idle people of a neighborhood are generally the busybodies? Funny, isn't it? But idleness does not mean literal inactivity but rather uselessness, and who will say that does not fit the state of the busybody?

ALL supposition to the contrary, actual experience proves that downright hard work is an essential element of success, and the sooner we give it its rightful place in our plans the sooner will we see them carried to that desired end. But hard work cannot make much headway alone; it needs hard sense to direct it. Hard work in the harness with hard sense on the driver's seat will outdistance all other equipages, however dashing in appearance, that crowd the great thoroughfare of ambition.

DISCONTENT is a fortunate or unfortunate thing, according to kind. It is a fortunate possession if it silently accuses us of mediocre accomplishments when we might attain to a high degree of excellence, with the result that we approach nearer the goal of perfection. It is an unfortunate possession if it is the noisy discontent that finds its source in the accomplishments of others to the end that their worthy efforts are discounted and one's own powers are crippled for lack of attention.

BE sure to have plenty of flowers this year. If you cannot plant them where your eyes will often rest on their sweet blossoms, then plant them wherever

you can and have cut bouquets of them in your rooms and for your friends. Just how large a place flowers have among the uplifting and refining influences of the world we cannot say but we know it is considerable. Growing *more* flowers is an easy and pleasant method of increasing these influences.

As a rule worry of any sort brings little good compared with the energy spent and the unwholesome influence exerted, but worrying over the weather is about the most senseless one can indulge in. Learned men with the aid of powerful machines have never been able to secure satisfactory results in their efforts to bring rain, and no one has ever yet attempted to drive away the weeping clouds—unless the frowns of the worrier are meant for that purpose. About the best way to meet the threatening clouds these days is to start out with a smile—and an umbrella.

HOW REGULATE?

Few people are so depraved as to contend that the saloon should be allowed to go its way unrestricted. The great panacea for the indisputable evils of the saloon, advocated by those who favor the liquor business, is regulation. Passing by the arguments advanced by these men as well as the numberless evidences of failure where this method has been tried, we wish to direct your attention to a peculiar case loudly calling for some drastic measures. Let us see whether you can find a place where the regulation remedy might be applied.

July 1 Tennessee and Mississippi will become dry States according to their State-wide prohibition laws passed some time ago. In order to accommodate the people of these States who will continue to thirst for intoxicants the liquor people have chartered all boats formerly used for summer moonlight and charity excursions along their shores and will use them as floating saloons. They will take out federal licenses and while the boats travel up and down the Mississippi River they will conduct the regular business of a saloon. Launches will carry people to and from these steamers in mid-stream.

All this is in the natural course of affairs where the liquor element is concerned and presents only an everyday problem for those who are fighting evil. The real remedy-defying feature of the case comes in these words of our informant: "Under a recent ruling the federal government can not interfere, neither can the authorities of the States." How is that for unchaining the devil and tying the hands of those who oppose him? And what sort of foundation do you suppose such a ruling has? Of course it isn't the first case where the federal government has apparently taken the side of the liquor element against the individual States, but who ever thought that the laws

of the United States were as the laws of the Medes and Persians? "The federal government cannot interfere." Truly, matters are in a terrible state! How shall we regulate?

"A JUST WEIGHT IS HIS DELIGHT."

IN this commercial age of get all you can and keep all you can, the following news item taken from the *Woman's National Daily* reads like a legend:

St. Marys, O., April 22.—The antithesis of "Jim" Patten has been found by the Jay Grain company of this place in a Dunkard farmer living near Mulberry, Ind. A letter just received from the company's agent at Mulberry states that this farmer, whose name is not given, brought his wheat to the elevator and inquired what price was being paid for the grain. When told that he could get \$1.30 a bushel, he expressed extreme disgust and said: "That is an exorbitant figure. It seems that thousands of people will be unable to buy bread if the price of wheat is kept that high." The Dunkard refused to accept more than \$1.10 for his wheat and when asked what should be done with the 20 cents per bushel he refused to accept, he replied: "Give it to the poor people who are unable to buy bread because of the corner in wheat." The agent has asked the company here how he shall proceed to dispose of the money to best advantage.

The fact that this incident found its way into the pages of a newspaper printed in another State shows how rare such incidents are. Indeed, is it too much to say that some people have gone so far on the opposite road that they will not be able even to appreciate the incident? They will put the man down as lacking good business sense instead of taking off their hat to him as the highest type of a business man. We trust, however, that there is no one among our readers who will fail to value rightly such a keen sense of justice.

Not so long ago, and it is still true in some places and to a slight degree, the name by which this man is designated stood for the purest type of honesty and justice. Those who bore it firmly refused the world's corrupted definition of these principles and clung to the one given by the Originator of the principles himself. Their word was as good as their bond. They could be trusted implicitly in the least as in the greatest matters. But alas! The world's business standards at last found their way into the hearts of these people and now the name is often a mockery of what it once signified. We have sold our birthright for a mess of pottage! We have joined ourselves to Mammon and have sat down to eat and drink with those who are drunken with the riches of this world! Oh, is it not a lamentable condition?

It is true that James Patten is largely to blame for the recent rise in wheat products, but how are we to class the thousands of people who knowingly took advantage of the unnatural prices—prices brought about by a method of gambling? We have become so accustomed to taking the world's way in matters

of business that we never stop to ask if there is wrong connected with it somewhere, unless we happen to be of those who must pay the price.

We love truth. We rejoice in those who deal justly. With these redeeming graces let us readjust our dealings with men and regain the priceless position now all but lost.

DOUBTFUL PROSPERITY.

NEW YORK and Chicago dailies published under large headlines, recently, the statement that George Williams, a janitor in one of the public school buildings in a small town in Missouri, had fallen heir to a large estate in Great Britain. All the papers said it was a great stroke of "good fortune" for him. The amount of money represented by the estate was over a million dollars. Without knowing anything about the circumstances of this man's life, it would be almost a miracle if that amount of money could come suddenly, without any effort expended, into the daily program of any living man without doing him great moral injury. Everything we get in this world without working for, without some form of service rendered, is a danger to us. Even salvation is not free in the sense that we have nothing to do to get it. It is free only in the sense that bread is free, because wheat is made by God, and cannot be made by men. Wheat is given to men as a free gift, but before a loaf of bread from the wheat goes onto the table, thousands and millions of people have labored long days at hard work to make the wheat into flour and the flour into bread. It is very much a question whether it is a stroke of "good fortune" for a poor man suddenly to become extremely rich. It is in any case a test of one's ability to stand prosperity, if that is the word to use, and most men break down under it.—*Selected.*

SOME DAY.

THIS is a world of change. What was wise a few years ago may be foolish now, and what is wise today may be foolish a few years hence. What is wise in one place may be foolish in another.

Some day our economic sense will revolt against spending over a quarter of a million dollars uselessly in order to get twenty thousand dollars in the city treasury.

Some day our sense of pity will revolt against depriving women and children of a million dollars' worth of home, food, clothing and education.

Some day our economic sense will revolt against the waste of human energy by the saloons.

Some day our moral sense will revolt against the moral waste of human souls directly traceable to the saloons.

The date only is uncertain. The ultimate result is as sure, in our estimation, as the rising of the sun.—*Selected.*

THE HOME WORLD

SOME THINGS WE OUGHT TO TEACH OUR CHILDREN

CATHARINE BEERY VAN DYKE

A Divine Purpose in Our Lives.

"There is a divinity that shapes our ends,
Rough hew them as we may."

THERE is much truth in these inspired lines of Shakespeare and we may well make them a text for serious consideration in the study of God's purpose in our lives.

Often we have seen people making their plans seemingly unconscious of the fact that God has anything to do with their business. And while I believe that God delights to plan and control each individual life, I believe also that his plan and purpose may be turned aside through the rebellion, the disobedience or even through the indifference of the individual, for God does not force us to do his will.

"The ground of a certain rich man brought forth plentifully and he thought within himself saying: What shall I do, for I have no room to bestow my fruits? And he said: This will I do: I will pull down my barns and build greater; and there will I bestow all my fruits and my goods. And I will say to my soul: Soul, thou hast much goods laid up for many years; take thine ease, eat, drink, and be merry. But God said unto him: Thou fool, this night thy soul shall be required of thee."

The Bible abounds with illustrations of God's adjusting men, women and children to his wise plans. Look at Miriam, Moses, Joseph, Samson, Ruth, Samuel, the Jewish maid in Syria who had Naaman sent to be healed; and later John the Baptist, Nicodemus, the Eunuch of Ethiopia, Cornelius and Saul of Tarsus! Many of these lives were shaped from infancy to the will of God; some had a decided opposite bent.

I wish to present the idea of God's purpose in individual lives in a way that parents may use it effectively in the training of their children. If we looked upon each individual as existing alone, selfishly, it would be harder to see in every life a Divine purpose; but we are taught that God's creatures and creations all are interdependent. "None of us liveth to himself and no

man dieth to himself." As a burr or small screw may make or mar the usefulness of some great engine or other large piece of machinery, so each little life is instrumental and important in the process of making perfect God's great plan for all human life. "Train up a child in the way he should go" does not conflict in any way with the "divinity that shapes our ends," for the "divinity" is demonstrated in the trainer as well as in the child. The danger lies in the neglect of the parents to observe the adage of Solomon.

While we must look betimes at the thought of God as a whole, embracing every thing that comes under all the natural, moral and spiritual provinces of the universe, which he has made, we must also follow him in the little things—in the detail of his works, in the individuals of every order of creation—for it is in these that his marvelous greatness is even yet more marvelously portrayed than in the universe as a whole. We must think of his constant, loving care, his interested concern about all he has made. Not a sparrow falleth without his notice.

God has always put a high price upon human life. Vegetable life and animals he has given man privilege to "slay and eat." The mighty oak bows beneath the ax and is fashioned into houses and furniture for man's use. The yearly growth and consumption of our gardens attest the provision by which God helps to feed us. Our beautiful domestic animals, as well as many wild ones, succumb to man's strength and intelligence when he reduces them to the supply of his needs. But nowhere has God provided that a human life should be taken for food or in any way be used for the material appetite of other human beings. On the contrary, he holds it as a peculiar treasure and has taught us that it should be zealously guarded from accident, disease, poison and foolhardy destruction. He has called our living bodies the temple of his Spirit. He gives us a further notion of his value of human life when he says: "But the very hairs of your head are all numbered." "The bruised reed shall he not break

and the smoking flax shall he not quench," and in giving for us his own Son to redeem "whosoever will," he not only holds us in a possessive sense but also in fellowship and immortality.

And what is it all for? It is because of his infinite love to us. It is because through that infinite love he was moved to plan the creation of the universe for man's habitation—to fill that universe with light and air and food and other material things and forces for the sustenance of man's life and for his occupation and growth; and when man disappointed him he planned the great redemptive scheme that man might not only be restored to a state of favor with God, but that he might also ascend to God's own place of abode and live eternally with him.

Even men place human life at high cost. The governments throw around it the greatest possible protection. It is the aim and end of many of the sciences—medicine in particular—to save and preserve and enhance human life and health. More is being done today to prevent ailments and suffering than has ever been done before. Pure food, fresh air, proper time for recuperation of muscle, nerve and brain and other sane habits are urged by scientific men that man may not only attain to greater longevity but that he may be at his best as the years are passing on.

With human life held at such value by both God and man it is not hard to imagine that there is a Supreme design in individual lives. All of God's plans are complete and perfect. He unfolds them to us as we become able to comprehend them and so will he unfold them to our children. Bearing these things in mind it will not be hard to lead out our children in training along this line. "How?" Well, first, from the time you first look upon their sinless little faces, so fresh from the moulding hand of the Creator, believe in them. Believe in God. Believe that God has given you this child with some definite purpose in your own life and in that of your child; and from that day till the day of your death do not swerve one hair's breadth from that belief. "Suppose he turns out bad?" Your belief in God's purpose in your life and his will not make the conditions any worse but will rather present to you many an opportunity, many a method which you can use for his good along the way, making it less likely for him to go astray than it would be possible for you to do were you not governed by this faith.

Second, when the child is growing to think and to compare for himself let him be controlled by a conscious feeling that God is not far away; and that it is possible for him to live in such friendship with God that he need not be afraid of anything but doing wrong. Let him live under such assurances as: "Thou God seest me." "The eyes of the Lord are in every place beholding the evil and the good." Do not let him be afraid of God, but believe that he is his sweetest,

dearest, most faithful Friend. By talking often and familiarly about God in the home the children are bound to think of him in a friendly way. Why keep God so much out of your conversation and teaching that children get the notion that he is so great that little ones have no right to know him nor to talk about him nor to commune with him? How sweet it is of Jesus to touch the little ones and bless them and to say: "Suffer the little children and forbid them not to come unto me."

Third, after having them know that God is their personal Friend, lead them to yield to him and trust him with their closest secrets and most cherished hopes. They may sometimes feel blue and discouraged and lonesome. This does not alter his watch care, his love nor his purpose. They may sometimes get boastful, self-confident, independent. This does not change his mind but he warningly says: "Let no man think of himself more highly than he ought to think." "Which of you by taking thought can add one cubit to your stature?" "Thou canst not make one hair white or black." When they are weak, timid or fearful tell them that like as a father pitieth his children so the Lord pitieth them that fear him. "What time I am afraid I will trust in thee." "Certainly I will be with thee." Sometimes they may be sick or tempted or oppressed or bereaved or persecuted. "His eyes behold, his eyelids try the children of men," and he still assures us that if we suffer with him we shall also reign with him.

Children thus nurtured will not, when they grow older, be inclined to be pessimistic in their views of things nor be willing to give up hope and courage every time they cannot understand themselves or others or the things that happen to them.

The beauty of a good old age is that calm resignation which makes men and women contented with their lot, that hopeful looking forward to the time when God shall call them to himself, that sweet assurance they daily have of his love and companionship and that desire they often express that their dear ones shall also prove faithful to him who cares so much for them.

We must not think nor teach that while God has a protecting, directing, and loving care for each child that their purpose ends with the good of that child alone. Some lives touch others in a way that the others are made far more useful, as we look at it, than the one who sets the good influence amove.

In a foreign land one day a mission teacher was called from her busy workroom to go to rescue a little girl baby that had been cast out on the refuse heap. She gathered up the baby, nursed it back to life and health, kept and taught her while she grew up and longer—until that castaway, despised little girl baby became a worker for Christ and was the means of bringing many people to him.

A few days ago my husband called me to his office

to see a young woman. About a year ago she was working in a laundry and standing near an upright revolving bar one day taking a drink of water when her hair caught in the bar and was wound round and round. She was lifted several times from her feet but finally the entire scalp was torn from her head. One of her ears was torn off, one eyelid injured and the brow gone. She was all alone in the little room, but when loose from the bar she ran in terror to where the others were at work. She was taken to a hospital. The scalp was too badly mutilated to be put back, so, after weeks and months of suffering, having gone under the influence of anæsthetics nineteen times, her head, through the process of skin grafting, was covered and healed. Never again can she have a head of natural hair. She is out of the hospital now and will perhaps soon be ready to work again. My heart melted in listening to this sad, distressing history and I said to her: "Surely God has something particular for you to do for him since he prized your life so highly!"

In China some years ago a little heathen girl of six or seven years was married to a man twenty years her senior. She was taken at once to be the slave of her husband's mother. Here for years she was treated most unkindly. It is said that she had a hot temper as well as a warm heart and she often resented her unjust treatment, and was often tempted to take her own life. In trying several times to do so the strangling frightened her and she gave it up. Finally, into her neighborhood came some good teachers of righteousness. She became interested in the new doctrine and after long persecution gained the consent of her mother-in-law and her husband to attend the meetings. She was converted to the Christian religion and after a time her mother-in-law died, her husband relented and she is now a happy, useful and successful Bible woman. So God's purpose in some lives is to use them as torches to set other lives aflame for him.

"I know not where the palms may lift
Their fronded leaves in air;
I only know I cannot drift
Beyond his love and care."

RECIPES.

— Take a word or two of kindness,
Season well with some good deed,
Add of charity a plenty,
And of hope a generous meed;
And if you will mold them rightly,
Which may be no easy thing,
You will find you have a dainty
Fit to serve to any king.

Take a brimming pint of patience,
And of faith an equal share,
Stir them thoroughly together
With the sparkling wine of cheer;
Mix with these a cup of wisdom,
Add a dash of self-control,

And 'tis yours to quench the craving
Of a famished human soul.

Take of happiness full measure,
From the granary above,
Knead it with some inspiration,
Leaven it with abiding love;
And perhaps you may be able
To supply, with gentle art,
All the bread that is required
By one hunger-stricken heart.

—Ralph Methvin.

FATHER: PRIEST OF THE HOUSEHOLD.

MANY things have been spoken and written—yet not one syllable too many—about the happy and holy influence of a good mother, but there yet remains a solid philosophy in the old adage, "Like father, like son."

You no more surely cast a shadow upon the ground on a bright, beautiful day than you, as father, impress your moral shadow upon your home and your household. The father is the head of the house for good or evil. He ordains the law, he fixes the precedents, he helps very largely to create the home atmosphere, and the "order of the home" remains in the habits of the children, though they migrate to the ends of the earth. Truly, under the Divine plan, the priest of the home.

"His father was a Catholic," or, "His father was a Protestant," as a rule, determines the religious belief and position of half of the people of the country. "His father was a Republican," or, "His father was a Democrat," is the only reason given for a large number of ballots cast at any State or national election.

"He is a chip off the old block" is a very apt statement, in common use today, in giving identity of child to parent. They mean to say, "That son is like his father in thought, in habits, in character, as well as in looks." But if the "old block" is bad in its appearance, gnarly, cross-grained and partially decayed what about the chips?

In nature, the life of leaf, flower, and fruit is merged into that of other leaves, and flowers, and fruits that follow after. So it is also with human life. Here is a father, toiling, planning, sacrificing for his children. He never thinks of himself. In youth, he was strong, fresh, vigorous. As the years creep upon him, the fire goes out from his eye; the iron from his blood; the elasticity from his step; his form is less erect, bent with the burden of years. His life force and power have been given freely to his children. But the father's influence is far more far-reaching. He is making impressions every day for good or ill on the sensitive soul-plate of his every child. Every father should remember that his influence will have measure, not in the profession he makes, the long prayers he utters, and the sermonic lectures he delivers to his children—but in the life he *lives*.

Ceremony inducts the king or the president into his official position. Not so the parent. When a man becomes a father, there can be, on his part, no evasion of responsibility. He cannot say, "I decline to act." The most important office in the world is that of parenthood. In the development of society and of nations, the father was the first magistrate and priest.

You know how children learn most readily, not from precept, but from example. You well remember how they watched your every move; how they stood by your knee or sat in your lap, intently interested in all you said or did. You have watched their eyes grow big with wonder as you related some incident in your day's experience. You were a king in their eyes. Your station in life might have been humble, your home not entirely free from want, and your heart and life far from satisfactory to yourself, yet, to those childish minds, you were nobility itself. Hence how grave your responsibility. If our children can see every day in their home a man fixed in kindness, thoughtfulness, cheerfulness, hopefulness, helpfulness; a man who speaks the truth and can deny himself and trust God; a man who thinks more of high character than he does of cattle, bonds, stocks, style, and fast living, they will have good thoughts enough themselves, about such a man, and of the beauty of such a life, as are necessary to inspire them to noble living. Children are keen observers—especially of their parents. This truth is evidenced by the reply a little boy gave his Sunday-school teacher who asked him if his father were a Christian. Without the least hesitation, he replied: "Yes, ma'am; but he does not work at it very much." We cannot hide our graces, much less our faults, from our children's eyes. They love us, hence they will give us credit for a thousandfold more of goodness than we ever possess. What will prove most effective in winning our children to the true way of life is sincere, earnest, constant, unselfish love—the same love as is so beautifully revealed in the parable of the prodigal.

The great need of society today is to get the "man" in the household. We speak of "the man behind the gun," "the man in the chair," "the man in the office," "the man in the pulpit." We express our need and admiration for the "man" everywhere, but too often fail to put the true emphasis upon the "man" in the home.—*Charles Edward Odell, in Vick's Magazine.*

"Ammonia 'kills' grease by a chemical process and lends luster to silver in the same manner."

"THE real policy of economy is only found through a well-balanced system of expenditure."

"THE piety that will not work well in the kitchen is worthless in the church."

RENOVATING MIXTURE.

DURING spring cleaning, it is well to have a good cleanser that will answer more than one purpose. For removing paint, grease spots, and oils, and for clearing bed furniture of vermin, this is excellent: Soft water, one quart; dissolve in this one finely shaven cake of good shaving soap—about one ounce; saltpetre, one teaspoonful, and aqua ammonia four tablespoonfuls. After the soap is dissolved, add the other ingredients and let stand for a day or two, shaking well, to dissolve everything. Keep well corked. For removing grease, or oil, or paint, saturate the spot well with the mixture, sponging and rubbing well; if one application does not answer, try it again. Then wash off with clear, cold water. This is claimed to remove old, hardened paint, and also that it will not injure the finest texture. For removing dirt and handmarks from woodwork, wet a cloth in the mixture and go over the soiled spots. If put on the bedstead, in the crevices or cracks, it will exterminate bugs, kill the eggs, and thus rid the premises. Do not use on painted surfaces, as it will remove the paint.—*The Commoner.*

The Children's Corner

NUTS TO CRACK.

T. H. FERNALD.

WHEN the day is stormy and unfit for the children to play out-of-doors, let them try to make the names of common nuts by changing the letters in the following misspelled words:—

Lazhe—Eancp—Hlabselkr—Ecbeh—Madlon—Chykoir—Noarc—Tuntrueth—Briftel—Hunttecs—Uawltn—Tuocanoc—Nuapte—Mugten—Atacans.

Perhaps our editor will give me permission to publish these correctly in some future number of the NOOK.

THE CHILD'S WORLD.

Great, wide, beautiful, wonderful world,
With the wonderful water around you curled,
And the wonderful grass upon your breast—
World, you are wonderfully dressed.

The wonderful air is over me,
And the wonderful wind is shaking the tree;
It walks on the water and whirls the mills,
And talks to itself on the tops of the hills.

You, friendly earth, how far do you go
With the wheat fields that nod and the rivers that flow,
With cities and gardens, and cliffs and isles,
And people upon you for thousands of miles?

Ah! you are so great, and I am so small,
I tremble to think of you, world, at all;
And yet, when I said my prayers today,
A whisper inside me seemed to say,
"You are more than the earth, though you are such a dot:
You can love and think, and the earth cannot!"

—William Brightly Rands.

THE QUIET HOUR

CHERISHING JOY.

SELECTED BY ANNA LESH.

Let thy day be to thy night
A letter of good tidings. Let thy praise
Go up as birds go up, that when they wake
Shake off the dew and soar. So take Joy home,
And make a place in thy great heart for her,
And give her time to grow, and cherish her,
Then will she come, and oft will sing to thee
When thou art working in the furrows; aye,
Or weeding in the sacred hour of dawn.
It is a comely fashion to be glad,—
Joy is the grace we say to God.

—Jean Ingelow.

FOOLISHNESS OF GOD WISER THAN MEN.

J. S. FLORY.

It is a fact that the simple, ordinary, and common things of God confound the worldly wise. This is clearly proven in the way the "higher critics" endeavor to throw odium on the simplicity of divine revelation. They say the history of the origin of man and woman as given by Moses begins with a "huge joke," especially in regard to a "helpmeet" for Adam.

Let us see on which side the "joke," if any, really belongs. See those two beautiful roses bushes over there in the park, the admiration of all visitors? One to all appearance is older than the other, but the younger looking is just as glorious or more so than the other in its magnificent beauty, and it throws out a flood of fragrance that makes all who come nigh stop, look up and take notice. It is equal in its sphere of usefulness to fill its place.

The question how came it there may not concern us much; yet let us refer to its history briefly. The gardener desired a mate to it, so with his pruning shears he clipped a short slip—maybe three inches in length—full of life and planted it in the nursery. Then he cultivated it and transplanted it in due time to where it stands now, so grandly conspicuous to all lovers of the beautiful. There was an *involution* from the parent stock of life principle and as *like begets like* its evolution has been wonderfully like its mate. Who can for a moment doubt the fact that *involution* was the *cause* of its present state of evolution? All in the same order of enfoldment.

Now, take notice. Why should any common-sense, normal, thinking mind think it a "joke" to say a slip

taken from Adam's side by the heavenly Gardener, our Creator, and nourished with its life energy should produce a helpmeet for the original plant just like it in all of its physical and spiritual characteristics? No mystery about this. Indeed the simplicity of God's wisdom brings to naught the professed knowledge of men.

Then again, we notice the theories of man, so often based upon logical reasoning, teach that man has a spirit of life energy which is the creative substance that individualizes itself into intelligent human organic personality. This, too, in material bodies composed of many atoms of cellular life, each of which continually receives its share of omnipotent life. While it is the Spirit thus working and the embodiment of Divine energy, all intelligent beings become fully triune creatures with spirit, soul and body, or in other words *substance*, *individuality* and *personality* or material expression. In the lower form of cellular life organic appearances are free from the distinguishing features of male and female, as it appears in the human species and many other creatures.

Now that the make-up of this wonderful "harp of a thousand strings" is being better understood there is no need of his spiritual embodiment being misunderstood or the spiritual side of man being an enigma to all who are in possession of the divine life. Saying nothing of the wonderful beauty of the imagery of Moses, David and the prophets of old, and the wonderful figurative language of Christ, John and other holy men whose words were on the spiritual side of life, there is enough to make us realize what we are in our relation to God and that the Bible to us may be a lamp to our feet. And as Paul at Mars' Hill flung into the face of the heathen Grecian philosophers the fact that their own poets taught we are the "offspring" of God, we can say fearlessly that all the reasoning of critics is but foolishness in the wisdom of God who "makes wise the simple."

Pasadena, Cal.

FIRE AND FULNESS.

SOME are saved by fire, some by fulness. Some are dragged around the doorpost of the Eternal City, with the loss of all; others, like a ship entering port with a fair wind, under full sail, an abundant entrance being ministered unto them. Some, like Lot, lift the anchor

with reluctance, and have need to be prompted. "Haste thee, escape, for I cannot do anything till thou hast come hither." Others land with safety and honor, with the music ringing in their ears—"Lo, God hath granted thee all them that sail with thee." Lot is saved, and all his companions are destroyed; Paul is saved, and all his companions with him. One is saved by a horrid separation, the other in abundant fellowship. Lot was saved because of Abraham, all hands were saved for the sake of Paul. One by fire, the other by fulness. These illustrate the great truth, so frequently forgotten in a selfish world, "No man liveth unto himself." This vicarious service is often rendered in ignorance, sometimes with semiconsciousness, often with a heart unwilling. David said, "The Lord shall light my candle," but that light was for others more than for David. He has passed into history, but his name is great today. Many think only of themselves, they do not know that they live for others, which is the true mission of life.

An old fisherman went to bed on the rocky coast of Scotland; he could not sleep, he dressed and went out to the headland. He saw a ship acting unusually, she was drifting. He aroused the village, soon a fleet of boats were out to the rescue; before the dawn eighty souls were landed in that obscure village. "Thou holdest mine eyes waking, I am so troubled that I cannot sleep." You think of yourself, God is thinking of others. "Love thyself last."

We read when God destroyed the cities of the plain that God remembered Abraham, and sent Lot out of the midst of the overthrow. There is always some one behind.

When Augustine's mother was bemoaning the waywardness of her son, a holy man said, "It is impossible for him to be lost, when one thinks of the prayers piled up by his mother." Lot was saved for Abraham's sake. Passengers and crew were saved for Paul's sake. This law of life avails today. The voice of the Lord speaks in silent might to many a man, heads of companies, men of influence; speaks to millions of mothers in the silent eloquence of Love. "Lo, God hath granted thee all them that sail with thee."—*H. T. Miller.*

RELIGIOUS EDUCATION IN THE HOME.

THE influence of early training, and, particularly, the influence of a mother's teaching, was perhaps never better shown than in the statement made by one of our early statesmen, John Randolph, who had been charged with being a Frenchman rather than an American. "The charge was unjust," Randolph once said to an intimate friend, "but the truth is," he continued, "I should have been a French atheist had it not been for one recollection, the memory of the time when my departed mother used to take my hands in

hers, and cause me on my knees to say, 'Our Father which art in heaven.'" It is to be greatly feared that the sense of parental responsibility for the religious training of children has greatly weakened in these days. Parents are inclined to leave all that to the church, as they are wont to leave the responsibility for a secular education to the state. One is inclined to wonder if there is not danger that all responsibility will be put upon the state, with the result that the Christian home will have passed away. There is hardly a more important and threatening subject before the Christianity of the day than this matter of religious education.—*Northwestern Christian Advocate.*

THE FELLOWSHIP OF SUFFERING.

You are not sent into the world to be honored and pampered; nor even to receive your righteous due. If God aimed at your immediate glorification, he would take you to heaven; but he aims at your humiliation, that you may be like his Firstborn. You are to have fellowship with the Only-Begotten in many ways, and among the rest, you are to be partakers of his sufferings. Expect to be misunderstood, misrepresented, belied, ridiculed, and so forth, for so was the Son of the Father. You are to look for ill treatment; for as the Father sent his Son into the world which was sure to treat him ill, so has he sent you into the same world, which will treat you in the same manner if you are like your Lord. Be not surprised at persecution, but look for it, and take it as part of the covenant entail; for as Ishmael mocked Isaac, so will the seed after the flesh persecute that which is born according to promise.—*Spurgeon.*

BLESSED MINISTRIES.

THERE is a sphere continually around man in which he must sow freely if he would reap joyfully; in which he must give largely if he would receive bountifully; in which he must serve patiently if he would be treated lovingly; and in which he must bear bravely the burdens of others if he would move lightly under the pressure of his own. Unspeakably wonderful and beautiful are the ways of God in having bound man by such tender cords to such blessed ministries; by having established on earth an institution which constantly and mightily draws forth and trains to their full tension those unselfish affections, sympathies, and passions by which human communities are helped, blessed, and saved.—*Baldwin Brown.*

THE object of life, as the silent, unrecorded years of Christ's life teach us, is neither to be known, nor to be praised, but simply to do our duty, and to the best of our power to serve our brother men.—*Dean Farrar.*

ECHOES FROM EVERYWHERE

It will cost \$6,000,000 to complete the funeral ceremonies of the late Chinese emperor.

Twenty-seven ocean liners now have a daily newspaper, furnished with news by wireless service.

The lower branch of the Missouri Legislature killed Representative Johnson's bill to limit the grounds for divorce to a single statutory allegation. The bill lacked seven votes of the constitutional majority.

The Chicago board of education is square with the world for the first time in years. The schools have \$8,000,000 for current expenses and \$4,000,000 for buildings. Last year the board was \$600,000 beyond the appropriation a year ago, and some years the overdraft has reached \$2,000,000.

Augusta Evans Wilson, author of "St. Elmo" and many other novels, popular a generation ago, and still widely read in the South, died at her home in Mobile, Ala., May 9. She was born in 1835 in Columbus, Ga. She was the daughter of Matt Ryan and Sarah Howard Evans, one of the oldest families in the South.

Gov. Shafroth of Colorado has signed the campaign-expenses bill, and the unique measure becomes a law in 90 days. The bill provides that the State shall contribute for campaign expenses every two years 25 cents for each vote cast at the preceding general election, the sum to be divided among the political parties according to the vote cast for their respective candidates for governor.

Judge William L. Penfield, solicitor of the Department of State from 1897 to 1905 and an authority on international law, died after a long illness at his home in Washington, May 9. His death was due to a complication of diseases. Judge Penfield was 63 years old and a native of Dover, Mich. He was formerly a judge of the Circuit Court in Indiana. In the early '70s he taught German and Latin in Adrian College, Michigan, and practiced law at Auburn, Ind.

Those persons attempting to encourage a public sentiment to prevent immigrants from coming to the United States would find very little consolation or support in Brazil. The President of the State of Sao Paulo has recently signed a decree fixing the number of state-aided immigrants to be received in his State during the current year at 10,000. All immigrants coming to Sao Paulo qualified for this subvention must be Europeans. Every Spaniard over twelve years old will be given \$28; \$14 for those between seven and twelve, and \$7 for those less than seven and more than three years old. To all other Europeans except Spaniards, the subvention for persons over twelve years old will be \$31, and those of lesser age in like proportion.

The city of Los Angeles has solved the pole nuisance to a large extent by providing a joint pole committee, whose object is to eliminate unnecessary poles and cause the various companies to run their lines on the same poles. The committee has been at work for two years, and 10,000 poles are now being used jointly by the different companies, thus doing away with a like or even larger number that would otherwise be necessary.

The birth rate is more than twice as large in Russia as it is in France. In Normandy, where the birth rate is lowest, the births at times fall as low as 15 to the 1,000 inhabitants in a year. But in Russia there are many districts, as in Orenburg, where the births are as high as sixty to the 1,000 in a year. Notwithstanding the enormous emigration from Europe in the nineteenth century, its population now is nearly double what it was at the beginning of the century.

A manufactory at Turin, Italy, has built for several Americans an automobile which will be presented by them to Pope Pius. It will be a handsome machine of from twenty to thirty horsepower and especially adapted for use within the Vatican gardens. It will be elegantly equipped, being lined with white leather and having on the left side a gold medal of St. Joseph, the Pope's patron saint, and on the right a pocket which will contain a richly bound breviary. The pontifical arms will adorn the doors. The interior of the car will be lighted by electricity.

A new method of transmitting photographs to a distance has recently been devised. A gelatine negative is used, in which the picture is formed in relief. A style travels over the uneven surface of the negative and operates a rheostat in the main line. At the receiving station a luminous ray plays over a sensitized plate, and the intensity of its light is varied by the rheostat. The reliefs and hollows of the original are thus reproduced in light and shadow on the sensitized medium, and form the picture. This method of transmitting pictures was recently tried with success on the line between Paris and Lyons.

It is stated on the highest semi-official authority that the British government not only has not made, but does not intend to make any move to purchase the absolute rights to the Wright aeroplane patents in Great Britain. And thereby hangs a peculiar reason. National jealousy is back of the plan to keep the American inventors' airship out of the country despite the admitted fact that Great Britain is far behind the other nations in its fight to conquer the air. Bright inventors with a war office connection have convinced the ministry that although the Wright machine is by far ahead of anything else on the market, yet there are essential crudities in it which have not been overcome and rob it of its effectiveness.

The Russians who have entered Persia have made preparations for a long stay. In order to preserve quiet among the Shah's adherents they have occupied the entire Tabriz district. Gen. Sparsky, the commander of the expedition, has taken personal supplies for one year. The force of occupation will be increased to 7,000 or 8,000 infantrymen, with the necessary artillery and cavalry detachments required to insure the safety of Americans and foreigners in Northern Persia until such time as the Persians themselves are able to maintain order.

The New York Central has issued a new order that will be bewailed by dog lovers. No passes will be issued for dogs to go in the passenger cars, no matter how powerful a plea may be made. Dogs may be checked as baggage the same as in the past, two dogs on one ticket, but they will have to have chains attached or be crated and the owner must sign a release from all liability on the part of the company. The most important part of the new rule is the one that prohibits the carrying as baggage of any dog valued by the owner at more than \$25.

On a charge of conspiracy to commit peonage, Manager W. S. Harlan of the Jackson Lumber Company of Lockhart, Ala.; Robert Gallagher, assistant superintendent, and three of the company's foremen, must serve sentences in the federal prison at Atlanta, Ga. The Supreme Court of the United States has just affirmed the sentences imposed three years ago by the United States Circuit Court. Manager Harlan is a nephew of Justice Harlan of the Supreme Court of the United States. He is one of the biggest lumbermen of the South. The mills at Lockhart, where it was alleged foreigners were held as peons, are the largest in that section.

If we are to believe two French scientists who have been investigating the matter of ventilation by means of electric fans, there is about as much danger in their use as there is in the heat that would be experienced if the fans were not running. These scientists analyzed the air in a factory both before and after the fans had been placed in motion. Thirty-nine cubic inches of the air which was examined before the fans were started contained 18,000 bacteria, but after they had been in motion for an hour, the same amount of air contained 42,000 bacteria; and an hour later 65,000 were found. Two hours after the fans were stopped the number of bacteria in the same amount of air had sunk to but 21,000. Naturally, the conclusion of the investigators is that the movement of the fans stirs up the dust and the bacteria and makes persons in the vicinity all the more likely to breathe them. If dangerous bacteria are stirred up, of course all the more risk accrues to those present.

Recently in a New York hospital there was performed for the first time in this country an operation upon a human being in which the cavity of the thorax was opened while the lungs were kept inflated from an air chamber at pressure greater than the atmosphere. This new appliance is known as the positive air pressure apparatus. It consists of two chambers with a door connecting and another door connecting the smaller chamber with the outer air. The chambers are lined with rubber and are connected by pipes and valves with an electric air compressor. The operating table is so arranged that the patient lies with his head within the main chamber, a rubber neckpiece fitting tightly, so as to prevent the escape of the compressed air.

General Cipriano Castro, deposed president of Venezuela, is now in Santander, Spain. The erstwhile dictator says that he has received cables from Caracas telling him that the army and people earnestly desire his return. However, he adds that he will never return to Venezuela, as he intends settling definitely at Santander. Senor Castro's wife is on her way to Santander from the West Indies on the Guadeloupe.

As the result of a thorough investigation into the alleged discrimination by Ohio coal carrying railroads, the Interstate Commerce Commission has declared that the Hocking Valley Railroad Company and its various subsidiary concerns which the Circuit Court of Franklin County, Ohio, recently held to be an illegal combination, seemed to be dominated absolutely by what is known as "the trunk line syndicate." It is charged by the commission that an agreement was entered into by the roads and the Hocking Valley July 29, 1903, for the purchase of a large amount of common stock of that railroad.

James Boyle and his wife who kidnaped Willie Whitla, of Sharon, Pa., March 18, were found guilty by the jury and received their sentence May 10. Boyle was given the heaviest penalty the law of Pennsylvania inflicts for that crime—life imprisonment. His wife was sentenced for twenty-five years which by good behavior may be reduced to fifteen. At the conclusion of the trial Boyle gave out in writing what he claimed was a complete history of the kidnaping which implicated a near relative of the Whitlas. However as he had nothing to prove his statements, it is not likely that anything further will be done in the matter.

Fifteen to 13 the Missouri Senate voted down the Cross House bill prohibiting the sale and manufacture of cigarettes and cigarette paper in Missouri. However, the Rosenberger bill is up to Gov. Hadley for signature. It imposes a fine of from \$10 to \$100 on dealers or persons who sell or give away cigarettes or cigarette papers to any person under the age of 18 years, and for the second offense not less than \$50 nor exceeding \$500, half of the fine to go to the complaining witness. The act also makes it a misdemeanor for any person between the ages of 10 and 18 years to smoke cigarettes on any street, park or other lands used for public purposes, or upon any railroad train, street car or place of amusement. For this latter offense the fine is not to exceed \$10.

By July 4 next there will have been removed from the exterior of every saloon, restaurant and hotel in New Jersey the hundreds of thousands of dollars of signs advertising the various makes of beer, whiskies and other liquors, in compliance with a law passed at a recent session of the New Jersey Legislature and signed by Governor Fort. The bill was introduced by Assemblyman Eppinger of Hudson County and went through the House of Assembly and the Senate without much opposition. It provides that all signs advertising breweries and wholesale liquor dealers of manufacturers must be removed from the outside of the establishments of retail dealers in intoxicating beverages by July 4. Failure to do so will result in criminal action against the violator of the law. In Trenton while the bill was under consideration by the Legislature it was freely said the brewers were behind the bill. The retail liquor interests were opposed to it. The purpose of the brewers in procuring the passage of the law is to put an end to the growing and expensive practice of putting up large and costly signs.

Among the Magazines

ECONOMIC LOSS THROUGH THE MOSQUITO.

It is well understood that the mosquito, as a vehicle for the spread of disease, is responsible for an untold amount of sickness and general inconvenience. Not all of us, however, appreciate the heavy incidental losses due to the depreciation in the value of mosquito-infected districts, the impairment of the vitality, and, therefore, of the earning capacity, of malarial patients, and the large total resulting losses as expressed in dollars and cents. A valuable study of this subject has been made by Dr. L. O. Howard, Chief of the Bureau of Entomology of the Department of Agriculture, and presented in a recently-issued bulletin upon the subject of the economic loss to the people of the United States through insects that carry disease. The subject is dealt with mainly under the three heads of Malaria, Yellow Fever, and the Typhoid Fly. In the present notice we confine ourselves to the mosquito as a vehicle for the spread of malaria.

It is contended that malaria has retarded in a marked degree the advance of civilization over the North American continent. Particularly was this seen in the march of the pioneers through the middle West and the Gulf States west of the Mississippi. In attempting to estimate the economic loss from the prevalence of malaria, reference is made to the method of Prof. Fisher, given before the recent International Tuberculosis Congress, by which he arrived at an estimate of over a billion dollars annually as representing the cost of tuberculosis to the people of the United States. In this estimate Prof. Fisher considered the death rate for consumption, the loss of the earning capacity of the patients, the period of invalidism, and the amount of money expended in the care of the sick. No such definite basis is available for estimating the effects of malaria; but Dr. Howard, by using the statistics of deaths due to malaria in sixteen of the northern States during the period from 1900 to 1907, arrives at an approximate death rate for the whole of the United States of 12,000 per year. In the case of malaria, however, the death rate is a less sure indication of the real economic loss than in the case of any other disease; for a man may suffer from malaria for the greater part of his life, with a reduction of his productive capacity of from fifty to seventy-five per cent, and yet ultimately die from some entirely different immediate cause. Sir Patrick Manson, writing of tropical countries, declared that malaria causes more deaths, and more predisposition to death, than all the other parasitically-induced diseases affecting mankind, together. Celli states that, owing to malaria, about five million acres of land in Italy remain very imperfectly cultivated. Creighton says that this disease has been estimated to produce one-half of the entire mortality of the human race; and, inasmuch as it is the most frequent cause of sickness and death in those parts of the globe that are most densely populated, he considers that the estimate may be taken as at least rhetorically correct.

Now, although there is no perfectly sound basis for a close estimate, at least in this country, between the number of cases of malaria and the number of deaths resulting therefrom, an estimate based by analogy upon Celli's investigation of malarial mortality in Italy leads Dr. Howard to the conclusion that the approximate number of cases of malaria in the United States must be about 3,000,000. We quite agree with the doctor that it is no exaggeration to estimate that one-fourth of the productive capacity of an individual suffering with an average case of malaria is lost. With this as a basis, and including the loss through death, the cost of medicine, the losses in malarious regions through the difficulty of obtaining competent labor, it is estimated that the loss to the United States, from malarial diseases, under present conditions, is not less than \$100,000,000 every year.—Scientific American.

MARION CRAWFORD'S COSMOPOLITANISM.

At once the most prolific and the most cosmopolitan of American novelists, Francis Marion Crawford, who died at Sorrento, Italy, on April 9, had won and kept his fame simply by his marvelous gifts as a story-teller. Excelling in descriptive power, Crawford despised the cult of realism in fiction. He told the story for the story's sake. His pictures of certain European cities were so minutely faithful to detail that they have served the traveler as guides; but their accuracy was as spontaneous as anything else that went into the Crawford books. Those street scenes formed the backgrounds of vivid mental photographs. They were essential to the narrative, not merely the stage accessories. The author's brain was peopled with more heroes and heroines than could be projected on his canvas, rapidly as he worked. Some of Crawford's contemporaries, it is well known, have toiled painfully to create characters to fit mechanically devised plots. In the case of Crawford's stories, on the other hand, plots and characters were inseparable, and the combination was rarely so improbable or fantastical as to appear artificial. In a very real sense, Crawford's stories were a part of himself.

What manner of man, then, was this American who knew his Rome as few Italians know it and his New York better than many New Yorkers? He was a citizen of the world without losing his Americanism. As a boy he knew a half-dozen European languages; in early manhood he mastered Russian, Turkish, and finally Sanskrit and Hindustani. Born in Italy, he was educated partly in America and partly in England and Germany. His father, Thomas Crawford, was the sculptor of "Liberty" on the dome of the Capitol at Washington. His mother was a sister of Julia Ward Howe and a descendant of Gen. Francis Marion, of the Army of the Revolution. Although most of his life was passed in foreign lands, Francis Marion Crawford could not, if he would, have freed himself from the influence of American tradition.

The distinctive quality in all of Mr. Crawford's work is the sympathetic treatment of the human materials. Few Americans have known intimately so many peoples. None has yet arisen who has been able to picture so effectively other civilizations than our own. Equally at home in Europe, the Orient, and the United States, Mr. Crawford wrote with as full a sympathy and as quick a comprehension of one nationality as of another. It was a marvelous gift, and we must only regret that its master did not live to employ it with even greater success in the service of formal history.—From "Marion Crawford, the Novelist," in the American Review of Reviews for May.

THE DELUSION OF THE MILITARIST.

The militarist of our day betrays certain symptoms with which the student of pathology is not altogether unfamiliar. There are obsessions which obtain so firm a grip upon the mind that it is difficult to banish them. For example, a man who has the impression that he is being tracked by a vindictive and relentless foe is not going to sit down and quietly listen to an argument the aim of which is to prove that no such enemy exists, and that the sounds which have caused the panic are the footfalls of an approaching friend. The militarist will listen to no man who attempts to prove that his "perils" are creations of the brain. Indeed, he is exceedingly impatient under contradiction; and, here again, he is like all victims of hallucinations. To deny his assumptions or to question his conclusions, is to him both blasphemy and treason, a sort of profanity and imbecility worthy of contempt and scorn. He alone stands on foundations which cannot be shaken, and other men who do not possess his inside information, or technical training for dealing with such questions, are living in a fool's paradise. The ferocity with which he attacks all who dare oppose him is the fury of a man whose brain is abnormally excited.

Recklessness of consequences is a trait which physicians usually look for in certain types of mental disorder, and here again the militarist presents the symptoms of a man who is sick. What cares he for consequences? The naval experts of Germany are dragging the German Empire ever deeper into debt, unabashed by the ominous mutterings of a coming storm. The naval experts of England go right on launching Dreadnoughts, while the number of British paupers grows larger with the years, and all British problems become increasingly baffling and alarming. The naval experts of Russia plan for a new billion dollar navy, notwithstanding Russia's national debt is four and one-quarter billion dollars, and to pay her current expenses she is compelled to borrow seventy-five million dollars every year. With millions of her people on the verge of starvation, and beggars swarming through the streets of her cities and round the stations of her railways, the naval experts go on asking new appropriations for guns.

The terror of a patient who is suffering from mental derangement is often pathetic. Surround him with granite walls, ten in number, and every wall ten feet thick, and he will still insist that he is unprotected. So it is with the militarist. No nation has ever yet voted appropriations sufficient to quiet his uneasy heart. England's formula of naval strength has for some time been: The British navy in capital ships must equal the next two strongest navies, plus ten per cent. But notwithstanding the British navy is today in battleships and cruisers and torpedo boats almost equal to the next three

strongest navies, never has England's security been so precarious, according to her greatest military experts, as today. It has been discovered at the eleventh hour that her mighty navy is no safeguard at all, unless backed up by a citizen army of at least a million men. It was once the aim to protect England against probable combinations against her. The ambition now is to protect her against all possible combinations. In the words of a high authority in the British army, she must protect herself not only against the dangers she has any reason to expect, but also against those which nobody expects.

Like many another fever, militarism grows by what it feeds on, and unless checked by heroic measures is certain to burn the patient up: Men in a delirium seldom have a sense of humor. The world is fearfully grim to them, and life a solemn and tragic thing. They express absurdities with a sober face, and make ridiculous assertions without a smile. It may be that the militarists are in a sort of delirium. At any rate, they publish articles entitled, "Armies the Real Promoters of Peace," without laughing aloud at the grotesqueness of what they are doing.

The militarist is comic in his seriousness. He says that if you want to keep the peace you must prepare for war, and yet he knows that where men prepare for war by carrying bowie knives, peace is a thing unheard of, and that where every man is armed with a revolver, the list of homicides is longest. He declares his belief in kindly feelings and gentle manners, and proceeds at once to prove that a nation ought to make itself look as ferocious as possible. In order to induce nations to be gentlemen, he would have them all imitate the habits of rowdies. To many persons this seems ludicrous, to a militarist it is no joke. He is a champion of peace, but he wants to carry a gun. The man who paces up and down my front pavement with a gun on his shoulder may have peaceful sentiments, but he does not infuse peace into me. It does not help matters for him to shout out every few minutes, "I will not hurt you if you behave yourself," for I do not know his standard of good behavior, and the very sight of the gun keeps me in a state of chronic alarm. But the militarist says that, for promoting harmonious sentiments and peaceful emotions, there is nothing equal to an abundance of well-constructed guns.

A droll man indeed is the militarist. What matters it what honeyed words the King of England and the German Kaiser interchange, so long as each nation hears constantly of the launching by the other of a larger battleship? And even though Prince Bulow may say to Mr. Asquith a hundred times a week, "We mean no harm," and Mr. Asquith may shout back, "We are your friends," so long as London and Berlin are never beyond earshot of soldiers, who are practicing how to shoot to kill, just so long will England and Germany be flooded with the gossip of hatred, and thrown into hysteria by rumors of invasion and carnage.—Atlantic Monthly.

MILK TESTING WITHOUT APPARATUS.

THE following process for the detection of added water or of skimmed milk in ordinary milk is more accurate than the simple use of the lactodensimeter without the creamometer check. The whole test can be made in five minutes. The result does not show whether the adulteration consisted in the addition of water or in the subtraction of cream, but as a rule

this matters little to the consumer. What he wants to know is whether or not he had what he paid for.

The suspected milk is stirred with a spoon, in order to disseminate into the whole liquid the cream which may have come to the surface. Then one volume of milk is poured into fifty volumes of water. (One fluid ounce to two and a half pints.) A candle is lighted in a dark room. The experimenter takes an ordinary drinking glass with a tolerably flat and even bottom, and holds it right above the candle, at a distance of about one foot from it, so as to be able to see the flame of the candle through the bottom of the glass. He then pours slowly the diluted milk into the glass.

The flame becomes less and less bright as the level of the liquid rises into the glass. The flame is soon reduced to a dull white spot. A little more liquid, slowly added so as to avoid pouring an excess and the flame becomes absolutely invisible. All that remains to be done is to measure the height of the liquid in the glass, this being most conveniently ascertained by dipping into it a strip of pasteboard and then measuring the wet part. It should measure not over one inch if the milk is pure. With good quality milk, diluted and tested as stated, the depth will be about $\frac{7}{8}$ of an inch before the flame is lost to view. A mixture of one volume of milk and a half a volume of water should show a depth of $1\frac{1}{2}$ inches. A depth of 2 inches indicates either partially skimmed milk or a mixture of one volume of good milk with one of water, and so on.

The reader has already understood that the process is based upon the close relation between the opacity of milk and the number of fatty corpuscles contained in it. Both skimming and the adding of water work in the same direction, namely, to decrease the opacity of milk. The same cannot be said of the density. Skimming increases it, adding water decreases it; and the common test, which consists in the mere introduction of the lactodensimeter in milk, is worthless, as a skimmed milk may have a normal density if care has been taken to pour into it a certain amount of water. Density should be taken before and after skimming, and the percentage of cream should be determined with the creamometer. Thus applied, the density test requires a lactodensimeter, a thermometer, and a creamometer, and the test requires twenty-four hours, while the result is not much more accurate than the opacity test just described.—*Scientific American*.

CONSERVATION ON THE FARM.

NOWHERE else is it so easy to be wasteful as on the farm, and nowhere else is it so important that the precepts of wise economy be carefully observed as on the farm. The faithfulness with which such precepts are followed measures the entire difference that exists between success and failure in farming. Not only does the wise farmer seek to save and use to best pos-

sible advantage "every scrap" that enters into the economy of farm life, but he makes a careful study of soil conditions, so replenishes the soil with fertilizers, and rotates his crops as to "keep up his land" and not utterly exhaust and impoverish it. In the early history of nearly every Western State, farmers almost universally planted and replanted their land to wheat year after year, until it had become utterly worn out and the farmers themselves were almost bankrupt. Later, learning from bitter experience, most of these farmers wisely went into stock-raising, and thereby "brought up their land" to something of its old-time efficiency. The successful farmer knows that it is not so much what he takes off from his land and sends to market that makes him permanently well-to-do, but the earning power which he conserves in the land he tills.—*Selected*.

Between Whiles

Couldn't Understand Plain English.—By the extraordinary contortions of her neck, he concluded that she was trying to get a glimpse of the back of her new blouse; by the tense line and scintillating flash about her lips he concluded that her mouth was full of pins.

"Umph—goof—suff—wuff—sh—ffspog?" she asked.

"Quite so, my dear," he agreed. "It looks very nice."

"Ouff—wuff—so—gs—ph—mf—ugh—ight?" was her next remark.

"Perhaps it would look better if you did that," he nodded; "but it fits very nicely as it is."

She gasped and emptied the pins into her hands.

"I've asked you twice to raise the blinds so that I can get more light, James," she exclaimed. "Can't you understand plain English?"—*Chicago Record-Herald*.

Slightly Tongue-twistiferous.

Druggist—Little boy, what do you want?

Juvenile Customer (in a great hurry)—Mr. Blinkly, I want a sheet of shiky stypaper—no, I mean a steet of flicky shypaper—I guess that ain't right, either; I want a—

Druggist (equally hurried)—I know what you want, boy. It's a flite of picky—no, it's a peet of—well, here it is. Five cents. Run along. What is it you wish, madam?—*Chicago Tribune*.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

BINDER TWINE—Highest grade standard $7\frac{3}{4}$ cts. lb. Club together and send us your order. We save your money. Farmer agents wanted. Free sample.—*Central Supply Co., Mt. Morris, Ill.*

LITERARY ACTIVITY OF THE BRETHREN IN THE EIGHTEENTH CENTURY

Prof. John S. Flory, Ph D.

Every one who has read this book is ready to speak a word of commendation.

"I have read with much interest Prof. Flory's book, 'Literary Activity of the

Brethren in the Eighteenth Century.' It is, no doubt, one of the very best contributions to our historical literature that has yet appeared. The style is transparent and pleasing. The most striking feature of the book is the scholarly conservatism which characterizes every state-

ment. Some of our writers have been disposed to jump at conclusions. This is not true of Prof. Flory. He always gives his readers the benefit of the doubt. The book is just what one would expect of its author, —A Great Book."—P. B. Fitzwater, Principal of Bible Dept., Manchester College.

"I wish to express my appreciation of 'Literary Activity of the Brethren in the Eighteenth Century,' by Prof. John S. Flory, Ph. D. I consider it a very valuable contribution to our church literature. The author is to be congratulated for the thorough treatment of his subject. His style is easy and attractive. It is a readable book and ought to find its way into many homes."—Prof. T. T. Myers, Juniata College, Huntingdon, Pa.

Real Art Mottoes

These "Real Art" cards are by far the finest specimens of lithography we have ever offered. The stock has but recently been imported from Germany, hence the line is entirely new. They are lithographed on heavy glazed stock, size 16x20 inches and represent the best in modern art. The subjects consist of bouquets and vases of Roses and other flowers. Suitable for the home, office, school room or Sunday school.

We can furnish "Real Art" mottoes in Eight designs and Fourteen texts as follows:

50. The Lord Is Thy Keeper.
51. He Careth for You.
52. In Me Is Thine Help.
53. Shew Piety at Home.
54. Lead Me in Thy Truth.
55. I Will Never Leave Thee.
56. Looking Unto Jesus.
57. Ye belong to Christ.
58. God is a Refuge for Us.
59. Seek and Ye Shall Find.
60. God is Our Refuge and Strength.
61. The Lord Bless Thee and Keep Thee.
62. Thou Wilt Shew Me the Path of Life.
63. Who daily Loadeth Us With Benefits.

The illustrations presented herewith can give but the faintest idea of the beauty and quality of the "Real Art" line. These same subjects have sold in art stores the country over for 35 to 50 cents each. We are pleased to announce a price so low as to place the best mottoes within the reach of every one.

Price, each, postpaid, only

25 cts.

SPECIAL TERMS TO AGENTS ON REQUEST

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the north. There is some snow at times but the Chinook winds quickly melts all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. I. J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

EMPIRE COLONY IN "SUNNY STANISLAUS"

The CO-OPERATIVE COLONIZATION COMPANY is now locating a colony of our people in the lower San Joaquin valley, in central California. The new town of EMPIRE, as well as the colony lands, is located on the Santa Fe railroad, five miles east of Modesto, the county seat of Stanislaus County, thirty miles south of Stockton, seventy-five from Sacramento and one hundred and fifteen from San Francisco.

The colony lands join the new town site and are within a few miles of three different railroads. These lands are all under cultivation, and are free from brush, stumps, stones or other obstructions. Two large ditches cross the tract, affording ample water for irrigation of all crops.

Garner Schoolhouse, One Mile West of Empire, Where the Brethren Hold Services.

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and Investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

NEW CHURCH ORGANIZED—NEW RAILROAD BUILDING.

A new Church of the Brethren was recently organized at Empire, with twenty-five members, and other families of our people are expecting to move there soon. The Modesto-Empire Interurban railroad is now being built. For further information address,

CO-OPERATIVE COLONIZATION COMPANY

North Manchester, Ind., South Bend, Ind.

OUR FALLEN HEROES

L. U. Hulin.

Sleep sweetly, noble heroes, the bugle sound is hushed,
The Monster that defied thee for evermore is crushed.
'Tis sunshine where the shadows, in deep profusion, fell;
From our Matins till our Vespers 'tis with Columbia well.

'Tis well, thou land of freedom, where nothing can appall,
When every heart with loyalty responds to duty's call,
When every breast is surging with patriotic pride,
For the land of fallen heroes who for our country died.

'Tis well, when those entrusted with authority and power
Are men of thought and action, true to duty every hour,
Who falter not nor waver when sorely vexed and tried,
But are like those noble heroes who for her glory died.

Then place your fairest flowers upon the hero's grave,
Who for his country's glory his life so grandly gave.
And if tears of sorrow moisten the spot whereon they lay,
'Twill be a fitting tribute to their memory to pay.

Stars of unfading luster, in thy glory I rejoice,
In the galaxy of nations thou art my pride, my choice.
No monarch, crown or scepter, can thy glory from us thrust,
While we love our fallen heroes, while in truth, "In God we trust."
North Lima, Ohio.

\$400 Prize Cup Won by Colfax County, N. M. In Competition with Entire Irrigated West

Miami Ranch

is located in the choicest part of Colfax county, New Mexico, and it was largely due to the products grown upon and adjacent to this ranch that Colfax County won this valuable cup at the Interstate Industrial Exhibit held at Albuquerque, N. M., last October. Every State was represented—products from land selling as high as \$1,000 an acre were shown—but Colfax County won by many points.

Many other prizes have been won by this section of the country. New Mexico wheat took first prize at the World's Fair in Chicago, while apples raised in an orchard directly adjacent to Miami Ranch won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 an acre.

Miami Ranch

offers you health and pleasures as well as wealth. It's situated in a rich, cheerful valley, surrounded by picturesque mountains. Elk, deer, bear and other large game are to be found in the mountains, while thousands of wild duck and geese inhabit the surrounding lakes. The Rayado River, which flows through this ranch, is noted throughout the central west for its trout fishing.

The rainfall is sufficient to insure big crops. But with the gigantic irrigation system recently installed, there is not the slightest chance of crop failure.

The climate is perfect, the air is pure, and the scenery beautiful. Excellent church privileges, a good school and pleasant neighbors are all to be found on Miami Ranch.

Write for a free copy of our booklet, "Westward Ho." It tells in detail all about Miami Ranch. Tells how and when you can get a round-trip ticket from Chicago for \$30, and from Kansas City for \$25, via the Atchison, Topeka & Santa Fe. Write at once and take your choice of the bargain offers which we are now making on both large and small farms.

Farmers Development Company, Springer, New Mexico

The Saloon Under the Searchlight

By George R. Stuart.

A book of sixty-four pages. The best thing we have seen on this subject. A new book, dealing with an old question.

Simple, Practical and True.

"I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

Bright, Breezy—Not a Dull Line.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."—United Presbyterian.

Every minister of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village, town and city in the United States.

J. A. Bowers' apple crop of 1907 netted \$1,000 per acre, and in 1908, \$700 per acre.

E. A. Blair gathered from seven and one-half acres of apples 3440 boxes of fancy apples which netted \$5,500.00.

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

THE INGLENOOK

Vol. XI.

May 25, 1909.

No. 21.

CYRUS HALL McCORMICK

JOHN W. WAYLAND

SEVERAL months ago the present writer contributed to the INGLENOOK a series of sketches of famous persons, men and women, who were born just one hundred years ago—in the year 1809. At that writing the names of at least two distinguished men were overlooked, namely, Philip Saint George Cooke (1809-1895) and Cyrus Hall McCormick (1809-1884). Cooke was an American soldier and author; McCormick was an inventor, manufacturer, financier, and philanthropist. It is with the latter that this sketch shall deal.

McCormick was the eldest son of Robert McCormick, who was a farmer and mechanic of Rockbridge County, Virginia. The McCormick homestead is located not far from the Augusta County line, ten or twelve miles from the now famous little town of Lexington, and about twice as far from the great Natural Bridge, from which Rockbridge County is named. The family came of the hardy Scotch-Irish stock that had settled the region early in the eighteenth century, and that still is the predominating nationality in Rockbridge and Augusta. Sam Houston, the liberator of Texas, and Andrew Lewis, the commander of the whites at Point Pleasant, came of the same stock and from the same region. The country is rugged, like many of the early pioneers; and the mountains, the Blue Ridge on the east, the Alleghanies on the west, point skyward in plain view.

The McCormick homestead is known as Walnut Grove Farm. The old, two-story brick house, with an L, is preserved in good condition; and the log blacksmith shop, in which the first successful reaper was built, stands not far away.

A hundred years ago the McCormick farm, with others in the same part of the country, was far removed from the centers of learning and culture. The nearest large town or city was more than a hundred miles away, over the hills and mountains. Cyrus McCor-

mick's education seems to have been limited to that afforded in the neighboring old-field school, supplemented by the longer terms upon his father's farm and in the blacksmith shop. The institution at Lexington, first known as Liberty Hall Academy, now as Washington and Lee University, was in McCormick's youth known as Washington College; but there is no record of his presence there as a student.

The father, Robert McCormick, was a man of inventive skill. He was a blacksmith, carpenter, and machinist, as well as a farmer. He erected his own sawmill and gristmill; he made all the implements needed on his farm, and many for his neighbors; he devised a threshing machine, with which he did the work that had been done with flails by his ancestors for hundreds of years. At an early date he conceived an idea of a reaping machine. About the time of his son's birth he was endeavoring to work out this idea into practical form; but the machine he constructed at that time would not work. Seven years later he finished another machine intended for cutting grain, and after nine years more of expensive experimenting, in 1825, he completed a third. This machine was almost a success. It answered the purpose well when the wheat stood up straight on flat ground. But the wheat was frequently leaning or tangled, and the Rockbridge fields were not always flat. The problem was so difficult that Robert McCormick abandoned it. He consoled himself somewhat by inventing and making a successful hemp breaker.

The son, Cyrus McCormick, took up the task where his father had left it. As a boy of fifteen he made a harvesting cradle for his own use, with which he was able to do the work of a full-grown man. He also invented at an early age a hillside plow, so adjusted that, driving one way along the hillside, the furrow would be thrown to the right; driving the other way the furrow would be thrown to the left; always down-

hill. The advantage of such a device will be appreciated by every boy and man that has ever tried to turn a furrow uphill on a steep slope.

In the year 1831 Cyrus McCormick completed the first successful reaper. It was a clumsy-looking machine, drawn by one horse; the reel threw the cut grain back on a wooden platform, and thence it was raked off in proper-sized bunches by a man who walked at the side with a hand rake. Another man or a boy rode the horse to guide him.

The conservative neighbors no doubt thought old Mr. McCormick and his son a bit visionary, and it was likely with some misgiving that they came together one day in July, 1831, to see the new machine tested. The experiment was made in a small field of oats, owned by a Mr. John Steel. At the end of the test the reaper was declared a success. By the next year the machine had been further improved, and fifty acres of wheat were harvested in a continuous trial, with such rapidity and thoroughness as to leave no doubt that a great invention had been brought to a successful stage.

But it was only after three years had elapsed that young McCormick applied for a patent on his reaper. The meantime was probably spent in still further perfecting the machine. At least, such a course has been characteristic of the inventor, and has accounted in large measure for his great achievements: he was not content with mere success; he constantly aimed at improvement. A patent was finally obtained June 21, 1834. It granted the right of exclusive manufacture and distribution for fourteen years.

During the next several years the McCormicks became extensively engaged in the smelting of iron ore, an industry which is still important in the neighboring town of Buena Vista, but in the great financial panic of 1837 the family fortunes were overthrown. But they met the issue squarely and honestly. Excepting the old homestead and the shops, all their property was sold, and every liability was discharged, dollar for dollar. A new start in life had to be made; and then the reaper was taken hold of in earnest. Cyrus McCormick and his father, with his brothers, went into their shops with strong hands. For weeks and months they hewed wood and forged iron, and at the end of a year two reapers had been made and sold at a hundred dollars each. During the next year seven machines were sold at the same price, and during the following year about four times as many.

The difficulties of manufacture in this isolated region may be imagined. The steel sickle for each machine had to be brought in on horseback from a distance of forty miles. The reaper soon became well known in Rockbridge County, but the great mountains prescribed a small territory for its convenient sale. Nevertheless, the fame of it finally got abroad. In 1844 an order

was received from Cincinnati for eight machines. That city was only two hundred miles away in a straight line, but the mountains intervening were at that day a formidable barrier; so a roundabout route was chosen instead. The machines were hauled eastward sixty miles, through a gap in the Blue Ridge, to the head of navigation on the James River. Thence they were transported by boats to Richmond; thence by ship down to the mouth of Chesapeake Bay, down the coast and around the point of Florida to New Orleans, thence up the Mississippi, and finally up the Ohio to Cincinnati—in all a distance of over three thousand miles.

These machines introduced McCormick to the prairies of the West and to a great field of opportunity. He rode through the mountains, and made temporary arrangements for the manufacture of his reapers at Cincinnati. In 1845, a new patent, covering important improvements, was secured. Other improvements were patented in 1847. In the meantime the inventor went riding on through Ohio, Indiana, Illinois, Missouri, Wisconsin, and New York, making his reaper known to thousands of farmers far and near. One of his machines was put on exhibit by the American Institute, and a gold medal was awarded him. This was the first formal recognition of his great achievement.

In 1847 Mr. McCormick rode into the ten-year-old town of Chicago, in order to make arrangements there for the manufacture of his reapers. His comprehensive vision had discerned in the busy young guardian of the lakes the great wheat center of the West. He was a stranger to most men in the place, but he was able to impress his character and plans so favorably upon Mr. Ogden, the mayor of the town, that the latter became his partner, and furnished money to start the enterprise. From the new factory reapers worth \$50,000 were sent out in all directions for the next harvest. In the Chicago fire of 1871, McCormick was the heaviest loser; but the energy of character and power of industry that had before conquered inertia and distance now brought forth new factories from the ashes of the old. It is said that today one of the intricate machines is completed every three minutes.

Having established his trade in America, McCormick took his invention abroad. In 1851 he had a machine on exhibition at the London World's Fair. The American exhibit was very poor, and at first sight McCormick's reaper did not bid fair to redeem it. The thing was odd and ungainly in appearance, and was the object of much wit. The *London Times* described it as a cross between a circus chariot, a wheelbarrow, and a flying machine. There were several other reaping machines on exhibit, and some of them were very handsome to behold. The main thing that distinguished them from McCormick's reaper was that, in

the practical field test, his machine cut wheat satisfactorily while the others did not. The London Times was honest as well as witty. It came out in praise of the odd machine, and declared that it was worth to the farmers of Great Britain the whole cost of the fair.

At the Paris Exposition of 1867 McCormick himself directed the work of his reapers in the field trials, and the Emperor Napoleon III walked through the stubbles after them. He was so delighted that he conferred upon the inventor the decoration of the Legion of Honor. Many other honors were received at various places from time to time.

Some of the telling factors in McCormick's character, added to his native bent for mechanics, were tenacity of purpose, energy, industry, and honesty. By such qualities he rose above the limitations of obscurity, meager education, and physical difficulties. His heart retained the love of his native land and his fellow-men even in the midst of many cares, and when the power of wealth was in his hand. He contributed largely to the establishment at Chicago of the Presbyterian Theological Seminary of the Northwest and he afterwards endowed a professor's chair in Washington and Lee University, Lexington, Va. Mr. Leander J. McCormick of Chicago, a member of the inventor's family, gave \$50,000 to the astronomical observatory at the University of Virginia. But the greatest service that the family has rendered to humanity has been the gift of genius to the labor and life of the farm, the best training-place for useful citizenship.

BEAUTIES OF NATURE.

FANNIE R. MILLER. (AGE 14.)

WE are surrounded by the beauties of nature on all sides; we can enjoy all of them and it will cost us nothing.

Overhead is the beautiful sky, with here and there a moving cloud. In the distance are the green and shady woods, where the sweet flowers grow, which girls are so eager to gather.

To the right, flows the proud Shenandoah, whose murmuring sounds have been heard through many decades. To the left in the far distance is presented a beautiful mountain scene, where numbers of peaks seem rising heavenward. In the rear are to be heard the sweet sounds of a shepherdess and the bleating of her playful lambs. In front is the broad expanse of the grand Shenandoah Valley; and on all sides can be seen the golden grainfields with their gentle waves silently creeping over them, and the green grass fields gradually ripening for the scythe. The air seems to be filled with the twittering songs of birds and is laden with the sweet perfume of the blossoming orchard, and the odorous smell of the roses and shrubs. In the far distance, white-robed mountains of clouds are

springing up, a summer shower is gathering. They become denser and denser, their color changing to black. At intervals vivid streaks of lightning are seen flashing through them. Following each are heard speeding across the heavens the rumbling sounds of thunder. Finally lone streaks of rain are seen pouring down upon the thirsty earth; though here the sky is almost cloudless and the sun is shining in all its brilliancy. The shower has lasted but a short while; the rain has performed its mission, the clouds are most all gone, and the beautiful rainbow with its many different colors is seen arched across the heavens.

The brilliant sun is sinking toward the west. Presently it is seen gradually disappearing beneath the horizon with its rays reflecting on the few scattered clouds, turning them to red, and I am beholding one of those beautiful sunsets which poets paint so vividly and artists strive to imitate. And I am made to exclaim as the psalmist did of old, "O Lord, how manifold are thy works! in wisdom hast thou made them all."

Sangerville, Va.

SYSTEMATIZING U. S. NOTE DESIGNS.

COUNTERFEITING and confusion is enhanced by the fact that so many of our certificates and greenbacks of the same denomination have different designs, and the treasury officials have this week announced the completion of a system whereby they hope that counterfeiting will be discouraged, and the paper money will be all the more easily recognized by the public. There are at present for the various United States notes and coin certificates 19 different designs; under the new plan there will be but nine. The \$5 note has two designs. The \$10 gold certificate has on it a portrait of Michael Hillegas, the first treasurer of the United States, while the \$10 silver certificate has a portrait of Thomas A. Hendricks. On the \$10 greenback there is the picture of a buffalo. According to the new plan all the paper money of the same denomination will have the same portrait. The face of Washington will be on the \$1 silver certificate; that of Jefferson on the \$2 silver certificate; Lincoln's portrait will appear on the \$5 notes, both certificate and greenback; on the \$10 gold and silver certificates and United States notes will be the portrait of Cleveland; Jackson will be on the \$20; Grant on the \$50; Franklin on the \$100; Salmon P. Chase on the \$500, and Alexander Hamilton on the \$1,000. Thus the portraits of Hillegas, Monroe, Silas Wright, Lewis, Clark, Mansfield, and others, and the eagle, the buffalo, and the Indian head will all be done away with. Different colors are to be used for different classes of notes.—*The Pathfinder*.

"ALL permanent things are founded upon reciprocity, and survive only upon that condition."

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LIX.

As the two armed men led me from the police court I noticed that the streets became wider and better built. We were entering the best part of Pera, the Europeans' portion of the city, with its fashionable hotels, luxurious shops, and wider streets. The few foreign signs above the shops I had seen coming up from the sea, such as Italian and Greek, which had given me courage (for even such strange names seemed homelike in Turkey) had now increased in number, and in a few places English and French decorated their front windows with their best wares just as merchants had done in their respective countries.

Not far from the Tribunal my two guards told me they had been sent to my defense; that they were regular employees of the United States consulate; that the consul, on hearing of the matter between me and the Turks, had despatched them at once to my rescue.

But I had my doubts. They looked too ferocious. Their long, curving, slender swords of keenest steel looked too much like battle. Their revolvers, with bright handles exposed from the heavy leather pockets, were not pleasing to look at. I was more than half afraid that they were taking me to any place but to the United States consulate.

Though the money was in my pocket I objected to paying the fine, for I believed the conditions which prevented me from securing the special passport were sufficient to clear me. Before leaving the court, I had made the appeal to my consul, for in every important city in the world our country maintains an official citizen of the United States whose business, among other important duties, is to look after the welfare and safety of subjects of the United States when traveling through the country in which he is located.

At the moment therefore when it was made clear to me that I had been fined or detained by law I asked the officials to send a message concerning the affair to the United States consul. This they did. The coming of the two Turkish attachés to my relief was the answer. But my assurance of the honor of these men was only confirmed when we drew up before an office

door, in a fine street, over which waved the beautiful silk American flag.

"This is the consulate," they told me. "Go in."

We passed up a flight of stairs and entered a comfortable sitting room. The calendars on the wall, the books and papers lying about, as well as the furniture all looked "American" to me. How restful seemed the chair in which I sat! How quickly Constantinople came back to me in all of her magnificence as I had first seen her from the deck of my steamer, that morning!

As it was Sunday, a date was made for me to call on the consul Monday morning.

"We will keep your passport until the affair is settled," said the clerk, "and in the meantime you may go to your hotel."

"You can go now," said one of the guards at the door as I came from the office of the consul."

Though I felt more like a bird with clipped wings without my passport, the fact that it reposed in the faithful hands of the United States consul gave me no serious alarm. I sought at once a hotel. Not far from the consulate I passed Hotel De London on the right side, near a fine park, and a little farther down toward the Galata Bridge, was met at the magnificent entrance of Hotel Bristol by the manager of the hotel and his Turkish porter. In keeping with the secretive atmosphere of Turkey, a heavy curtain of rich goods fell from the inside to break the gaze of too curious eyes from the outside.

He put out his hand and I put out mine. That was enough. I was his fast friend from that moment, and no matter how often I return to the Sublime Porte, I will put up at his hotel.

I walked up the flight of eight marble steps, flanked by heavy marble pillars in Grecian style, laying my hand upon the elegant balustrades on the inside, also of marble, and determined to register at *Hotel Bristol* whether I went to prison, or not.

After an hour or less in the artistic dining hall where I was served by a waiter who gave me every attention, I looked about the interior of this public home of cultured luxury. It was the most luxurious of all hotels on the continent and possessed the only

American elevator in the city and possibly in Turkey. Electric push buttons were in my rooms to summon servants when I needed them. Fine baths adjoined them.

Opposite Hotel Bristol, still farther down the street, called Rue Grand, I think, was the Pera Palace, a rather more aristocratic hotel than the Bristol, but not so beautiful or homelike. Here, I was told, was one of my fellow countrymen, a man by the name of Doctor Harper, from Chicago. I could hardly believe that my old teacher of Hebrew was within a stone's throw of me in Turkey. I went over and gave my card to the proprietor, asking him if such a man was stopping there.

"Yes," he replied, "he occupies the first room up the wide stairway."

"I know him. May I call upon him?"

He took up my card and at once returned. "He will see you. Go up."

Yes, it was Dr. Harper, lying in bed, very sick. He was too ill to recognize me. Even then he was slowly dying from the malady that later took his life. But as Dr. Harper had been a prodigious worker I supposed he had overtaxed his strength while exploring some biblical antiquities in Asia or that he was suffering from a cold. So I told him about my work, that my studies at the University of Chicago under his leadership had inspired in me a great desire to see the whole world; that even I was on my way "around the world without a cent," earning my way by all kinds of work, and living usually among the masses. As his own ideals had been world-wide, and as he had found from experience the value of money in any great enterprise, I ventured to suggest that I myself could use a little more money to splendid advantage, and asked him if he believed that my mission was a worthy one, and if so, whether he could let me have a little money to help me on in my undertaking.

He surprised me by his answer.

"No. I could not spare you any. I came away with only so much, and I have barely enough to get back with."

If it was evident that he was more than a little indisposed. He was quite sick. The smile of approval or at least the good words that he would have given me in his office in Chicago were all lacking. Not

many of his students were better known at sight than myself, but he had quite forgotten me. It was his illness, and from the color of his fingers and nails I believed that he was much worse than he himself imagined. For I had been "reading hands" by the lines of the palm, and by the other marks that usually denote illness or health, and from three points in his own hands, which I saw at a glance, I inferred that his malady was intestinal.

He was so weak I took my leave a minute after, glad that while I had brought absolutely no money along with me, that I could get hold of as much of it as I wanted by earning it, and that time and industry were the two only requirements. The great man was afraid he would run out of money. I carried my *mint* right with me and *coined* it at pleasure. He was getting home to a big salary. I was just only started well on my long journey, glad to get back with youth and health.

On Monday I went to the consulate. The consul met me with genuine cordiality and I almost felt sorry for him because I was causing him an international trouble.

"You are required now," said he, "to carry a special passport called a 'teskere' here, in addition to your own passport. It will cost you something to get this,—a charge made by the Turkish government. You can not avoid this. Besides,

you will have the fine of two dollars to pay, because of your landing in Turkey without this teskere."

Then I told him how it was, how I had gone to the Turkish office in Smyrna to apply for and secure this same teskere, but that it was Friday, the Moslem's Sabbath, when the office was closed and that I was forced to leave on the steamer that sailed away before the office was reopened.

"I am afraid you will have to pay the fine. No one is exempt. It is an imperial edict."

"I think, however, Mr. C., without wishing to appear to you as an adventurer, that I shall refuse to do so."

"In that case," said the consul, "you may have to go to jail. Would you like to be imprisoned here in Turkey?"

"I should say I wouldn't," I replied, "but rather than to pay the fine which I believe to be unjust, I believe I will go to prison, if they send me there."

I remembered at this moment that before leaving

"The genial manager of Hotel Bristol met me at the marble entrance."

Smyrna I had gone to the United States consulate there, explained to him fully how I had gone to the Turkish consulate for the *teskere*, and had found it closed; that I was just leaving on the boat lying then in the harbor and that I might have serious trouble when I reached Constantinople without this special pass. Although the consul at Smyrna did not believe it was necessary to do so, I urged him to give me a piece of writing,—a letter from him, to this very effect, so that I might use it, if necessary, in Constantinople. He immediately took his pen, and on one of his official letter-heads he wrote over his signature, just the words that I now knew would avail me the greatest possible help.

The next moment I had removed it from my inside vest-pocket and laid it down before him.

It was not the two dollars I cared so much to save, yet that was no small argument for my plea in this land of almost impossible earnings by a stranger. It was the principle. The argument for the fine seemed absurd. They could compel me to get a passport or leave the country. But how they could fine me for not having one before I landed in Turkey, I can not see. Granted that it were possible to procure this *teskere* from Washington before leaving the United States, by tourists touching at Constantinople, suppose I had started on my voyage around the world at Honolulu, or South Africa, would I have been able to get the necessary passport before setting out? Or, suppose again that I had been on my way to Russia, and passing up through the Bosphorus, over the Sea of Marmora, had intended to leave the boat at a Russian port, and that while en route, right in the bay of the Golden Horn, before Constantinople, our vessel had taken fire, and I, among others, had been able to swim to land, rescued there by the Turks, and at once *put under*

arrest, as I had been, because upon my naked body *they could find no teskere*! Or again, suppose a tourist from America to the Holy Land should desire, after leaving his home land, to go aside to Turkey, and include that city among his sightseeing before he returned. Should he be compelled to lie in the harbor on the same boat that had carried his friends who had provided themselves with the *teskere* before leaving home, while he saw them enjoying the sights in the city, without also himself disembarking and seeing just that much more with practically no more expense? The more I reasoned out the fine the less I felt like paying it.

"I have decided not to pay the fine. It seems unjust. That letter from my consul at Smyrna ought surely to release me."

"I will do what I can for you," replied the consul, "but you will have to pay for the issuance of the *teskere* to you. We will keep your United States passport here until you pay the fine and secure a *teskere* or until the case has been settled and you have received your *teskere*."

I had done what I could. The United States had given me my passport. The United States had taken it from me, for the good consul represented my country in Turkey. Though it seemed hard to walk out of the consulate without my means of identification, there would be no need for its use so long as everything went well with me. As in most European countries, foreigners are arrested and taken away to jail when found near the spot where a riot has broken out or any other serious trouble that has called out the police, no matter how innocent they may be. During the few days I would be in Constantinople without the protection of the passport I would use double care to prevent any collision with the "law or the prophets."

JOURNALISM

RICHARD BRAUNSTEIN

JOURNALISM, which in its broadest sense includes all classes of literature, is the greatest and most impressive instructor in the world. It teaches more of life, of science and of art, than do all the universities of learning. It is a profession of the highest dignity, the widest influence and the greatest power. From the reporter on the country weekly to the editor-in-chief of the greatest metropolitan daily, to whom the rulers of the world pay tribute; from the writer of the interesting short story to the author whose name is known and esteemed throughout the civilized world—are all journalists.

The field covered by the modern newspaper is

marvelous. It rivals the magazines in the excellence of its literary products, in its graphic description of historical events, in the cleverness of its fiction, and in the accuracy and artistic value of its illustrations. The latest and greatest achievements of art, of science, of discovery, of exploration and of travel are given their first publicity in the public press.

With more than twenty thousand periodicals published in the United States and Canada, covering every field of literature from the cheap-priced high-class edited newspaper to the popular-priced high-class literary magazine, it is manifest that journalism never before offered such splendid and inspiring inducements

as it does to those who enter it with a determination to succeed. No other profession surpasses journalism in opportunities for rapid advancement, and it is also one of the few occupations that give their followers a choice of residence. Many of our noted writers live quietly in obscure places merely as a matter of choice. To those preferring travel, or life in a metropolis, the field is open.

And now with this brief review of journalism, I will take the case of the young writer in the country who wishes to become a journalist. Instead of at once rushing to a great city, where you have no kindred nor friends, and where you fight for every inch of ground, why not begin where you are? In nine cases of ten you will find it the wisest course to begin your efforts with your home as your background.

In a country newspaper the ambitious young journalist may serve his novitiate with credit. He may acquire the indispensable art of writing crisp, snappy, clever paragraphs. It is a much greater accomplishment than to write a long essay. The scholar who carries off the first prize at school, for composition, often fails when he tries to be brief, to tell something in a short compass. In the country newspaper too, the young writer may learn to look about him for interesting happenings; for he who writes must be the one who sees and who makes haste to tell while his impressions are fresh.

A young writer who has done good work in the several departments of a village or a country paper may come to a city with a well-founded hope of slipping into a niche there. He will probably become a space writer, receiving payment at the regular rates for whatever his paper prints, or he may secure regular assignments and be enrolled as a reporter in some department of a daily journal.

To the beginner of journalism the following suggestions will be of great assistance, as they will be found to cover many subjects:

Is there a historic place or building near your home? What is its history? What is its present condition? Who did own it? Who owns it now? Hunt up all interesting incidents and get pictures.

Whenever you want to get up a successful feature article make every effort to get good photographs. Pictures often sell a story when otherwise it would not be taken.

How about the man or woman in your neighborhood who is called a "character"? He (or she) says and does things that makes them distinctive from their neighbors. Get pictures and write them up in bright style.

Are there industries peculiar to your neighborhood? Why are they peculiarly adapted to that place? Tell how they started and progressed. Mention names and projectors and those most interested.

Hunt up sayings of the neighborhood children.

There is always something attractive about a bright child's remarks or questions if they are presented in good fashion. Is there a child prodigy where you live or near there? A photograph and the story of his talent is in order.

Has a man from your town risen into prominence? Perhaps you know something of his early struggles that would make very good reading. Hunt down the story.

Have you a philanthropist who is doing something unexpected now and then? He is worth a story.

Do you know anyone who has a fad or hobby? Is it unusual? Tell about it. Does he pursue a fad as a relaxation, or is it a dominant impulse that will break his rest and cause him to desert his interest at times?

Do you know anyone who seems to be the constant victim of unfortunate circumstances? He is good for a feature story and may be used to advantage in fiction.

Have you a squire or minister who has married an unusual number of people, or who has done unusual things? Get the story and picture.

Has any young man left your town and made a decided success in some particular line in a city? Or any young woman? What have they done? What were the steps of their progress? Always have an eye out for detail.

Are there any superstitions in your neighborhood? Who is affected by them and how?

Is there a haunted house, haunted road, haunted trail, or hollow near your home? Pictures, picturesque story.

Has any one you know of or have heard of, fallen heir to a legacy hedged around with peculiar restrictions? Is it worthy of writing up?

Is there a historic tree or stone marking some boundary line, which has caused disputes between neighbors or has been the resting place of some noted officer or prominent person? Or the scene of a romance? Story and picture.

Is there a historic tavern which is falling to decay in your part of the country? Tell of the successive changes it has seen.

Does any author, musician or artist make your neighborhood his summer rendezvous? What is his favorite amusement and daily occupation when "off duty"?

Is the name of your town unusual? How did it get the name? What does it mean?

Does anyone near you have a model garden or an old-fashioned flower garden? Many magazines make specialties of this sort of matter.

Rare coins, arms or other curios are always of interest, especially if the property of some one of note.

Odd collections of curios, china, laces, jewels, pictures, musical instruments, etc., make good money for those who see their news value and write interestingly about them.

THE SCRIBES

PAUL MOHLER

IF you will turn to Ezra 7: 6, 11, 12, you will find that Ezra was a ready scribe. That means that he was a good writer. Ezra was a priest, and it was his especial work to make copies of the sacred Scriptures. There were many such scribes, some whole families devoting themselves to this profession. It is a far call from the scribes of Ezra's day to those whom Jesus met; but there is after all a logical connection between them. It would be impossible to understand the later scribes without a knowledge of the former. The term "scribe" is but one of the titles of the New Testament class. Other titles were "Doctor" "Lawyer," "Rabbi," "Father," the "Wise," "Understanding," etc.

Ezra and Nehemiah were teachers of the law. After they had pushed the work of rebuilding the city of Jerusalem forward sufficiently, they called the people together and read to them the law, and bound them by pledges to keep it. Ezra is generally supposed to have collected and edited the sacred writings making up the Bible of the Jews. To have a law is to have lawyers also, for the law must be explained. Who should know the law so well as the scribes? So when teachers and interpreters of the law became necessary, this work fell naturally to the scribes. This was especially appropriate when the scribe was also a priest. The scribes of course magnified the law, and as the law became more precious in the eyes of the people, the scribes rose in importance. It was not long after Ezra's time until there began to be pious laymen, students of the law, in harmony with the priests, but independent of them. These were also called scribes, and they too had many pupils; and when, during the Grecian period, some of the scribes of the priests forsook the ways of their fathers, the lay-scribes became their opponents and the leaders of the people. When the Maccabean struggles began, these scribes were most zealous for the law and when the sect of the Pharisees was formed it naturally received their support. One of the Hasmonean rulers yielded so far to their influence that he gave them a seat in the national council, the great Sanhedrin, where they took equal rank with the chief priests and the elders. Indeed, it was but a short time until they far outranked even the priests in the eyes of the people. From the close of the Hasmonean period to the time of Christ, the scribes were the real leaders of the nation, although not the political leaders. They were nearly all of them Pharisees.

When Jesus came to the world, the Jews were intensely legal. To them, the law was the greatest gift of God to man, and nothing was right if it was not

in accordance with law. They cared but little for spontaneous acts of righteousness. The virtue of any act lay in its being prescribed by law, rather than in the nature of the act itself, or in the condition of the heart of the doer. It had not always been so, and the fact that it was so then was due largely to the work of the scribes, for the scribes applied the law. The law contained many commandments, enough for anybody it seems to me; but not for the scribes.

Since nothing was right unless lawful, they must examine every action minutely and see if it were lawful. For example, they must know whether or not it is lawful to carry a ladder from one pigeon roost to another on the Sabbath; whether they might eat eggs that were laid on a holy day; or whether fringes were needful or not to a square linen nightdress. Again, it is written, "After the Lord your God ye shall walk." The scribe says, "How is it possible to walk after God?" Then he infers that he must clothe the naked, because God clothed Adam and Eve in the garden. He must visit the sick, because God visited Abraham immediately after he had been circumcised. He must comfort the mourner, because God blessed Isaac after the death of Abraham. He must bury the dead, because God buried Moses.

By the time the scribes had risen to prominence, there was an immense collection of oral teachings that had been handed down from antiquity, and which was considered fully as binding as the written law. This was said to have been given by God to Moses on the mount as the authorized interpretation of the written law. This was never to be written, but was to be kept by oral tradition. It was part of the work of the scribe to teach this to as many pupils as he could find, as well as to apply it to the circumstances of life. So the scribe sat on his seat with his pupils around him. They sat on the ground or on lower seats at his feet. Saul was brought up at the feet of Gamaliel in very truth since Gamaliel was his teacher. To these pupils, the scribe repeated the oral traditions again and again until they were learned by heart, never to be forgotten. It was the ideal of the pupil to be like a cemented cistern that loses not one drop that it receives. The teacher also presented practical cases to which the pupils must apply the law. This with the rapid fire drill in their knowledge of the law sharpened the wits wonderfully, and we need not be surprised at Paul's readiness to meet and dispute with the Jews. He had been trained in controversy.

It was customary for the pupils to question each

other as well as their teacher, so we may understand the action of Jesus in sitting with the doctors (scribes), both hearing them and asking them questions. The scribes, themselves, met frequently to discuss points of law, and their pupils were allowed to attend these discussions. At such times, the questions were decided by the relative rank of the disputants. If there were decisions on that point already, those decisions stood, unless the scribes reviewing the point were more numerous or more honorable than the first. If it were a new point, the most honorable scribes controlled the decision. When there happened to be two great scribes of equal rank, but not of similar views, there was likely to be a division of sentiment, and two opinions offered. That meant two schools of scribes while those men lived.

Of course the Jews had courts of justice. They had their supreme court or Sanhedrin, just as we do, and many inferior courts. One did not need to be a lawyer to be judge, but he might be a better judge if he knew the law. How natural then for the scribes to be judges. And indeed many of them were. In the Sanhedrin they had their seats, and when cases came up for trial their influence must have been very strong. Later, especially after the destruction of Jerusalem, their authority became supreme in the courts of the Jews.

As said before, they were held in great honor; they enjoyed this very much. They loved to be called "rabbi" (my lord, or teacher). It was a part of their teaching that the pupil must love his teacher next to God. If his father and his teacher had each lost something, he must help his teacher first, and then his father. If both were in captivity, he must free his teacher first. This because his father only brought him into this world, but his teacher who teaches him wisdom, brings him into the life of the world to come.

All the teaching of the rabbi was supposed to be free of charge; the scribe who had no income, working at his trade, as Paul did, to support himself. But from what the Lord said in rebuking them, we infer that they knew how to enrich themselves at the expense of the people; and even Paul maintains his right to demand pay for his teaching.

Do not conclude from this article that the scribes were all evil men. Just remember what the Lord himself said of the scribe who hath been made a disciple to the Kingdom of Heaven (Matt. 13: 52). A number of the rabbis were great and good men, as was Gamaliel; and many of their teachings were deeply spiritual. It was far better to be a conscientious scribe than a worldly Sadducee. Their writings, you will find in the Talmud, and a wonderful book it is. If you have fifty dollars, you can buy a good English translation of it, but it is hardly worth the money.

There is some fine wheat in it, but too much chaff. Better read your Bible; it is all good.

Bethany Bible School, Chicago.

IMPORT JAPANESE WHITE OAK FOR RAILROAD CROSS-TIES.

THE growing scarcity of American timber suitable for railroad ties has induced one of the largest Japanese importing companies to introduce Japanese white oak as a desirable foreign species to take the place of the American oak, for railroad purposes. Several of the western roads have already purchased a large quantity of the Japanese white oak to be used in replacing worn-out ties along their rights of way.

The increasing cost of all railroad ties has naturally led the railroad companies to desire to prolong the life of the species of wood used, by preservative methods, and only recently an application was made to the United States Forest Service to conduct experiments at their Berkeley timber testing station to determine the value and life of the Japanese oak timber when properly treated.

This application brought up the interesting point as to whether or not the Forest Service would be allowed to undertake experiments with foreign species of timber, inasmuch as the act under which these experiments are carried on specifically requires that only American grown timbers shall be treated. The Forest Service has found it necessary, owing to pressure of other work, to decline to undertake this experiment, and therefore this point was not considered. It is estimated that there is a large supply of this white oak in Japan and should its use for railroad purposes prove satisfactory, it is probable that a large market will be created for it in this country.—*The Forester.*

RARE COIN FOUND.

COIN collectors are interested in the recent discovery of an entirely new twenty dollar piece of the Cincinnati Mining and Trading Company, dated 1849. So diligent have collectors been in their search for specimens of the gold coinage of the West, and so high have been the premiums paid for rare coins of this series that it was supposed that all the varieties had been found.

A twenty dollar piece of California bearing a date earlier than 1851 was not known. The Cincinnati company had been accredited with gold coins of the denominations of \$5 and \$10, both of which are extremely rare, one of the ten dollar pieces not long ago bringing \$3,000 at an auction, but no one knew that the same company had contemplated the issue of a twenty dollar piece until the coin in question came to light a short time ago in the possession of an Ohioan.—*Selected.*

NATURE STUDIES

WILLOW CATKINS AND GALLS.

N. J. MILLER.

EVERY American is acquainted with some kind of willow tree. The catkins have not failed to attract attention, but the flowers themselves, the individuals forming most of the catkins, are usually overlooked since they are without bright color, very small and unattractive. The masses of flowers, or catkins, may or may not unfold before the leaves (that depending on the species), and are of two kinds, each growing on separate trees. The loosely set masses (a) are usually slightly colored, hairy structures covered at maturity with powdery particles, pollen, and each of the flowers consists of a scale, one or two little glands and usually two slender filaments called stamens (s). On the other hand the closely set catkins (b) are usually soft gray or green and each flower usually consists of a scale, gland and one hairy pistil as figured (c), the club-shaped part developing into a conical

fruit or capsule. These appear in April, late spring or early summer.

These alone if ever fertile, are concerned in developing the "seeds" or "fruit" of the willow and not the peculiar growths on the ends of willows twigs called "pine-cone willow-galls." In summer they are green, soft, hairy structures and in winter hard brown, gray or black, very much resembling pine cones. Should a longitudinal section be made of a cone in winter time, a tube near the center, containing a white, footless, wriggling larva or worm-like form, will be seen. This larva is intimately connected with the development of the cone. An insect, a gall-gnat, deposits in early spring an egg in the tender, juicy, terminal bud of the

limb. This does not kill the bud but affects it in a wondrous way.

The leaves do not develop into the long, narrow normal structures (1). They form short and broad scales and the stem fails to lengthen, thus forming a "pine-cone willow-gall." It recalls the formation of the "witch's brooms," those unusual forms in willow trees—masses of twigs closely set and originating from a single branch. The peculiar, brushy forms, I suppose, suggested uncanny things to those who named them witch's brooms. In this case insects sting the growing point of a branch so severely that the branch remains short, thickens and the lateral buds, which otherwise would lie dormant a year or two, rapidly grow upward to form the peculiar structure.

The "pine-cone" gall begins to develop soon after the egg is laid and the larva, developing from the egg, feeds upon the plant juices, coming to the growing cone all summer. During the winter season it is well protected in this home and in early spring is ready to develop into a pupa which manages to move along the tube to the apex where it is transformed into a two-winged gnat. Then the tube opens to the surface and the gray animal flies away to deposit eggs in other young, tender and juicy terminal buds of the willow. The deserted cone, easily recognized by the hole at the top, soon drops off and disintegrates while new cones for the next generation of gall-gnats are gradually forming. So a "pine-cone willow-gall" is an abnormal growth due to an injury caused by a gnat, and has no connection with the fruit of the willow.

BOB WHITE AND THE MEADOW LARK.

NINE-TENTHS of the harmful insects that pester in orchard, field and garden are at some time in their career on the ground. If they are there by accident then the ground owner is justified in taking drastic measures for their removal; if they are there as a part of nature's scheme of furnishing food for birds, then the ground owner cannot count himself blameless if

he fails to permit the bird to come to breakfast in perfect liberty and freedom.

This article has to do with two birds,—one, Bob White, the Quail, the other called the Field Lark in the southland and the Meadow Lark in the northland. Bob White, the Quail, is to the nature student a most unique subject. Our Creator endowed that bird with some peculiar characteristics. First, it is the most prolific bird on the face of the earth; that is to say, one pair, Robert and Julia, will rear more young ones in a season than any other pair of birds; second, these birds never feed their young.

Before going into a consideration of their economic value in the place intended by him who doeth all things well, let us take a peep at their home and study their domestic life. It is the May-time. Robert, seated in a wheat field or on an orchard fence, is talking in an endearing tone to loving Julia, who in the grass or growing wheat is industriously hunting a home, a place where she may act in accordance with that first law of nature, the propagation of species. All she asks of the landowner is four inches of his field. Into that nest she will place, usually, seventeen eggs, sometimes twenty-five, so precisely that if you remove two from the charmed circle you can scarcely put back one. Nineteen days after the last egg is deposited, an observer who cares to see things in nature as they are can have a happy hour. First from under Julia will come a timid, shy, fuzzy creature, to be quickly followed by another and another and another. All the eggs will hatch within forty minutes from the time the first egg cracks. The ones to have the first great view of this world of ours will begin to play hide and go seek on and around their mother. In less than thirty minutes after the last shell has been broken that mother will start away from her home followed by her large and interesting family, three or four of them with half a shell sticking to their backs. and behind them will come Robert, happy, fatherly Robert, with head erect, watching with anxious eyes for intruders.

The mother is leading her family in quest of food. Too many children to carry food for as most other birds do, therefore she was ordered on creation day to point out the dainty morsels and let the children gather for themselves. She is an ideal rambler, and will lead those children around and around in that small field for many days if left undisturbed.

When the children are two-thirds grown, father and mother will lose them and proceed to have another home and another nest filled with eggs. The same operation of hatching and seeking for food is repeated; and when the second family are half grown the first children are hunted up, a reconciliation takes place, and then they go rambling around as a united family of from twenty-five to thirty-five active, whistling, agricultural implements.

The Secretary of Agriculture at Washington, D. C. has issued a special bulletin, which may be had for the asking, entitled "The Economic Value of Bob White." In that bulletin conclusive and absolute proof is furnished that quails are fond of at least sixty different species of harmful insects. I desire to call the reader's attention to this strange fact,—that the young quails in the wheat field are hatched just at harvest time, and that the Hessian Fly evolves from the larval condition just as the wheat is ripening, leaving the fly in the wing stage on the stubble of the wheat immediately after harvest.

The Meadow Lark is just what we call it. Mr. Meadow Lark belongs to the Oriole family and is a weaver of grass. He is so cunning in his weaving that he provides a home, covers it so carefully that many of our readers have passed within two feet of one of those brown grass fronts without seeing it.

Four eggs; then come four little children with long, yellow necks. Go some time before daylight, conceal yourself five or six feet from that home; see mother sitting on the little children, father about a foot and a half from them, with his head pointed toward them. Watch them before daylight as they start off through that meadow, hugging the ground so closely lest harm come to them before they are able to furnish their children breakfast. See them as they return again and again to that home, feeding their children more than one hundred and fifty times daily. Then with a pair of glasses examine the food that their children are fond of. You will discover that nine-tenths of that supply consist of wire worms or click beetles.

There will come a time when a Meadow Lark in the northern meadow will be considered worth twenty-five dollars; and after he has spent the summertime in the northern meadow, and goes to the cotton fields of the South for his winter work, he will be considered of such value that the man who dares to harm him will be placed in jail, where he belongs. The cotton industry of our southland is one of vast importance to all the civilized people on earth, therefore whatever machinery has to do with success in cotton growing is too valuable to be used as a target.—*Col. Isaac W. Proven in Bible Record.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

DURING these days of uncertain weather it is well to remember the promise that "while the earth remaineth, seedtime and harvest shall not cease."

WE often hear people complaining because they are misunderstood and laying their failures to this fact. It is an unfortunate condition, but as a misfortune it can in no way be compared with that of one misunderstanding himself. To go through life without knowing where we are or what we are is nothing short of a calamity.

By the time this issue reaches our readers many of them will be completing arrangements for attending the Annual Conference of the Church of the Brethren, to be held at Harrisonburg, Va., May 27-June 3, and those coming from the far West will be on their way. The editor hopes to be able to arrange the office work so as to attend a part of the meeting, at least. Sometimes it is worth while to do extra work for a time in order to have a few days off, and when attendance at our Annual Conference is the prize held out in return for the extra hard work we think it is *always* worth while.

If any one is contemplating sending us an article for the Fourth of July issue, treating some historical phase or in the way of suggestions as to a proper observance of the day, please bear in mind that the manuscript should be in our hands fully three weeks before the date of that issue, which this year is June 29, making June 8 the latest date for receiving copy to insure its appearance in that issue. This is necessary because of the arrangements made in the composing-room and pressroom for the getting out of the paper. We would be pleased to receive a number of contributions suitable for a Fourth of July issue.

PEACE ORATORICAL CONTEST.

ON the evening of May 1 there was an oratorical contest at Bloomington, Ill., between the colleges of the State which have organized peace societies. Ten colleges have these societies, seven of them bring represented in the contest of this year. Many of our readers will be exceedingly gratified to learn that the representative of Mt. Morris College, A. E. Myers, won second place in the contest and received the second prize, fifty dollars.

While recognition of the gift of oratory and the prize money are considerations not altogether to be ignored, they are insignificant compared with the real object of the contest which is the growth and strengthening of the peace sentiment, and we believe that those who are back of the contest have hit upon an effective means of increasing the peace forces thereby. To give this direction to the thought of those who are in the process of developing and training their thought powers is bound to bring a harvest of practical, effective work when the student later gets out into the field of action.

The contestant who won first prize in the State contest, Harold Flynn, of Illinois Wesleyan University of Bloomington, later represented Illinois in the interstate contest held in Chicago May 4, in connection with the National Peace Congress.

CARNEGIE HERO AWARDS.

THE Carnegie Hero Fund Commission at its regular quarterly meeting in Pittsburg, May 3, made awards to twenty-three persons in different parts of the country for deeds of heroism considered since the last meeting. The awards consist of sixteen bronze medals, seven silver medals, \$14,000 in cash, and annuities amounting to \$125 a month. Ten thousand dollars was also appropriated by the commission for the relief of relatives of the victims of the two mine explosions in the Lick Branch mine at Switchback, W. Va., on Dec. 29, 1908, and Jan. 12, 1909.

As many of our readers knew, this "hero" fund of \$5,000,000 was established in 1904 by Andrew Carnegie "to place those following peaceful vocations, who have been injured in heroic efforts to save human life, in somewhat better positions pecuniarily than before, until again able to work. The field embraced by the fund is Canada and the United States, and the waters thereof."

This hero fund is significant of the humane idea of this age, and its estimation of real bravery. Slowly but surely we are growing away from the idea, so long predominant, that the hero is the man who risks his life to *kill* others instead of to save them. The man who could force the largest number of his enemies into a position where they could be easily done to death and the man whose sword was deepest stained with the

blood of his fellow-men were once (would that we might say in the misty ages of the past!) awarded the hero medals and accorded every honor to show the high value placed upon such deeds. This in civilized (?) nations, though the same rules obtain in the hunting lodge of the savage when the "braves" return with their string of scalps, or heads, as in the case of headhunters.

It is true that the Carnegie Hero Fund does not reach all the real heroes of the present time, and neither does it aim to do so, but because it does not is no reason why we should discourage the beginning it has made in recognizing the noble, self-sacrificing impulses that are to be found in many human hearts. If it does nothing more than to cause us to consider seriously what constitutes a real hero, thus pointing out to us the thousands who go quietly through this life unrewarded as such, the fund shall not have been established in vain.

The medals awarded by the Carnegie Hero Fund Commission are encircled with these words: "Greater love hath no man than this, that a man lay down his life for his friends." Following are the interesting statistics of the five years since the fund was established: Cases considered, 3,219; granted, 246; refused, 2,059; pending, 914. Gold medals awarded, 13; silver, 113; bronze, 120. Pecuniary awards to heroes and their dependents, including pension allowances, \$164,941.54.

THIS TOO SHALL PASS.

A mighty monarch in the days of old
Made offer of high honor, wealth and gold
To him who would produce in form concise
A motto for his guidance,—terse yet wise—
A precept, soothing in his hours forlorn,
And one that in his prosperous days would warn.
Many the maxims sent the king, men say,
The one he chose: "This, too, shall pass away."

Oh, jewel sentence from the mine of truth,
What riches it contains for age or youth.
No stately epic, measured and sublime,—
So comforts, or so counsels, for all time,
As these few words. Go write them on your heart,
And make them of your daily life a part.
Has some misfortune fallen to your lot?
This, too, shall pass away—absorb the thought,
And wait; your waiting will not be in vain.
Time gilds with gold the iron links of pain.
The dark today leads into light tomorrow;
There is no endless joy, no endless sorrow.

Are you upon earth's heights? No cloud in view?
Go read your motto once again: This too
Shall pass away; fame, glory, place and power,
They are but little baubles of the hour,
Flung by the ruthless years down in the dust,
Take warning and be worthy of God's trust.
Use well your prowess while it lasts; leave bloom,
Not blight, to mark your footprints to the tomb.
The truest greatness lies in being kind;
The truest wisdom in a happy mind.

He who desponds, his Maker's judgment mocks;
The gloomy Christian is a paradox.
Only the sunny soul respects its God.
Since life is short we need to make it broad;
Since life is brief, we need to make it bright.
Then keep the old king's motto well in sight,
And let its meaning permeate each day.
Whatever comes, "This too shall pass away."

—Unidentified.

TOO MUCH LITERATURE.

IN our eagerness to persuade all families to have their homes supplied with plenty of good literature, let us not forget that it is possible to have too much, even of the kind of literature which is sound and helpful. That is, it is possible to have so many good books and good papers that the study of the Bible and other necessary study is neglected. In some homes there is to be found a liberal supply of standard works, especially of the latest out; all the books and papers published by their respective denominations; special papers devoted exclusively to temperance, or lodgism (for or against), or horticulture, or stockraising, or mothers, or Sunday schools, or young people's movements, or education, or other special lines; all the county papers and one or two leading dailies. If these are carefully read (and what is the use in having them if they are not) where is the time left for Bible study? We can see how any of the above may be used to advantage in the family of average intelligence, but we can also see how that there is either some money wasted in buying literature which is never read or time wasted by displacing the Bible by literature of less importance. When confronted with too great a variety of literature, we are not always wise in selecting and reading the best. Every family should determine as to what is best in the selection of good literature, and discard the rest.—*Gospel Herald*.

OUR PART IN THE WORK.

ALL of us at times are afflicted more or less with the feeling that we have accomplished much less in the world than we might have accomplished had we tried harder. We have done nothing to attract the attention of mankind; we have looked constantly for some great work or noble opportunity for brilliant service and it has not come; we feel that we are almost failures. And yet, if we have not attracted the attention of the world, we have at least, by our care in doing our duty, led the man who has the desk next to us to do his, when otherwise he would probably have failed. Our positions may be humble, but in them we are like pieces of the mechanism of a great machine. If we were not there and did not do our part, then the work of the machine would be imperfect. No man need be termed an absolute failure this side of the grave.—*Selected*.

THE HOME WORLD

WHEN LOVE COMES TOO LATE

ELIZABETH D. ROSENBERGER

"But the tender grace of a day that is dead
Will never come back to me."

THERE is always the future, like a shining stretch of sea, vast and unfathomable. To know the present hour is to know the value of the whole future. Now, O child, your life is free from care, you have only longings for the gifts that the years alone can bring. The sunshine, the bright flowers, the song birds, the clear sky are all for you. And you are impatient for what the years will bring? They will rob you of the joys of today, and no man can say what they will leave in their place.

"Now," you have the dear mother with you, and the family circle is complete; now is the time to say to one and all, "I love you," "You have done so much for me." You ought to live your life with God. All its daily duties, all its small delights should be refined and uplifted because of him whom you serve. There will come some things that are hard to bear, trials, and sharp conflicts and pain, and at the last there is a shadowed valley where each one of us must receive a mortal thrust. But "now" we see none of those things, the sun shines and love and joy are ours.

Yes, and now is the time to be patient and forbearing with those whom we love the best, a word of love and appreciation means so much to them. If we are too busy, too much occupied with our own affairs, to love and cherish them as we should, we may have unavailing regrets when they are taken from us. The Spaniards have a saying that there is no house without its "hush." Sooner or later there comes to every home the hush of bereavement.

"And the heart can have no sadder fate,
Than some day to awake—too late!
And find love dead."

One young lady who lived in Washington told this sad story. Her father was a physician, he had a large practice and the family lived in comparative luxury; then he died suddenly and there was but little left for their support. The daughter said: "I do not mind being poor, but I am broken-hearted because none of us saw that he was dying. Was it not pitiful that he

should think it not best to tell us that he was sick? And yet we knew that he suffered at times, but we all went on just the same, hoping it would come out all right. If I could only remember that even once I had pitied his suffering or felt anxious about his life I might bear his loss better. My own dear father; how terrible it is to love when it is too late!"

Is she alone in her vain regret? No, for the story is common enough. Many a father goes on, year in and year out, carrying the burden and managing to support his family in luxury, while those whom he tenderly loves hold with but careless hands the gold he worked so hard to gain. Then some day it is all over, head and hands can toil no more. Then the family suffer just as did this daughter, and in their sorrow they long for one more opportunity to tell their love. If the dead could return how graciously they would atone for their neglect.

"But when the love we hold too light
Is gone away from our speech and sight,
No bitter tears.
No passionate words of fond regret,
No yearning grief can pay the debt
Of thankless years."

We remember another instance. A young girl was anxious to continue her work of nursing. Her physician warned her that to do so was to endanger her health. She answered, "I cannot give up this work upon which I have set my whole heart without testing my strength a little further!"

But the doctor frowned. "Has any one ever told you that you are a very selfish girl?" he asked unexpectedly. "Even should you be so foolhardy as to continue nursing, have you any idea of what it would mean to your father and mother whom you pretend to love? You are the only sister to whom several brothers look for counsel and sisterly help. After all that your home people have done for you, have they no claim upon you? Have you the right to throw away your life? Would you sacrifice your nearest and dearest, and cause them untold suffering for the sake of the very questionable good that you in the present

state of your health might accomplish for a while,—in behalf of strangers?"

It was a strong appeal, and after some sleepless nights she decided that she would do all she could to make the dear ones at home happy, with never a backward glance at the sacrifice it demanded of her. And she never regretted her decision. She said once, "I am glad that I have been spared the remorse which would have been my portion if I had taken my own way, selfishly."

It is worth while to think of these things now. While life is new, while years are few, while feelings are tender and character is forming, let us guard against those things that may give offense or that may cause us self-reproach. The time is coming when our home ties must be sundered. But if the mourner finds cause for self-accusation and remorse in connection with his grief, his sorrow culminates there, and amid such sadness the eventide of life may often find us weeping over the errors of the morning.

"Gather blossoms for the living,
They'll enjoy their sweet perfume;
Do not wait till they are resting
In the dark and silent tomb.
They may brighten life's dull pathway,
Some poor sufferer they may cheer,
Send them in their radiant beauty,
Heaven may seem more near and dear."

THE POWER OF THE HOME.

THE welfare of the state depends absolutely upon whether or not the average family, the average man and woman and their children, represent the kind of citizenship fit for the foundation of a great nation; and if we fail to appreciate this we fail to appreciate the root of morality upon which all healthy civilization is based. There are certain old truths which will be true as long as this world endures, and which no amount of progress can alter. One of these is the truth that the primary duty of the husband is to be the home-maker, the breadwinner for his wife and children, and that the primary duty of the woman is to be the helpmeet, the housewife and mother. The woman should have ample educational advantages; but, save in exceptional cases, the man must be, and she need not be, and generally ought not to be, trained for a lifelong career as the family breadwinner; and, therefore, after a certain point, the training of the two must normally be different, because the duties of the two are normally different. This does not mean inequality of function, but it does mean that formally there must be dissimilarity of function. On the whole, I think the duty of the woman the more important, the more difficult and the more honorable of the two; on the whole, I respect the woman who does her duty even more than I respect the man who does his.

No ordinary work done by a man is either as hard or as responsible as the work of a woman who is bringing up a family of small children; for upon her time and strength demands are made not only every hour of the day but often every hour of the night. She may have to get up night after night to take care of a sick child, and yet must by day continue to do all her household duties as well; and if the family means are scant she must usually enjoy even her rare holidays taking her whole brood of children with her. The birth pangs make all men the debtors of all women. Above all, our sympathy and regard are due to the struggling wives among those whom Abraham Lincoln called the plain people, and whom he so loved and trusted; for the lives of these women are often lived on the lonely heights of quiet, self-sacrificing heroism.

Of course there are exceptional men and exceptional women who can do and ought to do much more than this, who can lead and ought to lead great careers of outside usefulness in addition to—not as substitutes for—their home work; but I am not speaking of exceptions; I am speaking of the primary duties; I am speaking of the average citizens, the average men and women who make up the nation.

Into the woman's keeping is committed the destiny of the generations to come after us. In bringing up children mothers must remember that while it is essential to be loving and tender it is no less essential to be wise and firm. Foolishness and affection must not be treated as interchangeable terms; and besides training your sons and daughters in the softer and milder virtues you must seek to give them those stern and hardy qualities which in after life they will surely need. Some children will go wrong in spite of the best training; and some will go right even when their surroundings are most unfortunate; nevertheless an immense amount depends upon the family training. If mothers through weakness bring up sons to be selfish and to think only of themselves, they will be responsible for much sadness among the women who are to be their wives in the future.

There are many good people who are denied the supreme blessing of children, and for these we have the respect and sympathy always due to those who, from no fault of their own, are denied any of the other great blessings of life. But the man or woman who deliberately foregoes these blessings, whether from viciousness, coldness, shallow heartedness, self-indulgence, or mere failure to appreciate aright the difference between the all-important and the unimportant—why, such a creature merits the contempt as hearty as any visited upon the soldier who runs away in battle, or upon the man who refuses to work for the support of those dependent upon him, and who, though able-bodied, is yet content to eat in idleness the bread which others provide.—*Theodore Roosevelt.*

THIS BABY OF OURS.

There is not a blossom of beautiful May,
 Silvery daisy or daffodil gay,
 Nor the rosy bloom of apple tree flowers
 Fair as the face of this baby of ours.

You can never find on a bright June day
 A bit of fair sky so cheery and gay,
 Nor the haze on the hill in noonday hours
 Blue as the eyes of this baby of ours.

There is not a murmur of wakening bird,
 The clearest, sweetest that ever was heard
 In the tender hush of the dawn's still hours
 Sweet as the voice of this baby of ours.

There's no gossamer tint of tasseled corn,
 Nor flimsiest thread of the shy woodfern,
 Not even the cobweb spread over the flowers,
 Fine as the hair of this baby of ours.

There is no fairy shell by the sounding sea,
 No wild rose that nods on the windy lea,
 No blush of the sun through summer showers
 Pink as the palms of this baby of ours.

May the dear Lord spare her to us, we pray,
 For many a long and sunshiny day,
 Ere he takes to bloom in Paradise bowers,
 This wee bit darling—this baby of ours.

—Author Unknown.

**THE LITTLE THINGS.**

Do not punish the children for accidents which can not be helped, or which occur in unaccountable ways. Talk to them, and tell them that with a little care the loss could have been avoided, and impress it upon their minds that every breakage, or bit of destruction is, in some sort, a loss, and will bring hardship, or self-denial in order to be replaced. Teach them to think, and to realize that carelessness is always costly.—*Selected.*

**REMOVING ALL SORTS OF STAINS.**

ACID stains, such as vinegar, wine or fruit stains, can be removed by pouring boiling water through the white cotton or linen cloth, by holding the cloth over a vessel.

Blood Stains—Make a thick paste of cornstarch wet with cold water. Apply to the material and when dry, brush off. Soaking in tepid rainwater is very good. Or use tepid solution of one tablespoonful of kerosene to one gallon of water. Let stand a few minutes, then soak in cold water. Then wash in a good, soapy water and hang in the sun.

Chocolate or Cocoa Stains—Use cold water, then pour boiling water on the stained portions.

Coffee Stains—Pour boiling water through the cloth.

Cream Stains—Dampen the spots with diluted ammonia water as one to four of water. For badly stained linen try five parts of glycerine, five parts of water, and one-fourth of ammonia. Apply to the stain and let it remain six or eight hours, then rub with a clean cloth.

Egg Stains—Table salt and a wet cloth will remove egg stains.

Fruit Stains—Powdered starch applied instantly will take out almost any fruit juice stain from wash goods, if allowed to remain on the goods for a few hours until the discoloration passes into the starch. If the spot has been fixed some time soak the article in a weak solution of oxalic acid and rinse immediately in boiling water or hold the spot over the fumes of sulphur.

Grape Stains—Wash with warm, soapy water and a little ammonia water, sponging afterward with clear, cold water.

Grass Stains—Saturate the spot in alcohol or kerosene, then in clear water.

Grease Spots—For grease in cloth make a paste of fuller's earth and turpentine. Rub on fabric until turpentine evaporates.

For silk, use gasoline. The fabric should be cleaned with a piece of the same goods, the cloth rubbed lengthwise and with the weave.

Grease spots can be removed from marble by applying a paste of potash and whiting.

Grease spots can be removed from wallpaper by rubbing with soft bread-crumbs. Work in a rotary motion.

Ink Stains—Sweet milk or use lemon juice and salt or oxalic acid, which is stronger solution, rinsing in hot water.

Iodine Stains—Soak the spot in alcohol, then in soapy water. If powdered starch be applied immediately and allowed to remain until dry, then brush off, the stain will leave.

Iron Rust—Lemon juice and salt and put article in hot sun. Oxalic acid is a sure remover, but one must be careful in using it, as it will eat the goods. Dip the article quickly in hot water.

Mildew—Soak the article in sour milk and lay in sunshine to dry; or dip article in one part of chloride of lime and twelve parts of water (strained) and lay in the sunshine. As soon as white, rinse thoroughly.

Oil Paint—Remove oil paint with pure turpentine. Ammonia is sometimes good; rinse in clear water.

Perspiration—After rubbing soap on stain, lay the garment in the hot sunshine. This only applies to white goods.

Scorch—Rub the article with soap and bleach in the sun.

Soot Stains—Rub the spot with dry cornmeal or salt.

Tea Stain—Boiling water poured through the cloth will remove freshly made stains. For obstinate stains use either a strong solution of tartaric acid, chloride of lime water, or javelle water. Soak in the bleaching mixture until stain disappears, then rinse in several clear waters.

Tar Stains—Rub the soiled part with lard, then with soap and water.—*Household Journal.*

The Children's Corner

THE LADDIE FROM LILLIPUT LAND.

CLARA NORTH RULEY.

BETTY and Mary Belle were out under the wild grapevine, making a playhouse. It was a most accommodating grapevine, twining and creeping over an apple tree in such a manner that a delightful shady arbor was the result. Near it was the partition fence that separated their yard from the one that belonged to the House just North.

The House just North was a house of mystery, though it was very commonplace in appearance, but for weeks, though it was rented, neither Betty nor Mary Belle had been able to catch a glimpse of the occupants. They had watched patiently for some one to enter or leave the place but so far their patience had been unrewarded. Just now they had forgotten the House just North, for Mary Belle was busily engaged in the manufacture of a cupboard for their dishes and Betty was deep in the mysteries of a playhouse stove. This last must be constructed with great care, for sometimes mama let them build a real little fire and cook real dinners in the playhouse. This was when they had both been very good and mama had time to sit out on the lawn within reach in case of an accident. Betty had finally decided that she would need to call in the aid of her brother John who, though he was younger than either of the girls, was a very practical little boy and could make many things for the girls when he was so minded. Suddenly Betty missed Mary Belle's constant chatter, and looked up from her task to see what had happened, for it was a serious thing indeed that stopped Mary Belle's tongue.

There she was, one black eye glued to a knot hole in the fence, the other rolled desperately toward her sister. Up went her finger as Betty was about to speak. Then she motioned. Betty crept curiously up to the fence and in turn applied her eye to a crack, no other knot hole being available. There stood a real little Lord Fauntleroy, long golden curls, velvet suit and all.

Betty was a romantic little soul and for a moment she thought she had been transplanted to a land where fairies ruled. Perhaps she herself was changed, but no—with a pang of regret she saw the patch on her apron and Mary Belle's pig tails had the same uncomplaining quirk in them that they had a while ago. There was John in his Brownie overalls, busily sharpening skates on this summer day getting ready for winter. John was the one to be ready for anything. No, it was only in the yard of the House just North that enchantment reigned.

Betty leaned over to Mary Belle and whispered

softly, "Do you suppose he is a real little boy, Mary Belle?"

"'Course he is," answered Mary Belle, scornfully. "I 'spect his mama's a silly woman that thinks it looks nice to dress her little boy up in his Sunday clothes every day. Most likely it will kill him, for I heard Uncle Doctor say that it was very bad for children to be dressed up all the time."

"But," objected Betty, "they can't be Sunday clothes, they arn't a bit like John's."

"Well, they are, anyway," insisted Mary Belle, stoutly.

"Let me peek through the knot hole, Mary Belle; this crack is such a tiny thing that when I am looking at little Lord Fauntleroy's face I can't see his curls."

But Mary Belle, secure in the right of possession, would not surrender the knot hole. So Betty secured the aid of John, who widened the crack into a very respectable looking knot hole. By this time their whispers had become audible and attracted the attention of the little boy in the yard of the House just North. He came over to the fence. Mary, nothing loth to begin a conversation, said, "Hello, little boy, do you live in the House just North, and are you a fairy boy or a real boy?" To the children's astonishment he told them that he didn't even believe in fairies. "Who are you then?" said Mary Belle.

"I'm the laddie from Lilliput Land."

If he had said he was Prince Prettywits, from Fairyland, they would not have been more puzzled, so he explained to them that he was the little boy in an extravaganza making a summer run in the nearby city.

Just then a big fat man and a pretty lady came out of the house. "Is that your mother and father?" said Betty.

"No, indeed," said the laddie from Lilliput Land. "That is the Manager and the Leading Lady. My mama!" and he laughed, "Why, my mama is a heap prettier than that lady. Why, she just looks like that lady going across the street," and Betty, Mary Belle and John all cried, "That is *our* mama."

Then the laddie from Lilliput Land told the children that his papa was dead and his mama had been ill for a long, long time. One day the Leading Lady happened to see him. She told the Manager she had found the very little boy they needed for the play, so the Manager, who was a very kind-hearted man indeed, advanced money to the Laddie's mother, so she might go to a sanitarium and get well and strong again, and the Leading Lady brought the Laddie with her to this house in the suburbs for the summer. Just then a big colored woman, the biggest Betty, Mary Belle and John had ever seen, came to the door and called the little boy. He ran to the house with the promise that he would come again the next day.

Milford, Ind.

THE QUIET HOUR

SERMONS,—LONG AND SHORT.

J. G. ROYER.

MUCH has been said by mouth and pen, first and last, about long sermons and short sermons. At this time the shorts seem to have it. Clocks are now placed inside of the churches presumably to keep from staying too long, and the preacher has his watch lying on the book-board to keep from saying too much.

In my earlier church-going, when, as it now seems to me, people had more religion, clocks were put on the outside of churches to keep the people from coming too late; and the preacher looked at the face of the congregation, rather than at the face of his watch, to regulate the length of his sermon. Observation has taught me that the face of the watch sometimes says thirty minutes, while the face of the congregation is saying an hour, an hour! Better stick to the face of the congregation, my brother.

Every preacher ought to have some short sermons and some long sermons; for there are, so to speak, some short hearers and some long hearers, short subjects and long subjects, long occasions and short occasions. Things ought, as far as possible, to be made to quadrate, *i. e.*, to fit or suit and correspond.

I once heard of a preacher who went out to a country schoolhouse on a wintry morning. On his arrival he found a few men and women rather meagerly clad, on the sunshine side of the house, shivering from the bleakness of the morning. The preacher invited them to listen to a sermon over an hour long, on the love of the world and the danger of riches. At the close of the meeting one of the congregation was heard to say to the one next to him that he doubted if the entire congregation could have raised a dollar and a half.

Now, a short sermon would have suited better on that morning, and heaven would have been a more suitable subject, closing with the hymn:

"No chilling winds nor poisonous breath
Can reach that healthful shore."

Then there are times when everything seems to say: "We want it long today." Long heads, high heads, and broad heads are present—farmers, mechanics, merchants, teachers, editors, and housekeepers,—all are present on this beautiful summer morning, and everything seems to say: "Dear brother, we are with you today as long as you please. Share with us liberally the good things of the Lord." Now you can give them

a long sermon. They will not only stand it, but they will be glad for it.

But night will draw on. The bright sunshine of the morning will be asleep in the west, and the balmy breezes will have lulled. It will be sultry and close this evening. The room will not be uncomfortably crowded—plenty of seats—quiet will reign. Now, better give them one of your short sermons.

A preacher is always safe in giving a short sermon to a long hearer; but it is unwise, if not cruel, to try to crowd a long sermon into a short hearer. A good sermon need not be long, and a poor one ought not to be long. I have heard forty-five-minute sermons that were shorter than some twenty-five-minute sermons I have listened to.

And such it seems to me is the long and short of sermons.

THE CLOSED HEART.

D. D. THOMAS.

A SHELL lay open in the shallow waters of the ocean shore, taking and assimilating such food as came within its reach. A delicious morsel lay just beyond. It yearned passionately for that especial bit of food, refusing to partake of any other. It was compelled, however, to see another denizen of the deep pick it up, and to the shell it was lost forever. Slowly it closed its stony jaws and there disconsolate it died at last.

One could not question the right or wrong of the shell for such a thing, as by no code or reasoning could we fix responsibility upon it. But we can see how it lost life when it could have lived, how it delved into the clouds when there was plenty of sunshine, how it became a stranger to hope when hope was knocking at the door.

There are questionable elements that enter into an action of that kind. The "other denizen" might have starved so far as the shell was concerned. The pleasure of eating was more to it than the searching where most life could be given. Self-denial was not an element that it harbored. Then when it saw the morsel go it became envious and it could be said that envy ate its vitals out. In its heart no doubt its fellow being was murdered though it was helpless to perform the overt act.

Heaven showered blessings upon it and what it had of life was a song. It looked forth and saw that which would benefit others and began to covet. That was the

starting down hill toward the exit of life. For even the life within the shell is affected by that law, that "he who would gain life shall lose it," and it is a law that the highest animate life cannot change. An affection sprang up, very ordinary at first, but grew and grew into inordinate, that excluded the love from heaven itself. Well, the source of life was cut off, and one can see how death could not be excluded. But such are the mercies of God that even under conditions of this kind there is still hope. The waters are there to bear the morsels of life, the power is within to assimilate.

It has coveted and lost. It has shut out the source of life. A false pride arises not to be humbled by admitting some other morsel. Here they are all around. The waters are teeming with them. The voice of appeal is heard but it is deaf to all these. The winds bear the glad tidings of the goodness and glory of God, but the little shell fitted by the Maker to preserve life lies listless upon the ocean shore. It has been deluded into believing that it was suffering martyrdom, when it was the victim of intense selfishness; that it was acting righteously, when every act was destroying life; that its virtue would be acceptable to God, when its example would result in the extinction of all living beings. So delusive is the light that Satan sheds upon his victim's work.

Let us imagine another course open to the shell. The wraiths of the sea are ever a feast to it. These songs, now low, now high, then dying away in the distance, now rising with a grandeur, so fill its life that it is very happy. The sunshine gladdens it and the darkness soothes it. The tears of heaven refresh it and the waters of the sea replenish it. Its days are filled with rejoicing and its nights are serene with peace. It grows and enlarges its life and at death there are no stings of pride or thrusts of envy. Even when the life has escaped, the organs of its being torn down, its shell all that remains, then the laughing maid upon the shore picks it up and she hears it sing of the sea.

Lafayette, Ohio. ❀ ❀ ❀

THE TEST OF MEN.

ONE recognizes in our own rough daily judgments that fidelity is the discriminating test of men. We are told that So-and-So has made a certain statement. That gives the statement no significance of value to us. But So-and-So also made it. That quite alters the matter. He is a faithful man and his own trustworthiness covers all that issues from him. It is what we seek in servants—simple fidelity in all quiet and unostentatious duty. And it is what we crave in friends. "Give us a man," said Dean Stanley, "young or old, high or low, on whom we can thoroughly depend, who will stand firm when others fail; the friend, faithful and true; the adviser, honest and fearless, the adversary, just and chivalrous; in such a one there is a fragment of the Rock of Ages." For, as Paul joyfully realized, fidelity is the very nature and

characteristic of God. Whatever else changes, he changes not. He abides faithful because it is his own being. He cannot deny himself.

Love, says Paul, is a greater thing than faith or hope, but love in this sense is simply fidelity, the realization in life of the faithfulness of God. Paul's doctrine is that fidelity, which is simply veracity in action, is sovereign over life. And this is Christ's doctrine: "Be thou faithful unto death, and I shall give thee a crown of life." That was the closing verse in a small Christian tract prepared for distribution to the Japanese soldiers going to Manchuria. A captain read it with delight. "That is the religion for us," he said. A curate whom the late Archbishop Temple proposed to send to a very difficult post, was urged by his friends to decline, on the ground that he would not live two years in the strain and trial of it. He came to Temple, "Yes, it may be so," was the reply, "but you and I don't think of things like that, do we?"

Dying is a trifle, an incident in the temporary episode of life, but fidelity is no trifle. It is an anchorage in the eternal moral integrity of God. To betray it for the sake of life or any other bauble, is to trade glass for diamond; to build hay, whose end is fire, instead of gold, which is to be tried and to endure.

This conception of what, after all, is the greatest thing in life, dignifies our common ways. It brings the heroic within the reach of each one of us. If we can display the divine nature in our common living then that glory is possible to every one.

And it is by taking advantage of this possibility of fidelity in the ordinary things of life that we shall come some day without knowing it to the glory of the Divine character realized in life.—*Robert E. Speer.*

❀ ❀ ❀ WHICH?

READER, there are two ways of beginning the day, with prayer and without it. You begin the day in one of these two ways. Which?

There are two ways of spending the Sabbath, idly and devotionally. You spend the Sabbath in one of these ways. Which?

There are two classes of people in the world, the righteous and the wicked. You belong to one of these classes. Which?

There are two great rulers in the universe, God and Satan. You are serving one of these great rulers. Which?

There are two roads which lead from time to eternity, the broad and the narrow road. You are walking one of these two roads. Which?

There are two deaths which people die, some die in the Lord and some die in their sins. You will die one of these deaths. Which?

There are two places to which people go, heaven and hell. You will go to one of these places. Which?

—*Parish Visitor.*

ECHOES FROM EVERYWHERE

The State Supreme Court of Kansas has decided that a distiller, brewer or wholesale wine dealer cannot invoke the aid of the courts in collecting a bill for liquor in Kansas. The suit was brought by the Nelson Distilling Company in Butler County.

In order to protect the consumers of bread against the microbes that may infect it while being transmitted from the bakery to the customer, the Montclair, N. J., board of health has adopted a rule requiring that every loaf delivered in the town shall be delivered in a sealed aseptic bag.

In Canada an effort is being made to induce Swiss immigrants to settle there, a somewhat difficult task, as in Switzerland the emigration laws are very strict, the circulation of literature describing foreign countries being forbidden, as well as personal solicitation. Only about 6,000 Swiss leave their native land each year to settle elsewhere.

An attempt is to be made to acclimate the Korean wild fig in California. The fig, growing on a hardy vine, on trees, trellises, and hedgerows to a height of 30 feet, bears a delicious fruit. Some of the seed has been sent to the Department of Agriculture, California State University. The fig grows wild in Korea, and has proven of great value there.

Nearly \$8,000,000 of treasure was found in the Yildiz Kiosk, which had been placed there by Sultan Abdul Hamid. It has been decided that out of this sum will be paid the expenses of the mobilization and the maintenance of the army which overthrew the Sultan. All other monies belonging to the deposed Sultan will be confiscated by the state.

The minister of marine, Admiral Mirabello, has obtained the approval of the Italian Cabinet to a naval programme that provides for the construction within 'three years' at a total expense of \$52,800,000 of four Dreadnoughts and several fast scout cruisers. A local paper says the decision to build these vessels was reached after Italy had learned that Austria-Hungary was going to spend \$40,000,000 on increased naval power.

Miss Addie M. Hunt, a trained nurse, has secured one of the largest judgments in the history of New York personal damage actions. The jury awarded her \$58,000 damages against the Long Island Railroad Company. Both of Miss Hunt's legs were taken off by a Long Island train two years ago. She fell beneath the car and her petition charged that the train started to move before she could board it. Four months ago, at the first trial of the case, Miss Hunt was awarded \$25,000, but the court set the verdict aside on the unusual ground that it was inadequate.

Prince Lidj Jeassu, 13 years old, grandson of King Menelik of Abyssinia and heir apparent to the throne, was married May 16 to Princess Romanie, 7 years old, granddaughter of the late Emperor John and niece of Empress Taitou. The marriage is of great importance politically, as it unites the two dynasties and families of powerful chiefs.

The faculty of Drake University, Des Moines, Iowa, have taken drastic measures—that might well be widely patterned after—to compel the elimination of objectionable matter from the university paper, the Quax. The annual edition, just published at a cost of \$3,000, was confiscated and the editors compelled to cut out offensive cartoons that reflected on one of the faculty and one of the students.

The Duke Di Litta has sent an Italian inspector of emigration to his big estate on the Manatee River in Florida to study the economic and hygienic conditions with reference to the proposed colonization there of 5,000 earthquake sufferers. The Duke made his offer to the government shortly after the earthquake devastated Messina and Reggio. He owns great tracts of land in southwest Florida which he proposes to permit quake victims to farm on shares.

Dr. H. O. Beeson states that a very common and entirely avoidable cause of indigestion is the use of common salt in excess. Salt, if used in the proportion of 4 parts or less to 1,000, is beneficial to digestion, but beyond 6 parts to 1,000 it is positively harmful. Our daily average consumption is approximately 22.5 parts to 1,000, whereas sea water contains only about 27 to 1,000. Our daily army ration contains 307 grains of salt, of which only 15 are assimilated.

A novel device has been invented for use in hotels, to enable the patrons to determine the exact time at any hour of the day. A small telephone receiver is connected to the head of the bed in each room, and may be placed under the pillow, if desired. The device is connected to a master clock. When the sleeper wishes to know what time it is, he places the 'phone to his ear and presses a button. A set of gongs will then strike the hour, the quarter, and the number of minutes past the quarter.

The commandant of the Paris police has devised a pair of spectacles by the aid of which his men can not only see what is going on in front of them, but at the same time note what is taking place to the rear. Small concave mirrors are attached at the outer edge of the corners, being so placed as not to interfere in the least with the forward view. A trial of the spectacles is said to have proved to be very satisfactory, and it is expected that the efficiency of the police will be increased by making use of them.

A special committee of the Turkish Parliament is considering an amendment to the constitution by which the succession to the throne will no longer go to the oldest male descendant of Othman, the founder of the dynasty. The Young Turks favor a descent from father to son, as in other European countries. If the proposed change in the constitution is effected the Young Turks plan eventually to ask Mehmed V to abdicate in favor of a prince of greater physical vigor and—what is more important—more in touch with modern ideas and with the world of men.

The Netherlands General Peace League has started a movement to try to induce all the governments of the world to become parties to the Danish-Netherlands treaty of obligatory arbitration. This treaty, it will be remembered, is without limits either as to time or classes of disputes. It refers all controversies for all time to the Hague Court. It is therefore the model treaty. It contains a provision also that other governments may become parties to it. The Netherlands Peace League is asking the peace societies and workers in all countries to aid in securing the realization of their proposal.

Miss Carolina H. Huidobro, well known in peace circles for her peace addresses, which were devoted mostly to the interpretation of the events leading up to the erection of the great peace monument, "The Christ of the Andes," on the boundary between Chile and Argentina, died of heart disease at her apartments in the Hotel Clarendon, New York, on April 13. Miss Huidobro was a native of Valparaiso, Chile. She came to this country at the age of seventeen, to complete her education, and then returned to Chile. She returned to this country fifteen years ago and remained here. She was much interested in the peace movement and was a good speaker.

The colored folks at the national capital and in the nearby States of Virginia, Maryland, Pennsylvania, New York, etc., are making arrangements to be largely represented at the big national convention of the National Negro American Political League, which is to begin its second annual sessions on May 27 at Columbus, in the Buckeye State. This organization is widely extended and has its headquarters at Washington. The National Negro American Political League was formed in the City of Brotherly Love, in Pennsylvania, about a year ago as a merger of a number of national, State and local political organizations. Its purpose is to convince the colored voters, particularly in the North and West, of the necessity of using their ballots primarily to secure race rights, rather than in the interest of any political party.

The first sweeping change in the affairs of the New York custom house under the administration of Collector Wm. Loeb, Jr., was recently announced when it was officially stated that the offices of four of the five United States weighers had been abolished. The change, which went into effect at the close of the business May 12, removes from office Chas. H. Wardell, Jr., Archibald Edmunston, John W. O'Brien and Chas. DeWitt Drew. There is now but one United States weigher, Thomas D. Hyatt, who was of assistance to the government in the prosecution of the sugar frauds and other short weight cases. The weighers' offices of the docks have been removed to the custom house. Ten of the assistant weighers who were of assistance to the government in bringing to light underweighing frauds have been made deputy weighers with an increase of salary.

Yielding to the insistent demands of a large part of the Russian public, the Czar has ordered the release from Fortress Peter and Paul of Admiral Nebogatoff and Gen. Stoessel, who were undergoing life imprisonment, the former for the surrender of his ships to the Japanese in the battle of the Sea of Japan and the latter for lowering his flag at Port Arthur. Both the admiral and the general are in failing health and it is believed that Stoessel has but a short time to live.

In the hope of guarding against future disturbances among state employes, the French Government has begun drafting a statute granting its employes the right to form benefit associations, but denying them the right to strike or confederate themselves with civil unions. The passage of the measure when completed is practically assured. The postmen's and telegraphers' strike is dead. Both the postal and telegraphic services, however, are suffering from the harassing tactics employed by the remaining strikers. The regular handling of printed matter was resumed today.

Owing to the discontinuance of public relief to the earthquake sufferers, thousands of victims of last December's catastrophe are pouring back into Messina at an alarming rate. Since the quake most of Messina's population that was not killed has been sheltered throughout Sicily and Southern Italy. These people are now flocking back and an increased population of from 20,000 to 40,000 is threatened within a few days. Local authorities are imploring the government to take some remedial steps, but owing to the prevailing red tape in all government affairs it will be days before any relief can be had.

The lower branch of the Michigan Legislature has passed the Crampton-Warner liquor bill, the most rigid saloon regulation bill which ever was acted upon in the State. Among the many provisions, it is declared that the wholesaler, if nonresident, must pay \$500 annual fee and an extra \$50 for each warehouse, and that he can sell only to a retailer. No ex-convict or woman can own a saloon; two violations of law forfeit licenses; druggists can sell liquor only on physicians' prescriptions or for scientific or sacramental uses; saloons are limited in number to one to each 500 of population; no new saloons shall be within 400 feet of a church, and no signs advertising liquor shall be placed outside the saloon.

Upon his return to Washington from Baddeck, Nova Scotia, where he had been taking part in the aerodrome experiments for the last six months, Prof. Alexander Graham Bell said that heavier-than-air machines of this type would prove valuable chiefly as an aid to warfare. He called attention to the fact that the weight of these aeroplanes increases faster than their size, which seems to bar their successful use extensively for transportation purposes. With the tetrahedral kite system, however, the increase in size, weight, and lifting power is found to be about equal, and he sees no reason why machines of this type could not be constructed capable of carrying 100 men or more. At the same time it would be possible to maintain a low-rate speed not possible with the aeroplanes of the Wright type. He believes that his machine, the Silver Dart, which recently made successful flights at Baddeck, is superior to the Wright machines.

Among the Magazines

ALCOHOL AND THE CORSET.

Evidently realizing that the above title would prove somewhat perplexing to his readers, M. Marcel Prévost, the author of the article appearing thereunder in a recent number of *Le Figaro* (Paris), explains in his opening paragraph that "it is not the title of a fable, nor is it the fantastical juxtaposition of two words drawn at random from the dictionary. It is the rapprochement,—perhaps unexpected,—of the names of two of the worst plagues that ravage humanity called 'civilized,' and particularly the people of France. One is more especially a masculine plague; the other is exclusively feminine. Both, however, have this common characteristic, that their attraction is purely artificial."

All children are naturally gourmands; but the taste for alcohol is not inborn. The first time a child tastes it he makes a grimace; and he is only brought to take it by means of the addition of sugar. M. Prévost refers to the reprehensible practice of the women of Normandy, who give their babies slices of bread steeped in diluted brandy, the result of which is that the boy of ten "is already an assiduous frequenter of the cabarets." He adds:

"Were the consumption of alcohol suppressed today, humanity would not have one pleasure the less. The suppression of alcohol would be no greater loss to the French people than the suppression of opium."

Equally "the feminine plague of the corset is a sort of diabolical suggestion, which satisfies no true need of either well-being or estheticism." M. Prévost reminds his countrywomen that the Venus of Milo exceeds thirty-eight inches round the waist; and he calls their attention to the admirable group of "The Dance" on the facade of the Paris Opera House, in which the figure of the man exhibits a waist no larger than those of the women dancers. The estheticism of Carpeaux, he says, was that of ancient Greece, and of all the world in the main, "for no maker of corsets ever pretended that the lines of his models would conform to the canon of the artists." The following little "lecture" is then addressed to womankind:

"Some women say: 'It is impossible for me to walk without corsets'; but this should be translated: 'The deformity which was imposed upon me from infancy is now acquired definitively. I am not a normal woman.' Just as the slave of alcohol says: 'I am ill when deprived of my beverage.' A good half of the feminine beings scattered over the globe walk without corsets. The compression of the waist was suggested to women neither by the desire to be more beautiful nor with a view to comfort. It was a suggestion as unforeseen, as stupid, as the compression of their feet by the Chinese women or the dilation of the neck among the 'swells' of Padang. Do you know, Madame, what is the height of fashion among the grand ladies of Padang? At the age of six an iron collar is fixed around the neck of the young girl;

each succeeding year another collar is added, each being solidly riveted; little by little the intervertebral cartilages are distended, until in the adult the neck becomes as long as the face."

M. Prévost, in the course of a fierce denunciation of alcoholics, says:

"Thousands of human beings are wretched through alcohol; and one cannot find a single soul that it has made happy. One statistician (I believe a German) has calculated that a single alcoholic has in the space of a hundred years cost the state 900,000 francs, through the misery, sickness, insanity, and crime of his descendants."

The effects of the feminine plague are less tragic in appearance; but appearances must not be too implicitly relied on. "Anything that threatens the equilibrium, the health, of the women is exceptionally grave; for the woman is the mother, and the scarcity of mothers is the ruin of the race." After citing the views of eminent physicians as to the injurious effects of the corset, M. Prévost asks the women to try a little experiment for themselves.

"Lay aside your corsets for six months, Madame. At the end of that time your waist will have increased from four to six inches, and the organs will have recovered their normal volume. 'But this would be frightful! Increase my waist six inches! Sir! you are mad!' This is simply the argument of the Chinese ladies and of the grandes dames of Padang."

The evils of corset-wearing are summed up in the following terms:

"From all this results this sad phenomenon: With a smaller expenditure of energy, with a régime more sober and more chaste than that of man, with less of alcoholism, the modern woman is less healthy than the modern man. She is becoming more and more a being fragile, bizarre, dyspeptic, and neuropathical. She is fitted less and less for the duties of maternity; and thus the feminine plague conspires with its masculine fellow to attack the race at the very root."

What should be done with regard to these two plagues? M. Prévost answers:

"Deal with them as with all plagues,—with discretion, constraint, and force; and force here means the law. Already laws for the regulation of the sale of alcohol have been devised. But laws against the corset,—will any one dare to introduce such? In Bulgaria and Roumania girls are forbidden to wear corsets in the state schools; in Germany a similar prohibition exists for the female students in the gymnasia; in Russia the girl pupils of the lyceums and the high schools are required at entrance to discard 'the cuirass which they wear under the name of corset,' . . . but in France an ordinance of the Council of Health forbidding the use of corsets during lessons in gymnastics is not executed and, moreover, is not executable for the very good reason that 'the habiliments of the young ladies do not admit of the discontinuance of the corset.'"

"But," concludes this entertaining narrative, "fashion, even if absurd, is not invincible, as witness the passing of the custom of piercing the ears. When women are convinced that the compression of the waist is more dangerous than the mutilation of the feet, as in China, they will doubtless themselves call for a law to wipe out the feminine plague."—Review of Reviews.

FREE TEXTBOOK TROUBLES.

The practice of supplying books to public schools at public expense is gaining ground rapidly. As a dollars-and-cents proposition it is a success. Books can be bought much cheaper in large quantities, and as they are used on an average about three years, their cost per pupil is much less than when the parents had to buy books separately for the children, at retail prices. In some places, no doubt, poor judgment is used in the furnishing of free textbooks; the publishers have ways of unloading undesirable books on the authorities. In the District of Columbia schools, for instance, they are now using spellers dating back to 1890. In these spellers the names of the types used in printing are given as "pica," "bourgeois," etc., whereas these terms are now discarded and the "point system" is in general use—the inch being divided into 72 "points," and pica type being now called "12-point," brevier "8-point," etc.

California has for some years tried the scheme of publishing her own textbooks, in order to evade the exactions of the schoolbook trust. The results have not been entirely satisfactory, for textbook-making is an art, and no single State can afford to put money enough into the preparation of the different books to make them first-class.

The promiscuous use of schoolbooks by pupils of all grades of dirtiness is obviously very objectionable on hygienic grounds. Our schools are already a hotbed of disease, for whatever one pupil "has" is quickly spread into all the homes of the community, and the adoption of public books has been a boon to the little germs. Then, again, one pupil is cleanly in habits and he will use a book a year without soiling or injuring it to any great extent, whereas the next one will so befoul and tatter his book that it will not be fit to give out again. The fact that the books are paid for out of the public funds leads many pupils to be careless, and some teachers are opposed to the free system on this ground, for a pupil who has to provide his own book takes pride in it as his own property.

A compromise system has been proposed by Principal Armstrong of the Canton, Ohio, high school. He believes as a matter of economic as well as hygienic policy, each pupil should have some pecuniary interest in the books he uses. His idea is that the books should in the first instance be provided at public expense. After being used, those of each kind are to be divided into three classes, first, second, and third, according to condition. Then each pupil can buy from the school the class of book he sees fit; if he is particular he can pay the price and get a new book. In any case, at the end of the year he will turn in the book and receive credit for it according to its condition, so that he will only pay for the actual damage he has done to it. At present a careful, cleanly pupil often has a dirty and torn book, while a careless pupil draws a new one. This is not fair, and it does not encourage careful habits. Prof. Armstrong's proposed remedy seems to be a good one, but it will probably not be favored by the parents, who have directly to foot the bills.—The Pathfinder.

ABOUT THE MATTER OF PURE DRINKING WATER.

The water question, in so far as health is concerned, is one of the most significant questions with which the individual or the community can concern itself. What we shall drink, whether it be river or well or lake or spring water, is of the utmost importance. Our country is so large, our streams so much used. Take a river like the Ohio, which flows first in the shape of many branches through Pennsylvania and West Virginia, passing towns like Wheeling, McKeesport, Pittsburg, Cincinnati, Louisville and other places, before finally joining the Mississippi at Cairo—there could be nothing more dangerous in the shape of water than that. It is at once the drain and the sewer of innumerable villages and towns, the place in which is dumped all the refuse and from which is drawn again the water with which the streets and toilets are flushed.

You mustn't think, either, because you have a well in your yard that you are perfectly safe. Do you know where the water comes from? Have you any idea what drains into your well? How far is it from a sewer? How far from a cesspool? Have you ever had it tested? Do you know that some so-called pure, cold well water contains enough lime or sodium or other chemical to undermine your bone or muscles and produce certain forms of disease? You can just as easily have your system undermined and destroyed by what you drink in the shape of pure cold water as by what you do in any other harmful way, and more so. It is more insidious.

It is no excuse to say that you can not help yourself. The water question can always be helped. Wells can be deepened; drains looked after. If you live in cities, examinations can be asked and secured. Then, at least, if anything happens to you or your children, you can bring an action for damages which will not only relieve your private needs, but be so significant that it will create public sentiment and perhaps bring about better sanitary conditions for your neighbor. Try it, anyhow.—The Delineator for June.

CEMENT HEN HOUSE.

CEMENT or concrete is the proper material to use in building hen houses. They can be whitewashed inside and out, and by putting a quart of cement into each gallon of lime-wash, it makes a durable paint which will not rub off.

The cement wall is more easily whitewashed than rough boards, and there are no hiding places for vermin.

The ingredients for cement walls are cement, sand, gravel and water.

Every farm with a gravelly creek bed has the foundation of a cement plant already in operation; the sand and gravel are already mixed and wet, so that not much more water is needed.

Make a rough box, half as long as a wagon bed, and twice as wide—or it can be made a little longer and not quite so wide. In this put the gravel, and for every five bucketfuls of gravel put in one of cement. Then with a short-handled shovel throw it from one end of the box to the other, three times, which will thoroughly mix it. Then pour in the water, making a good

mortar, having it too thin rather than too thick, so that it can be readily poured into the mold.

The easiest and quickest way to build the walls is to set up two rows of scantling and tack boards inside; pour the mortar between these boards. Allow them to set two days to give the wall a chance to become good and firm, and then the boards can be removed.

If the mortar is too thick it does not run together properly, and is apt to leave air-holes, and these connecting with other air-holes make a bad wall. The mortar should be well pushed down to prevent these air-holes.

If the full length of the wall can not be built at one time, do not try to make it connect straight up and down, but let the mortar run out and dry obliquely. Then when the next filling is put in, drive some spike nails about half their length in the partly dried mortar, say about eight to ten inches apart. This will make a solid, continuous wall that will not come apart at the joining.

Door and window frames must be put in before the walls are built up, and they must be placed permanently, for the opening can never be changed.

We built a wall, solid, which if continuous would have been seventy-eight feet long and seven feet high. Seventy sacks of cement and three times as much sand and gravel built this, and there was enough left to make a twenty-barrel water tank.—*Farm Journal*.

A BOGUS GEOLOGIST.

CLEVER detective work and prompt action on the part of the police of Oakland, California, prevented a bogus geologist of the United States Geological Survey from fraudulently collecting and making off with a possible couple of thousand dollars.

One D. P. Coble, possessing several aliases and hailing from Vancouver, B. C., has confessed to the authorities that he thought it would be a simple and easy way to outfit himself for a trip to Mexico by stopping in Oakland and engaging a number of young men for United States Geological Survey work in Alaska during the coming season, requiring them to deposit with him \$65 each as a guaranty that they would not quit the service. He therefore opened an office in Oakland, hired a stenographer, had \$25 worth of work done in printing Geological Survey letterheads and elaborate blanks, forged several cleverly-written letters addressed to himself from the Director of the Survey showing his authority to hire young men for government service, and then inserted an advertisement for such young men in the Oakland papers.

He was well prepared to carry out the game; but unfortunately for him the Oakland detectives were on the watch for just such confidence schemes and a member of the "force" applied for one of these Alaskan jobs at "\$60 a month and found." Then followed a little 'quick communication between the

Oakland chief of police and the San Francisco office of the Geological Survey and also the Director of the Survey at Washington. In the meantime the applicants for the Alaskan positions were many and Coble was evidently expecting a rich haul for his three days' work. Thirty applicants were to report on Tuesday and clinch their places by depositing with Coble \$65 each. If they hadn't the sixty-five handy, but could raise \$25, for instance, he would, he had stated, personally advance the difference against the applicants' future salary. To lend color to this scheme he had a forged letter from the Director of the Survey and also blank expense checks against salary account. But by Monday the mesh had been sufficiently tightened around the enterprising but unsuspecting Alaskan promoter, and he was unceremoniously arrested and, after a brief hearing, jailed, thus indefinitely postponing his Mexican trip. His offense is stated to be punishable by \$1,000 fine or three years' imprisonment, or both, and he is being held for the action of the Federal Grand Jury.

The only people, it appears, who are out of pocket in the matter are the stationery printers and the stenographer. The typewriter purchased on approval for the Alaskan work and the reservations of ten steamship berths for the Alaskan applicants were recovered and canceled respectively.

A southern colonel had a colored valet by the name of George. George received nearly all of the colonel's cast-off clothing. He had his eyes on a certain pair of light trousers which were not wearing out fast enough to suit him, so he thought he would hasten matters somewhat by rubbing grease on one knee. When the colonel saw the spot, he called George and asked him if he had noticed it. George said, "Yes, sah, Colonel, I noticed dat spot and tried mighty hard to get it out, but I couldn't."

"Have you tried gasoline?" the colonel asked.

"Yes, sah, Colonel, but it didn't do no good."

"Have you tried brown paper and a hot iron?"

"Yes, sah, Colonel, I'se done tried 'mos' everything I knows of, but dat spot wouldn't come out."

"Well, George, have you tried ammonia?" the colonel asked as a last resort.

"No, sah, Colonel, I ain't tried 'em on yet, but I knows dey'll fit."—*Everybody's Magazine*.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

BINDER TWINE—Highest grade standard 7½ cts. lb. Club together and send us your order. We save your money. Farmer agents wanted. Free sample.—Central Supply Co., Mt. Morris, Ill.

FARMS FOR SALE—From \$40.00 to \$60.00 per acre. If you are in the market for a farm write at once for a 1909 price list giving full description.—M. H. Miller, Bristol, Ind.

Sunday School Supplies Free

Let us furnish you with all your quarterlies and papers free for one quarter. Here are a half dozen Sunday-school helps that you should give a trial. Our introductory offer applies to one or all of the publications below.

Brethren Teachers' Monthly

A manual of methods. Comprehensive comments on each lesson. Three or more copies to one address, 13 cents per quarter, or 48 cents per year. Single subscription, 50 cents per year.

Advanced Quarterly

For Intermediate and Adult classes. A popular lesson help. Single copy, 5 cents. Five or more to one address, 3 cents per quarter.

Juvenile Quarterly

The lesson clearly and forcefully presented for the Primary and Junior Pupils. Numerous illustrations. Single copy, 4 cents, five or more copies to one address, 2½ cents per quarter.

Our Young People

An illustrated 8-page weekly. Interesting, instructive and elevating. Single subscription, one year, 50 cents. Five or more copies to one address, 10 cents per quarter or 40 cents per year.

Our Boys and Girls

The best illustrated weekly for boys and girls. Choice stories, helpful poems and Bible incidents. Single subscription, per year, 50 cents. Five or more copies to one address, per quarter, 7½ cents per copy.

Children at Work

An attractive little paper for the little people of the Sunday school and home. Single subscriptions, per year, 20 cents. Five or more to one address, per quarter, 3 cents per copy.

If your school is not using these popular Sunday-school helps we will gladly allow you to use them for six months at half price. We could not afford to make this liberal offer if we did not feel quite sure that you will continue to use them for years to come.

Even though your school may be using five of our publications we will allow you to try the sixth one on our introductory terms. Ask for full particulars.

A sample copy of each publication sent on request.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

The Home Model Washer

Contains new features that should concern all who are in need of a washer. By means of a thumbscrew, the lever can be quickly set for long or short leverage, for light or heavy work, a good feature.

The agitator, the part that does the washing is also something new in that line. It is Simplicity and Strength and

makes this washer noted for easy, fast and clean washing. Do yourself a favor by learning all about this washer. It is low in price. I pay all the freight whether the washer is returned or not after a thorough trial. The circular illustrates and explains it all. Send for circular at once. Agents wanted. Address: **WM. S. MILLER, Meyersdale, Somerset Co., Pa.**

Buckeye Pure Home Made APPLE BUTTER

Is pronounced by hundreds of our customers, the best they ever ate. It is the product of apples, apple cider and granulated sugar; very appetizing and wholesome. Our Motto: Highest class of goods and a square deal guaranteed to all. Write for circular and special prices.

C. J. MILLER & CO., Smithville, Ohio.

Arnold's Chart of Paul's Journeyings

A useful teacher's tool that you should have close at hand while teaching the life of Paul. Prepared by Bro. C. E. Arnold. Clear outline journey maps; and the principle events and places arranged in easily read columns; all on one sheet of paper, 12 inches by 19 inches. Folds within stiff covers small enough to slip into one's pocket. Twenty cents.

**BRETHREN PUBLISHING HOUSE
Elgin, Illinois**

NEFF'S CORNER

Just about the time this appears in print Clovis will celebrate the second anniversary of her existence. She is now a county seat and has a population of about 3,500. I have been here 21 months and in that time property values have increased 400 to 800 per cent, owing to location. Another railroad is building toward the town, and for it also Clovis will be a division point. We expect a population of 10,000 within three years and a proportionate increase in property values. I have charge of 23 rent houses, but turn many applicants for houses away. Houses are still building on every hand and they are usually rented in advance and tenants moving in before they are finished. Being here on the ground and acquainted with the situation, I am in a position to pick up a bargain now and then. If you have funds to invest, it will be worth your while to write me. Address

JAMES M. NEFF,
Clovis, New Mexico.

CLASS COLLECTION ENVELOPE.

A tough manilla envelope, on which may be recorded the amount of class offering for entire year, with totals for each quarter. Price, each, 2 cents. Price, per dozen, 15 cents.

**BRETHREN PUBLISHING HOUSE
Elgin, Illinois**

Real Art Mottoes

These "Real Art" cards are by far the finest specimens of lithography we have ever offered. The stock has but recently been imported from Germany, hence the line is entirely new. They are lithographed on heavy glazed stock, size 16x20 inches and represent the best in modern art. The subjects consist of bouquets and vases of Roses and other flowers. Suitable for the home, office, school room or Sunday school.

We can furnish "Real Art" mottoes in Eight designs and Fourteen texts as follows:

50. The Lord Is Thy Keeper.
51. He Careth for You.
52. In Me Is Thine Help.
53. Shew Piety at Home.
54. Lead Me in Thy Truth.
55. I Will Never Leave Thee.
56. Looking Unto Jesus.
57. Ye belong to Christ.
58. God is a Refuge for Us.
59. Seek and Ye Shall Find.
60. God is Our Refuge and Strength.
61. The Lord Bless Thee and Keep Thee.
62. Thou Wilt Shew Me the Path of Life.
63. Who daily Loadeth Us With Benefits.

The illustrations presented herewith can give but the faintest idea of the beauty and quality of the "Real Art" line. These same subjects have sold in art stores the country over for 35 to 50 cents each. We are pleased to announce a price so low as to place the best mottoes within the reach of every one.

Price, each, postpaid, only

25 cts.

Set of eight designs, postpaid,

Sunday Half Hours with Great Preachers

by

Rev. Jesse Lyman Hurlbut, D. D.

How would you like to have fifty-two of the greatest preachers of the world for the past 1,700 years come before you one at a time for fifty-two consecutive Sundays—every Sunday for a full year—and each one preach to you the eloquent sermon which made him famous for all time? The possessor of "Sunday Half Hours with Great Preachers" will have conferred upon him, in the nearest possible manner, this inestimable privilege and benefit. Dr. Hurlbut has selected the fifty-

two most famous preachers of the world, both from the Catholic and the leading Protestant churches throughout the world from the days of St. Augustine and Chrysostom, who lived three hundred and fifty years after Christ, down to, and including John Bunyan, John Wesley, Whitefield, Henry Ward Beecher, William Ellery Channing, and other greatest preachers of the world. It contains 681 large pages, bound in elegant cloth.

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,

Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the north. There is some snow at times but the Chinook winds quickly melts all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. I. J. A. Weaver.

EMPIRE COLONY

IN "SUNNY STANISLAUS"

The CO-OPERATIVE COLONIZATION COMPANY is now locating a colony of our people in the lower San Joaquin valley, in central California. The new town of EMPIRE, as well as the colony lands, is located on the Santa Fe railroad, five miles east of Modesto, the county seat of Stanislaus County, thirty miles south of Stockton, seventy-five from Sacramento and one hundred and fifteen from San Francisco.

The colony lands join the new town site and are within a few miles of three different railroads. These lands are all under cultivation, and are free from brush, stumps, stones or other obstructions. Two large ditches cross the tract, affording ample water for irrigation of all crops.

Garner Schoolhouse, One Mile West of Empire, Where the Brethren Hold Services.

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and Investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

NEW CHURCH ORGANIZED—NEW RAILROAD BUILDING.

A new Church of the Brethren was recently organized at Empire, with twenty-five members, and other families of our people are expecting to move there soon. The Modesto-Empire Interurban railroad is now being built. For further information address,

One Dollar Per Year

The Stars and Stripes Waved from the Highest Floor.

BRETHREN PUBLISHING HOUSE, ELGIN, ILLINOIS

A New Book Out And It Is Free

A large party of Brethren from California, in charge of S. P. Bowman, are on their way to the Annual Conference at Harrisonburg, Virginia. As they passed through Omaha, they were each one presented free with a copy of this new book, "JUST TWENTY YEARS AGO."

Following are the names of the parties in charge of Mr. Bowman:

Cornelia and Mary Johnson.	Mr. and Mrs. Sam Fesler.
F. L. Hepner, wife and children.	D. A. Norcross, wife and son.
A. N. White, and wife.	Mrs. Katie Bashore, and child.
Mrs. M. Myers.	Mrs. Fannie Gibbel.
Miss Wampler.	Mr. Percy E. Zug.
Mr. and Mrs. Moses Brubaker.	Miss Elizabeth Snider.
A. H. Emmert, and wife.	

Those persons who attend the Annual Conference at Harrisonburg, and fail to get a copy of this free book, will receive one by mail by writing the undersigned; or should there be any who for any reason will not be permitted to attend the Conference, we would be glad to have them write us asking for a copy of this booklet. It is new and bristling with the history of the church and missionary statistics which will be helpful. Not only send your own name and address plainly written, but the names of other brethren and sisters who you think would be interested in this booklet.

Address all orders for the new book, "JUST TWENTY YEARS AGO," to Geo. L. McDonaugh, Omaha, Neb.

Life and Sermons of Elder James Quinter

We have just completed the second book and are filling orders every day. We feel certain that several of our customers neglected to place an order in advance, and have printed a few hundred copies besides those needed to fill the advance orders.

The work should prove helpful to thousands of our readers who know little of Bro. Quinter. In his day he was one of the most scholarly and devout men among us, and it will do the younger generation of members good to learn more of his life and experiences. His sermons will prove especially interesting.

The book contains 426 pages, large, clear print, on excellent book paper. The frontispiece is a splendid likeness of Elder Quinter and adds much to the appearance and value of the publication. The introduction is written by Eld. H. B. Brumbaugh. Besides the interesting sketch of Bro. Quinter's life and labors there is a full account of the funeral services and numerous tributes of respect from his coworkers.

Part Two contains some forty of Brother Quinter's choicest sermons, delivered here and there throughout the Brotherhood.

The binding is an artistic cloth, on which back and side titles are stamped in white foil.

If you are interested, order today.

Price, postpaid,\$1.00

HOUSE**
Elgin, Illinois

Two Centuries of the Church of the Brethren

This book contains the twenty addresses delivered at the Bicentennial Conference, Des Moines, Iowa, June 1908. The first large edition was soon exhausted and we have not been able to fill orders

for some time. The second edition is now ready and will be in demand, as several thousand of our readers neglected to purchase during the life of the first edition.

This new edition is printed on thin paper, making a volume about two-thirds the size of the former edition. Typographical errors have been corrected and the binding improved. Large, clear type, 400 pages.

The book is embellished with Twenty-five Full-page Photogravure Effect Portraits. These illustrations consist for the most part of portraits of the speakers who delivered the Bicentennial Addresses at the Des Moines Annual Conference. The frontispiece presents a splendid likeness of the five men composing the Bicentennial Program Committee.

The book is a fitting souvenir of the Bicentennial year and should be found in every Brethren Home.

Send your order by return mail.

Price, in artistic cloth,\$1.50
Half leather, gilt top,\$2.50

\$400 Prize Cup Won by Colfax County, N. M. In Competition with Entire Irrigated West

Miami Ranch

is located in the choicest part of Colfax county, New Mexico, and it was largely due to the products grown upon and adjacent to this ranch that Colfax County won this valuable cup at the Interstate Industrial Exhibit held at Albuquerque, N. M., last October. Every State was represented—products from land selling as high as \$1,000 an acre were shown—but Colfax County won by many points.

Many other prizes have been won by this section of the country. New Mexico wheat took first prize at the World's Fair in Chicago, while apples raised in an orchard directly adjacent to Miami Ranch won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 an acre.

Miami Ranch

offers you health and pleasures as well as wealth. It's situated in a rich, cheerful valley, surrounded by picturesque mountains. Elk, deer, bear and other large game are to be found in the mountains, while thousands of wild duck and geese inhabit the surrounding lakes. The Rayado River, which flows through this ranch, is noted throughout the central west for its trout fishing.

The rainfall is sufficient to insure big crops. But with the gigantic irrigation system recently installed, there is not the slightest chance of crop failure.

The climate is perfect, the air is pure, and the scenery beautiful. Excellent church privileges, a good school and pleasant neighbors are all to be found on Miami Ranch.

Write for a free copy of our booklet, "Westward Ho." It tells in detail all about Miami Ranch. Tells how and when you can get a round-trip ticket from Chicago for \$30, and from Kansas City for \$25, via the Atchison, Topeka & Santa Fe. Write at once and take your choice of the bargain offers which we are now making on both large and small farms.

Farmers Development Company, Springer, New Mexico

NEFF'S CORNER

Just about the time this appears in print Clovis will celebrate the second anniversary of her existence. She is now a county seat and has a population of about 3,500. I have been here 21 months and in that time property values have increased 400 to 800 per cent, owing to location. Another railroad is building toward the town, and for it also Clovis will be a division point. We expect a population of 10,000 within three years and a proportionate increase in property values. I have charge of 23 rent houses, but turn many applicants for houses away. Houses are still building on every hand and they are usually rented in advance and tenants moving in before they are finished. Being here on the ground and acquainted with the situation, I am in a position to pick up a bargain now and then. If you have funds to invest, it will be worth your while to write me. Address

JAMES M. NEFF,

Clovis,

New Mexico.

Teacher's Class Book.

A neat folder with blanks for one year. Can be carried in Bible. Very complete yet simple and compact. Price, per dozen, 35 cents.

J. A. Bowers' apple crop of 1907 netted \$1,000 per acre, and in 1908, \$700 per acre.

E. A. Blair gathered from seven and one-half acres of apples 3440 boxes of fancy apples which netted \$5,500.00.

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

No. 22.

THE ART OF GIVING

MYRTLE WHISLER

GIVING is an art in which some are more proficient than others.

In the earlier times barter was originally in the form of exchanging gifts. The primitive people would receive a gift, guess upon the value of the article and in return give a present of about the same value. Some people still are so primitive as to give in this same way.

In speaking of the art of giving, the good only is taken into consideration and not the giving of such things as hard words, sarcasm, hatred, jealousy, and a long list of harmful gifts.

We have come to realize that it is not the gift that is so appreciated but the motive that prompted the giving. It is not the value of a gift that determines the reward. The woman who gave her all,—only two mites,—gave more than the rich man who dropped his gold in the treasury and had an abundance left.

God teaches us giving. He gave us his Son, the Great Redeemer of our souls. He gives us beautiful, sunny days, beautiful flowers of all sizes and shapes, supplies these plants with showers of rain and he actually seems to smile on all mankind.

Nature teaches that to use any of its gifts only multiplies them, for the seed will mildew in the garner, but if sown will fill the ground with riches.

Emerson has said, "We show only half our real selves, the other half is felt but not expressed." One cannot give out all he feels when in contact with nature, with saintly people and with God. We cannot give the best of ourselves, neither can we give the worst. Scattering smiles, saying kind words and doing deeds of love must all be cultivated, for truly the more we give the more we have of something which is grander and nobler.

This verse often crowds into my thoughts after the day is over:

"Count that day really worse than lost,
You might have made divine,

Through which you scattered lots of frost
And ne'er a speck of shine."

The more we live for others the greater beings we become and the more we are living the life we were destined to live. This can be well illustrated by the life of the lowly shepherd girl of France, Joan of Arc, who left all and obeyed the voice within her that bade her free France, and by doing so she freely gave her young life in the effort.

There is strong logic in the true story of the peasant woman who lost her only son. The neighbors came and spoke sympathetically, but all in vain; she could not be consoled. Queen Victoria heard of her grief. She came to see her, put her arms around her and wept with her. The peasant woman exclaimed, "She has comforted me more than any of them." They asked her, "Why?" She replied, "She wept with me."

Give the best of our time to study and we will reap a rich reward not only in knowledge, but we are rewarded by the power of concentration.

To give is to beautify life. In "The Vision of Sir Launfal" is shown the difference between true heart giving and giving only to appease conscience or to get rid of a beggar. Sir Launfal could not recognize the Holy Grail until he had seen more in the leper than his ragged clothes and his repulsive body, until he could love and sympathize enough with the outcast to share his last crust of bread with him and give him a drink from his cup. Then Sir Launfal's eyes were opened and he recognized the Holy Grail which he had spent his youth in hunting and the leper who was none other than the Christ.

Nature says, "Give, give, give." Our own true selves say, "Give, fulfil thy mission and be happy."

Imagine two people lost in a snowstorm: One has become unconscious because of the intense cold; the other sees this, is alarmed, forgets his discouragement and begins to chafe and arouse his companion. By doing this both are kept alive and at last rescued.

Contrast the miser's life with that of the missionary's, the former living for self, the latter all for others. The first is miserable all through life, fearing every one and fearing death; the second extremely happy in fulfilling his mission and welcoming death as his friend. The one a coward, the other a soldier; the one friendless, the other with hosts of friends. Who would not be the missionary!

All who help others are great and their deeds live after them. We get inspiration from such men as Shakespeare who left us his great dramas, Bryant who left us "Thanatopsis," Bunyan because of his "Pilgrim's Progress," Lincoln the liberator of the slave, and from painters, sculptors, musicians, scientists and so many other great benefactors.

Again, we find that the ones most bountifully rewarded are the ones who put forth their entire effort for the accomplishment of that one thing and remain at it till it is completed. Why! the more a man *has* (we can easily supply *does*), the more shall be given unto him. When a laborer is needed, the lazy man with nothing to do is not asked, but the already-overworked, busy man is sought.

Who does not appreciate the little courtesies of life which mean so much but are so easily omitted? They brighten our lives just when we need them the most. A cheery "Good-morning" is better medicine than a tonic.

Better give and never receive, better give and be deceived by the giving than never give at all, for after all you gain your reward, your character is made more beautiful.

The giving up of some high ambition we have held for years when it hinders some one else's progress or pains them, will, in the future, have some greater reward than the fulfilling of that ambition. To illustrate: Washington when a young man gave up his desire to go to sea because of the pain he caused his mother. In after years he developed into a stronger man than he could ever have become had he gone to sea and he won the name, "Father of his Country."

The world cannot live without love. There is no power in the universe like friendship and friendship is love. It is in helping others, giving our best to others and they in return to us, that our lives are most enriched.

We are changed and made better by gaining a new friend, are made happier and gain some new truth never realized before. We understand mankind more thoroughly. Listen to what Frances Willard has said: "The world wants the best things. It wants your best."

"There's never a rose in all the world
But makes some green spray sweeter;
There's never a wind in all the sky
But makes some bird wing fleetier;

There's never a star but brings to heaven
Some silver radiance tender;
And never a rosy cloud but helps
To crown the sunset splendor;
No robin but may thrill some heart,
His dawnlike gladness voicing.
God gives us all some small, sweet way
To set the world rejoicing."

OUR LITTLE TRAMP.

M. M. WINESBURG.

EVERY one had gone to bed but little Kate and I, and we were awaiting up until Buzz came home from the shop, for it was Saturday night and Buzz was always late that night, and while we awaited we were also keeping up a roaring fire, for it was needed.

The weather had been pretty cold for several days, but it had been still colder all day Saturday; and when night settled down it was simply stinging cold, with snow thick on the ground and frozen until it was crust-ed, while the pond and little streams were solid sheets of ice. The air had been sharp all day long, yet as the hours of darkness advanced the coldness seemed to increase, and Kate and I huddled up close to the roaring fire, and then could not keep from shivering.

It must have been along about ten o'clock, when we heard a knock on the front door, and wondering who it could be at that time of the night I went to the door and opened it, to find a boyish-looking figure, enveloped in a big overcoat, standing on the porch.

As I looked out he asked, "Please may I get warm by your fire?"

"Certainly, come in," I replied, stepping back to let the boy enter, although I did not have the least idea who he was; still the thought struck me that probably he was one of the boys from the ridge, who had been up to the village and froze out on his way back home.

The boy sank wearily into a chair at one side of the fireplace, while I stirred the fire up still brighter and threw on some more fuel, and at the same time took stock of our late visitor. One good look satisfied me that he was none of the boys from the ridge, but one of those unfortunate beings we call tramps.

The young fellow did not look to be over eighteen, and while his garments were only of the common kind, yet they were serviceable. A warm cap for his head, and felt boots on his feet, while a heavy overcoat was buttoned up close to his throat and concealed his other garments, but the right sleeve of his overcoat was empty; the poor boy had but one arm.

After I had made the discovery that the boy was a perfect stranger and crippled also, I took a good look at his face—when he was not noticing me—and saw that he was rather good looking, with dark eyes and hair and that clear white skin that one sometimes sees with dark eyes and hair. But one side of his face was badly scarred and the ear on that side of his head

was almost gone. Clearly the boy had been the victim of some horrible accident, and I felt a throb of pity for the poor fellow.

Now I must confess that I had some reasonable curiosity to know who our visitor was, but I asked him no questions for he was even then nodding in his seat; and before long he sank into a sound slumber. He must have been almost frozen when he came to our door.

What to do with our tramp I did not know, as every bed in the house that night was occupied then, or would all be when Buzz came home; so Kate and I sat there and kept up the fire for some time longer. Then I went and awakened the "Head of the House" and told him about the half-frozen boy out by the fire. The "Head of the House" sat up in bed and peered out at the boy for a moment and then said: "Oh! go to bed whenever you are ready and when Buzz comes, I will waken the lad up and bunk him down somewhere."

But before we got off to bed Buzz came stamping in almost frozen and I'll not forget his look of astonishment when he saw our sleeping tramp.

Kate and I now went to our room, and Buzz pulled the "Young Hopeful" of the household out of his cot and took him off to bed with him, while the "Head of the House" awoke our little tramp and bunked him down in the cot vacated by our "Young Hopeful."

The next morning our tramp of his own accord gave some account of himself. He said that on Saturday he had tramped from a small town about twenty miles from us, in all that intense cold and snow. It was no wonder he was almost frozen—and he also told us his name and where his home had been, for he was now homeless.

He said that his home had formerly been in a well-known mining town in Ohio, and that after his mother died he and his father and brother still continued to keep house and work in the mines until that

terrible day when the country was shocked by one of the most horrible mine disasters on record and his father and brother had both been killed, while he had had his right arm blown off and the right side of his face and head badly lacerated.

His injuries had kept him in the hospital for a long time, and after leaving the hospital he had picked up a living the best he could. He had now been a cripple for nearly five years, and getting tired of trying to earn a living he had started out on a long tramp, and he rather surprised us by stating that he was undertaking the stupendous feat of tramping the country through to Florida, in hopes of finding his only living brother who had gone to that State about a year before the mine disaster, but whose present address he did not know, though he hoped to trace him from where he had been when last heard from.

The boy had surely undertaken a big job for the winter months, for I would not like to have tackled the trip at that time of the year. The boy also seemed rather bright and must have had a fair common school education, for he could write fairly well with his left hand, in fact a great deal better than I have known many to write with their right hand.

All day Sunday and Sunday night our little tramp staid with us, for the weather was still stormy on up until night fell again, and then it got some milder. When Monday morning came the sun came out bright and warm and the snow began to melt away, and after dinner on Monday our little tramp again started on his way to Florida.

I had no money to spare to help the boy on his way, or he would surely have got help, so all I could do was to wish him a safe journey through. Afterwards I wished that I had asked him to write, and let me know if he made the trip all right and found his brother. I hope he did, though I shall probably never know, but I do know that I have often thought of our little tramp, especially on real cold winter nights.

SONNET

RICHARD BRAUNSTEIN

Without a voice how should I sing the song?
The restless, mocking, inner life of me
Is much like other lives. I have no key
To win men's hearts from out their breasts, in long
Pulsations of swift joy or keenly strong
Passions of pain. How could I ever be
The pitying singer of humanity!

I should but do our human life a wrong.
O sweet bird-singer on your apple bough,
Give us your message of divine content.
Show us a heaven in each ample note!
You are God's message, singing here and now,
And you teach poets when their songs are spent.
How dare they sing who have no song-bird's throat!

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LX.

FROM the Hotel Bristol as a center I made daily trips in all directions, going alone on all of these excursions except when I was furnished a guide to take me to certain mosques and museums.

The city is made up of three different main divisions. Pera is that European portion crowning the hill in the eastern part; Galata is the business portion running

Moslem Minarets—"tapering candles of prayer."

along the water and also lying between Stamboul,—the third section,—and Pera; on the other side of the narrow Golden Horn, Stamboul, just across the famous Galata Bridge. This is the portion of the city occupied almost exclusively by the Mohammedans, while Armenians, Turks, Grecians, Frenchmen, Englishmen and Jews are found in Pera and Galata. The Golden Horn, so often spoken of by writers, is that narrow arm of the sea that swings into the land and receives the "Sweet Waters" of Europe. It looks like a river flowing down out of Turkey into the Bosphorus, and as it has no tide, its salty taste is about the only evidence that it flows in from the sea.

On both sides of the bridge hundreds of ships lie easily at their moorings, some loading, others unloading, while hundreds of caiques and little boats mass together at the landings. The water is so deep along

this dock as to afford draughtage for the biggest ocean steamers, and the entire frontage is capable of receiving at one time one thousand vessels. The Golden Horn presents one of the most lively water scenes around the world. In fact, it has no equal for magnificent water effect, hill-crowned groves, and brilliant buildings.

The government forbade the use of my camera within the city, the only civilized place in the world probably where the use of the kodak was absolutely forbidden in the streets. The few scenes stolen by me were taken on the responsibility of a gentleman who guaranteed me against any harm, and who was with me when I carried my camera. To have been caught taking pictures in that part of Turkey would have meant certain arrest and fine. From the hotel windows I caught a picture of a funeral procession, Grecian, I think, with pallbearers dressed in long, black gowns, bearing the uncoffined body above their heads. The Turkish government forbids the use of coffins in order that guns and ammunition may not be secreted in them and mock funerals thus paraded by the citizens opposing the government, as had been done in the past. With arms thus gathered together the enemies of the Sultan could make a stiff resistance to his forces, and thus endanger the throne of the Ottoman tyrant. At another time my friend took me to the roof of a restaurant on the opposite side of the street so that I could catch a good view of the magnificent hotel at which I was living for seven days. The American flag was flying at the highest floor, and also down over the portals, with other flags of the representative nations at various elevations. As a substitute for photographs I will submit a few sketches of striking scenes that may be able to give even clearer ideas of the curious.

Though I regret my inability to show more pictures of the Queen of the Golden Horn, I feel stronger in my character that I did not break the law except on the guaranty of a man of such prominence as made it equal to a special permit. And even though I might have carried away a hundred fine views of the place I believe that if I ever visit the city again the Turks, who found me honest in my dealings with them at this time, will be more liberal themselves in giving me

a photographer's license to catch just those scenes that, seen by our countrymen, will entice more tourists to their city and so increase their wealth by the money left by them in hotel living and in the purchase of valuable souvenirs. The best pictures of Constantinople can not be shown in photograph. The real image of her mysterious atmosphere can be seen only on the retina of a lively imagination. To get the exact conditions and know why Constantinople is so much different from any other capital, it is necessary to go there

Sophia, which was not a mosque, but a Christian church. A charge of fifty cents is made at the door, where I again worked my card game. The man at the door, an old Moslem, took my card, looked at it upside down, my picture and all, pretended to read the printing on it, looked wise, and handed it back, with a wave to me to go on in. It was so ridiculous,—looking at my photograph upside down without knowing the difference, I could scarcely keep from bursting out in a laugh. But I could well afford to hold in a good

St. Sophia, Constantinople.

in person. No sooner will you come here than you will feel just that particular mystery that no one describes in his letters or dares to speak of to his friend even in a whisper, until far away on his homeward journey.

"Tips" are expected and demanded here as in few other places. My sight-seeing, of all the important features of a place, necessitates my entering each day many places for which a small admission is charged. To give ever so little to all of these would soon bankrupt me. I exercised the most frugal expenditure. When I came to the Galata Bridge to cross over into Stamboul, the tollkeeper expected me to pay the regular fee charged to all pedestrians. A penny saved is a penny made, so I showed him my "card," and motioned to him to allow me to go across without paying anything. I hardly thought he would give me this privilege on a public highway, and although he at first objected with vehemence, he afterwards told me to pass on across.

The finest mosque in the world is probably St.

laugh for fifty cents! What might I not secure with my picture right side up! On the inside were big slippers to be worn by all tourists, for no one is allowed to walk on the pavement within its sacred walls, in their boots or shoes, or without slipping these slippers over them. With these big slippers on my own feet I was entitled to go through the mosque, a mosque built by Justinian, the Christian Emperor, fourteen hundred years ago,—the pillage of the Mediterranean. It is ornamented by huge white marble and green breccia columns which support the mammoth arches on which rests the splendid dome two hundred feet above. It became a mosque when it was captured by the Turks, the Moslem conqueror taking it in the name of Mahomet and dedicating what was left immune from the wild destruction of the savage soldiers to Mahometanism. The Christian crosses and other gospel emblems were removed and Moslem characters and crescents substituted. One important text was left just as the Christians had placed it there: "I am the door; by

me if any man enter in, he shall be saved." Here also hovers the image of a dove near the cross, over the open Bible. I was almost afraid to read aloud this text for fear that the Moslems, in their furious fanaticism, might remove this also and substitute texts from their Koran.

The bazaars in Stamboul are considered to be the greatest bazaars in the world. In one of these, the Grand Bazaar, were said to be three thousand different stores or shops in which everything conceivable might be purchased. I stopped after walking through six hundred and eighty-seven of them! Silks, souvenirs, carpets and rugs are the chief articles of display, through nearly everything, needful and otherwise, can be bought here of the courteous but determined merchants. The guide who took me through introduced me to one of the proprietors who made me a present of the Turkish crescent-flag, in red silk, with the crescent moon and star embroidered heavily in finest white silk.

Everywhere I went were great numbers of dogs,—fat dogs, lean dogs, little dogs and big dogs, scratchy dogs and sleepy dogs, but dogs, dogs everywhere. They usually lay at corners, and seldom or never made any effort to get out of the way of passing wagons. These dogs have their own precinct and ward, and govern those particular parts, it is said, with masterly skill, each set getting its living in its own district. They have no master, no name, no friend, no kennel,

no work, no fun. They just exist. Though living alone they are kindly treated by the Turks, who would resent the least insult offered one of the meanest of them. As a rule they lie and sleep in the open street in the daytime, and when night comes, begin their rounds of scavenging, cleaning the streets of such materials as may be safely eaten by them. It is a rule of the shopkeepers to toss into the street what garbage they can not dispose of to customers, knowing that the dogs will come around at night to remove it. At times, in order to get a good living, the dogs must be contented with food that is undesirable, and as they eat so much of this kind, they have developed unthinkable digestions, eating things that would stagger an ostrich. Perfectly harmless, it is said they never sicken with the hydrophobia. At my Hotel Bristol several dogs came each night, the same ones, and I brought out to them delicate morsels of food saved from my portion at the table, just to see them eat something real good. Then, too, as I knew the high regard the Turks paid to them, it was good policy for me to show an interest in them. They choked on my fine menu at first, they ate so greedily. Then they wagged their thick, clumsy tails, straight and stiff like a pump-handle, and walked off to the next place of business stiff-legged and slow, like the tramps in our own country who get rheumatic by sleeping out nights.

THE MACCABEAN INDEPENDENCE

PAUL MOHLER

THE location of Judea was not in all respects a fortunate one. It lay between Egypt and the powerful nations to the north and east. On account of its location as well as its wealth, the land of the Jews was a province to be desired by any nation so fortunate as to possess it. Only the favor of the Lord could keep so small a nation out of the hands of such powerful neighbors. In view of these facts, the Maccabean Independence was a remarkable demonstration of national power.

The Antiochs, or Greek rulers of Syria, were eager to Hellenize the Jews, or to make them like the Greeks. Many Jews saw the superiority of Grecian culture and accepted it. By careful, patient labor, they might have gained their point in the course of time, but Antiochus Epiphanes spoiled the whole plan. He was an erratic, impulsive ruler, doing all sorts of unaccountable things.

In 168 B. C. he undertook to conquer Egypt, but was prevented by the Romans. Foiled in this, he took his spite out on the Jews. He had at several different times persecuted the faithful Jews cruelly; but this

time he was going to make a clean sweep. The officer whom he sent to carry out his purposes compelled the Jews to give up their worship of Jehovah, destroy their copies of the law, cease their observation of the Sabbath, circumcision, etc., and to sacrifice to the Greek gods instead. All who refused were slain. The Syrians also took possession of the temple, dedicated it to Olympic Zeus, and offered sacrifices to their gods on the great altar of burnt offerings. Schurer says that this is the fulfillment of the prophecies in Dan. 11:31; 12:11.

All the Jews who could, escaped from the city; the places of those who left the city and those who were slain were filled with Greek colonists. The walls of Jerusalem were thrown down, and a citadel or fort was built for the Syrian garrison. Frequent searches were made throughout the land for copies of the Law and for signs of the faithful observance of the Jewish rites. Offenders were put to death.

At Modein, a town near Bethel, northwest of Jerusalem, dwelt a faithful Jew, Mattathias, with his five

sons, John, Simon, Judas; Eleaser, and Jonathan. One day, seeing a Jew offering a sacrifice on a heathen altar, he became so indignant that he killed the Jew and the king's commissioner who was directing the sacrifice, and broke down the altar. Then, of course, he fled to the mountains. There he found a large number of Jews, also in hiding. But about this time a detachment of Syrian troops came seeking the refugees, and attacked them on the Sabbath day. By this time, the Sabbath was held in such great reverence, that rather than lift the sword on the Sabbath, almost the whole party allowed the Syrians to take them and cut them down. This event was a very strong object lesson to Mattathias; and it seemed to him to be a very poor way to serve God; so he and those with him decided to resist with all the might that God should give them. If necessary, they would even fight on the Sabbath. So he gathered together all who were willing to fight for their faith and went up and down the country, overturning the altars, killing unfaithful Jews, and encouraging opposition to the Syrians. But Mattathias did not live to see the movement become a great one. He died, and was buried at Modein with great lamentation.

Befor his death, however, he exhorted his sons to carry on the fight, naming Simon as a wise man of counsel, and Judas as the leader in battle. Judas was indeed a very hero. He attacked the Syrians with such astonishing energy and dealt them such swift and terrible blows, that he was soon surnamed "Maccabeus" or the "Hammer." And indeed the whole party soon came to be known as Maccabees. From the first, the Lord was evidently with them; for every Syrian force that was met was defeated until the Syrian king thought it necessary to send a real army into Judea to quell the revolt.

Imagine now the situation of the Maccabees. Judea was but one province of a mighty empire. It was like Cuba fighting Spain with no sea between. It was apparently simply a question of how hard the Syrians cared to try to put down the revolt. And apparently the king was in earnest, for he sent a large army under the command of three generals. With the army, went a large number of merchants, who expected to buy the Jewish captives as slaves. So sure were they of victory, that they divided the army, sending a strong detachment against Judas, while the remainder remained in camp at Emmaus. But Judas by this time had a real army at his command, thoroughly drilled and organized and enthused with religious fervor. When he heard of the Syrian movement, therefore, he boldly moved his army in between the Syrian divisions. Attacking the Syrian camp with great energy, he beat them badly, and when the other division returned, they drew off in fear. Thus were the Jews completely victorious, and the Syrian merchants despoiled of their prey.

The next year, a still greater army was so badly defeated that its commander had to return to Antioch to gather more troops. Then Judas found time to return to Jerusalem, and renew the service. The temple garments, vessels, and even the great altar had to be destroyed on account of the Syrian defilement, and new ones had to be made. After all things had been put in shape, the temple was reconsecrated in a great feast lasting a week. This feast was kept yearly as the "Feast of the Dedication of the Temple," mentioned in John 10:22.

Judas had now gained his main object; but there was still the Syrian garrison in the citadel and his efforts to drive out this force brought on him the Syrian hosts again. Long years of struggle, with great Maccabean victories and defeats followed. Judas never lived to see his country entirely free from the foreign yoke; nor did his brother Jonathan, who succeeded him, but in the year B. C. 143-142, complete independence was given to Jerusalem and Judea, including a large share of Palestine that was not, in the beginning, even claimed as Jewish territory.

The story of how all this was done is exceedingly interesting, and reflects great glory on Jewish diplomacy as well as bravery; but it is too long a story to tell here. Get hold of Josephus, the first book of the Maccabees, Schurer's "Jewish People in the Time of Jesus Christ," or a number of other books. Perhaps Josephus tells the story best.

But isn't it a pity that this nation which fought so bravely for the privilege of keeping the forms of their religion should have refused the very heart of it when Jesus came? Is it possible that Christians would do the same thing if he were to come to day?

Bethany Bible School, Chicago.

RAISING AND GIVING.

THERE was consternation in the Ladies' Aid when it was rumored that Mrs. Drivewell would decline a re-election to the presidency.

"Whatever can we do without her?" cried little Mrs. Breezy, impulsively. "Such a worker in the church—where shall we find her equal?"

It was, indeed, a problem, for the Ladies' Aid leaned upon Mrs. Drivewell rather than upon the Lord for help in every time of need or trouble, and her ability at raising money was unquestioned.

"Who will manage the Colonial supper?" wailed Mrs. Timid. "We had never thought of one even until she came among us, and see what heaps of money they bring in. Everyone patronizes our Colonial suppers."

"A good reason why they should," snapped Mrs. Sharp. "It isn't every day they get a chance at a dollar supper for twenty-five cents. Sharp says if I ever do the work on another one, he'll get a divorce

from me." Mr. Sharp was known as a noisy, unregenerate man with none too much respect for church or church methods, so this harrowing domestic condition failed to arouse much sympathy—indeed, Mrs. Sharp was the thorn in the side of the Ladies' Aid at all times, though they were loth to extract her on account of her ability to "make things hum," as one sister expressed it.

"Mrs. Drivewell says that the work is too heavy. That her physican has strongly protested against her taking it another year," remarked Mrs. Heuston with a sigh; "but, as you say, I do not see how we are going to get along without her."

"Why couldn't we divide the Ladies' Aid into two sections, with a president for each?" suggested Mrs. Ames, thoughtfully. "I have heard of its being done in other churches."

There was a tumult of delighted approval.

"The very thing; and that would relieve Mrs. Drivewell of at least half the burden. That nice little Mrs. Dey, who has lately joined us, has been a great worker in the church, I hear. Why not elect her for the second section?" Mrs. Clark had done more thinking than talking until now.

"A good idea," observed Mrs. Breezy; adding, shrewdly, "It wouldn't do to have two Mrs. Drivewells, for the dear woman does love her own way. Her best friends cannot deny that."

"Her best friends know it better than anyone else, I reckon," Mrs. Sharp added, dryly. Thus it came to pass that on election day, the Ladies' Aid was divided as proposed, and Mrs. Drivewell and Mrs. Dey elected as presidents. There was a marked difference between the two ladies.

Mrs. Drivewell was large, commanding, and with a decisive speech which reminded one of a general on the field. She always had her way. She knocked down adverse opinions as a player bowls down ten-pins, and the Ladies' Aid meekly hurried them out of the way and gave her a victorious score. Mrs. Dey, on the other hand, was small, unobtrusive, but *not* inefficient. She had ideas, and it was not very long before her section of the Ladies' Aid began to take notice.

It was after the blaze and glory of the Colonial supper. At that great yearly event all the ladies of the church were expected to give, and give liberally, of money, stores and labor for the success of the enterprise, and in consequence a feast was spread which attracted the outside element as molasses draws flies. Crowds came and licked up the tempting viands till there was scarcely enough left with which to serve the weary and perspiring waiters.

"I never was so tired in all my born days," remarked Mrs. Breezy, as she fanned herself with her apron. "I've been right in this hot kitchen since eight

this morning, and my husband says if I ever agree to do it again he'll get me a strait-jacket." It was a noticeable fact that the husbands of the Ladies' Aid made vigorous speeches before and after these brilliant events.

"Well, he'll smile broadly enough when he hears how much we have made," replied Mrs. Drivewell, calmly, as she juggled a promising looking bag. "Seventy-five dollars isn't to be sneezed at these hard times."

"Only seventy-five dollars! That means that we have fed three hundred people on hotel fare and taken the materials to do it with out of our own living." Mrs. Sharp's suggestive logic was too convincing to be denied, and even Mrs. Drivewell looked a little sheepish.

"It's the only way I know of to raise money for the church," she said, with a defiant toss of her shapely head. "Of course it means work and plenty of it, but if anybody knows of a better way—"

"With the parsonage to keep in repair, and the new church furniture to get, the Ladies' Aid must earn money," murmured Mrs. Timid, deprecatingly.

"You're right we must," asserted Mrs. Drivewell, aggressively, "and as I said, if anyone knows of a better way—" and she looked about, as if expecting some one to pick up her gage of battle and daring them to do so. Mrs. Dey half opened her lips as if to speak, but closed them again for a better time and occasion. She had just come from a church where the giving was managed on such a different scale that she longed to see the plan tried in this, her new church home, but she was a wise little woman and bided her time.

Her division responded with some little curiosity when the call came for a meeting. "She is such a quiet little body I am curious to see how she will conduct a meeting," confessed Mrs. Clark.

It began with a prayer. "We need wisdom to know how to do our work and do it in the best way," she said simply, and no one doubted her sincerity as they heard her fervent appeal. Work meant more to them when they arose from their knees, and a solemn hush fell over them instead of the usual chatter and laughter when they were together.

"I believe that we are all anxious to do and to give of our very best for the Lord's cause," Mrs. Dey began, her sweet voice full of feeling, "but before we make any definite plans for our future, I wish to study with you the difference between raising and giving. What is it that we understand by raising money for the church?"

"Getting money or goods out of somebody who doesn't want to give it," answered sharp-witted Nellie Phillips, who was often on soliciting committees because of her wits, "like I teased a whole ham out of our butcher for the Colonial. He said we church

people were the most unblushing beggars he ever saw, and he'd have to raise on the price of our meat for a year to make good, but he gave it, all the same."

A pained look flitted across Mrs. Dey's expressive face. "One instance where the name of the Lord Jesus was not honored as it should be," she said gently. "I have made a study of this question of raising or giving money for the Lord's cause, and I have come to the conclusion that there is only one right way, and that is to *give* with free hearts and willing hands what is needed. To give until we really know we are giving, and then pray the Lord to bless the result of our giving, as we cannot ask him to bless our *raising* money by the questionable methods which our young sister has so graphically described."

Mrs. Dey had thrown a bomb with her gentle hand, and the ladies of section Number Two looked at each other in surprised consternation. "I think I can illustrate what I mean," continued Mrs. Dey, "by telling you the story of our church at Moreton. We had always *raised* money in that church. Some of our weary, wornout sisters had actually grown grey in its laborious service, and an almost endless succession of small bickerings and jealousies had followed. They were so heated and tired out, poor things, over the much serving at suppers and socials that cross words were spoken, and even looks misinterpreted, under the strain of the continual *raising* of money. Money was the flourishing cause of much evil, but we could not see it when our eyes were so hidden by the Almighty Dollar. The Lord sent us a new pastor, a veritable man of God, who believed in spiritual tithing as well as money tithing. He believed that faith and prayer and the pocketbook should go hand in hand, and that each one should give for himself or herself, and not for another. Heretofore, about a dozen of us had done the work of the *raising* of money in the church, but he began to show us the better way, and he never rested until he had abolished the serving of meals for pay, and brought in the new era of each one giving as the Lord had prospered them, even to the little children, and when we met together socially our church hospitality was free."

"And did it pay?" asked Mrs. Sharp, incredulously.

"It certainly did, though doubting Thomases were as thick as blackberries at first," smiled Mrs. Dey. "Families gave dollars where they had given nickels before, and the Lord's cause prospered wonderfully. The backs of the church drudges began to straighten up and they could take time to visit the sick and to do the real work of Christ's church in the world. The missionary society took on new life, and the congregations became so large that a new church building was necessary."

"Oh, mercy," sighed Mrs. Clark. "It makes my back ache even to think of a new church."

"But when it becomes a necessity, I hope we shall

find a better way of helping than keeping a church restaurant," replied Mrs. Dey, so sweetly that no one could be offended by her remark. "Really, dear ladies, what would be your estimate of what it cost you in food, labor and money for that Colonial supper, for instance?"

"Counting the four of us who went to the supper, at least three dollars," promptly replied one sister who had not before spoken.

Others responded with greater or less sums, and Mrs. Dey took the record on a slip of paper. "As nearly as I can judge, the price of the supper added to the cost of the materials you furnished leaves so small a margin of profit that it is really not worth mentioning. The same sum given to the Lord's cause with prayer, and faith in his power to multiply it, would have saved all this hard work, and, in my opinion, come much nearer to the scriptural idea of giving."

"But the most of us have no purse of our own," remarked Mrs. Reddy, with a sigh. "It seems to be the only way we can give."

"But every one of us has some talent, some way in which we can earn, for that fact was brought out in our experience social," Mrs. Best said, her bright eyes shining with interest. "I earned my dollar making jelly for our grocer, and he was so bound to have more that I kept on until I earned my fall hat."

"I earned mine making baskets for Miss Parnell's Angora cats," laughed Nellie Phillips. "I had no idea there were so many ways of turning an honest penny until I heard the reports read at the social."

"Suppose we try the plan for a year, quietly and unostentatiously, not even letting our left hand know what our right is doing. Let us assume half the sum which the Ladies' Aid raises annually and give, each one according to her ability to earn or otherwise lay aside for the Lord's work, and compare results at the end of the year."

Mrs. Drivewell's section of the Ladies' Aid was greatly puzzled, before the year was half gone, at the seeming indifference of Section Two on the financial question. "I was afraid that Mrs. Dey hadn't the gimp to make a good president," remarked Mrs. Drivewell. "Not a single supper have they had this year, and only one social, and that was free, except for a collection. Of course, it gives us a freer swing, but where is their money coming in?"

The pastor's wife smiled knowingly. She had knowledge of Mrs. Dey's plans, and she had been delighted to note the growing love for the spiritual work of the church among the ladies of her section.

The prayer meetings were better attended, and the young people's classes were branching out in lines of work for which they had neither time nor interest before, and the pastor was greatly encouraged.

There was a joint meeting when the question of the annual supper came up, and Mrs. Dey brought forth

NATURE STUDIES

WEST HILL NATURE CLUB.

ARMELIA L. COLWELL.

THE time was May, 1900, a beautiful sunny day, and the place, a small schoolhouse, nestled cozily in the hollow near a small brook. The fresh white paint gleamed out against the hillside, surrounded by trees,—maples, oaks, and the sturdy hickory,—an ideal place for a country schoolhouse, and this day Mrs. Rich had invited all the children of the neighborhood to meet her at the schoolhouse.

Mrs. Rich is a farmer's wife, and before her marriage she was a teacher in the public schools, and after marriage still enjoyed the company of the children, and helped them to have some jolly times, as well as taught them some new things.

They already had a well-organized Band of Mercy which was doing good work. They always responded gladly when Mrs. Rich asked them to meet, as they felt sure they would be well entertained. This day about twenty boys and girls gathered with eager questions to know what was to be done. Mrs. Rich called them to order and after all had repeated the Lord's Prayer and sung a Band of Mercy hymn, she told them she had decided to take up Nature Study, as outlined and given out by the State College of Agriculture, Cornell University, Ithaca, New York.

Each Junior Nature Club must have four members and as many more as can be secured. The lesson leaflets each month are supplied free to each teacher and scholar in New York State, on application, a charter for each club also being furnished free of charge. The dues to be paid each month were letters written on the subjects furnished. John W. Spencer, who is in charge of the work, asked that all letters be written him to begin, *Dear Uncle John*:—And he is an uncle to be very proud of, always so good and kind, answering letters and answering or having answered all questions asked by the boys and girls, or, as he always calls them, his dear nephews and nieces.

After four letters had been written he sent them a club button, white with red butterfly, and the words, "Cornell Junior Nature Club." The idea is to make a study of plants, birds and animals and other outdoor subjects. The object is to teach the children to love nature and the country and country life.

Mrs. Rich organized the club and it was called West Hill Junior Nature Club, and when the charter arrived and was nicely framed and hung up in the schoolhouse and the first month's leaflets arrived, the boys and girls began in earnest. Even little Ethel Ayres, only four years old, printed her letter with the others and was very much pleased to receive one from Uncle John to her. The first leaflet was "A Children's Garden," with an offer from a noted florist, offering to furnish flower and garden seeds for one cent a packet. Mrs. Rich sent for sixty packets, the boys mostly choosing garden seeds, but Levi and Charles each took some sweet peas, and pansies, and some of the girls choosing, besides their flower seeds, to raise vegetables also, for as Ethel said, How could they make any jack lanterns if they raised no pumpkins.

The gardens were duly planted and well cared for by the earnest little workers. The club met once a week on Tuesday afternoon, either at the schoolhouse or in the grove or at the home of Mrs. Rich and each week reported their work or asked for further instructions. Many subjects were studied, usually one plant and one bird, or animal, being given for each meeting, each one learning what he could about it. The meetings were very interesting; the birds were studied with opera, or field glasses; the bugs and insects were studied with a magnifying glass. All were much surprised at the beautiful things in nature which they had been in the habit of seeing every day but never observed, and all were surprised that they were so very ignorant of the things all around them.

The teacher, Mrs. Rich, offered as a prize a book to each one who did a full year's work. The end of each year's work was fittingly observed by a public meeting at the schoolhouse to which the parents were invited. Besides the singing and recitations of the children, some minister or public speaker was always invited. One of the boys, Levi, brought a camera and the pictures taken each year are greatly prized by all. Much care is taken to trim the schoolhouse for the annual meetings. The color scheme is always in red and white with plenty of greenery, red and white being the Cornell colors. Nearly all kinds of flowers are worked into the scheme. Mrs. Rich each year paints them all badges on red satin ribbon lettered in white.

This club is now in its tenth year of work. Mrs. Rich has never given less than ten books in one year and never more than sixteen. Of course some start in well and do not quite finish and so lose the book. Ethel Ayres, who started in at four years of age, still belongs to the club and is the only one who has done perfect work every year since the club started. Levi was perfect for seven years, Hazel for six and Cornelia for five. Others have done well, but in the ten years many changes have come; families moving out and in;

her with a gayly-colored blanket of leaves, after which she slept many days and nights, until a frosty, starry hour came, when she stirred a little and whispered, "Mother, I'm cold."

Then her mother covered her with a white blanket, soft as down upon the mother-bird's breast, and our cowslip slept softly, but soundly, many weeks.

One May morning she heard a delightful rustling in her bed, not knowing that the rustle was caused by the whispering of her companions underground,

The Flowers and Vegetables in the Foreground Are the Products of the Nature Club's Work.

three of the girls are married and some have moved far away. Only one has died and she was far from us at the time. Much good has been done in the neighborhood with the flowers raised and much kindness and help given to those in need of help and sympathy by the club. One could be organized in every community, whether through a college or not.

A LEGEND OF THE COWSLIP.

THERE was a time, long ago, when the cowslip had no golden blossoms. To be sure, she wished to have them, but as she did not know how to bloom she contented herself for one summer with her rich dark leaves, and in autumn fell asleep with her feet curled close and warm underground and her head tucked beneath the cover which her mother had provided.

But one night she woke with a little shiver and said, "Mother, I'm cold"; and her mother hastened to cover

who, like her, were just awakening from happy dreams, pushing out their white feet, and stretching up their tiny hands, as you have seen waking babies do.

Then she heard a robin sing; but as the earth still covered her, the song was but half understood, and to hear better she lifted her head high enough for a yellow sunbeam, who had been looking everywhere for her, to see her.

She remembered both the sunbeam and the robin, and so glad was she to see them both that she laughed a low, sweet "Ha, ha, ha ha!" and there she stood in full bloom every ha-ha having become a smiling, sunny-hearted blossom.

Of course, she was amazed, and hung her head in a sweetly modest fashion, as do cowslips to this day; for since that happy springtime not one of the family has forgotten to laugh itself into golden bloom when it hears the robin and sees the yellow sunbeam of merry May.—*Unidentified.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

THIS is the season when the children are being turned out to feed on the chance influences around them. May they find pleasant pasture and may it contain no harmful thing to poison their minds or corrupt their hearts.

WHAT is so genuine and so profound as the faith of a little child! And that is the kind of faith we should have in our Father,—the kind we *must* have to be acceptable, for, "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven."

WE talk about the wholesome discipline of opposition. Just now we may consider the thrifty weeds in the light of such discipline. But, though they directly antagonize the plants, we must take them as *our* opposers and so proceed to annihilate them. The particular blessing lies in the process by which they are overcome.

TAKE time to enjoy the beauties around you. Look up often at the deep blue sky and the fleecy clouds, Draw in deep breaths of the pure, fragrant air. Turn aside to listen to the murmuring brook and to look at the lovely flower. How is it possible for us to appreciate the things which "eye hath not seen and ear hath not heard" if we do not enjoy the wonderful things here which God has made?

THANKS to the crusade that is being made against the common house fly through the columns of many publications, no one needs to remain ignorant of its harmful, disease-carrying habits. What is needed now is to make the crusade one in deed by waging a relentless war against the pest throughout the season. Screen the flies out of the house and then see that they have no feeding or breeding places outside around the premises.

SUPERSENSITIVENESS.

IN the religious world there are few congregations that are not more or less afflicted with the presence of people who are forever getting their feelings hurt. And not a small part of the minister's work is the task of petting these people and protecting them from imaginary personal thrusts. As a rule this extreme sensitiveness is childishness, pure and simple, and it is unfortunate that one cannot cure the possessor of it as a child is cured of its naughtiness. Does not Christianity include forbearance,—suffering long and being kind?

In the majority of cases no offense is intended, but, suppose it is intentional, what is the attitude of the Christian? Surely not that of a cry-baby! These supersensitive people are also to be found in neighborhoods and in the home. Is it too much to say they have more feelings than religion, more feelings than neighborly kindness, more feelings than love of home folks? And these feelings, what is their origin? Evidently the most intense selfishness. Thinking of self—jealousy over self's dues, rights and privileges—is the beginning.

MARS AHOY!

A GOOD deal of comment is being made by newspapers and magazines on the idea expressed by Prof. Pickering of the Harvard observatory that when the planet Mars comes within 35,000,000 miles of the earth we might be able to send signals to the inhabitants, if inhabitants there are. His plan for attracting the attention of the Martians is by means of a system of mirrors arranged so as to flash light in a rhythmical manner upon the planet. He estimates the cost of such an undertaking at \$10,000,000. Prof. R. W. Wood, of Johns Hopkins University, suggests the simpler and cheaper plan of using a huge strip of black cloth, winding it from one roller to another and making it appear and disappear at regular intervals. He thinks the alkali deserts of the Southwest would be a good place for such an experiment.

According to one report some people in the State of Texas have taken Prof. Pickering so seriously as to offer to put up the money if he would come to Texas and put up the mirrors. But the professor has declined the offer, saying that as yet our knowledge of Mars is not extended enough to warrant our going to so great expense in trying to send signals. Of this particular phase of the subject, and of the subject in general the *Scientific American* says:

"Would it be worth while to carry out the idea? To us it seems that if the experiment proved a failure, and no answering signal were received from Mars in reasonable time, the matter would not be conclusively settled. Knowing practically nothing of the conditions on Mars, it would naturally be unsafe to conclude from a failure that the planet is uninhabited, for which

reason the habitability of Mars would still engross Flammarion, Lowell, and the host of newspapers that accept their utterances as astronomical gospel. On the other hand, if an answering signal should be received, it would be safe to say that the event would transcend in human interest and importance the most stirring occurrence in the history of the earth, and would inaugurate a new era in the progress of the human race.

"Even in the face of this tremendously alluring but exceedingly remote possibility, it seems to us that the \$10,000,000 stipulated by Prof. Pickering, and the smaller indeterminate sum required by Prof. Wood, could be more worthily expended, particularly so when we examine the evidence on which the theory of Martian habitability is based.

"To the indefatigable studies of Prof. Lowell we owe whatever facts have been gathered that bear at all on the question. But Prof. Lowell's arguments have been riddled by the inexorable logic of geologists, astronomers, and physicists. He is wedded to the Laplacean theory of planetary evolution, although that theory is considered inadequate by many astronomers in the light of recent celestial observations. He assumes that the history of the earth is the history of Mars. He advances the theory that Mars is a planet which has shriveled up during the course of ages; that its surface is one vast parched desert, with the exception of the snow that gathers each winter about the poles; and that the chief concern of the inhabitants, if inhabitants there be, is to conserve this paltry supply of water, and to conduct it, as the snow melts in the spring, to those regions in the equatorial and temperate zones which would still blossom if they were watered. Evidence of this gigantic irrigation system, which dwarfs anything of the kind that we have ever attempted, Lowell finds in that network of lines which Schiaparelli first discovered, and which were called by him 'canals' for want of a better name. As spring and summer approach, the lines slowly creep down from the poles toward the equator, and the dull red or orange of the supposed desert region changes to green. With the advent of autumn and winter, the green resumes its dull red or orange hue, and the lines or 'canals' gradually disappear. In these chromatic changes Prof. Lowell sees the seasonal growth and decay of vegetation. His argument for the habitability of our planetary neighbor is based on the undeniably remarkable regularity of the 'canals.' It is pointed out that they are usually the shortest distance between the points that they connect and that they meet in groups of three, five, seven, and more in well-defined spots, which he terms 'oases,' like so many spokes converging in a wheel-hub. In other words, there is nothing haphazard in the arrangement of these canals as Prof. Lowell sees them. They are to him so artificial that they are the symbols of an

intelligent race, who have sunk all political and international disputes in the one vital problem of postponing the day when their orb must eventually dry up and they themselves perish.

"To reinforce his argument, Prof. Lowell points to the earth. He argues that all terrestrial life emerged from the ocean, although no geologist will positively assert how life did originate on this planet; that the earth was once wrapped in a damp, cloudy envelope, although there is much evidence that moisture, even in geologic times, was of local prevalence only; that the earth is gradually drying up, although all geological evidence points to the fact that the proportion of land to sea has always been a fluctuating quantity, with no marked tendency in either direction; and that deserts on the earth are the harbingers of an ultimate dearth of water extending over the entire earth, although geologists maintain that deserts have always existed. Perhaps the most vigorous attack on Lowell's theories has been conducted by Prof. Andrew E. Douglass, who has studied the 'canals' by the methods of experimental psychology, and has shown that there are fundamental defects in the human eye which produce faint canal illusions, and that these have worked serious injury to our observations in the past. It must be confessed, however, that Prof. Douglass has not explained away the seasonal appearance and disappearance of the 'canals' and 'oases.'

"Ingenious as Prof. Lowell's explanation of Martian phenomena undoubtedly is, so much of it is based on unsound geological reasoning, and so much on sheer conjecture, that it seems almost futile to make any attempt at signaling in the hope of obtaining something like experimental evidence that Mars is really a living world peopled by intelligent beings."

A REFORMER.

Before the monstrous wrong he sits him down—
One man against a stone-walled citadel of sin.
For centuries those walls have been a-building;
Smooth porphyry, they slope and coldly glass
The flying storm and wheeling sun. No chink,
No crevice, lets the thinnest arrow in.
He fights alone, and from the cloudy ramparts
A thousand evil faces gibe and jeer him.
Let him lie down and die; what is the right
And where is justice in a world like this!
But by and by earth shakes herself, impatient,
And down, in one great roar of ruin, crash
Watch-tower and citadel and battlements,
When the red dust has cleared, the lonely soldier
Stands with strange thoughts beneath the friendly stars.

—E. R. Sill.

HONOR is but the reflection of a man's own actions shining bright in the face of all about him, and from thence rebounding upon himself.—*Wise Sayings.*

THE HOME WORLD

THE CHILD--ITS PROBLEMS AND POSSIBILITIES

GERTRUDE A. YODER

"HEAVEN lies about us in our infancy." We call it heaven because of the state of perfection suggested by the pure, innocent and loving lives of children. They come as gifts from God, bringing hope and thoughts of the future.

Charles Dickens says, "We love these little people; and it is not a slight thing, when they, who are so fresh from God, love us." How great is the responsibility of the parents' relation to the child! How careful they should be about the way in which they accomplish the work of nurturing and cultivating the child's love and confidence and molding the character which tells for two worlds—this and the next.

In every beginning think of the ending. This will help solve half of the child problems. There are many child problems during childhood, youth, womanhood, and manhood which must be solved, some by the growing child, more by the help of parents and society.

The child is a problem and has problems. Children have trials and troubles that are just as real and as hard for them to bear as have the boys and girls of larger growth whom we call men and women. These too were once in their places and loved so dearly the things of the child-mind. As they became men they put away childish things—some put them so far away that they are not always as considerate toward the rights of children as they ought to be. A child's mind is not a man's mind, nor can it be without *gradual* growth. Men are not men in their childhood, for youth is only the springtime of life. "Childhood shows the man as morning shows the day." As a child is trained so will he be.

Children and youth must have fun and merriment. They are not easily spoiled by happiness—more injury is done by repressing their buoyant spirits.

The germs of the beautiful, sublime and heavenly should be sown in every true home and plenty of good

literature supplied that the child-mind may be filled with wholesome thoughts, thus making the soul beautiful and the character firm, strong, high and broad.

How may teachers and parents best solve the problems of character-building, soul-winning and the preparation for their possibilities of life and other problems of equal importance? Force will not solve them. Criticism will not solve them.

Children are very imitative and far more thoughtful than they are often given credit for. They need more models than precepts,—models in our parents and homes. Many problems are made difficult by an ill-governed home. Some one has said, "The best paternity is that which can be at once mentor, counselor, sympathizer and friend. To influence the young to their being governed without their knowing it—by being at once of them, with them, and still above them—is the ideal type of successful management."

Hamilton says,

"Home is not merely four square walls,
Though with pictures hung and gilded;
Home is where affection calls,
Filled with shrines the heart hath builded."

Another writer says, "The home came from heaven, modeled on the Father's house and many mansions, and was meant to be a training place, the one for the other."

"A good boy," says Professor Peabody, "is the natural product of a good home. The great and overshadowing peril of a boy's life is not, as many suppose, bad companions, or his bad books, or his bad habits, it is the peril of homelessness. I do not mean merely homelessness, having no bed or room which can be called one's own, but that homelessness which may exist even in luxurious houses—the isolation of a boy's soul, the lack of any one to listen to him, the loss of roots to hold him in his place and make him grow. This is what drives the boy into the arms of evil, and makes

the streets his home and the gang his family, or else drives him in upon himself, into uncommunicated imaginings and feverish desires. It is the modern story of the man whose house was 'empty,' and precisely because it was 'empty,' there entered 'seven devils' to keep him company." How important the ideal home—the home which is attractive, happy with the sunshine of contented dispositions, with plenty of a father's wise counsel and a mother's fond love, and in which the Gospel of Christ is taught. So far the character problem is solved in the home and the answer is either wrong or right, according to the nature of the home.

An author has said, "The mere enforcement of good conduct is not enough; the mere inculcation of sound principle is not enough. If we would truly bring up our children 'in the nurture and admonition of the Lord,' it is not enough that we simply teach them what is right. True knowing, true doing and true being involve each other. Above all things instruct them from the Word of God, taking Jesus for their example in patience, meekness and love," showing by example the beauty and strength of prayer and church services, and continually pointing them to their Savior.

"We cannot," says Bishop E. H. Hughes, "evangelize the world by the wholesale in some miraculous way. We must deal with individuals—above all with the individual child,—and win him or her to Christ. What attitude shall we adopt toward the child? We should treat him as a child pupil, not as an adult pupil. Too often we deal with children as if they were adults or else dead children.

"The only point of agreement that the churches for a long time were able to reach was, 'All dead children are saved.' Today we no longer tolerate the shutting-out of the kingdom of heaven of living children and the condemnation of childhood as inherently evil and full of sin. Admitting the presence of evil-inherited tendencies in children, we see them in grown people also. Moreover, there are as many inherited good tendencies as evil tendencies in children, and we must not lose sight of that.

"We remember, for example, that there is never more faith and fervor in our relation toward God than when we are in our childhood. Indeed, far from condemning children because of the perversities that we may find in childhood, we should bear in mind the words of the Master, who himself best defined the relation of the child to God, 'Suffer the little children to come unto me; for of such is the kingdom of heaven.'"

The child's possibilities for good or evil, success or failure, depend entirely upon the solution of its problems, for as Richter says, "The clew of our destiny, wander where we will, lies at the foot of the cradle."

Hemet, California.

LOVE, HONOR AND OBEY.

"How shall I make my children obedient?" asked a young mother.

"By never allowing her to be disobedient," replied a wise matron.

The parents should exact from the children love, honor, obedience. This part of the marriage service should be incorporated into the training of sons and daughters.

One cannot begin too early, but to judge by some of the letters I receive I should fancy that some mothers have never begun at all. Questions as to whether one should spank or not spank, punish or not punish, demand obedience or plead for it would seem to indicate that the average mother finds child training a sad problem.

While I am a determined optimist, in that I feel that the world is growing better all the time, I do think that there is much to be desired in the way of respect for and submission to authority from the average American child. I am an old-fashioned mother and insist that implicit obedience should be demanded from the child to the parent. I was recently present during a public discussion of modern educational methods and was surprised when several of the mothers who spoke confessed frankly that they did not send their children to the schools they (the mothers) wished them to attend because, as one of them put it, "This is the day when children go where they please and do as they please, and we parents must comply with their wishes and conform to their ideas. So my boys and girls have chosen their own schools, and their father and I have decided to yield gracefully."

This manner of dealing with children reminds me of a story I once heard of an argument between a young married couple. The husband was telling of the first difference of opinion he and his wife ever had.

"It was with regard to the upholstery of our drawing-room furniture," he said, "and we could not agree as to what color would be best. My wife wanted green; I preferred blue."

"Well," said the listener, "how did you settle the matter without any unpleasant feeling?"

"Oh," replied the ingenuous husband, "we *compromised* on the blue!"

That is the way in which many parents secure what they consider the obedience of their young people. They "compromise" on that which the child wishes.

I believe entirely and unreservedly in the rule of love, but such love as seeks for the dear object that which is really best—not that which gives most pleasure at the moment. The wise mother does not raise unnecessary issues, but when she once gives an order or utters a prohibition she demands from her boy or girl the obedience which will be a training in self control and which will best develop the child's character.

Each of us is under authority to some one, and to submit gracefully to that authority is half the battle. The self-willed boy will have to learn lessons in obedience sooner or later, and the sooner the easier will they seem. Moreover, his love for and confidence in his mother should make him yield gracefully to her wishes. If not, he must be forced to yield.

And right here comes the question of punishment—how and when it should be administered.

The child should never be punished in public or in the presence of others. To do this is an insult to the child's self respect and an offense to the spectators. But the youngster should know that, as surely as night follows day, naughtiness in public will be followed by some penalty in private.

Absolute rules as to methods of punishment are impossible. Different children require different treatment. I know I am likely to call down a storm of protest about my ears when I state my belief that some children need to be spanked. Others are ruined by corporal punishment. I have in mind two brothers, born in the same environment. One, with a violent temper, could only be checked or brought to reason by a very small but decided little switch. All other expedients failed. Coaxing, pleading, solitary confinement, putting to bed, washing the face in cold water, and sundry other remedies suggested by well-meaning friends had no effect. When the child was crossed in his purpose, or denied anything he wished, the small body would stiffen and the not small lungs would roar forth screams and yells of rage, while fists struck out and feet kicked furiously. And these fits of rage would continue until the application of the small switch aforesaid, when the writhing form would relax, the cries cease, and the child would be ready to listen to reason. Then there would be the quiet time, when the mother took her little boy on her lap, and explained to him that if he behaved like a small wild animal he must be punished as one. She would talk to him of this evil habit he had and urge him to conquer it while he was a little chap and before it grew so great that it would conquer him. She made him understand that as God had put him in her care it was her duty to make a good man of him, even if the process made him and her suffer. By the time the little fellow was five years old he had learned his lesson and conquered his temper. It was *there*, just the same, and occasionally his eyes would flash and his small fists clench, but the angry scream was suppressed and the blows and kicks restrained. His small brother was not lacking in temper, but a gentle reprimand would bring him to a state of reasonableness even when very angry, and for him the switch was unnecessary. Both boys attained self-control and both grew up to be strong, manly fellows, with will power to resist temptation and to rule their own spirits.

So the mother must make a study of the individual temperament of each boy and girl. There are two things she must demand if she would develop the best side of the natures that are in her care. One is absolute truthfulness, the other is absolute obedience. In the extreme cases where corporal punishment seems necessary the child, if properly trained, should never need such after he has reached eight or ten years of age. Common sense and reason should by this time have been so well developed that "spanking" should be put away with other babyish things.

I have found that an appeal to a sense of justice rarely fails and is understood even by the toddler. It is never too early to enforce obedience. The tiny baby soon learns if screaming brings what he wishes.

No parent should ever allow herself to punish when she is angry. There may be some question as to when one should discipline a child, but there is no doubt that the time when discipline should *not* be used is when the disciplinarian is vexed.

As soon as the child is old enough to be taught the rules of cause and effect make him understand that every transgression of any law brings its own punishment. This is a lesson that will stand him in good stead as he grows older.

To the sensitive nature one of the most painful results of transgressions is the inner consciousness that one has done wrong, that one has not lived up to the best in one's own nature and to what the Creator expects of one. Inculcate this principle in the child and he will be that which you long and pray to have him—the father of the noble man he will some day become.—*The Circle*.

WHEN GENIUS IS NOT INHERITED.

THE human brain is made up of countless billions of cells.

The work of a great genius is done by an inconceivably minute part of the brain. It may be due to a development of this minute cluster of brain cells, in connection with freedom from defective construction elsewhere.

Genius marries, and when his children are born the world wonders because they are dull and commonplace.

The same is true of the ordinarily able man, the successful citizen.

Do you want your son to inherit your ability?

Make your wife the companion of your brain.

Your wife gives you children. She cannot give you that which you will not give her.

If you do not share your brain with her, if you do not share your interests, if you do not associate her and your love for her with your noblest thoughts, your most earnest work, she cannot give you a son possessing qualities which you have withheld from her.

A man of genius has a commonplace son because his

marriage is a commonplace marriage, and this is the fault of the man of genius.

Almost invariably, as you may learn in Galton's "Hereditary Genius," or in any racing guidebook, you will find that talent comes through the mother.

The mother's interests, unlike those of the father, are not scattered. Her best and strongest emotions are reserved for the home life.

Her noblest thoughts are associated with her married relationship, and her child inherits the best that is in her.

The man of genius lives in a selfish, isolate atmosphere of his own.

His wife has the pleasure of sharing his annoyances, his dyspepsia, his private grievances, his rheumatism and his general bitterness. He laments loudly that his son develops into a commonplace nothingness. And often, poor fellow, he imagines that the fault is his wife's.

If you are a great genius, or even a man of ordinary ability, you want your son to inherit your strength. Make your wife a real partner now. Let her be ever associated in your mind with the best work of your brain, and you will not have to sigh because you are the father of a fool.—*Journal*.

IN CASE OF LOCKJAW.

A DISTRESSING case of lockjaw has been cured by the following remedy after the doctor decided that the patient would die: Three bricks were put in the fire to heat and water in a kettle to boil. A teaspoonful of cayenne pepper was put in a cup; over it was poured boiling water which was sweetened. This was poured gently into the open mouth of the patient; she sucked in between her teeth two tablespoonfuls. Then the bricks were taken out of the fire and placed in a bucket filled with boiling water sufficient to immerse the bricks half their thickness; then the patient was covered closely with a blanket and placed over the steaming bucket and held there in position to allow the hot steam to encompass her body. In less than five minutes the spasm of lockjaw relaxed and she was able to speak to her husband and family. Finally she fully recovered. This remedy has been used successfully with other ailments. Do not make the hot drink so strong as to strangle.—*Green's Fruit Grower*.

EGGS IN DYSENTERY.

THE egg is considered one of the best remedies for dysentery. Beaten up slightly with or without sugar, and swallowed at a gulp, it tends, by its emollient qualities, to lessen the inflammation of the stomach and intestines, and, by forming a transient coating on those organs, to enable nature to resume her healthful sway over a diseased body. Two, or at most, three, eggs per day would be all that is required in ordinary cases; and

since the egg is not purely medicine, but food as well, the lighter the diet otherwise, and the quieter the patient is kept, the more certain and rapid is the recovery.—*Selected*.

The Children's Corner

POLLY PUTOFF.

HER real name was Polly Putnam, but everybody called her Polly Putoff. Of course, you can guess how she came to have such a name. It was because she put off everything as long as she possibly could.

"Oh! you can depend on Polly for one thing," Uncle Will would say. "You can depend on her putting off everything, but that is all you can depend on." And I am sorry to say he spoke the truth.

"Polly, Polly," mother would say in despair, "how shall I ever break you of this dreadful habit!"

It was just three days to Polly's birthday, and she had been wondering very much what her mother and father intended to give her. She thought a music box would be the best thing, but she was almost afraid to hope for that. A man who went about selling them had brought some to the house, and Polly had gone wild with delight over their pretty musical tinkle.

"Polly," mother said that morning, "here is a letter that I want you to post before school."

"Yes, mother," answered Polly, putting the letter in her pocket.

As she reached the schoolhouse she saw the girls playing, and she stopped "just a moment." Then the bell rang, so she could not post the letter then. She looked at the address. It was directed to a man in the next town. "Oh, it hasn't got very far to go. I will post it after school."

After school she forgot all about it.

"Did you post my letter, Polly?" asked mother when Polly was studying her lessons that evening.

Polly's face grew very red and she put her hand in her pocket. "I will post it in the morning," she said, faintly.

"It is too late," answered mother. "The man to whom the letter is directed went away this evening, and I haven't got his address. It really only matters to yourself, for it was an order for a music box for your birthday?"

"O mother!" exclaimed Polly, "is it really too late?"

"I don't know where he is now," said her mother. "If you had not put off posting the letter he would have received it before he started and sent the music box. It is too late now."

Wasn't that a hard lesson? It cured Polly, though; and she has nearly lost her old name.—*Christian Uplook*.

THE QUIET HOUR

"OLD SOLDIER'S FAREWELL."

CONTRIBUTED.

Into the glory of sunset my lone bark is gliding,
Where in the silence eternal it soon will be hiding;
Yet from the gloom sounds a most gladsome bassoon,
Leading me onward confiding.

Soldiers, ye stand on the eve of a battle of glory,
Winning the world and the loved ones of Christ for his
glory:
Strength to your arms! Heed not Old Mammon's alarms!
Angels will herald the story.

Comrades who labored with me for the old world's re-
deeming,
Binding the sheaves of fruition while daylight was gleam-
ing;
Leave not your task! Nobly endure to the last!
Fields are all ripe for the gleanings.

Into the glory of sunset my gaze now is turning,
Back in your camps are the beacons of hope brightly
burning:
All now is well! Fondly I bid ye farewell!
Heaven is the end of my journey.

OUR INSISTENT ENVIRONS.

J. HUGH HECKMAN.

THE world insists upon companionship; yes more, she calls for service. Her demands upon time and energy are wonderfully exhaustive of vital life forces. No one can continually comply without weakening vitality and causing his powers to ebb low.

A century ago Wordsworth realized a condition which, wherever attendant upon mankind, has limited the development of highest natures. He expresses the situation tersely,

"The world is too much with us; late and soon,
Getting and spending, we lay waste our powers."

The truth of these words is evident to any one who gives the matter thought. Nor are these powers the least significant in the makeup of mortals. Continuous resort to the bartering marts of the world will whet into keenness the sense of the business man. Attendance upon public duties will augment the ability of the professional man. But even the sense of these may be dulled by unrelaxedly being sacrificed upon the altar of world service.

The graces that adorn the soul cannot be developed when the oppressive burdens imposed by the world are constantly borne. In such instance there is no opportunity wherein the soul may be nourished by its necessary

food which is not of the world. The waste of sacred power creates disaster. It is the work of sin and the end of sin. Conservation of soul power ministers unto the efficiency of mental and physical power. Rather than waste all three, wisdom dictates the simultaneous cultivation of all.

Soul interests are not promoted in never-ceasing contact with the temporalities of the world. There is another time and another place for that. That time comes when the mantle of world-care is laid aside and a cloak of childlike freedom is substituted—childlike in its humility, teachableness and quick discernment of truth. That place may be in the home, surrounded by an affectionate circle; it may be in the sanctuary of the Most High; it may be in the inner chamber, or it may be in God's great out-of-doors. The pleasure is too great and the prize too precious to forget the time, or fail to reach the place.

However insistent the world may be for constant attention, acquiescence need not forever be granted except man will it so. The world must pass away. We may not attach ourselves too firmly to it lest we miss it when it goes—and we go.

OUR LOVE FOR GOD.

MANY find it difficult to love God because they have not been taught that God is lovable and in every way worthy of their love. They have been taught evil doctrines and unattractive views of God, which have made them afraid of him rather than to love him. They have been taught to look upon God not as a loving and merciful Father, but as a tyrant and a taskmaster, who watches carefully in order that he may note and set down against them the lapses of conduct and the slightest mishap or neglect, who busies himself to mark down with extreme and severe exactness what is done amiss.

It is scarcely to be wondered at if persons who have been thus taught in their youth find it difficult to love God even then or in their maturer years. Who has ever been frightened or threatened into loving any being? How can we love anyone who does not seem to us kind, merciful, amiable, loving? Our love must be called out by God's love. If we are to love God, it must be because he has first loved us.

But he has loved us and he does love us. The dark and cruel thoughts about God, which, in all ages, have

been too prevalent, are not what this kindly and beautiful world about us teaches. Kindness, goodness, and sweetness beam from the earth, air, and sky. Neither are they what the New Testament teaches. God is good, God is kind, God is the most fatherly of all fathers, more loving than springs forth from a mother's heart. Dull, indeed, must be the heart that can feel no love for the God of whom the Gospel speaks! Perverse, indeed, must be the mind if it can wrest the matchless story of Christ's salvation into a doctrine that would represent God as harsh and unloving.

"God is love," says John, "and he that dwelleth in love dwelleth in God, and God in him." If we could believe that, and we need not say in all its fullness, but if we could only believe it just as we will if we let Jesus help us, then love to God will be born in our hearts, and we shall feel for him all that the natural, loving little child feels for its loving mother.

If we really believed that God, who made heaven and earth, was calling us and beseeching us by the sacrifice of his only begotten and beloved Son to give him the love of our hearts, we could not help giving the fullness of our love to him.—*Methodist Recorder*.

DEFECTIVE CONSCIENCE.

JESUS taught the brotherhood of man not as beautiful theory but as a practical ideal to be realized in our everyday relations. To desire and to labor for the common good of all is the Christian purpose. The Christian conscience must be as broad in its reach as the Christian Gospel. It must be considerate of the welfare of the unknown brother a hundred miles distant as well as of that of the blood kin living in the same house. But how far are Christians today from realizing this ideal in daily practice! The man who is very careful that healthful conditions prevail in his own home is often very slow to correct sanitary evils in the house of his tenant. The man who is most solicitous to provide for the education of his own child often does not scruple to employ the underaged children of his neighbors in his factory. The man who would not think of imposing impure milk, diseased or immature meat, upon his acquaintances, without an apparent pang of conscience, consigns it to the distant city market where it is disposed of to unsuspecting people. Such examples of defective conscientiousness almost daily come to our attention. The Christian Church has still before it the gigantic task of socializing the Christian conscience; that is, educating the conscience of Christian people to the true Christian standard.—*Northwestern Christian Advocate*.

LET HIM IN.

THERE is no such great mystery about conversion. You know already what it is to let some human being

enter into your life. You know all that it means. Everything is changed by it more or less. Those whom we house in the innermost chamber of our hearts seem sometimes to have more to do with the making and shaping of our existence than we have ourselves. Today, perhaps, you came to this chapel without one thought of Christ. He made no part of your thinking, of your acting, of your planning, or of your dreaming. If you will hear his voice today, and let him in, then everything will be altered. He will really come into your thoughts. He will speak to you. You will speak to him. You will say to yourselves, "What would he think of this? What would he do in my circumstances? What would he think about this scheme? How would he have me to direct my life?" When that comes to pass you are living the Christian life, however imperfectly and poorly. You are a Christian: Christ is to you a reality. He will not be at first all that he will come to be, but he is willing just to enter, and once over the threshold he will become more and more to you, till from Guest he turns to Host. What could be better, happier, wiser for you than to open the door to this Seeker, this Knocker, this Beseecher? Let him in. Say to him, say it to him now in the silence of your souls, "Come in, thou blessed of the Lord; why standest thou without?"—*W. Robertson Nicoll*.

GROWING OLD.

A little more tired at close of day;
A little less anxious to have our way;
A little less ready to scold and blame,
A little more care for a brother's name;
And so we are nearing the journey's end,
Where time and eternity meet and blend.

A little less care for bonds and gold,
A little more zest for the days of old,
A broader view and a saner mind,
And a little more love for all mankind!
And so we are faring a-down the way
That leads to the gates of a better day.

A little more love for the friends of youth,
A little less zeal for established truth,
A little more charity in our views;
A little less thirst for the daily news;
And so we are folding our tents away
And passing in silence at close of day.

A little more leisure to sit and dream,
A little more real the things unseen,
A little nearer to those ahead,
With visions of those long loved and dead;
And so we are going where all must go,
To a place the living may never know.

A little more laughter, a few more tears
And we shall have told our increasing years.
The book is closed, and the prayers are said,
And we are part of the countless dead.
Thrice happy then, if some soul can say:
"I live because he has passed my way."

—Unidentified.

ECHOES FROM EVERYWHERE

In forty-two and a half years the Dr. Barnardo Homes have rescued, trained and given a good start in life to 68,050 children. The homes today shelter the largest "family" in the world, 8,391 boys and girls.

In compliance with the demand for cleaner street cars made by the city officials and citizens of Des Moines, President George B. Hippee has issued an order forbidding smoking on cars, even on the platforms.

The final plans are now being prepared at Twin Falls, Idaho, of what the engineers claim will be, when completed, the highest bridge in the world. It will serve to carry the tracks of an electric road across the Snake River Canyon at a point a short distance below the Great Shoshone Falls of that river. The under side of the bridge will be 700 feet in the clear above the water.

Declaring that he believes this time he will reach the North Pole in an airship, Walter Wellman, the Chicago newspaper man, has sailed for Norway, from which country he will proceed to Spitzbergen. Twice before Wellman has visited Spitzbergen with the intention of making a polar flight, but each time he has had to abandon his plans. This year he hopes to start for the pole in August.

The Oklahoma State board of health has issued an order that all cattle intended for breeding or dairying purposes which are shipped into Oklahoma must be accompanied by a health certificate issued by a State or federal veterinarian showing they have stood the tuberculin test. This does not apply to shipments of animals for slaughter nor to shipments for grazing when the ultimate destination is northern or eastern markets.

A special commission has been appointed to draft a bill reducing the number of public holidays in Russia. A memorandum points out that France has only 56 holidays, including Sundays; England, 58; Germany, 60, and Russia, 91. The excess of holidays, it is stated, costs Russia \$1,000,000,000 yearly. Many of the holidays come during the season of work in the fields and keep agriculture backward. The bill proposes that 28 of the holidays be eliminated, leaving 68, including Sundays.

Believing that their men will do better work and about as much with less strain and less danger of accident if they rest on Sunday instead of working, the managers of the United States Steel Corporation have closed the National Tube Works at McKeesport, Pa., on the Sabbath. It is understood that this is the first step toward the closing on that day of all the mills under the charge of the corporation. The only exception to the rule will be the blast furnaces and other departments which when once started must be kept running.

The Illinois Senate by a unanimous vote passed Jones' bill limiting the hours of work of female employes of laundries and mechanical factories to ten hours a day. This was the original eight-hour bill which the Illinois Manufacturers' Association fought but was amended by its introducer to limit the hours to ten and the employments to laundries and mechanical factories.

The Prussian military authorities have decided to discontinue the enlistment of negroes in the army. This ruling applies chiefly to the military bands, in several of which there are African drummers. The explanation offered is that the negroes in question have adopted the vices and none of the virtues of the German civilization. It is said that they have degenerated rapidly and are not amenable to discipline.

The Zeppelin Airship Co. is now busy pushing its plans for establishing a line of airships from north to south, from Lucerne to Hamburg, by way of Friedrichshafen, Strasburg, Frankfort, and Cologne, with branch lines if occasion calls for them. It is hoped that the line will be in operation by May, 1910. New works are now being built at Friedrichshafen and after they are completed, the company will be able to turn out 10 airships annually.

Henry H. Rogers, vice president of the Standard Oil Company, active leader in the organization of the Amalgamated Copper Company, builder of the Tidewater Railway, one of the most successful fortune-makers in the world, and one of the chief figures in the famous government oil suit, which resulted in the imposing of a \$29,240,000 fine in Chicago, which was later reversed, died of apoplexy at his home in New York City. He was 69 years old. Mr. Rogers' fortune is estimated at \$100,000,000.

There is a wide range of difference between people in their ability to hold their breath. Many find it difficult to refrain from breathing for half a minute, while those who have very strong lungs may extend this time to a minute. The pearl fishers of Ceylon will remain under water a minute and a half, but only by taking a number of deep respirations before going down. By this preliminary deep breathing the blood is freed from carbonic acid and other poisons and thus the period until the next breath can be much prolonged. A girl named Wallenda some years ago stayed under water four minutes, 45 seconds, and that is the highest record of that sort. M. Vernon, however, has now succeeded in holding his breath the astonishing time of eight minutes 13 seconds, by breathing deeply for six minutes and then taking several breaths of pure oxygen. Too long continued deep breathing is dangerous, as it causes a kind of paralysis of the muscles and vertigo.

Dispatches from Bluefields, Nicaragua, say banana plantations have been laid waste by night riders near there and the people are awaiting news of a revolution led by night riders. The attacks are being directed against the Bluefields Fruit Company. Seven American and Mexican warships are in that vicinity. The greater part of the Nicaraguan forces are already in the field and more than 5,000 men are assembled on the Honduras frontier, while smaller forces are stationed in other parts. A large army is being mobilized by Gen. Aurelio Estrada.

Cologne Cathedral, which is in unsatisfactory condition, according to the report of the architect of the cathedral, who says the stone is crumbling rapidly, due to acids in the air, and that the necessary repairs will cost many millions of dollars and take many years to carry out, is one of the noblest specimens of Gothic architecture in Europe. It was begun in the year 1248, and the choir was consecrated in 1322. Through centuries the building was slowly carried on and the foundation stone of the transept was laid in 1842. Six years later everything except the towers was finished, and these were completed in 1880. The towers are 512 feet high and the edifice is 443 by 200 feet. Experts declare it will take several million dollars to repair the cathedral properly.

A firm of patent swindlers operating in New York City under the name of Walsh Brothers & Co. has recently been found guilty of using the mails to defraud. The firm posed as an agency for soliciting patents, and those who answered the advertisement were confidentially informed that John T. Sherlock, one of the members of the firm, possessed a special influence with the Patent Department, which gave him an advantage over other agencies. The inventor was thus induced to pay a registration fee, and the only return he received for his money was a small cut of his invention. By this method the firm managed to take in from \$500 to \$1,000 per week. Sherlock has been sentenced to serve a term of two years in the Atlanta Federal prison and pay a fine of \$500, while John Walsh, another member of the firm, must serve eight months in the penitentiary and pay a fine of \$100.

Financial problems constitute the gravest feature of anxiety on the part of the Cuban government, and with the protracted delay in the presentation of the budget for the coming year the general feeling of uncertainty and lack of confidence becomes accentuated. Governor Magoon's budget for the current fiscal year ending June 30 was \$24,250,000 and the estimates of revenue a little more than \$27,000,000. Careful estimates of the revenues for the coming year indicate a total of probably not more than \$24,000,000, exclusive of the taxes available for the payment of the interest and sinking fund of the \$35,000,000 loan for the payment of the army of the revolution. The sources of revenue applicable to this purpose always have been and continue to be ample, with a very considerable surplus. Estimates of the expenses of the government for the coming year place the total at not less than \$30,000,000 and by some authorities as high as \$40,000,000, indicating under the most favorable conditions a very serious deficit. President Gomez is opposed to burdening the country with an additional issue of bonds, and one of his first acts was to decide against the issue of the loan of \$15,000,000, authorized by Governor Magoon, to meet the cost of the contracts for the sewerage and paving of Havana and the waterworks of Cienfuegos.

A new axle train-lighting system has recently been devised, in which the generator is located in the baggage car of the train. The generator is placed in the body of the car, where it is open to inspection at any time, and it is driven by belts from the axle of one of the trucks. The belts are made self-adjusting so as to take up slack due to the flexing of the springs. A storage battery which is charged by the dynamo serves to furnish current for the lights when the train is standing still.

That alcohol was the cause of insanity in 46 per cent of the patients admitted to the Norristown, Pa., State Hospital between April 1, 1907, and April 1, 1909, is the assertion of Dr. C. R. McKinnis in a paper read before the Association of Pennsylvania Hospitals for the Insane May 15. Dr. McKinnis said that in two years 530 patients had entered the institution. Alcohol caused insanity in 240, and 71 cases were diagnosed as alcohol psychosis. In cases of epileptic insanity the work of alcohol could be traced.

Under direction of Circuit Attorney Jones the St. Louis, Mo., grand jury is investigating rich tax dodgers. While the deposits in banks aggregate \$400,000,000, not more than \$4,000,000 is listed for taxation. To make a false tax return constitutes perjury, with the sentence of from two to seven years in the penitentiary. However, indictments can be found charging the making of a false affidavit, which is a misdemeanor, punishable by a fine or a workhouse sentence, or both. Owners of automobiles say that the machines belong to their wives. If so the wives may be arrested for not having license to act as chauffeurs. Before the investigation ends the officers of every bank in the city may be summoned before the grand jury.

President Taft signed a proclamation opening for settlement and entry a million acres of rich farm land in the Coeur d'Alene Indian reservation in Idaho, the Spokane reservation in Washington and the Flathead reservation in Montana. Coeur d'Alene is the point for drawing sites in all three divisions. Registration will begin July 15 and terminate August 5 of this year. The drawing will begin at 10 o'clock on the morning of August 9 and continue as long as it is necessary to dispose of the lands. The points of registration at which applications must be executed and sworn to are as follows: For the Flathead, either Kalispell or Missoula, Mont.; for the Spokane land, at Spokane, Wash., and for lands of the Coeur d'Alene reservation, at Coeur d'Alene.

President Taft send back to the War Department the estimates submitted to him for the support of the military establishment for the fiscal year 1911 and indicated his desire that they should be cut approximately \$36,000,000. The estimates were prepared during Secretary Dickinson's visit to Panama and carefully scrutinized by Acting Secretary Oliver, who reduced them to \$171,650,000—\$18,000,000 less than the estimate for 1910, but about \$16,000,000 more than the appropriations for the current year. When Mr. Taft saw the figures he expressed his wish that they be \$20,000,000 less than the appropriations for this year. Army officers say the reduction in estimates, if persisted in by the President, means practically no construction work for the army during 1911.

Among the Magazines

OVEREDUCATING CRUDE BRAINS.

That we are attempting to force too many different types of brain through the same course of training in our schools, and that we should pay more attention to racial factors in our public education, is asserted by an editorial writer in the *Interstate Medical Journal* (St. Louis). He says:

"Every now and then there is an unwise assertion that the educational system is a failure, and a demand is made that it be replaced by an industrial education as at Tuskegee—the school to take the place of the old-fashioned apprenticeship and the graduates turned out ready to make a living—a stride toward Socialism. Yet there is just enough anatomical basis for these criticisms to cause us to pause and determine whether we are correct in thrusting higher education upon those unable to accept it, and whether the money had not better be spent upon the lower grades beyond which such a huge proportion of children never pass, reserving the higher courses for the few able to pass rigid tests as to ability. Perhaps a study of ethnic types in the high schools, colleges, and universities will throw light on the subject. It is a huge, uncultivated field bound to give rich returns, as we may find that most of the types in the higher schools are descendants of immigrants from countries where there is a large number of higher schools per million of population, and that our lower types have no use for the higher schools for the same reason here as in Europe—inability to use them.

"At least one thing is certain—the extreme necessity of training what brain exists in each little citizen. The public-school system must be developed more and more. But we must strongly combat the popular delusion that such education causes an effect in the way of increased number of cells and fibers, for Donaldson ('Growth of the Brain') shows that the cells cease their multiplication before birth. Even if there were an increase, there is no evidence that such acquired characters are ever transmitted. Pedagogues quite commonly assert that education for two or three generations will markedly increase the intelligence of the descendants, but there are no facts whatever upon which to base such an opinion. Indeed, Greece was on the down grade at her greatest pedagogic period. Education is a process of making a better society of the material at hand by enhancing the economic value of each unit—eugenics does not enter the question at all. In Europe, apparently, it is intelligence which is developing education, and not education which has evolved the larger and better brains which characterize the higher races."

But does the perpetuation of American institutions, the writer goes on to inquire, demand an education which was not obtained by the men who created those institutions? Will not the men with brains rise without prolonged education, as did Franklin, Lincoln, and Garfield? Of course no one doubts that our self-made men would

have been better off for more schooling; but are we not injuring too many boys by thrusting on them a training of which they are unable to profit in the struggle for existence? Says the writer:

"Thousands are starving in all the professions, who should be on the farms like their ancestors, raising healthy country lads instead of anemic, under-fed city weaklings. The 'failures' have muscles for mechanical work, but not brains for intellectual labors, and if the muscles had been properly trained, they might not have been 'failures.' Percherons are not trained for the Derby, and our pedagogues may find therein why such a small percentage of children who enter a high school are able to graduate.

"The great discussion now going on as to the large percentage of 'backward' children in the public school, might end if it is shown that they are as far advanced for their age and brain as they should be, and that forcing them on may be injurious. In other words there is a danger that pedagogy, unchecked by ethnic brain studies, may lead itself astray unless each child's abilities are studied as carefully as a horseman studies a colt's, and then training adopted to suit each individual, for no two boys are exactly alike."—Literary Digest.

THE ECONOMIC ARGUMENT AGAINST THE SALOON.

More and more the economic argument is influencing voters to abolish the saloon. The man who frequents the saloon is not so strong in body nor intellectually so keen, nor professionally or industriously so efficient as the man who does not. A man who has no scruples on the subject, but has good common sense, soon discovers that he is handicapped in the heated competition of life when he becomes a patron of the saloon.

The New York Central, the Lackawanna, the Pennsylvania, the Baltimore & Ohio, the Wabash, the Rock Island, the Great Northern, and other railroad systems have adopted the following rule: "The use of intoxicants by employees, while on duty, is prohibited. Their habitual use, or the frequenting of places where they are sold, is sufficient cause for dismissal." The Michigan State law will not permit a man who is not a total abstainer to have anything to do with the running of trains. The premium on temperance in railroad circles is so great that 25,000 employees of the Northwestern Railroad signed a pledge of total abstinence at one time.

Business houses generally discriminate against the drinker in the employment of men. The United States Commissioner of Labor sent a note of enquiry to 7,000 concerns employing labor; 5,363 of them responded that they took the drink question very much into account in hiring men, and that they had to be the more careful in selecting responsible help because the law held them liable for injuries caused by accident. The young man of ambition and hope who wants to get into a good place

and succeed in it knows full well that he must stay away from the saloon. This business argument sends hundreds of thousands of employees into the ranks of those who are fighting the traffic.

The people paid last year a billion dollars for intoxicating drink, \$108,000,000 more than for all the necessities of life, and it is a protest against this colossal material waste and a desire to divert some of the drink money to better uses that has prompted many to vote no-license in the campaigns. The billion dollars paid over the counter for drink for the year is only about a half of the material damage the traffic causes, requiring institutions to be maintained by the public.

The large amounts of money paid into the treasuries of States and municipalities by the liquor-dealers are no compensation for the material as well as the moral waste in the community, and while there are many friends of law and order who vote for license because they think the saloon ought to be made to pay a part of the price of its public injury, the people are getting to believe more and more each year that the damage of the saloon is too great, and they are unwilling to tolerate it and are voting "no" on the proposition to permit it.—From "Another Year of Defeat for the American Saloon," by Ferdinand Cowle Iglehart, in the *American Review of Reviews* for May.

WHO IS THE WISE GIVER?

There is a growing tendency among rich men to give their money to institutions, rather than to leave it to their sons or grandsons. In America, money is seldom handed down from generation to generation in large estates. The highest type of individual is he who can see farthest into the future and direct his actions so that they will be operative for good fifty or one hundred years hence. For this reason wise givers, wise and loving parents, are learning not to give all of their fortunes to their children. Why? Because there is a surer way of investing it, so that it will yield interest to their children and grandchildren, than by handing down to them swollen fortunes with the accompanying evils.

The best inheritance any man can have is an environment that promises health, that gives opportunity to be self-supporting and to make his own fortune, in whatever way seems to him most worth while. Not the man who leaves money for his grandchildren's education, but he who gives money to make the school system provide good education for all children, is the wise giver. Not the man who builds a model tenement, but he who enables his town to enforce the tenement-house law that protects all tenements for all time; not the man who gives a home to convalescent mothers and babies, but he who gives a fund to teach the public to educate all mothers to save their babies.

Our interest is no longer in the maintenance of a particular family, but in a better race of Americans—i. e., in a better environment.

The money of Americans is their conscience, the use of it, if not the getting of it, expresses an ideal—now a health ideal, now beauty, now government, now social welfare. May it not be that one hundred years hence the man, not known today as philanthropist or benefactor, but who uses his money, his thought, his time and energy to put his ideal into permanent form on a commercial basis, will be lauded as the Charitable Man?—Editorial in *The Delineator* for June.

GRAIN VERSUS CASH RENT.

WE are not now discussing the question of whether it is better for the owner or the tenant to deal on the basis of cash rent or grain rent. That will be settled in different ways by varying conditions. When seasons are favorable and prices of grain high the landlord would naturally prefer grain rent, because experience has shown him that he receives more net income in this way than he would dare to ask the tenant in cash.

When the owner is so situated that he can keep an eye on the farm operations and can dispose of his share, he prefers the grain rent, of course. When he lives a long distance from the farm, however, and can neither keep in touch with its operations nor market his grain, then he is willing to accept cash rent. When the seasons have been bad for a number of years, so that grain rent has not paid well, he then insists on cash rent. If he holds the farm for speculation and cannot lease it for more than a year at a time, he again prefers the grain rent, other things being equal.

The tenant of limited means prefers grain rent, knowing that if he should meet with a bad season or misfortune in any way he might otherwise sink his capital or savings. On the other hand, the tenant who is forehanded and can engage in live-stock farming and can secure a lease for a number of years, naturally prefers cash rent. Decades hence, when we settle down to a regular system of farming in the West, we believe that cash rents will be the rule and grain rents the exception. This, however, is not what we started to speak about, but rather the effect of cash and grain rent on the farm itself. For we are interested in the land as well as in the landlord and the tenant. They will pass away; the land will remain, and the welfare of the future generations will depend very largely on whether the land has been farmed in such a way as to retain, if not increase, its available fertility.

It may be safely assumed in all deals between landlord and tenant that each will look after his own personal interest. The tenant, whether paying cash or grain rent, will do his utmost to get all that he possibly can out of the land during the term of the lease. He will get every bushel of wheat, every bushel of corn, every ton of hay that he can possibly obtain in that year. He won't have the farm the next year. Whether it gains or loses in fertility is a matter of no consequence to him.

In renting for a share of the grain he can deal only to a very limited extent in live stock; hence can have a very limited amount of manure available. Therefore, it seems to us that the custom of grain rent so common in recent years will sooner or later tend to decrease soil fertility. This would also be the case where the land is rented for cash for a single year. The landlord must not expect the tenant to lie awake at night or work extra hours to maintain the fertility

of land when his tenure is definitely limited by the lease to a short period.

Cash renters generally have a longer tenure, that is, their leases are for a longer period than grain rent, and cash renters naturally pay much more attention to live stock than those that rent for a share of the grain. Live stock means manure; and on the lands of a neat farm that manure will be hauled out for the looks of the thing as well as for increasing the fertility of the soil.

If the lease is for a long period, or for a short period with the understanding that it is terminable at will of either party, where, if the tenant is a good one and the landlord lives, it is likely to continue for a series of years, in that case the land is likely to maintain and even to increase its fertility, to the benefit not only of the parties directly interested, but of the entire community. Therefore, the sooner we settle down to business and deal in land as a permanent investment, the profit of which is determined largely by the maintenance of its fertility, the sooner we will drift into cash rents for a period of years, or at least with the understanding that the lease can be continued at the will of both parties.

The tenant, unless he is forehanded, cannot afford even in a section where crops are reasonably certain to pay a large cash rent for a single year. A hail storm or an untimely frost or a wet harvest or a season of drought or flood may prevent him from making more than a bare living, to say nothing about paying the rent. Or he may be able to make only half the rent; and in this case he exhausts his available capital and is not likely to continue to rent for another year; whereas over a period of five years he is morally certain to have two or three good years, possibly one or two where he can "make a killing."—*Wallace's Farmer*.

RAISING AND GIVING.

(Continued from Page 537.)

the report of her section for the three quarters since she had held office. Mrs. Drivewell fairly gasped in her astonishment. "How have you done it?" she asked, breathlessly.

"Simply by giving heartily, as unto the Lord," replied Mrs. Dey, calmly. "I am proud of my band of workers, and now we have a proposition to make to you. Why not make our donations to this annual supper a cash offering and thus save the backaches, the nerve-wearing operation of the supper itself? The ladies of my division are ready and more than willing to do their share."

Mrs. Drivewell was loth to give up her pet scheme for raising money, but the husbands approved so energetically that it was agreed to follow Mrs. Dey's lead for once, and the results were so surprising that

even Mrs. Drivewell became reconciled to the idea of giving, instead of raising, the necessary funds for the needs of the church.—*Home Herald*.

Between Whiles

He'd Help.—Caller—"Sir, I am collecting for the poets' hospital. Will you contribute anything?"

Editor—"With pleasure. Call tonight with the ambulance and I will have some poets ready."—Judge.

The Cure.—"Can I offer you a little friendly advice?" "If you'll take a little in return."

Here negotiations ceased.—*Louisville Courier-Journal*.

Pride Goeth, Etc.—Professor (coming from his club holding up triumphantly his umbrella to his wife)—"You see, my dear Alma, how stupid are all the anecdotes about our absent-mindedness. You see, I haven't forgotten my umbrella."

Mrs. Professor—"But, my dear, you didn't take your umbrella with you: you left it at home."—*Frankfort Witzblatt*.

A Keen Observer.

Ethel, aged three, had been to visit her cousins, two fun-loving and romping boys. She had climbed upon her father's knee and was telling him of her visit. "Papa, every night John and George say their prayers they ask God to make them good boys," said she. "That is nice," said papa. Then thinking soberly for a few minutes, she said, "He ain't done it yet."—*The Delineator* for June.

Johnnie: "Pa, won't you please buy me a microbe to help me with my arithmetic?"

Papa: "What good will a microbe do you?"

Johnnie: "I just read in this paper that they multiply rapidly."—Judge.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

BINDER TWINE—Highest grade standard 7½ cts. lb. Club together and send us your order. We save your money. Farmer agents wanted. Free sample.—*Central Supply Co., Mt. Morris, Ill.*

FARMS FOR SALE—From \$40.00 to \$60.00 per acre. If you are in the market for a farm write at once for a 1909 price list giving full description.—*M. H. Miller, Bristol, Ind.*

FOR SALE—5x8 Printing Press, including type, cabinet, ink, and unprinted stock. Worth \$150.00. A bargain at \$50.00 cash. Other business. Green stamp brings samples of work.—*Dallas Kirk, Pentz, Pa.*

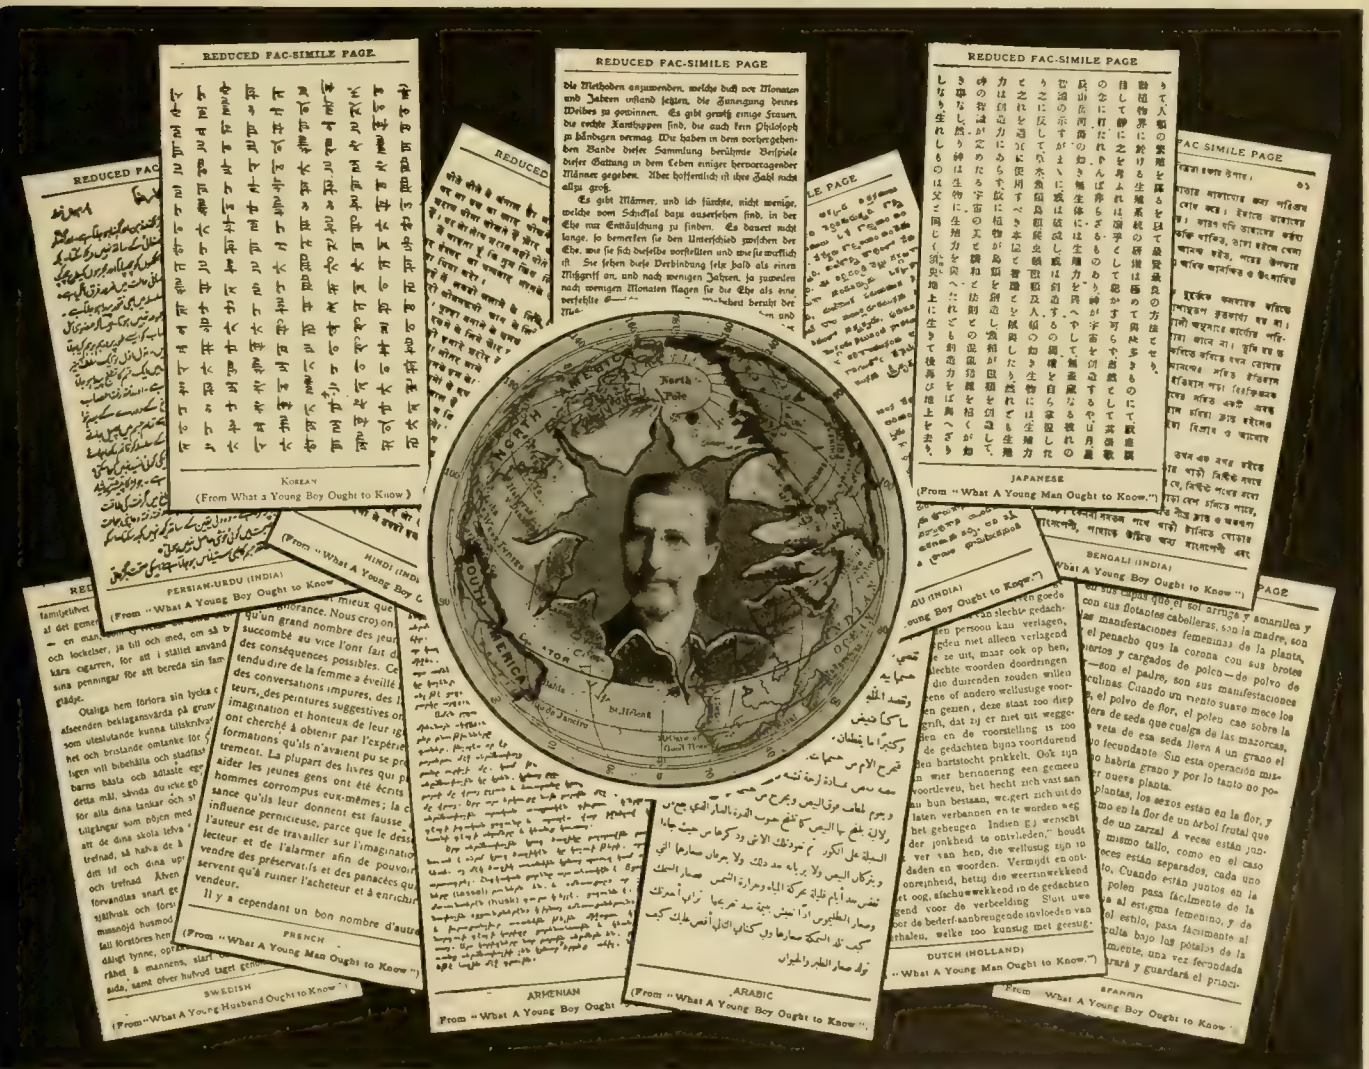

BOOKS THAT BELT THE GLOBE

L. M. CROSS

THE necessity for self-knowledge is becoming daily, almost hourly, more apparent. The ominous and costly silence of the centuries is at last broken. The clouds of ignorance are being dispersed by the demand for pure knowledge of what has always been considered an avoided subject. This has been brought about somewhat by the scandalous details of evils published in the daily press, by the stories in the juvenile courts of youthful depravity and vice, by the

But the voice spoken through the printed page that has done most to awaken the nations of the earth from their fatal slumber has been that of Sylvanus Stall, D. D.* When the columns of the press and the voices in the pulpit were silent, when doctors and educators were busy with other matters, he endeavored to dispel the darkness of ignorance by sending forth the light of proper intelligence.

It was when Dr. Stall was a young minister, think-

editorial and contributed articles in the columns of some of the leading periodicals which have told in pathetic and heartrending language of the awful sacrifices demanded from the very flower of our young manhood and womanhood because of ignorance concerning subjects which intimately affect the temporal and eternal well of every human being.

ing of the dire need of proper literature and the sad condition that existed in society, that he realized that some one should brave public sentiment, and perchance even censure, and afford boys and men pure, clean and honest books upon these matters. His thought formed itself into a resolution that if God spared his life, he would some day, with his help, undertake to write

such books. Whenever he saw a book which he judged would prove helpful he purchased it and laid it away for the propitious time which he believed, in God's good providence, would surely come. He attended clinics in medical colleges, visited hospitals and made careful preparation in every way for the purity work which is now firmly established.

About ten years ago he kept his covenant and published "What a Young Boy Ought to Know," and "What a Young Man Ought to Know," and awaited with confidence the judgment of the public upon them. It exceeded his greatest expectations. Words of heartiest approval came from such clergymen as Theodore L. Cuyler, Charles L. Thompson, James A. Worden, F. B. Meyer, Bishop Vincent, and Josiah Strong and from such laymen as Edward W. Bok and John Willis Baer and from such women as Frances E. Willard and Lady Henry Somerest, and many others of the great and good in all parts of the world.

So universal was the encouragement he received from appreciative people everywhere that he recognized in it a leading of providence and resolved to consecrate his entire thought and energies to the one idea of disseminating pure literature along these vital lines. Then followed "What a Young Husband Ought to Know," written in that language which only a pure heart and brain could conceive. Then when he reached the period of middle life, he found that men of forty-five and over were as ignorant of the changes through which they were passing as boys at the period of adolescence, and there was a fourth book, "What a Man of Forty-five Ought to Know."

Dr. Stall, although believing that his special work was for men, was not without interest in girls and women. He realized that they also should have the right kind of literature, and he seems to have been providentially led to secure the services of Mrs. Mary Wood-Allen, M. D., and Mrs. Emma F. A. Drake, M. D., who have written in the same pure, chaste and informing way for girls and women upon the things they should know.

Some of the far-reaching influence of Dr. Stall's books is made apparent by the fact that several of the large church missionary societies, at their own expense, have had one or more of these books translated and published for the use of their missionaries in their work in different portions of Asia. The books have been translated into nearly all of the European languages and many of the Asiatic tongues—in all twenty or more. Reduced page productions of some of these languages appear above.

In this series of books the whole question of the reproductive nature is presented as Dr. Stall conceived God must have thought of it when he created man and woman and endowed them as he did, and gathered about the relation of husband and wife, and parent and child the tenderest and most sacred relations of life.

Dr. Stall is a man with a definite, clear and soul-consuming message and he has known how to deliver it. He has spoken in the vernacular of the people. Like his Master it can be said of him "the common people heard him gladly." The influences of these books will never die. If their wise counsels are heeded it will mean a better brand of people in the coming generations. The faculties which have been covered with the blight of ignorance in the past will be purified and lifted to that eminence which God intended them to occupy.

WHY THE AMERICAN STANDARD BIBLE IS THE BEST VERSION OF THE SCRIPTURES

Never before in the history of Bible translation and revision has there been such an immediate and hearty acceptance of the work of the translators as has been accorded that of the American Committee. This is due to many causes:

1. The recognized reverent scholarship of the American committee.
2. The representation on the Committee of every phase of Evangelical belief.
3. The extreme care and deliberation of the work covering a period of nearly thirty years.
4. The wealth of new material at the command of the Committee, older and more authentic manuscripts, and tablets and papyri recovered and deciphered, from cities which had been buried for centuries.
5. England, Germany, France, Holland, Denmark, Sweden and Norway have all made recent revisions of the Bible, thus showing that Christian scholars the world over have felt the necessity of a better Version of the Scriptures.
6. The American Committee had for reference and comparison all these recent revisions made by other countries, thus giving them the advantage of the accumulated Christian scholarship of the world.
7. Since the translation and revision of the King James Bible in 1611, many words have become obsolete, and many others have entirely changed their meaning. Upwards of forty English Dictionaries have been issued in order to keep pace with the changes in the language.

DR. JOSIAH STRONG declares we should consider ourselves only as Christ's servants. "Christ would still seek the lost," he says, "but he must do it now on our feet; he would still minister, but he must do it with our hands; he would still warm, and comfort, and encourage, and instruct, but he must do it with our lips. If we refuse to perform these offices for him, what right have we to call ourselves members of his body in vital union with him?"

Sunflower Stories and Lullabies

By Olive A. Smith.

A collection of stories and verses for young folks. Miss Smith is a writer of considerable ability, contributing to several young people's papers regularly.

The poems and stories found in this volume are among her very choicest productions.

In remembrance of her home in Kansas, the Sunflower State, she has called the collection "Sunflower Stories and Lullabies."

The book contains many such stories as "Mabel's Diamond," "The Story of a Bird," "A Real

Boy," "An Adopted Family," "The Class in Number Seven," and "Sammy." Interspersed throughout are a large number of such poems as "In Chipmunk Town," "The Moon Baby King," "The Wise Crow," "The Meadow Preacher," and "The Bye-Bye Boat." One hundred pages of the most delightful reading. The book is printed from large clear type, on a good quality of paper. The frontispiece is reproduced from a painting by David Emmert. Handsomely and substantially bound, artistic side title, profusely illustrated.

BRETHREN PUB. HOUSE, Elgin, Illinois

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. 1. J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

EMPIRE COLONY IN "SUNNY STANISLAUS"

The CO-OPERATIVE COLONIZATION COMPANY is now locating a colony of our people in the lower San Joaquin valley, in central California. The new town of EMPIRE, as well as the colony lands, is located on the Santa Fe railroad, five miles east of Modesto, the county seat of Stanislaus County, thirty miles south of Stockton, seventy-five miles from Sacramento and one hundred and fifteen from San Francisco.

The colony lands join the new town site and are within a few miles of three different railroads. These lands are all under cultivation, and are free from brush, stumps, stones and other obstructions. Two large ditches cross the tract, affording ample water for irrigation of all crops.

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and Investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

NEW CHURCH ORGANIZED—NEW RAILROAD BUILDING.

A new Church of the Brethren was recently organized at Empire, with twenty-five members, and other families of our people are expecting to move there soon. The Modesto-Empire Interurban railroad is now being built. For further information address,

CO-OPERATIVE COLONIZATION COMPANY
North Manchester, Ind., South Bend, Ind.
Or Levi Winklebleck, Modesto, Cal.

THE INGLENOOK

June 8, 1909

One Dollar Per Year

IT IS THE MEANER PART THAT DIES

Though love be bought and honor sold,
The sunset keeps its glow of gold;
And round the rosy summits cold
The white clouds hover, fold on fold.

Though over-ripe the nations rot,
Though right be dead and faith forgot,
Though one dull cloud the heavens may blot,
The tender leaf delayeth not.

Though all the earth be sunk in ill,
The beauteous autumn's mellow still;
By virgin sand and sea-worn hill
The constant waters ebb and fill.

From out the throng and stress of lies,
From out the painful noise of sighs,
One voice of comfort seems to rise,
"It is the meaner part that dies."

—Sir Lewis Morris.

A New Book Out And It Is Free

A large party of Brethren from California, in charge of S. P. Bowman, are on their way to the Annual Conference at Harrisonburg, Virginia. As they passed through Omaha, they were each one presented free with a copy of this new book, "JUST TWENTY YEARS AGO."

Following are the names of the parties in charge of Mr. Bowman:

Cornelia and Mary Johnson.

F. L. Hepner, wife and children.

A. N. White, and wife.

Mrs. M. Myers.

Miss Wampler.

Mr. and Mrs. Moses Brubaker.

A. H. Emmert, and wife.

Mr. and Mrs. Sam Fesler.

D. A. Norcross, wife and son.

Mrs. Katie Bashore, and child.

Mrs. Fannie Gibbel.

Mr. Percy E. Zug.

Miss Elizabeth Snider.

Those persons who attend the Annual Conference at Harrisonburg, and fail to get a copy of this free book, will receive one by mail by writing the undersigned; or should there be any who for any reason will not be permitted to attend the Conference, we would be glad to have them write us asking for a copy of this booklet. It is new and bristling with the history of the church and missionary statistics which will be helpful. Not only send your own name and address plainly written, but the names of other brethren and sisters who you think would be interested in this booklet.

Address all orders for the new book, "JUST TWENTY YEARS AGO," to Geo. L. McDonaugh, Omaha, Neb.

Paul the Herald of the Cross

By J. W. Wayland

The story of Paul's life is told in an interesting and instructive way. A splendid sidelight to the Sunday-school lessons for 1909.

It will appeal to boys and girls, and older persons, too, and will leave them the better for reading it. Brother Wayland follows the Great Missionary from youth to death, and all the way he holds the attention. One

cannot read the book without feeling a desire to help in spreading the Gospel.

\$400 Prize Cup Won by Colfax County, N. M. In Competition with Entire Irrigated West

Miami Ranch

is located in the choicest part of Colfax county, New Mexico, and it was largely due to the products grown upon and adjacent to this ranch that Colfax County won this valuable cup at the Interstate Industrial Exhibit held at Albuquerque, N. M., last October. Every State was represented—products from land selling as high as \$1,000 an acre were shown—but Colfax County won by many points.

Many other prizes have been won by this section of the country. New Mexico wheat took first prize at the World's Fair in Chicago, while apples raised in an orchard directly adjacent to Miami Ranch won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 an acre.

Miami Ranch

offers you health and pleasures as well as wealth. It's situated in a rich, cheerful valley, surrounded by picturesque mountains. Elk, deer, bear and other large game are to be found in the mountains, while thousands of wild duck and geese inhabit the surrounding lakes. The Rayado River, which flows through this ranch, is noted throughout the central west for its trout fishing.

The rainfall is sufficient to insure big crops. But with the gigantic irrigation system recently installed, there is not the slightest chance of crop failure.

The climate is perfect, the air is pure, and the scenery beautiful. Excellent church privileges, a good school and pleasant neighbors are all to be found on Miami Ranch.

Write for a free copy of our booklet, "Westward Ho." It tells in detail all about Miami Ranch. Tells how and when you can get a round-trip ticket from Chicago for \$30, and from Kansas City for \$25, via the Atchison, Topeka & Santa Fe. Write at once and take your choice of the bargain offers which we are now making on both large and small farms.

Farmers Development Company, Springer, New Mexico

The Home Model Washer

Contains new features that should concern all who are in need of a washer. By means of a thumbscrew, the lever can be quickly set for long or short leverage, for light or heavy work, a good feature.

The agitator, the part that does the washing is also something new in that line. It is Simplicity and Strength and

makes this washer noted for easy, fast and clean washing. Do yourself a favor by learning all about this washer. It is low in price. I pay all the freight whether the washer is returned or not after a thorough trial. The circular illustrates and explains it all. Send for circular at once. Agents wanted. Address: **WM. S. MILLER,** Meyersdale, Somerset Co., Pa.

Your Children

speak in the language of the twentieth century. In school, they are taught the language of the present day. Is it natural then, that in their Bible study, they should be expected to understand the English of the seventeenth century? The

American Standard Bible
Edited by the American Revision Committee
is for you and your children. It is the Bible truth revealed in the clear, simple language of the twentieth century.

24-page Booklet Sent Free

This book tells about the previous translations of the Scriptures and shows how, by the growth, change and development of the English language in the past 300 years, the American Standard Bible became a real necessity. The booklet tells also of the thirty years of effort spent in producing the American Standard Bible and gives many endorsements from prominent clergymen and religious writers of all denominations, with names of colleges and institutions where it is used.

A postal will bring the booklet—write for it to-day

NEFF'S CORNER

I now have another offer to make in keeping with our rapidly growing, progressive city. A specially desirable lot will cost \$375.00. A 4-room frame house 24x26, drop siding outside, ship-lap inside, nicely finished with canvas and wall paper, wood work stained and varnished, two coats good paint outside, outhouse built and painted, all complete, will cost \$575.00 Total, \$950.00. Such a property will rent readily for \$20.00 per month, which is a little better than 25 per cent on your investment. The demand is not nearly supplied for such properties, and you not only get a good income from such an investment, but outlook at present is, your property will rapidly grow in value. If you have less than \$950.00 to invest, try our Investment Association plan. Money invested on this plan earned 17 per cent last year over and above all taxes, insurance and other expenses, and every investor has received his money back who asked for it. Full particulars on request.

JAMES M. NEFF,
Clovis, New Mexico.

J. A. Bowers' apple crop of 1907 netted \$1,000 per acre, and in 1908, \$700 per acre.

E. A. Blair gathered from seven and one-half acres of apples 3440 boxes of fancy apples which netted \$5,500.00.

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

A CHEST OF DRAWERS

ELIZABETH D. ROSENBERGER

I LOVE the old Perkiomen River. The craggy hill-sides sloping down to the water's edge, the old oak trees and weeping willows all draw me like a magnet. So though I have but two weeks' vacation I come here to enjoy it. I have taken rooms in a tiny cottage and I board myself. One day I stopped in at Mrs. Allebach's house, just in time to escape a shower of rain. I found her the most delightful old lady, ready to talk about old times and new.

"What a beautiful old Windsor rocking-chair!" I exclaimed one day, as she urged me to take a seat.

We were old acquaintances by this time, and I knew by the way she sat down and smoothed her apron there was a story coming, and I waited, anxious for her to begin. "Yes, an' I had a good many other things that was just as nice as that rockin' cheer, an I wisht I had 'em yet. That's what I do."

"What became of them? Did you have a fire?" I asked.

She looked at me rather patronizingly. "Then you've never seen these men who go round the country, buyin' up anticks?"

"No," I answered her laughing, "I have never had anything to sell, so they have left me alone; are they peddlers?"

"Peddlers?" she queried with lofty scorn, "no indeed, you wouldn't dare to call them stylish lookin' gentlemen peddlers! Why, I thought they was lawyers when they came here the first time. They knocked on the front door an' I went an' let 'em in. They set down in the settin' room, an' then one of 'em says, 'Madam, we are lookin' for antick furnitur; would you let us see what you got?' It just bothered me, I couldn't think what to say for a little spell. An' then I said 'I don't believe you'd want our old stuff.'"

"The men laft: an' one of 'em pinted right at a chest of drawers 'at had belonged to my grandmother, an' he says, 'Would you sell that?' It beat me so

I think my heart quit beating. I got cold all over. You see Nathan was short of money that fall from havin' to pay a big doctor bill for me in the spring, an' I had worried about it a good deal; night times I couldn't always sleep for thinkin' about it. An' I seen right away that they would buy if they could." Here she went to the kitchen to see if her beans needed any more water.

"Did your dinner burn?" I asked, sympathetically.

"No, it's all right," she said. And then she continued, "'Have you any old things up in your garret?' one of 'em asked. Well, I thought I could easy spare some of the things we had put up there, an' so I took 'em up. An' they just went pokin' around until they found my old spinning-wheel and some old hombly cheers. An' then they spied some pewter plates I had put there because I got tired of scouring them. An' they took them to the window an' I could see they wanted 'em."

"Well, I suppose you were glad to sell them, as you did not use them," said I, for Grandma Allebach was silent, thinking of the past.

"Oh, you're too young to know just how I felt. We used to have them pewter plates on the table when Rosy an' Willy was little. An' then we come downstairs agen, an' then the one went up to my chest of drawers an' says he, 'We'll give you twenty-five dollars for this piece if you'll sell it.'"

"'I'll have to talk to Nathan about it,' says I. 'We'll come back again tomorrow,' says they, an' then they went away."

"When Nathan come home, I was a-tryin' to get supper. but I was so flustered I couldn't tell him at first. He see there was something wrong, an' when we was a-settin' at the table I told him about the men a-wantin' our furnitur and pewter plates an' other things. An' Nathan didn't say anything for a spell, an' then he got up from the table an' sat in that rockin'

cheer an' I see he didn't want to give that one up. Then last of all I told him they were goin' to pay us twenty-five dollars for the chest of drawers."

"That's a big sum," said Nathan, "but we're used to it an' mebbey we'll be sorry when it's gone."

"But of course Nathan always let me do as I please, an' when the men come next day, I up an' says, 'What'll you give fur all you looked at yisterday?' An' the one answers reel prompt like 'Fifty dollars,' an' I says '*you can have em!*' I said it quick, so that my word would be out an' I'd have to keep my promise. But that chest was over a hundred years old. An' my brother Amos an' me had both kep' our clothes in it when we were children. An' my children's clothes had all been kep' in it, an' I couldn't hardly bear to take the things out of them drawers. But they come that very afternoon to get it, an' I let everything go."

"I suppose you and Nathan got used to doing without them, as you were not using them," I said.

But Grandma Allebach shook her head. "I *want* 'em right now. But we most had to have that money an' so the things were gone. But I seen my chest since, an' at first I didn't reckonize it."

"How was that?" I asked.

"Deary me, I never shall forgit how I felt. You see it was this way. Rosy's daughter Lovina lived in Philidelphy, an' she kep' writin' for me to come an' visit her. So last fall Nathan an' me went down one Saturday to stay over Sunday. She has things fine an' stylish, an' when she took us upstairs to go to bed there was the prettiest chest of drawers in the corner, an' I walked right over to it an' says I, 'Lovina, where did you get that?'"

"That ship-on-ear? oh, we bought that with my other furnitur. I like it because the drawers hold a lot an' it's well made," says she.

"I was a-examinin' it; some ways I couldent let it alone. 'Let me look in the lower drawer?' says I. An' with that she pulled it open. 'Certainly,' says she. 'Pull it clear out,' says I. An' when she did, I emptied the things on the bed. Then I looked on the under side of the drawer an' there sure enough, we all saw 'G. Hendricks, 1830,' cut in the wood. An' then I just broke down an' cried."

I waited a moment for grandma to become composed.

"I am glad you got it, Lovina," says I. "Your mother kep' all her clothes in it, when she was a girl, an' it's still in the family. Your great grandfather made it."

For a moment she was silent as if that was the end of the story; then she added, "An' you'd never believe it if I was to tell you what they paid for that thing."

"Chiffoniers are rather expensive," I answered.

"They paid seventy-five dollars for it, an' I'd a give it to Lovina if I'd a knowed she wanted it."

A JOURNEY ALONG THE COQUILLE RIVER OF SOUTHERN OREGON.

H. D. MICHAEL.

LEAVING from near the headwaters of the Coquille River early one July morning of 1908, as the health-giving dew was glistening like diamonds on each blade of grass and the air was clear and fresh, filled with the melody of the beautiful song birds as it floated to my ears from across the fields and mountain pastures; I started on a journey along the winding road that leads among prairies, fields and mountains. Up in the higher altitudes it led me, before it finally made an abrupt turn off among the timber to follow the river's course down a large canyon, where the stately fir and cedar trees are growing to an enormous size and so thick that as I passed along among this timber and in this deep canyon it seemed to be just getting dusk; for it is always somewhat dark among such heavy timber.

Imagine if you can this beautiful scene of nature: The green, mossy knolls, the dark recesses where the prettiest of ferns and wild flowers grow in profusion, and the clear mountain stream, winding along below, as it runs along smoothly for a while, then over falls or rapids where it always seems to be murmuring some sweet song of its charming surroundings. In noting these beautiful sights the thought came to my mind of the fair morning of youth as the child starts on its long journey of life with most of its surroundings quite pleasant and scarcely a thing to mar its happiness; then later on in life rough roads and difficulties appear as they did for me, for a little farther on the road was quite stony and steep as well as dangerous. As I passed around some of the steep bluffs I could see the river almost underneath the road and a considerable distance below, and in thinking of the dangers of passing along this road I also thought of the dangers along life's journey that so many rush into and are derailed, as it were, from the paths of duty and become wrecked on the road of life, all for their inability to see the danger or to heed it when it is pointed out to them.

In passing along through one of the finest bodies of timber still standing in the West, I noted the size of the stately firs and white cedars and admired their symmetrical growth and how smooth and pretty the bodies looked to the first limbs which were usually from seventy-five to one hundred twenty-five feet from the ground. But there were also scrubby oaks and a second growth of fir trees, that are limby and sometimes covered with the poison-ivy or poison-oak vines which often completely cover the bodies of the trees and climb to a height of one hundred feet or more.

The poison-ivy or oak is a very pretty plant, especially in the fall of the year when the leaves have turned a fiery red, and it has justly been named poison-ivy or oak, for it resembles both the ivy and oak and will cause a poisoning of the skin which will result in

eruptions and an itching and swelling of the skin. Therefore it is shunned by most people, but some seem to be exempt from its attacks.

With the sight of the poison-oak came the thought of so many that appear very nice but are a serious menace to their associates on account of their poisonous influence that is so easily thrown in the way of the one that, like the giant firs, is trying to make a symmetrical growth and follow the example the firs set in towering as high as is in their power, not content to be one of the small, low or scrubby trees, like those around them.

A little farther on in coming out on a turn in the road where the grade is quite an elevation above the river, a beautiful panoramic view unfolded itself before me. Below I could see the beautiful blue of the deep water of the river, then the towering bluffs covered with pretty mosses, ferns, and wild flowers, and on farther the timbered mountain slopes with the tall trees waving in the wind, while in the distance was the beautiful green of the grass-covered mountain prairies where still the wild deer feed in apparent safety on account of the almost inaccessibility of the places. Here countless numbers of elk roamed, too, not many years ago, but they are almost exterminated now by the hand of the relentless hunters that slaughtered them for the sole purpose of obtaining their hides.

In viewing the picture before me I thought, how grand! how sublime! Then another picture came to my mind of when God, our Creator, created all that lay before me, and it seemed a beautiful theme to muse upon as I hurried on my journey. What grand scenes and what goodness and provision are shown in all of it with man placed here to tend and keep it. But oh! how neglectful so many have grown of their duties toward God; neither do they appreciate the blessings received continually. To me it seemed a great privilege to view these scenes and know that I had seen some of the beauty of this world of ours while many pass along the same road only noticing the jolts received, the dust in the air, and the dangers of getting over the grade and rolling and tumbling to the depths of the canyon below.

Along this road are some of the finest of little creeks and springs of clear, cool water as it comes trickling out of the mountain side. Near by are wild berry vines in profusion and at this season of the year I found an abundance of ripe wild blackberries. The natural thing to do was to stop and eat as many as I wished, so of course I did so. They are a very delicious berry. That is also another proof of God's goodness and wisdom in providing food for the wild animals as well as man, for at this season bears live on these blackberries almost exclusively, though in some places they find an abundance of a species of wild clover known as the bear-clover, and are very fond of

that also. The little chipmunks enjoy eating blackberries, too, but it may surprise some to know that though the seeds are very small they eat only the kernel of the seed, leaving the outside or flesh part of the berry.

As I passed some of the rapids and falls of the upper river, I wondered what this country could be transformed into when all of this waste power is harnessed by man. But on gradually coming on down into the valley I noticed the beauty of the tracts now transformed by man into gardens and orchards and thought of the time when but a few years before, the road I was now traveling was only a horseback trail and this whole valley lay as waste land except for a few fields tilled by white settlers that had found their way into this fertile valley.

But just take notice if you will of the contrasts so easily seen in both farms and modes of farming. There were some of the old, original worm (rail) fences put up by the first settlers, or at least long ago, and old driven picket fences covered with briars and brush and old dilapidated buildings still in use, while many of the farmers now have fine modern buildings, water piped from some nearby spring and their farms well fenced and all in fine order. The first-mentioned class made me think there were still some that Solomon might cite to the ant for a lesson. Soon we were in the heart of the beautiful little Coquille (Kokeel) valley nestled in among the mountains that protect it from winds and afford the hunter much pleasure and recreation, and often much exercise and no game if unskilled in the art of hunting the wild game. From here on the river grows less attractive as it deepens and becomes more sluggish and one must turn to the towns, dairy farms, and orchards to find interesting sights. But who would not be interested in watching and studying the different habits of the fine herds of from twenty-five to one hundred fifty head of milch cows to each dairy?

But at last I am to the mouth of the Coquille River where its waters pour into the Pacific Ocean, and after watching the breakers roll and break against the rocks for a while I felt that the trip had been an enjoyable one and instructive as well.

Pasco, Washington.

EASILY SETTLED.

A PAID speaker for the "wets" was soaring in his speech in a neighboring city recently and wanted to know, "What would become of the brewery men, the drivers, the saloon proprietors and their families if the town went dry?"

A woman in the audience arose and said: "I have washed for twenty years to support a family and educate three children—all on account of a drunken husband. If our town goes dry, those people can have my job."—*Illinois Issue.*

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LXI.

AN excursion of great importance was my visit to the old Seraglio in Stamboul, the former official residence of the Sultan and the place where all the royal affairs were transacted.

Numerous of the Sultans are buried here and their royal tombs are exposed to the public view. The kind of "fez" or cap worn by the monarchs is shown at the top of the monument, which though undergoing but little change in fashion during centuries of use, gives a hint of the various styles of "hat" worn by the Turks.

From season to season and month to month this same "flower-pot" has been the style of all good Moslems. Though millions of fezzes are worn, the trade in them is ever slack. The average size will fit almost any head, and it is worn from day to day until totally unfit for use. Being of good wool, honestly dyed, in colors red and black, it survives rough treatment for years. Hat factories in the city of the False Prophet are not the most thriving institutions, for unlike Chicago, where the style changes with the moon, the men in Constantinople experience no alternation in the style of their regulation "fez" during all their lifetime. The extravagant amounts squandered in our country by foolish men and women, for silly headgear alone, would board and lodge the average Moslem, individual to individual. The crazy styles of hats designed by prostitutes in Paris and first adopted by "fallen women" in New York and Chicago, and then made worse by the flimflam art of half-baked milliners who wouldn't know a buzzard feather from an ostrich plume, or a bird of paradise from a swamp-snipe, instead of improving the beauty of feminine charm, make it hideously ridiculous. These "hanging gardens" of Babylon, as if designed by inmates of a mad-house, having the added power of movement not possessed by the curious gardens constructed by the heathen king, change their relative position to the sun, moon and stars, at the will of the wearer, giving congregations full of them the appearance of a burnt Canadian forest transplanted by exotic freaks of Zululand and roamed over by disemboweled specimens of a prehistoric zoo. The unnatural colors, heightened to excess, mixed like the gaudy wares in a Chinese toy

shop, put a taste of poison in the mouth like the arsenic paint sucked from the baby's tin-horn. No man with brains in his head or good taste in his sense of the beautiful and appropriate would ever want to see his sweetheart or wife with her pretty little head crushed into inhuman deformity and transformed into a flaring monstrosity that, were she the sole specimen of such overdress, would send tired horses off at a breakneck runaway, and bring jeers of mockery from loafing street wags.

"Turkish tombstones that look like a petrified football team making a touchdown."

Such malformations as these, running all the way from a tin-cup to a cartwheel, after being cast aside by the wretched women of the street, are picked up and worn by one who pretends to be virtuous, the heart of the poor, befuddled simpleton under the grotesque curio as treacherously false as is the caricature of harmony that flounces in billows of cheap ribbon, stinking turkey-quills and glass-eyed birds, above.

The little boy who was found beating the life out of his sister's new hat, having mistaken it for a real bugaboo, was a wise brother. The mother who bought it was the one who needed the chastising; the hat couldn't help itself. The simple headdress of the Turkish woman could be adopted with the gain of economy, good sense, much time and a fine husband. Girls with heads gracefully shielded by the mantilla of the Spanish beauty and the double covering of the Turkish woman look much more caressable than when stagger-

ing under Himalaya juggernauts. And when women cease to be attractive to good men because of the fake ornamentation of the head, the flirt's secret boudoir and not the baby's home, is established.

The recollection of my first visit one evening at twilight to the Turkish graveyard revives in me the violent shock of fear its tatterdemalion aspect gave me. Scarcely a stone was perpendicular and many were in the act of lying down, as if for slumber, or like contestants in a prize ring, were pummeling each other to a finish. No two stood parallel. The slab was thin and narrow, and of such a height as to suggest, too realistically for my pleasure, human ghouls, with pails turned over their heads, about to do some fiendish work. To increase their spectral deception, each stone was topped by what looked like a human head. On nearer approach I found this to be the shape of the "fez" or cap of the Musselman, carved from the same stone, or set in by a hole and pin. The "fez" marked the graves of the men.

The monuments for the women were without the cap. Two tall stones, one at the head and one at the foot, usually marked the resting place of the earnest follower of the prophet of the desert. Our own graveyards have been known to frighten timid folks. What wouldn't they do if their tombstones were more slender and crowned by men's hats and inclined to every angle of the vision! Many of these Turkish monuments were of white marble; others were of common stone or wood, and nearly all were engraved or painted in epitaph lettering. The Turk's fondness for the cypress causes him to plant many of these trees with this dense, dark foliage in cemeteries, and they believe that the souls of the bodies that repose below them, when drawn out of their graves by the little tuft of hair always left by the barber at the top of the shaven head for that purpose, may flit about in the shade of the leafy arbor awaiting the judgment of the two seraphs who sit on each of the "caps" on the two stones.

The longer I looked at the queer tombstones that first evening when I stood in my first Turkish cemetery, the more vividly did the picture come into my mind of a petrified foot-ball team in the act of making a "touch-down." Standing here alone as the darkness stole over the city, the monuments seemed to be moving. As no one can hold his head perfectly quiet while the blood is pumping hard at the valves in the neck, so my head moved slightly back and forth like a short pendulum vibrating in a small clock. The tall, slender slabs, so close to one another and at such crazy angles, completed the illusion, registering the slightest movement, not of my body but apparently of the stone men with their caps on in the city of the dead. The sense of horror that followed was sufficient to turn my steps directly from the grounds.

The sketch submitted herewith is exactly what you

would see in the Turkish cities of the dead. Not a single stone stood erect. Some were falling over, others lay prone upon the ground. The one fair feature of the Moslem's cemetery is the grave of dark cypress trees planted in it.

Famous for their daily baths and consequent cleanliness of body, the Turks enjoy the dilapidated aspect of their graveyards and allow them to become laughing objects of wonder.

THE COMPLAINTS OF AN OLD HAT.

ZETTIE ELLEN STEPHENS.

MANY years ago I was a new hat. Oh, how proud my master was of me! He was always careful where he put me. He did not pull me over his ears when the wind blew. He would not let his sisters use me as a house for their paper dollies. They were angry with him because of this.

But one day, Leo, his little sister's dog, finding me on the floor where I had fallen, picked me up and ran outside with me. He was a little dog and so I was dragged along on the ground. It had rained in the night and the ground was very muddy. Leo was an outdoor dog and he liked to chase up and down the road. There were puddles of water there and he ran through these. After chasing up and down the road several times he ran into the house, and left me lying there. His sharp little claws had torn my brim into shreds.

About five minutes after Leo left me, a great lumber wagon came along. Its wheels passed over me. The mud held me to one of the wheels and I was carried along to the front gate of a little cottage. There I lay on the ground in the cold wind all night. In the morning I found that the wind had dried the ground. I saw three little girls and a boy playing in the yard. They looked very happy. Soon the children came out to the gate. The little boy saw me and ran at once and picked me up. He shook the mud off me and then put me on his head. He pulled me over his ears, too. He was smaller than my master and so I fitted down on his head. I had no brim now; Leo had torn that off.

At dinner time they ran into the house. The boy threw me on the floor. As soon as dinner was over I was carried out and put into a little brook near the house. The girls' dolls were placed in me and I sailed away down stream. After a time they became tired of playing with me. I was pulled out of the water and thrown into a gutter. The gutter was full of muddy water. I lay there a long time and was soaked through and through. One day a little dog saw me and pulled me out of the water. He tore me to pieces. The wind was blowing and I was blown into a nearby meadow. The sweet flowers nodded their heads over me, but I was a hat no more.

THE HERODS

PAUL MOHLER

It is generally understood that the Herods who ruled Judea during the New Testament age were Romans, because they administered the Roman authority. But this is a mistake. The Herods were not Romans but Idumeans; Edomites, probably descendants of Esau.

The land of Edom, or Idumea, which lay southeast of Judea, was brought under Jewish authority by David and Judaized by John Hyrcanus, one of the Maccabean kings in 109 B. C., who compelled its inhabitants to be circumcised. During the reign of Alexander Jannæus B. C. 104-78, a man named Antipater was appointed governor of Idumea, which office he handed down to his son, also named Antipater.

We hear much more of the second Antipater than of the first, for it was he who stirred up the civil strife between the high-priest Hyrcanus and his brother Aristobulus, which made it easy for the Roman conqueror, Pompey, to take Jerusalem, B. C. 63.

During all the changes of masters which Palestine experienced during the great Roman civil war, Hyrcanus and Antipater managed to keep in favor, cleverly foreseeing each change, and changing sides just in time to win the favor of the new master, with perhaps one or two exceptions. When Julius Cæsar became master of Syria, he appointed Hyrcanus ethnarch and high-priest of the Jews in Palestine, and Antipater procurator or governor of Judea. Under this arrangement, Antipater became the real ruler of Palestine under the Roman governor of Syria, since Hyrcanus was completely under his influence. He held the government in name, Antipater in fact.

Antipater had two sons, Phasael and Herod. Phasael became governor of Jerusalem, Herod of Galilee. Herod was at this time twenty-five years old, and full of a wonderful energy, which made his a remarkable career. It is a long story, that of his rise to the throne, telling of wars, murders, victories and defeats. The picture which Matthew gives us of his cruelty and jealousy is just like him. This was indeed very near the close of his life, at a time when his heart was especially bitter and when the Jews were very uneasy under the galling yoke of his tyranny, but it is true to his character.

Herod was a great builder. The Maccabees had destroyed many of the Greek cities of Judea, especially the pagan temples. Several of these Herod rebuilt, among them Cæsarea, where he built a temple to Augustus, colonnades, a mole, and many public build-

ings, making it the chief city of his kingdom; and Samaria which he renamed Sebaste in honor of the wife of the Emperor Augustus. Here also he built a great pagan temple and many public buildings, the ruins of some of which remain to this day. He built many amphitheatres and theaters at Jerusalem and other cities, establishing games at Cæsarea and Jerusalem. All this was pleasing to the Greek inhabitants of Judea but not to the Jews. To please them, he rebuilt their temple in great magnificence, making it one of the noblest buildings of antiquity. To prevent the cessation of the service during the building great care was taken so that during that entire period, the operations had rather the appearance of repairing the old temple than building anew.

You will remember that when the temple was rebuilt by Zerubbabel after the captivity, it was a rather humble affair, so much so that Jews who remembered the glory of Solomon's temple could but mourn its departed glory. In the time of Herod, there were many private dwellings that far eclipsed it in grandeur, so that Herod's services in giving them one of the finest temples of the world must have pleased the Jews exceedingly.

Herod had ten wives, one of whom was a Jewess, Mariamne, a member of the Hasmonean or Maccabean family. She was his favorite wife and he loved her so jealously that on two separate occasions he gave orders that in case of his death, she should be killed, so that no other man should ever have her. This caused her to hate him and in a jealous rage he had her executed B. C. 29. So great was his grief and yearning for her that he indulged in the wildest excesses until he became sick, almost losing his life.

The two sons of Herod and Mariamne would undoubtedly have inherited his kingdom, uniting as they did the royal blood of the Jews with that of Herod; but here again the evil of his plural marriages appeared. His other sons, being of humbler birth, united against them and so poisoned his mind that they too were executed.

At Herod's death, B. C. 4, he left a will dividing his kingdom among three sons, Archelaus, who was to have Judea, Idumea and Samaria with the title of king (Matt. 2:22); Herod Antipas, who was given Galilee and Perea, with the title of tetrarch; and Philip, who was made tetrarch of the region beyond the Jordan (Luke. 3:1).

This will had to be approved by the emperor, and

since it gave Archelaus the chief legacy it was opposed by the other brothers. The Jews, too, opposed it, pleading with the emperor to give them no more Herods; but all in vain. Archelaus was given the title of ethnarch instead of king, but his inheritance was the same.

Of the three, Philip, the son of a heathen woman, was the only decent one. He ruled his territory well, building many beautiful structures as his father had done. Antipas (Herod) was sly, ambitious and luxurious. Jesus spoke of him as a "fox." He it was that married his brother Philip's (not the tetrarch) wife and who beheaded John and appeared at the feast in Jerusalem and questioned Jesus (Luke 23). His wife Herodias was his evil counselor and under her influence he sank lower and lower morally and lost favor even at the Roman court so far that he was finally sent into exile till his death.

Archelaus was the worst of the three. His rule was violent and tyrannical and after a few years of it the protests of the Jews and Samaritans were heard by the emperor and Archelaus was removed, and his dominions taken under the immediate Roman rule, being attached to the province of Syria.

After the death of Philip his tetrarchy was given to Herod Agrippa I, the grandson of Herod I and Mariamne. After the deposition of Antipas, his tetrarchy was also given to Agrippa. Agrippa was popular with the Jews, and after a series of misunderstandings between the Jews and Roman rulers had made a sympathetic governor for Judea necessary, he was made king of Judea also (A. D. 41).

His rule was pleasing to the Pharisees, especially when he persecuted the Christians. He loved to live at Jerusalem, and worshiped at the temple as a simple Israelite. He even demanded that his son-in-law, a Gentile, should be circumcised. So pleased were the Jews with all this that when he wept over Deut. 17:15, the people cried out to him, "Be not grieved, Agrippa, thou art our brother!"

At his death Agrippa left one son, Agrippa, and three daughters, Berenice, Mariamne, and Drusilla. To none of these was the kingdom given but it passed again into the hands of Roman procurators. To Agrippa was given a small kingdom north of Galilee which was afterwards enlarged to include parts of Galilee and Perea. His sister Berenice married, but becoming a widow, went to live with Agrippa as his wife. They were both Jews in form as was their father, but like him they were hypocrites. When Agrippa made his famous reply to Paul's wonderful sermon, it really represented no depth of conviction. To him religion was only a matter of form, to be changed when it pleased him. He is the last of the Herods who appear in the New Testament account.

In conclusion, it must be said that to the Herods

their territories owed a revival of Greek culture and architecture. They also saved the Jews from a vast amount of friction with the Roman government, by their knowledge of the Jewish traditions and prejudices. Of their private life, the less said the better. They were an ambitious family and subjected all else, good or evil, to the furtherance of their ambitions, but not all of them were fortunate. In their careers is exemplified the proverb, "The way of the transgressor is hard."

WASHINGTON MONUMENT.

T. H. FERNALD.

UPON the banks of the Potomac River and the Tiber Creek, in Washington City, in the United States, is a public park, called the Mall. In this park the American people erected a monument in honor of George Washington, our first President. The cornerstone was laid by President Polk July 4, 1848, and the capstone set in position December 6, 1884.

The foundations are one hundred twenty-six and one-half feet, square and thirty-six feet eight inches deep. The base of the monument is fifty-five feet one and one-half inches square and the walls are fifteen feet and one-fourth inches thick. At the five hundred-foot mark, where the pyramidal top begins, the shaft is thirty-four feet five and one-half inches square, and the walls are eighteen inches thick. This great monument is made of blocks of marble two feet thick. The height from the ground to the very top is five hundred and fifty-five feet. At the top of the pyramid is an aluminum tip nine inches high which weighs only one hundred ounces.

We are told that the mean pressure of the monument "is five tons to the square foot and the total weight, including the foundation, is nearly eighty-one thousand tons." At the base is a door, facing the capitol, which is eight feet wide and sixteen feet high, and enters a room twenty-five feet square. There is an elevator, the machinery of which is supported by an immense iron framework, and is hoisted by steel wire-ropes two inches thick. The stairs begin at one side and consist of fifty flights, each containing eighteen steps. At a distance of about five hundred and twenty feet from the base are situated eight windows eighteen by twenty four inches, two on each face of the monument. The area at the base of the pyramidal top is one thousand one hundred and eighty-seven and one-fourth square feet, being space enough for a six-room house, each room to be twelve by sixteen feet. The total cost of this, the highest monument in the world, was \$1,500,000.

Washington Monument is composed of more than eighteen thousand blocks of marble, weighing several tons each. One hundred and eighty-one memorial

stones from each State in the Union are set in different places in the monument.

On Saturday, February 21, 1885, the monument was dedicated with ceremonies of the most imposing character. The procession, consisting of more than six thousand persons, marched from the monument to the capitol, while salutes were fired at the navy yard, the procession being reviewed by the President of the United States. The concluding ceremonies were held at the House of Representatives, the principal oration being written by Hon. Robert C. Winthrop and was calculated to add to the fame of him who was "first in war, first in peace, and first in the hearts of his countrymen."

Belfast, Me.

DOING GOOD.

MAUD HAWKINS.

"If to do were as easy as to know what were good to do, chapels had been churches, and poor men's cottages, princes, palaces."

Some people apparently make it their rule to do just as little for others as they possibly can. Such narrowness and selfishness are certainly disgusting, to say the least.

"To do all the good we can, in all the ways we can, to all the people we can, all the time we can" is the best spirit to possess. Nothing is truer than that we pass this way but once, and if when our going time comes we have a record both in this and the next world for doing good our lives will not have been spent in vain.

Some are always just about ready to do some great good, but they never get fully prepared, while others are always lamenting their situation, which prevents them from doing some great philanthropic deed. They are blind to the fact that by doing the little things that come their way, they can do great good. It is not the big things alone that count. They are all right, but how can we live without the ones who minister to our little, everyday wants? Each day we need sympathy, love and encouragement, which no great philanthropist can give.

After all, the one who constantly gives from his small store of kindness is more needed than he who can give great things, for it is not always financial help that we need most.

We little know what a kind act or word or even a smile may do, the hope it may bring to a poor, discouraged soul that is on the brink of ruin.

Some will not do a kindness unless it is proclaimed from the house-tops. That is not the true spirit in which to give. Do good for the sake of doing good to some one, not for the effect it will have. The one who "practices charity in silence and disappears unknown" will receive the greatest reward.

Some will do nothing unless they are quite sure that the favor will be returned to them in the future. They invariably keep the text before them, "Cast your bread upon the waters and after many days it will return to you again."

Those who realize how grand a thing it is to do good to others are the only ones who truly live. To minister to the living, to clasp in friendly grasp the hand ready to drop at the owner's side heavy with discouragement, is a privilege. To carry a cup of water to the thirsty and fainting by the wayside, or a blossom to the sick or lonely, is like the opening to them a window which overlooks the gardens of Paradise. Now is the time to act. That particular opportunity will never come again. Every day we should be on the lookout for something to do to help a brother or sister, and we surely will not look in vain, and in the end these little deeds will make one great, grand total.

Towanda, Pa.

FORTRESS TUNNEL BUILT BY MONKS.

A CORRESPONDENT of the South Bend, Indiana, *Tribune*, writing from San Antonio, Texas, gives the following very interesting account of a tunnel discovered some years ago connecting the old adobe fort, the Alamo, with other missions of that section. The massacre referred to occurred in 1836 when Texas was fighting for independence. Because of the heroism of the garrison at that time the old fort has been called "the Thermopylæ of America":

"If the defenders of the Alamo had known that the holy fathers who constructed the old adobe fort had also dug a secret tunnel several miles long they might have saved their lives and the celebrated massacre would have no place in history. Such a tunnel exists, but, strange, to say, it has never been explored.

"The mysterious excavation leads in two directions from beneath the ancient Alamo building. It is known that one branch of the tunnel runs south for at least two and one-half miles, to the old Concepcion mission, and that another branch extends north from the Alamo to the ruins of the antiquated stone blockhouse which stands in what is now San Pedro Park. It is about two miles from this blockhouse to the Alamo.

"The early historic accounts of the string of ancient missions which are situated along the San Antonio River make no reference to the system of tunnels, which was evidently constructed about the time the buildings were erected. It is evident that the existence of these tunnels was not known to the early settlers.

"When the American garrison of the Alamo was surrounded by the Mexican troops it knew of no way of escaping the death that surely awaited it. So well did the Franciscan fathers who built and inhabited these missions keep the secret of the existence of the

tunnels that this knowledge did not even come to the early Mexican settlers of San Antonio. It was not until about 20 years ago that the discovery was made that a tunnel led from the Alamo to the Concepcion mission. It was quite by accident that the underground passage was found.

"Louis Teborah was digging a well at his home in South Presa street, when the picks of the workmen struck a hard substance that proved to be adobe plaster, such as the Franciscan fathers taught the Indians of this section to make in the early days. A few strokes of a pick made an opening in this concrete wall, and a cavern was exposed to view. Mr. Teborah and the laborer, who were digging the well, descended into the opening, and found that it was not a cave, as they supposed, but was a tunnel, with a width of about five feet and height of seven feet. The concrete layer of two or three inches in thickness formed the walls and arched roof, while the floor or bottom of the passageway was of dirt.

"The tunnel was explored by Mr. Teborah and others for a distance of several hundred yards in both directions. Further progress was blocked by cavings which had occurred, filling the passage with dirt and debris.

"One end of the explored tunnel crossed under the San Antonio River. In order to get a safe distance below the bed of that stream the tunnel was lowered several feet at the crossing point, flights of stone steps connecting the two levels. It is thought that the tunnel runs in an almost direct line between the blockhouse on the north to the Concepcion mission on the south by the way of the Alamo, and if this theory is correct the river crosses above it no less than a dozen times.

"The opening into the tunnel in the Alamo is situated in one of the cells of the monks. Centuries of disuse have caused it to fill with debris and no effort has ever been made to clean it out and conduct an exploration, so far as known. The same condition is true of the entrance beneath the blockhouse and at Concepcion mission. Since the discovery was made by Mr. Teborah several years ago the tunnel has been encountered at several other points on its course. While excavating for the outfall sewer that leads south out of the city, the tunnel was broken into and considerable difficulty was experienced in building the brick sewer across it. It not infrequently happens that the tunnel is struck while excavating for the foundations for houses.

"It is considered remarkable that no systematic exploration of this ancient relic of the Franciscan fathers ever has been attempted. It is believed by many people that the tunnel does not stop at the Concepcion mission, but that it extends all the way to the San Francisco de la Espada mission, situated nine miles south of San Antonio, connecting en route

the San Jose and the San Juan missions. All these ancient structures are built close to the San Antonio River and are surrounded by little villages of Mexicans.

"These mission buildings were erected nearly two centuries ago, and it is supposed that the tunnel which probably connects all of them was constructed about the same time. The blockhouse in San Pedro Park was built at a later date, and it is considered likely that the branch tunnel which leads to it was built some time after the passageway to the missions was finished.

"There is much speculation as to the original object of the system of tunnels. It is considered likely that Indian labor was used to dig the tunnel, and if this be true it could not have been kept a secret from the tribesmen. It is considered probable that the real object of this tunnel connecting some if not all of the missions along the San Antonio River was to afford the monks an opportunity of visiting each other without the knowledge of the Spanish military and civil authorities, who made their headquarters in San Antonio.

"If this theory is correct the monks did not lead the strict life of a recluse that has heretofore been generally supposed. Instead of being alone in their cells they were probably off on a visit to some of their brothers at one of the other missions, without the outside world being any wiser.

"An exploration and rehabilitation of this ancient system of tunnels might lead to many interesting discoveries, it is claimed. In the imaginative minds of some people the treasure room of the Franciscan monks is situated at some point on the line of the underground passageway, and perhaps it may still contain a store of vast wealth. The Mexican inhabitants of the little village situated adjacent to the missions have a superstitious dread of the mysterious tunnel. None of them could be induced to enter the dark and grewsome passageway."

SUBSTITUTE FOR CEDAR IN PENCIL MAKING.

CEDAR is used as a casing for pencils, and the price of this wood has risen rapidly in the last few years. With this as with other materials, when there comes a scarcity which brings up the price some fellow goes to work and discovers a substitute. A German chemist has produced a substitute for cedar for use in the manufacture of lead pencils which it is believed will be better than cedar. The chief article entering into the manufacture of it is the common potato. A German factory is now turning out a large number of pencils each day. They are more easily sharpened than the wooden pencils. The people who persist in putting the pencil points in their mouths will find the new pencils something to their liking.—*Selected.*

NATURE STUDIES

LAKES.

JOHN H. NOWLAN.

MANY persons have never seen a mountain but there are few who have not seen a lake. True, it may have been only a small lake, but its life history is the same as that of a large one.

How are lakes formed? If they are being formed, is the number increasing? If not how are the old ones being destroyed?

Glaciers in their descent from the heights where formed plowed into the ground in their course and pushed the earth ahead, leaving a low place in the bed and making a ridge in front. Acting thus through centuries they have carved deeper and deeper till their trenches were hundreds of feet deep and many miles wide. As the ice sheet retreated by reason of the increasing warmth the opening was filled with water. Overflowing, the surplus water cut a channel to the sea, forming a river. In some cases the ice sheet ceased its retreat and again advanced, blocking the outlet of the lake, causing it to seek a new course to the sea. Some of these old outlets are plainly traceable in at least a part of their courses.

When a river has worn its channel down till its load of rock waste is fine its flood plain will have a very gentle grade, and the current will be easily turned aside by any obstruction. These bends (called meanders from the Meander, a river of Asiatic Turkey) increase by the cutting away of the outer bank. In turn the bank sends the stream back and causes it to cut in the opposite direction. The size of the meander increases with the volume of the stream. They continue to increase in size till the cause that formed them also leads to their destruction. The neck of the meander is narrowed and at last cut through, and the bend around the spur becomes what is called an ox-bow lake. Some of those along the lower Mississippi are twenty-five miles long.

In 1893 a landslide in the Himalaya Mountains blocked one of the deep valleys emptying into the Ganges. The heavy rains undermined the mountain, causing 800,000,000 tons of rock to make a dam 1,000 feet high. Almost a year passed before the lake thus formed was filled, then the weak strata gave way before the rush of water. The dam was lowered 400 feet in four hours and every habitation for 150 miles was swept away.

The number of lakes in the world is probably not increasing. While new ones are being formed old ones are being filled by the sediment of inflowing streams. Others have been drained by the deepening of their outlets, while still others have been greatly reduced by decrease in rainfall.

One of the most extensive of these has been named Lake Agassiz. When at its greatest it reached from the source of the Red River of Dakota northward into Canada hundreds of miles. Here in the silt deposited in the bed of the former lake are the great wheat regions of that part of the Union. Wave-carved beaches and deltas built by inflowing streams mark the boundaries of the ancient lake. A channel about a mile wide at the southern extremity marks the exit of its outlet. Here the Minnesota wanders, a pigmy to the mighty stream of olden days.

In western Utah a lake once extended northward into Idaho, westward to Nevada, and southward almost to the Arizona line. Through a mountain pass the waters flowed into the Snake River. Since then the climate has become drier and the lake has dwindled till it occupies only a small fraction of the former area. The bottom is now partially covered by Great Salt Lake, while the ancient beach line and the deltas of the inflowing streams are plainly traceable on the mountain sides one thousand feet above. This lake is called Bonneville, in honor of a noted explorer. As long as the waters had an outlet they were fresh, but when evaporation became the only means of removing the surplus water they became more and more salt till the present stage was reached.

This lake is sometimes referred to as the saltiest lake in the world, but such is not the case. It has eighteen per cent salt, while the Dead Sea has twenty-four per cent, and Lake Van, in eastern Turkey, is the densest body of water known—thirty-three per cent.

Sometimes the lakes are almost or completely evaporated, leaving marshy or dry plains of salt called *salinas*. One of the most noted of these is in South America. Lake Titicaca, in the northern part of Bolivia, has an altitude of 12,500 feet above sea level. The outlet flows southeast to a shallow salina about fifty miles long. From there the excess flows southwest to another dazzling white salina. South of this is another with an area of 4,000 square miles. Here is

a layer of salt four feet thick. What a store of wealth! But it is so inaccessible that it is of little importance commercially.

Another use of lakes is to act as filters for the rivers flowing into them. The muddy Rhone flows into the east end of Lake Geneva where it has built up a delta twenty miles long since the time of the Cæsars. The river where it leaves the lake is very clear.

Lakes act as regulators to their outlets. Drouth and flood have little effect on the Niagara, because Lake Erie checks the floods. Its area is so large in comparison to its inlets that a rise of many feet causes a rise in the lake of only a few inches. On the other hand if all its inlets were to become dry it would require a long time for the Niagara to lower it perceptibly.

We must go to books to learn many of the facts of geography, but not so with the work of water—we can see it at work all around us if we will only look. Nature's laws are unchangeable, and what is true to-day was true in the earth's primeval time.

COLORS OF FLOWERS AND LEAVES.

BOTANISTS tell us that plants are made warm, are really protected from cold, by their colors. Probably few of us who love to see the beautiful colors of the autumn foliage, ever think of it as a protection for the trees themselves against the frost. Yet these colored leaves actually produce heat for the tree, and protect it from cold. In the same way the colored petals of flowers help to keep the pollen at their center warm. The pretty red petals of the poppy are really a sort of Red Riding-hood cloak, which is flung about the pollen to protect it.

Most of us regard red and yellow as warmer colors than purple or violet, yet this does not seem to be true. If you want to make an actual test, try the following experiment which is suggested by Professor McMillan in his book, "Minnesota Plant Life":

"Take two thermometers of the same size and which register alike, wrap the bulb of one in a green leaf and one in a purple leaf, such as the beet or some varieties of begonia, and place the two in the direct rays of the sun. After a little time you will find that the thermometer wrapped in the purple leaf registers from six to ten degrees higher than the one in the green leaf. This may not surprise us so much, since green is regarded as 'cool,' but follow this experiment with another. Place one of these thermometers in the midst of a bunch of violets, and the other in the midst of a bunch of primroses, or I suppose dandelions would answer the same purpose. The one surrounded by the violets will register higher than the one among the yellow blossoms, if both are exposed to the sunlight. You can try various experiments along the same line, comparing the violet with red in the same way.

"It is because violet-colored flowers afford the best

protection for the pollen against cold, that so many of the flowers which grow upon mountain tops, or in arctic regions, are of this color. For the same reason, too, many of our very early and very late flowers are lavender or purple, yet who but a botanist would ever find out that their lavender dress was given them for the purpose of keeping them warm?

"Nature has other devices for keeping warm the tender buds of cold climates. In some plants the seed-coats are very thick, on others the stems are covered with a hairy coat which is sometimes seen on the leaves also, but none of these devices are as interesting or surprising as is the coat of delicate colors as a means of keeping the tender plant warm."—*Selected*.

FLY FOGS IN INDIA.

ONE of the evils of Calcutta is the plague of green flies, from which the whole city suffers at certain times in the year. The happy hunting time of these minute insects is during the late autumn and early winter. They are a serious nuisance both in and out of doors. They wing their way through all the open doors into the houses and into every room, making life unbearable.

Like most insects, the little green flies have a great affection for the flame. On occasion the inhabitants have found it necessary to put out all the gaslights, even at a public dinner, and to take their meals practically in deep gloom, illuminated only by flickering candles.

Naturally it is not at all pleasant to go on eating with dense clouds of insects swarming overhead or, roasted to death, falling about one in pattering showers.

They seem to spring into existence from nowhere. Perhaps it is almost dusk when the lights of the street lamps are becoming visible. Then suddenly the air, which a moment before was quite clear, is full of myriads of green flies, drifting in misty patches and obscuring the street lamps.

Often the number of insects which have been scorched to death is so great that little heaps of them collect inside the lamps, while bucket loads have to be swept up from the roads next morning.—*Selected*.

MY REVEILLE.

My reveille! It is a thrush—

He sings at morn—

A rhapsody that breaks the hush

When day is born

And there is visible the least

Faint flush low-lying in the east.

The song he sings—ah me, the song!

It is a burst

Of wild, sweet melody and strong—

The morning's first—

A clear, ecstatic roundelay

To waken me—my reveille.

—Clark McAdams, in St. Louis Post-Dispatch.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

FEW of us breathe the pure, outdoor air as much as we should. Now when it is soft and balmy is a good time to begin the habit of living out-of-doors as much as possible. In many cases you can make it possible to be out more than you have hitherto by doing many household tasks out of doors. By spending a large part of the time in the open air during the summer months you will come into possession of a supply of good, red blood and will be able to go on enjoying the life out-of-doors even when winter draws on.

"WHAT so rare as a day in June?" asks the poet, and we find ourselves searching through our richer experiences for a suitable comparison. But the perfection of a June day or that of any other day of the year is seemingly lost on a majority of the people. If their attention is called to the subject they may venture a word of praise for the dew-pearled meadow or the brilliant sunset, but they do not see all the influences that have a hand in the making of a beautiful day. When once they *do* see these things of themselves they will find the beautiful days plentifully distributed through all the seasons.

GIFFORD PINCHOT, of the U. S. Forest Service, who has done so much to awaken Americans to the importance of conserving our natural resources and especially our forests, is now appealing to the women of the land to help in this beneficent work. He says: "Women can bring, as no other body of citizens can bring, to the children in the schools the idea of the wickedness of national waste and the value of public saving. The issue is a moral one, and they are the first teachers of right and wrong." And not only in the schools but in the home, the women of our land have a splendid opportunity to teach the broad patriotism that includes, besides its honor and security, the

well-being of the nation which is directly dependent upon the carrying out of the conservation principle.

READING AND WRITING.

WHILE the reading of books and papers is generally looked upon as a very commendable habit and the reader is given the credit for being more or less of a scholar and thinker, the conclusion is not always the true one. Because of the limited opportunities for reading and the vast amount of reading matter at hand too often the reader is no thinker at all. He does not even exercise the faculty of memory, the matter going through his mind like water through a sieve. Or if he retains any of it it is in its original form, without dissection or digestion. In other words, he lets others do his thinking for him, and so we come to have comparatively few real leaders and a great many blind followers.

This leads us to mention the peculiar, dominating influence over the average reader of the thing that is read. The mere fact that a thing appears in print is the only credential required to clothe it with full authority on the subject about which it is concerned. In perhaps a majority of the cases where we are met with the formidable argument of "they say," the "say" is that of a writer whose word has been taken without the least looking into his claim to authority.

Under the present conditions it is hardly probable that the mere advice to do more thinking will be followed, but on the other hand it may not be in vain to remind writers of their responsibility and urge them to be careful what sort of thoughts they commit to paper. If the one who speaks by word of mouth, the one with whom the hearers are more or less acquainted personally, needs to guard his words, how much more that one who remains hidden behind the printed page and is therefore clothed with wisdom which he may not possess.

"PRESENT POSITION OF THE INTERNATIONAL PEACE MOVEMENT."

SOME time ago in these pages we mentioned the convening of the Second National Peace Congress in Chicago, May 3-5. The meeting was largely attended and the cause of peace received much strength and encouragement. The editor of the INGLENOOK did not get to attend any sessions of the meeting, but a member of the INGLENOOK family who was there has promised us a write-up of it to which we direct our readers' attention. But however full his report may be, it will be next to impossible for him to mention all the good things that were said in favor of peace. We are therefore taking the liberty at this time of giving our readers several extracts from an address by Benjamin F. Trueblood at the opening session under the title given above, taken from the *Advocate of Peace*:

"We have met in this second National Peace Congress in the interests not of an unrealizable dream, but of a great already triumphing reform. In a recent magazine article ex-President Loubet of France wrote: 'International pacification is not a dream, not an ideal from cloudland, but a progressive fact, observable in every civilized country.'

"A progressive fact, observable in every civilized country.' No words could more fittingly summarize in a single phrase the present position of the reform which has brought us together. The peace movement has passed its theoretical period. It is far along toward the completion of its practical stage. It needs no more a Henry the Fourth with his Great Design, nor a William Penn with his finely-wrought judicial Plan for the Peace of Europe. The Abbé de St. Pierre, with his scheme for Perpetual Peace, is no longer our leader. We have passed Bentham and Kant with his lofty vision of a world-state; we have even left behind Ladd and Burritt and Sumner and Jay, with their splendid dream of a Congress and Court of Nations. The world was asleep when these great pioneers were dreaming their dreams of arbitration, of an international court of arbitral justice, of a congress of nations. It is now awake,—a part of it at least,—and with swift blows is carving into reality what they saw in the rough stone of humanity."

The speaker then gave a brief review of the actual accomplishments of the peace forces from which we give the following:

"The men and women, now a great host, who believe that the day is past when blind brute force should direct the policies of nations and preside at the settlement of their differences are now thoroughly organized. A hundred years ago there was not a society in existence organized to promote appeal to the forum of reason and right in the adjustment of international controversies. Today there are more than five hundred, nearly every important nation having its group of peace organizations. Their constituents are numbered by tens of thousands, from every rank and class in society,—philanthropists, men of trade and commerce, educators and jurists, workingmen, statesmen, rulers even. The organized peace party has its International Peace Bureau at Berne, Switzerland, binding all its sections into one world-body. It has its International Peace Congress, which has held seventeen meetings in twenty years—congresses over which statesmen now feel it an honor to preside and which are welcomed by kings and presidents with a warmth of interest and a generousness of hospitality scarcely accorded to any other organizations. It has its great national congresses in many countries, like this present one and that in Carnegie Hall, New York, two years ago, and its special conferences, like that at Mohonk Lake. It has its score and more of special organs of propaganda published in no less than nine

different languages. It has its literature, abundant in quantity and high-grade in quality, which is now much sought after by intelligent men and women of many callings. In another direction it has its Interparliamentary Peace Union, an organization of statesmen, of legislators, twenty-five hundred of them, many of them among the foremost public men of the time, banded together not for any political purpose, but purely to promote international understanding, good feeling and the pacific settlement of international controversies.

"In order to determine further the advanced position which the peace movement has attained on its practical side, the two Hague Conferences and what they have accomplished must be taken into account. It is still the habit of some persons to speak disparagingly of these great gatherings and their results. Some do it because they are satisfied with nothing short of immediate perfection; others, because they wish the whole movement for the abolition of war to fail; others do it purely from ignorance."

Many of our readers have read the proceedings of the two Hague Conferences, but we believe it will be worth their while to reread the actual results as given in this condensed form.

In the work of the second Hague Conference Mr. Trueblood gave the following list of conventions that were adopted: "The convention forbidding the bombardment of unfortified coast cities, towns and ports; that prohibiting the collection of contract debts from a debtor nation by force until arbitration has first been tried or refused; that rendering the international mail service inviolable; fishing vessels and vessels charged with religious, scientific and philanthropic missions exempt from capture; that prescribing a declaration of war before hostilities have begun; those concerning the rights and duties of neutrals in land war and naval war; that placing severe restrictions on the laying of submarine mines; that providing for the creation of an international prize court; and the declaration prohibiting the discharge of projectiles and explosives from balloons.

"The first Hague Conference gave us the Permanent International Court of Arbitration, to which twenty-five powers finally became parties by ratification of the convention. This Court has now for eight years been in successful operation, and no less than four controversies have been referred to it during the past year. The second Hague Conference enlarged and strengthened the convention under which this Court was set up, and made the Court the tribunal, not of twenty-five powers, but of all the nations of the world. Though reference of disputes to this tribunal is still in general voluntary, a majority of the important nations have already, by special treaties with each other in pairs, pledged themselves to refer all disputes of

THE HOME WORLD

A VICTORY OF PRINCIPLE

HATTIE PRESTON RIDER

MRS. DAYTON'S hands were plunged deep into the bread-sponge, when the door-bell rang. Now, every housekeeper knows that if one neglects to answer that or the telephone, it is certain to prove one's best friend at the door or on the wire; while answering the call, under such inconvenience, generally results in a cool response of "wrong number" at the 'phone or an interview with an oily-tongued agent at the door. Mrs. Dayton's case was no exception. The shabby urchin who greeted her on the step carried a box under his arm and an oblong envelope in his grimy hand.

"Want to buy some bluing this morning?" piped the youthful venturer, cheerily. "Ten cents a package, three for twenty-five. My ma says it's awful good bluing."

A mild spasm went over Mrs. Dayton's face. She had bought a book of worthless needles, a card of brass collar buttons, and two pairs of cheap socks already that week, and at each purchase the conviction had been growing upon her that she was doing the business world in general and the agent in particular a moral wrong, not to mention the waste of her own money and sympathy. She saw the truth, that trading on the compassion of others, without giving fair value for what one receives, is only legalized begging; and begging is demoralizing, most of all to the beggar. It is not just, either, to the local merchant who has built up a business by clean and painstaking effort. Moreover, Mrs. Dayton had once sampled "sheet" bluing. There were grim lines about her mouth as she looked at the mite, who stood regarding her with optimistic anxiety.

"I want to sell twenty more of them packages, so I can git an Indian suit," he explained, eagerly. "We're going to have a show in Billy Fisk's barn, and a big parade. Sell you a ticket to the show for fifteen pins. We git the pins, and Billy's mother buys 'em off'n us a cent for a hundred. But first, I want to sell this bluing, so's to have the suit!"

"And are you Billy's brother?" Mrs. Dayton asked.

"Me?" with a stare of surprise at her ignorance. "No'm; I'm Johnny Foster. I live next to Billy's."

Mrs. Dayton knew of the Fosters, and also of the Fisks,—a tawdry, incapable lot, living up to the very last cent of their incomes, and never by any chance paying a debt if it could be avoided. Then the hard lines in her face softened, as she reflected that this scion of the thriftless race was in no way responsible for the shortcomings of his people, and on that very account more to be pitied than blamed. And a child always found the warmest corner of her heart.

"Doesn't your mama know that we can buy five times as much bluing, and a great deal better quality, for the same money at the store?" she asked. "Does she like to have you go round selling so poor an article that it is really just the same as expecting people to give you the money outright?"

A keen, shrewd look shifted across the small face.

"My ma says *she* hasn't got no money to pay out for Indian suits," he explained. "And besides, she says, folks 'll buy of us kids a lot quicker'n they will of grown folks. This here bluing is all right. Won't you take some? I want to git that suit just awful."

There was a faded, outgrown Indian costume, gay with fringe and embroidery, laid away in a chest of drawers in the attic. The thought of it sent a twinging pain of breavement through Mrs. Dayton's heart, for the little boy who was little no longer, but had "put away childish things." She stood bravely by her convictions, however.

"Isn't there something you could do to earn the money in a way that would really be useful to the people who pay you?" she asked. "Some boys run errands, and some have a little patch of ground and raise vegetables. Everybody likes fresh onions and radishes and lettuce. A boy I know earns a dollar a week going round with the grocery-man, after school and on Saturdays, helping carry baskets. All those things are really useful, you see, and you would be giving a fair value for the money you get in return."

The urchin threw back his head, a trifle superciliously.

"My ma says her kids don't have to work for other folks," he objected. "Selling things is more respectable. Besides, we have to practice nights and Saturdays, and them ways are too awful slow. I want that suit soon's I can git it. We're going to have the show about the fourteenth, and if I ain't on time, I can't be in the parade. Say, I wisht you'd buy just one package!"

The bright eyes pleaded out of the neglected young face. After all, what was he but an irresponsible baby, and the price of helping him toward his desire so small! The little worn-out suit in the attic added its appeal. Then something spoke to her as with a living voice:

"My own boy has grown to noble manhood, strong in the strength of having learned to love honesty for honesty's sake. Shall I, for a weak sentimentality, deny this unmothered little soul the same truth, which he will some day understand, even if he does not now?"

"I'm sorry," she said, gently, "but I cannot take it," and shut the door.

"Very likely I shall become brave and hard-hearted enough for anything, in time," she laughed to herself, a trifle unsteadily, as she flicked away two bright tears. "But oh! I hope no more of them will come to be refused on principle, today!"

TRAINING A CHILD.

It is unfortunate, in a way, for the general business of education that the young child is usually so winsome. If he did not appeal so strongly to grow-up people, they would not tolerate his dictatorship, and it would be better for him in the end. But most adults like to see a little thing assert himself; they think it is quite a joke that one so small should show so much spirit, and so they encourage his tyranny by rewarding him with their smiles—when he knocks some one in the face, for instance. Of course, no physical harm can come of this during the first two or three years, while he is so helpless; but the boy of eight or nine years is a different proposition. He may now proceed on exactly the same principle as he did at two years old, but, instead of his expressions being received with smiles, they are returned with blows. Herein lies the tragedy of child-training in many a home. The child acquires certain attitudes toward people during the first two years that he can not possibly be allowed to continue during later years. As he grows older, the parent, the teacher, and possibly society at large, are in constant conflict with him to undo what was unwittingly established in the beginning. * * * The only way a child can tell that some actions are wrong is that they are resented by the people about him; they do not turn out well, so

they must be abandoned. * * * On the whole and in the long run, that child will be far happier who early suffers for wrong doing, rather than he who is allowed, for the sake of immediate peace, to continue his erring ways. Sooner or later, the parent must forbid actions that earlier have been allowed, and right here begins the struggle which often results seriously for both the boy and his parents.—*M. V. O'Shea, in Twentieth Century Magazine.*

VALUABLE HEALTH IDEAS THAT ARE TOO OFTEN OVERLOOKED.

Chew for Your Lives.

THERE is nothing simpler than chewing. We learned to do it before we can remember, yet there are but few who *remember* to chew properly. We are just beginning to appreciate that thorough mastication brings a harvest of blessings. We receive so much more benefit from the food that we eat that we do not need to eat so much.

Thorough mastication means, in the majority of cases, a cleaner tongue and a *clearer* head. It means the awakening of a more *discriminating* taste, so that one will be more disposed to discard unwholesome food and be more content with a simple variety.

All one has to do is to keep chewing and little by little the back of the tongue clears the food away, so when mastication is completed the mouth is empty. Pretty soon one comes to relish the food so much more that he gets enough extra satisfaction from eating too abundantly to pay him for the extra chewing.

Deep Breathing a Paying Investment.

The shiftless hired girl only sweeps the middle of the room. The average individual is equally shiftless about breathing, for he only breathes in enough air to ventilate the center of the lungs; yet by deeper breathing he could do himself more good than by taking medicine.

Every time we take a full, deep breath the diaphragm is pushed down over the liver and gives it a good squeeze, just as you might press a sponge in your hand. It gives the circulation in that region of the body a good boost.

I once heard Dr. Babcock, the noted heart specialist, tell of a patient who was suffering with a terribly congested liver from a crippled heart. He said he could get no effect from any drugs. He then instructed the patient to breathe deeply for fifteen minutes at a time several times a day, and in a few days the liver was the normal size.

You who read this, why not take a hundred deep breaths a few times a day without having a doctor prescribe it for you? You will receive so much benefit from it that you will wish somebody had put you on to that simple trick long ago.

There are thousands of people who chase over to

Europe, take long sea voyages and do other expensive things for their health when if they would stay at home and practice deep breathing, adopt the thorough mastication of simple, wholesome food, drink from one-half dozen to a dozen glasses of water a day and get plenty of fresh air at night, they would get twice as much help and it would not cost them a cent, which is the only thing that spoils these most important remedies. Most people only appreciate what they pay for. If a deep breath cost a quarter hosts of people would flock to Deep Breath Headquarters and buy some.

Work Out Your Physical Salvation.

The young kitten's breath is sweet, and we do not mind having it on our laps, but the old, lazy house cat's breath smells catty, so he has to sleep in the barn. The wide-awake up-to-date cat takes his daily physical culture. Some folks think that when the cat is stretching himself he is playing, when in reality he is engaged in serious, earnest business. These feline movements were the fundamental exercises by which Sandow built himself up from a spindling youth to the giant who could lift something like a ton and a half.

Pull your hand slowly up toward your shoulder, all the time imagining that you are lifting a heavy weight. Then take a deep breath and push it away again, as if you were pushing over a stone wall. Repeat with the other arm. Then lift your knee up toward your chest, imagining that you have about two hundred pounds hitched to your foot, then push it down, just as though you were pushing a post into the ground. Do the same with the other knee. Make each movement slowly. That gives you the idea. You will soon be able to invent a whole system of exercises all of your own.

It is more important to have strong abdominal muscles than it is to have strong muscles of the arm, for while we think up in our brains we live, move and have our being down in our abdomens. A capital way to strengthen these muscles is to sit near the front of your chair, then tilt backwards against the back of the chair, at the same time raising the knees. Repeat this a dozen or more times, with the chest well up, several times a day and you will soon have strong enough abdominal muscles to pay you well for the trouble.

When you are standing or walking keep your neck pressed back against your collar button. If you wear no collar button do it anyway. Raise your chest well up toward your chin and all other things in the way of proper position are sure to be added to you.

While you are doing your daily work imagine you are taking physical culture in some gymnasium. In other words, that you are *playing*, and you will get twice as much good out of the work, and will do no less work either. Your work *can not* be a drudgery unless you make it so.

When you get tired of these exercises you might try knee bending or squatting down and rising up for a

change. You will not do it very long before you will be glad to stop, and it is splendid exercise for the lower limbs.—*David Paulson, M. D., in Lifeboat.*

THINKERS OUT OF ORDER.

STANDING in the middle of a room which his wife had just swept, a man, opening a letter, threw the end piece he had torn off on the floor. He didn't stop to think, says the *Cumberland Presbyterian*, that his wife, who had just said she was sick, would have to pick the scraps up.

A man (a preacher, at that) who loves his wife lighted a lamp and threw the match, still blazing, on the carpet. Somebody would have to pick it up. Somebody's carpet was scorched. Evidently he didn't think.

Sitting right by the coal scuttle when he wanted to sharpen his pencil, he turned around and let all the two dozen chips fall on the carpet. The little woman sitting by didn't say anything, but after awhile she got the broom and dustpan and cleaned up the untidy litter. He didn't think.

He was quite entertaining at the table. The hostess laughed a good deal at his wit. At the close there was a windrow of peelings and fragments around his plate, not to mention dabs of gravy and pieces of butter. The hostess had put on her best company tablecloth, and hoped it would do for one or two more dinners. Of course, he didn't think.—*Exchange.*

YET NOT LARGE ENOUGH.

"AREN'T you glad that I'm going, Aunt Mary?" There was a hurt feeling in the girl's voice; she was so happy over the invitation, and she wanted everybody to be happy with her. Hadn't she been happy when Aunt Mary had the beautiful trip to California the year before? And she—Jean—had so longed to go with Milly Russell for three whole months!

Aunt Mary looked up with a quick smile. "I think that you will be large enough, dear," she said.

"Large enough!" the girl repeated, puzzled.

Aunt Mary nodded. "Lots of people aren't big enough for big pleasures," she said. "I've known three girls who were spoiled by 'good times' that were too big for them; they came home discontented, and have stayed discontented ever since. They might have made splendid times out of the material lying all about, but they didn't see it because it wasn't labeled 'London' or 'Paris.' Upon the other hand, there's Milly Connor—she's gone right on enjoying and using her trip abroad ever since she came home. She's the kind of girl I shouldn't be afraid to trust with any number of pleasures—she'd use them over again for so many people."

"It sounds like old clothes—making over and passing on," Jean laughed. But her eyes said that she understood.—*Selected.*

HOUSEHOLD HINTS.

ALWAYS rinse glasses that have contained milk in cold water first before they are washed in warm water. The milk will cloud the glass if dipped in hot water as soon as they are emptied.

Keep a small brush on hand near your soap-dish in the kitchen, then it will be ready to clean the "grater" after grating lemons, chocolate or anything of the kind.—*Household Journal*.

Wash mirrors, window glass and glass over pictures with alcohol. It dries much easier than water, hence is easier to use in winter.

Try a little salt in the water when boiling a cracked egg, and you will find that it cooks without any of the white part leaving the shell.

If a kettle in which you are cooking something burns dry, take it from the fire immediately and set it in a pan of cold water. After a few minutes take the food out and put in a new kettle if it needs further cooking. The food will not taste burned.

If potatoes are pricked before baking, that the air can escape, they will not burst in the oven.

The greatest care should be taken to thoroughly air a sleeping-room in which gas or oil has been burning during the evening before the room is slept in, as it is well known that a gas burner is a great consumer of oxygen.—*Household Journal*.

The Children's Corner

SUCH A JOKE.

HE was a new boy, and we didn't like him very well. Maybe he was too good. Anyway, he was always studying in school time, and he had such a sober look that we just named him "Old Solemnity," and let him alone.

He scowled his forehead into wrinkles when he studied, and he had a fashion of reading his history lesson rolling his eyes round to see where the places were on the map, till he did look funny enough to make anybody laugh. Dick drew a picture of him on his slate one day, and the fellows nearly went into fits over it.

At recess we left him to himself. You see, there were enough of us for our games without him, and we didn't believe he would be much good at playing. He used to stand and look at us, and he looked pretty sober sometimes; but we didn't think much about it.

One morning Ted brought a big orange to school. He was always bringing something, but this was more than common; we didn't get oranges very often. He had it all wrapped up in a paper, but he promised to divide it with Dick and me. Then he showed us

something else—a big potato he had cut in a likeness of Tom's face. Tom was the new boy, you know, and it really did look like him. It was the shape of his head, with a knob on one side for a nose; and Ted had scored queer little lines in his forehead, and given the mouth and eyes just the right twist. Just then the bell rang, and we hadn't a chance to show it to anybody else; but Dick said: "We'll put it on a stick and pass it round at recess. My, but Tom will be mad!"

Ted rolled it up in a paper—"so its fine features wouldn't be rubbed off," he said, and dropped it into a drawer under the seat, where we kept our pencils and traps generally. After we had been busy over our books a little while, another idea struck him, and he whispered to me:

"Say, let's slip that into Tom's pocket where he'll find it at recess. We will tell the boys, so they'll all be watching, and it will be the biggest joke out. Dick can manage it."

So I told Dick, and he slipped his hand into the drawer behind him, and when he got a chance dropped the little bundle into Tom's pocket. We three hardly dared to look at each other for fear we'd laugh aloud. But that was every bit of fun we got out of it, for the minute recess came, before we had a chance to tell anyone, Tom rushed up to us with his face like a full sunrise.

"I'm ever so much obliged to you fellows, for I just know you're the ones that did it," he said; and I hadn't thought he could talk so fast. "It was real good of you, and I mean to take it home to my sister Sue. You don't care, do you? She's sick, you know."

There he stood, holding up our nice big orange! Dick had made a mistake in the package, and we knew pretty well who had the best of the joke. We'd have made good models for potato heads ourselves just then, for we all stood and stared for a minute with our mouths open.

"Why, we didn't"—began Dick; but Ted gave him a pinch that stopped him.

"We hope she'll like it," said Ted, grand as a prince. Ted isn't selfish, anyway. "Is Sue the little lame girl I've seen at your house?"

So Tom told us all about her—I suppose he thought we must be interested, or we wouldn't have given the orange—how the scarlet fever had left her lame, how worried his mother was about it, and how he was trying to help all he could. We did get interested sure enough. We put that potato where nobody saw it, and we got into a way of bringing some little thing for Sue nearly every day after that. We like Tom first rate, now; he is tiptop when you get to know him. I never told anybody but grandmother how we came to get acquainted, and she laughed and said:

"A good many of the people we dislike, dear boy, would look very different to us if only we took the trouble to be kind to them."—*Ruth Cady*.

THE QUIET HOUR

"FILLED WITH THE SPIRIT."

JOSEPH D. REISH.

Be not drunk with wine, wherein is excess; but be filled with the Spirit.—Eph. 5: 18.

IN the verse here quoted Paul is endeavoring to emphasize the importance of the Spirit-filled, or, as we usually term it, the spiritual life, by the *contrast method*, which, in this instance, is used advantageously.

Its opposite, the carnal life, he here pictures in one of its most common forms, that of drunkenness. Those who have witnessed any of the manifold evils resulting from the excessive use of intoxicating liquors can readily form an adequate idea of the force of the argument the apostle here uses.

Let us, for ourselves, contrast some of the works of an intoxicated human being which, perhaps, we have witnessed, with those of one who is filled with the Spirit, as portrayed in Eph. 5: 19-21. Then will we be prepared to rightly judge which of the two is living the more consistent life.

The works of the flesh may always be placed in contrast to the works of the Spirit for they are directly opposed to them. Gal. 5: 17.

The one who is filled with the Spirit cannot hide the fact from the world any more than the drunkard can conceal the fact that he is working the works of the flesh. They both will out. However, the former has no desire to keep his works from view for his conscience is clear in all that he does; and, besides, he is a part of "the light of the world" and should not endeavor to be "put under a bushel," or, in other words, have his works veiled from sight, but should "let his light shine before men" (Matt. 5: 14-16); whereas the latter is ashamed of the whole of his nefarious business when sober and in his right mind, and—certainly all others detest it. The drunkard realizes that his works are evil and so chooses the darkness rather than the light in which to perform his evil deeds (John 3: 19, 20), for "they that be drunken are drunken in the night." 1 Thess. 5: 7.

In Gal. 5: 19-23 Paul enumerates the works of the flesh and fruits of the Spirit in separate and distinct lists, after which he adds: "And they that are Christ's have crucified the flesh with the affections and lusts. If we live in the Spirit let us also walk in the Spirit." (Gal. 5: 24, 25). From this we infer that in order to belong to Christ we *must* be filled with the Spirit.

If to be one of Christ's involves being filled with the Spirit it also includes being emptied of the flesh, or a casting aside of all the works of the flesh in order that we may be prepared to *wholly* yield ourselves to the Spirit's power and will, for we cannot serve two masters. Matt. 6: 24.

This flesh-emptying process is first accomplished at baptism, if it be efficacious, for in our baptismal vow we declare we "willingly renounce Satan, and all his pernicious ways, and all the sinful pleasures of this world"; and baptism is "for the remission of sins" (Acts 2: 38); and, further, "the blood of Jesus Christ his Son cleanseth us from all sin" (1 John 1: 7), which blood we apply at baptism.

If we sin, as we may, 'after baptism, it is evidence that we are not living the *Spirit-filled* life; that we have not crucified the flesh with *all* the affections and lusts; that we are striving to serve two masters. But if we repent we shall be forgiven, the sin remitted, and the guilt removed, and we shall again be prepared for the full indwelling of the Holy Spirit. 1 John 1: 9.

Once we are filled with the Spirit it is then we will be of use to God by being useful to the world, for we will then be willing to be used when and where he directs.

In the history of the early Christian church, "The Acts of the Apostles," mention is frequently made of certain of the church being "filled with the Holy Ghost." See Acts 2: 4; 4: 8; 6: 5; 7: 55; 11: 24; 13: 9, etc.

At such times they were busy and useful and accomplished some good work, for the Spirit of God was working in and guiding and teaching them.

The same Spirit, not having lost one iota of his power, may be had for the asking today by all who are willing to make the necessary preparations for his reception, and by the one whose life is wholly influenced by the leading of the Spirit wonders may be accomplished as were in apostolic days.

The Spirit will teach all who are willing where to go and what to do (Acts 13: 2; 16: 9; etc.), and, in the person of Christ as one of the triune Godhead, will guide and direct them while doing their God-appointed task. Matt. 28: 20.

Knowing the magnitude of the work and the greatness of the responsibility resting upon the Christians of the world in fulfilling their mission, it is a blessed

thought to know that our "heavenly Father will give the Holy Spirit to them that ask him." Luke 11:13. This thought should comfort and encourage all depressed spirits and cause us all to more earnestly crave for this great "gift of God" (Acts 8:20), that he may "guide us into all truth" (John 16:13) through life and thereby cause us to "grow in grace, and in the knowledge of our Lord and Savior Jesus Christ" (2 Pet. 3:18), "till we all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ: that we henceforth be no more children, tossed to and fro, and carried about with every wind of doctrine, by the sleight of men and cunning craftiness, whereby they lie in wait to deceive; but speaking the truth in all love, may grow up into him in all things, which is the head, even Christ." Eph. 4:13-15.

Denbigh, N. Dak.

FEELING AND PRINCIPLE.

IN almost any of our communities, you may set ten persons to inquire into the religious state of their neighbors, and in nine cases out of ten the first question will be about feelings. Not, What are your convictions of truth, your principles of conduct, the root and ground of your faith in God, or in the solid and fixed facts of a revealed Gospel and the kingdom of our Lord? but, What is your feeling? Not, What are you standing on? Not whether a holy Christ has your loyal and unflinching obedience. Not how far you are practically pledged to a righteous Master—which are certainly the chief matters now, as they were in the days and the preaching of the apostles—but rather whether the sensibilities are lively, and the devout emotions enthusiastic. Religious *feeling* is one of the fruits of the Spirit—one of them; it has much to do in kindling and sustaining religious exertion. But feeling is certainly the most irregular element in our composition, and it so far depends on outward conditions that it makes one of the least trustworthy tests of the actual frame of a Christian soul before God. Feelings belong to the passive part of our nature; principle to the active part. Feeling depends on a sensitive surface; principle on depths of moral purity. We *feel* spontaneously, and often whether we would or not. There is no principle and no duty without a direct exertion of the will. Feeling may be sudden; duty is deliberate. Feeling may be transient; duty is constant. Feeling changes with temperament, with state of health and nerves, with a thousand fickle external influences. Principle is independent of all physical or alterable circumstances, moves straight on through all moods and climates, sails by fixed stars, and is the same secure end and glorious thing through all the shifting seasons, though the mountains of prosperity were torn up and cast into the sea.

It deserves to be considered, therefore, whether the emotional type of piety is, on the whole, the only or the strongest type, or is calculated to carry a man bravely and uprightly through all the temptations of the market and society, of public and private life. Let us hope that the sturdy common sense of this people will repudiate any ministration that addresses itself chiefly to a sentimental fancy, whether in the gusty appeals of open-air conventicles, in sensational pulpits, or in the scenery of church chancels.

Is it not likely that some part of the loose dealings, and false accounts, and violated covenants, which have frightened the propriety and shocked the better sense of all Christian bodies, are traceable to this idea, that religion is concerned entirely with *emotions* and not with character? Ananias and his wife had just come into the church, been baptized, joined the Christian community, and their feelings were so far wrought upon that they wanted to follow where the popular current was then setting, and to throw their private estate into the common treasury; though that was no part of the Christian obligation, as St. Peter taught them. What was their sentimental ardor worth? It did not save them from being both, one after the other, wound up in shrouds and carried out to a dishonored burial. It appears to me that, even within the recollection of living men, the Christian faith has come to be less and less regarded as a commanding and mighty power from heaven, a voice of authority, a law of holy life, but more and more as an easy-going guide to future enjoyment, to a universal happiness and an indiscriminate salvation. Who can believe these horrible insults to morality would go on cursing our cities, and corrupting our young men, if the offenders looked up above a hireling police, a venal judiciary, and a cowardly public opinion, and believed those simple words, "Thou, God, seest me, who wilt by no means clear the guilty"? The Gospel is a gift of grace, but if it does not keep the disciple out of the schemes of sharpers and liars, the grace has miscarried. The Gospel is love; but it has a law element in it, too, which the saintliest Christian never outgrows. The Old Testament goes into the New. The Savior says explicitly, he came not to destroy the law, but to fulfill it, and he is coming to judge every follower by his deeds. If you cut the New Testament apart from the Old, your own Bible is gone, and rationalism will pick the fragments to pieces at its leisure. We want that older and eternal Testament which gives us the text—"Righteousness and judgment are the habitation of his throne." See how that word "righteous" studs all the Scripture pages, and how the glorious reality it represents is the steadfast foundation of the welfare of souls, from the first creation on to the new heavens and the new earth.—*F. D. Huntington.*

ECHOES FROM EVERYWHERE

When Dr. Charles W. Eliot retired as president of Harvard University he was presented with a purse containing \$150,000, contributed by the alumni of the University.

The international council of the Olympic committee, recently in session at Berlin under the presidency of Baron de Coubertin, decided to hold the 1912 Olympic games at Stockholm, Sweden.

With appropriate ceremonies, including an address by Henry Watterson, a statue of Abraham Lincoln was unveiled at Hodgenville, Ky., the martyred President's birthplace, on Memorial Day.

Central Texas was visited by a destructive cyclone May 30. The town of Zephyr was wiped out and it is reported thirty-two people were killed. Cyclones have of late visited portions of Oklahoma.

Congressman William Lorimer was elected United States Senator from Illinois on the ninety-fifth ballot. He takes the place made vacant by the expiration of the term of Senator Hopkins, who was a candidate for re-election.

The four big Chicago packers, Swift, Armour, Morris and Cudahy and their associate, the National Packing Company, do an annual gross business of nearly \$800,000,000, a total greater than that of the Steel Corporation in its biggest year, 1907, when gross sales reached \$757,000,000.

For the use of his automobile and carrying \$1,808,000 a distance of six blocks, the district court of Travis County, Texas, allowed Sheriff George Matthews \$4,542. The money was that paid to the State of Texas by the Waters-Pierce Oil Company, which had been fined for violating the antitrust laws.

An earthquake shock was felt through the middle West, comprising Illinois and parts of Wisconsin, Michigan, Iowa, and Missouri, on May 26. No serious damage was done and no lives were lost. The vibration seemed to be north to south, and the duration from two to ten seconds. The shock was plainly felt in the Inglenook office.

Declaring that the successful trip of the battleship Mississippi proves St. Louis and Cincinnati would be a prey to the fleet of foreign invaders in case of war, the New Orleans board of trade has passed resolutions calling on the St. Louis Commercial Club to co-operate in urging Congress to make New Orleans a fortified naval basis.

Because of violation of college statutes and various other well-defined reasons detrimental to the best interests of the institution, President McMichael of Monmouth (Ill.) College has set his seal of disapproval on and ordered the disbanding of the Greek letter societies which have

flourished without molestation for the last ten years in the college.

Lieutenant General Arthur MacArthur, the ranking officer of the army, was placed on the retired list by operation of law on account of age and the grade of lieutenant general ceases to exist in the army. Major General Leonard Wood, commanding the department of the East, becomes the ranking officer of the army, but without increase of rank.

Absence of saloons at Rockford, Ill., has caused an advance in rentals of business property of from 25 to 35 per cent. This, coming in the face of the cry that there would be many vacant places in the city if it voted out the liquor traffic, is a boost for the anti-saloon forces in the campaign they are about to take up again preparatory to the next township election.

Major Israel C. Greene died near Mitchell, S. D., where he had lived for thirty-six years, aged 85. As lieutenant of marines he was the man who captured John Brown after striking him down with his sword. Major Greene was a close friend of Gen. Robert E. Lee. Harper's Ferry was seized October 17, 1859, and held for eighty-five days by John Brown and his sixteen men.

After a lapse of twenty-five years the Arkansas River is again to be navigated. Little Rock merchants have purchased two steamboats which will run from Little Rock to Arkansas City and there connect with the Kate Adams from Memphis. It is probable one boat may run as far as Fort Smith. The boats were built in Grand Rapids, Mich., and are making an eventful trip.

There has been a marked increase in immoral performances at the theaters of Havana, Cuba, accompanied by a general spread of vice and an outbreak of gambling since the American occupation came to an end. In order to counteract these vicious tendencies a meeting was held at the residence of Bishop Estrada. Many prominent citizens were present and a society for the prevention of vice was formed.

Chicago has required the elevation of 748 miles of railroad track at a cost of \$53,622,000. That this is cheap is indicated by the fact that the elevation work has saved an average of 1,380 lives annually. On this basis, Chicago feels that it can afford to expend an additional \$150,000,000 for the elevation of the balance of the tracks. It has already appropriated between \$3,000,000 and \$4,000,000 of this amount.

Several seniors and post-graduate students of the College of Agriculture of the University of Missouri have accepted positions on Missouri farms at from \$18 to \$20 per month. Farmers have sent in requests to be supplied with graduates in the agricultural department. Fred S. Putney,

who is a graduate of the New Hampshire and Pennsylvania universities, is working for a Holt County farmer for \$30 a month and board.

Too much contention manifested itself in Paris among the strikers for the successful carrying through of a strike, so that the strike of the postal employes which threatened to tie up the government for a while collapsed. The unions blame the postal employes for the failure. All of the striking workmen and postal employes who could get back to work are in their places. About 300 of the government employes are dismissed.

With one exception the wealth amassed by the late H. H. Rogers, said to be between \$50,000,000 and \$100,000,000, goes to members of the family. The widow and children are given the greater part of the fortune. Other relatives participate in liberal amounts, the income of \$400,000 being given to Chicago members of the family. The town of Fairhaven, Mass., where Mr. Rogers was born, is bequeathed \$100,000 for use of its primary and grammar schools.

A discovery is announced from Portugal which is of great importance to scientists, because it means the breaking of the radium monopoly now possessed by the Austrian government, and incidentally promises a reduction of perhaps one-half in the cost of producing the metal. The discovery is that of a great deposit of uranite phosphate, which contains over 50 per cent of uranium oxide. Uranium oxide is the constituent of pitchblende, from which radium is obtained.

Senator Curtis of Kansas introduced in the United States Senate the interstate liquor shipment bill prepared by the National Anti-Saloon League, and it was introduced in the House by Representative Langley of Kentucky. This bill prohibits the shipment of liquor from outside a State or Territory where shipment to such point would be unlawful from other points within the same State or Territory. It goes farther than the recent amendments to the penal code and is designated to obviate the objection of unconstitutionality urged against the Littlefield bill and similar measures in the past.

Rats are receiving continued attention from the Agricultural Department of the United States. The campaign started against them may result some day in the extermination of the pest in this country. A recent bulletin issued by the department has it figured out that a single rat can eat 60 cents' worth of grain a year and that if all the rats in the country were fed on grain alone it would cost more than \$100,000,000 a year to board them. It has been estimated that a single pair of rats and their progeny breeding without interruption and suffering no losses would in three years increase to more than 20,000,000.

There are eleven national homes for soldiers. The main home is at Washington, D. C., with branches at Dayton, Ohio; Milwaukee, Wis.; Togus, Maine; Hampton, Va.; Leavenworth, Kans.; Santa Monica, Cal.; Marion, Ind.; Danville, Ill.; Johnson City, Tenn., and Hot Springs, S. C. At the present time there are about 35,000 men in these various homes, 1,250 of them being listed at the National Home at Washington, which receives and maintains only discharged soldiers from the regular army. There are also 29 State homes, as follows: Yountsville, Cal.; Monte Vista, Colo.; Noronton, Conn.; Boise, Idaho; Quincy, Ill.; Lafayette, Ind.; Marshalltown, Iowa; Dodge City, Kans.;

Chelsea, Mass.; Grand Rapids, Mich.; Minneapolis, Minn.; St. James, Mo.; Columbia Falls, Mont.; Grand Island and Milford, Nebr.; Tilton, N. H.; Kearny, N. J.; Bath and Oxford, N. Y.; Lisbon, N. D.; Sandusky, Ohio; Rosenberg, Oregon; Erie, Pa.; Bristol, R. I.; Hot Springs, S. D.; Pennington, Vt.; Orting, Washington; Waupaca, Wis., and Cheyenne, Wyo.

According to a cable dispatch from Constantinople to the Jewish Morning Journal Ahmed Riza, president of the Turkish Parliament, visited the Haham Bafhi, the spiritual head of the Jews in Turkey, and on behalf of the government extended an invitation to the Jews of Russia and Roumania to immigrate to Turkey. As proof that Turkey was acting in good faith, Ahmed Riza informed the Haham Bafhi that the government would abolish all restrictions against Jewish immigration, and what is still more significant would confer full citizenship upon Jewish immigrants immediately upon their arrival in Turkey.

The Spanish Cortez has passed a law by which every male in the kingdom who is entitled to vote must do so at all municipal elections. The only persons who are exempt are judges, notaries, priests, and men over 70 years of age. The penalties for failure to vote are graded, among them being the published censure for having neglected a civic duty, having taxes increased 2 per cent, or if in the employ of the state, province, or municipality, a reduction of one per cent of salary, and for repeated failures exclusion from the right to hold any civil office. The Spanish government recognizes that voting is a civic duty, and one of such importance that it should not be neglected or evaded.

A rival to the United States Steel Corporation, comprising most of the independent steel and iron companies in the United States combined with a capitalization of \$750,000,000, is to be formed at once, according to well-informed Wall Street (N. Y.) sources. Plans contemplate the formation of a holding company with the above capitalization which will take over not only the principal independent steel companies but back of it include a big Pine Street banking house, a leading firm of brokers and a Pittsburg bank. An estimate of the cash value of the independent properties included in the combination is \$400,000,000. It is declared the new combination proposes to harmonize the steel trade and do away with "cut-throat" competition.

Baron Kogoro Takahira, Japanese ambassador to the United States, is quoted as saying that Christianity is spreading rapidly in his country. "The people," said he, "are great students. They are thinkers as well as workers. They are a race who love to get at the truth, who love to investigate and ponder. My people were civilized years before the Christian missionaries visited the shores of Japan. They were enlightened, not as you of the West are, but in the manner of the Far East. The educational movement is strong in my country and growing stronger each day, and if the Christian missionaries are able to convince the people that Christianity is the truth, then they have won their battle. That is all my people desire in the way of religion—the truth. If the workers for Christianity prove this to them Japan will accept this creed. When I say Japan I mean a majority of the people. Under our constitution all creeds are allowed, and, as in this country, no religion is persecuted. All have the protection of the law."

Among the Magazines

NEW MAIL SERVICE PROPOSITION.

In the June Lippincott's Colonel Willard French tells of a new plan which seems likely to be adopted by the Postoffice Department and which should prove of great benefit to the public. It is at present known only as "the return envelope and postal card" plan, but it has already gone through all of the preliminary examinations of the Congressional Committees on Postoffices and Post Roads, and commissions appointed by the Postmaster General, and has not only been approved but by legal authority has been pronounced something which the Department has power to inaugurate without legislation. Colonel French says:

"The system is something which applies chiefly to advertisers who use the mails in distributing circulars with enclosed envelopes or postal cards, soliciting correspondence or orders. A careful investigation has resulted in the report that where the enclosures are unstamped very little is ever heard from them, and where the cards or envelopes are stamped, but one in ten ever returns. This results in making each reply which the advertiser receives cost him twenty cents for postage alone. And yet, under the discouraging conditions, there are sent out, annually, a hundred million envelopes and as many postal cards.

"The law requires that all postage shall be prepaid, so that any plan which has been devised will require the coöperation of outside agency, to the extent of securing a deposit of a hundred thousand dollars with the Department, as a postage fund. The Department will manufacture envelopes and cards, bearing a peculiar stamp which can easily be recognized, distinguishing it from ordinary mail. These the Department will sell to whatever form of syndicate may represent the deposit, at the regular price less the price of the stamp. The contractor will distribute them as they may be ordered by advertisers, after having a return address printed on them, with notice that the stamp is void if the address is changed. Such envelopes and cards endorsed by advertisers may be returned to them without affixing additional stamp, but on arriving at their destination they will be held by the postoffice till the advertiser pays the regular postage on all such matter as he actually receives. The moment the envelope or card is mailed, the stamp which the Department impresses becomes a legal stamp and satisfies the law, while it is of no value if the address is changed, and no loss to the advertiser if thrown away. When the advertiser pays the amount of regular postage on all such mail as he actually receives, he only keeps the original deposit intact.

"It is not unusual for the Department to rely on outside coöperation. Pneumatic tubes, for example—and in fact almost all transportation—are accomplished through private coöperation, and it is not anticipated that there will be any delay or difficulty in arranging with some form of corporation, as a reasonable profit will be allowed by Government contract to the receiver and dispenser; while it will be greatly to the advantage of the Department to

have an active agency constantly at work encouraging trade and creating new business all over the country. As the result of the investigations it was reported to the commission that without any further impetus than the removal of the present handicap to business in this line, the firms already using the mails would increase their use at least fivefold, which alone would result in increasing the revenue of the Department over sixteen million dollars annually. With the natural growth and the new business that would follow it is thoroughly conservative to accept the report that when the system is understood and in working order the net revenue to the Postoffice Department will come very close to wiping out even the threatened deficit of thirty millions. Considering either the public or the Department, it is worth trying."

A LONG-DELAYED TRIBUTE.

On Wednesday, April 28, a fitting tribute was paid in the city of Washington to the man to whose genius is due the present and prospective beauty and dignity of the nation's capital. On that day the remains of Major Pierre Charles l'Enfant were transferred from an abandoned family burial ground on a Maryland farm to their present resting place in the National Cemetery at Arlington. The ceremonies were of a simple character. The body, draped with the national flag, was placed in the rotunda of the Capitol, where a service, attended by the President and Vice-President, the French Ambassador, and a large audience composed of members of both Houses and of the diplomatic corps, was held, after which the remains were carried under military escort to the Arlington burial ground and there interred. No stronger evidence could be given of the need for this national recognition than the fact that the majority of the people of the United States are probably ignorant alike of the name of Major l'Enfant and the important work which he accomplished. It is to l'Enfant that we owe the excellent plan upon which the city of Washington was originally laid out. At the suggestion of Jefferson, this French soldier, who had been identified with Lafayette in the cause of American liberty, was invited by Washington to lay out a city which would form the capital of the nation, and in its plan and scope be suited to the requirements of the republic for all time to come. History tells us that the present scheme was the outcome of a week's sojourn at Mount Vernon, where, with the plans of several cities of the old world before them, President Washington and his French engineer worked out, at least in their broad outline, the plans of the capital approximately as we now know it. It has been asserted that in constituting the Capitol and the White House the two centers for the series of radiating avenues, l'Enfant probably had in mind the plan of Versailles. Whatever the origin of the present plan, there can be no doubt about its success; for, when in connection with the celebration of the centennial of the city, in 1900, a commission of prominent American

architects was sent abroad to study the plans of the most beautiful of European cities, they indorsed l'Enfant's plan, and based their recommendations upon its general outlines. Unfortunately, after the work of construction commenced, there was disagreement between the French engineer and the building committee, and he was removed. In spite of President Jefferson's recommendation that he be paid from \$2,500 to \$3,000 for his services, it was not until 1810 that he was voted \$666.66, with interest from 1792, for the work he had done. He was invited by a Mr. Digges to his farm in Maryland, and, after spending some twenty-five years of his life there, he died and was buried in the family burial ground of the Carrolls and Digges. Here the body remained for nearly a century until its recent removal to Arlington. To make this tardy recognition of the important services of the designer of our capital city complete, it will certainly be in order for the nation to erect a suitable memorial above his present resting place.—Scientific American.

AN ARTIST'S SAD EXPERIENCE.

An artist living in Chicago acquired a little fruit farm in one of the most productive regions of Georgia, where several of his relatives had settled. Although he was seldom able to visit the place, which was operated by a brother-in-law, the artist took a keen interest in his country holdings, and talked proudly to his city neighbors and associates about his farm. Early in the season he received word from his brother-in-law that the first crop of grapes had been gathered, packed, and shipped to a South Water Street commission house. "They are beauties," the letter informed him. "Finer, sounder, sweeter grapes never went out of this part of Georgia."

Instantly the artist made out a list of a dozen friends to whom he had boasted of his farm. Then, on the day after the shipment was due to arrive, he went to the commission house to buy a dozen baskets of his own grapes for his special friends. His eye lighted with the pride of possession when he saw the baskets, stamped with his own brand, stacked up on the sidewalk and inside the commission house.

"Any grapes?" he inquired.

"Finest ever grown out of doors," responded the salesman, tilting a basket to display its contents.

"Every basket just as sound as this one," he continued; "not an unsound cluster in the whole shipment."

"What's the price?" asked the artist, wishing that his friends were with him to hear the praises of his crop.

"A dollar a basket," answered the salesman. "That may seem a little high, but it just happens that there isn't another decent basket of grapes on the street today, and we can get a fancy figure for every one in this shipment. They'll be gone in almost no time."

The artist made his purchase of a dozen baskets and ordered them delivered to his local grocer, with whom he had arranged for their distribution to his friends. He also bought several baskets for his own use, and found that the salesman had not overpraised the fruit.

Later he received a letter from his farm manager enclosing the account of the sale returned by the commission merchant, saying that the grapes had been received in bad condition, owing to the melting of the refrigerator ice, and that it had been necessary to throw a large part of them on the dumps as absolutely unsalable. The return was made upon a gross average price of twenty-five cents a basket. After deducting freight and commission charges,

the net accounting was for an average of nineteen cents a basket. From "Robbing the Hand that Feeds," by Forrest Crissey, in the June Everybody's.

"PRESENT POSITION OF THE INTERNATIONAL PEACE MOVEMENT."

(Continued from Page 565.)

a judicial order and those arising in the interpretation of treaties to its jurisdiction.

"Another step of still greater moment was taken by the second Hague Conference in the direction of providing a perfect substitute for force in the settlement of international differences. It voted without a dissenting delegation for the principle of an International Court of Arbitral Justice, with judges always in service and holding regular sessions. It failed to agree upon a method of selecting the judges for this High Court of the Nations, but it laid its plan for the Court before the governments and recommended to them the study of the question with a view to arriving at a solution satisfactory alike to the small and the great powers.

"The high-water mark of the work of the second Hague Conference was reached in its action in regard to future meetings of the Conference. The principle of periodic meetings of the Conference hereafter was approved without a dissenting voice. The date even of the third Conference was fixed, and the governments urged to appoint at least two years in advance an international commission to prepare the program of the meeting. This action means, if approved by the several powers, as it undoubtedly will be, that we are to have hereafter regular meetings of a World Conference. The powers of the Conference will at first be only advisory, but in the very nature of the case its conclusions and recommendations will be very largely adopted, and in this way it will, from the very start, be substantially a legislative world-assembly. Its powers will naturally grow and be extended. Here we reach the real position which the peace movement has attained. The promise, therefore, is very large for the years just before us. When the nations meet representatively at regular periods, and men of the highest ability and experience discuss in a friendly and frank way all of the common problems of the world, the days of war will be numbered, the great armaments which now burden and distract humanity will tumble to pieces, and the era of universal and perpetual peace will have begun. It takes no large vision to see this great consummation realized at no distant time."

A WORD FOR THE FAITHFUL HORSE.

OF all the brute friends of man the horse is certainly by far the most useful and the most valuable to him. In these latter days he earns the living for his master, his master's family and himself; usually works

six days a week and hauls the family around on the seventh, accepts the poorest shelter or none at all, takes what food his master allows him uncomplainingly, is always ready to do his best at any task to which he is assigned and through thick and thin, bad luck or good, weal or woe, is the reliable, faithful, efficient and optimistic friend of his master, his family and his interests.

In peace the horse toils for man in many ways; in war he suffers and dies for him. In disaster he carries his master out of danger, in victory he bears him proudly in the triumphal march. He shares his sorrows and his poverty in full and gets but little share in his prosperity. Though he would enjoy rest and recuperation in the green fields, he contentedly toils and struggles at his task on the bare roads between them. Blows he receives patiently from the hands of his taskmaster, nor resents them except when long continued, and sometimes not even then. Worn and weary he drags out his life day in and day out, whether he is mortally ill or weakened for loss of rest, sleep or lack of food. He coins his lifeblood for his master, every heartbeat is for his master's welfare, and he is truer to man than man is to himself. In war, in peace, in sorrow, in joy, in wealth, in poverty the horse, the nobility of the animal race, is the closest, most valuable, most noble, most intelligent friend of man. His name is benevolence.

It is a stinging disgrace to human nature that there must be humane societies to teach some men, to compel others and to remind almost all that they must be kind to this noble friend. It is a shame that in bad weather the horse is neglected, unfed, unsheltered from the storm, left to thirst intensely, ridden to exhaustion and treated as inanimate, yet such is the case. He is buggy ridden, sleigh ridden, worked to death.

Let those who deal with the horse be careful of the comfort of the faithful friend of man. Let those of humane instinct aid the humane society in its efforts to prevent abuse of an agent through whose efforts is due almost as much of the wealth, comfort, convenience, civilization and progress of man as to any other agency of which he avails himself.—*Beverly (Mass.) Times*.

COSTLY SIDEBOARD.

READING, PA., has a costly and unique piece of furniture. It is a sideboard, which took its owner, Harrison Weber, twelve years to construct, working on it during all his spare moments. The sideboard contains over 150,000 pieces of wood, all inlaid and fitted together, without showing one single joint. Its value, according to the time spent on it and the material, is something like \$6,000, and he says there is no other sideboard in the whole world to compete with it, so far as construction and beauty are concerned.

It was a most delicate undertaking. The front of a single drawer contains 2, 586 pieces of wood, arranged to show different designs of blocks and stars, with five to sixteen points. An end panel contains over 4,000 pieces.

The sideboard is a patriotic piece of furniture, as many of these tiny pieces of wood are so constructed that they represent the American flag first adopted, the 1812 flag, with fifteen stars, and the regular flag of today, having thirteen stripes and a star for each state in the Union.

Every flag shows the original colors and this is the only place on the entire finish of the sideboard where the woodwork is stained, as the star ground had to be stained blue. Otherwise the sideboard represents the natural color of the three woods of which it is made, namely, white holly, red cedar and walnut.—*Philadelphia Press*.

Between Whiles

Diogenes was looking for the honest man. "You are too late," said the first citizen approached, "he was my wife's first husband." Herewith the philosopher gave up the search.

A Boomerang.

Little Archie, aged four, had been very troublesome all day, and especially trying to his father, who had had to stay at home as he was not well enough to go to work. In the evening after the little fellow had said his prayers, his father called him, thinking it a good time to say a "word in season" and began by asking, "My son, why is it that father and mother have had to punish you so often today?" Archie thought a minute, and then to his father's discomfort replied, "I guess it was cos you were both sick and cross today."—*The Delineator* for June.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

BINDER TWINE—Highest grade standard 7½ cts. lb. Club together and send us your order. We save your money. Farmer agents wanted. Free sample.—*Central Supply Co., Mt. Morris, Ill.*

FOR SALE—5x8 Printing Press, including type, cabinet, ink, and unprinted stock. Worth \$150.00. A bargain at \$50.00 cash. Other business. Green stamp brings samples of work.—*Dallas Kirk, Pentz, Pa.*

FARMS FOR SALE—From \$40.00 to \$60.00 per acre. If you are in the market for a farm write at once for a 1909 price list giving full description.—*M. H. Miller, Bristol, Ind.*

OLIVE BRANCH OF PEACE

AND GOOD WILL TO MEN

Elders S. F. Sanger and D. Hays

An interesting history of what the Brethren and Mennonites endured during the Civil War period because of their Anti-war principles.

"Upon the whole, the object in publishing this little volume especially as it relates to the Civil War is threefold: 'First, to give a true and faithful record of the sufferings and experiences of these Christian People.

"Second, to testify to God's goodness in protecting them.

"Third, to strengthen the faith of Christians who may yet be required to suffer persecution for the sake of Christ and his Gospel of good will to men.'"

One of our agents reports: "I took 12 orders for the book in one hour. It sells on its own merit." Ask for terms to agents.

Bound in cloth. Two hundred and thirty-two pages. Back and side title stamped in gold. Illustrated. Do not fail to order a copy.

Price, postpaid,75 cents

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

The Saloon Under the Searchlight

By George R. Stuart.

A book of sixty-four pages. The best thing we have seen on this subject. A new book, dealing with an old question.

Simple, Practical and True.
"I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

Bright, Breezy—Not a Dull Line.
"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."—United Presbyterian.

Every minister of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village, town and city in the United States.

Sunday School and the Pastor.

By John T. Faris. A book of experience, not of theory. It tells how pastors have contributed to the success of Sunday-school work. It is rich in hints and practical plans. 84 pages, limp cover. Price, 25 cents.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

THREE TIMELY BOOKS for the FLORIST AND GARDENER

MY TEN-ROD FARM, or How I Became a Florist. By Chas. Barnard.

An interesting story of the successes and failures of a florist. Through an accident at the mill Mrs. Maria Gilman became a widow with two children to provide for. This she did by converting her small flower garden into a commercial asset which now furnishes an annual income of two thousand dollars. Attractively bound in cloth. 118 pages. Postpaid, 45 cents.

THE STRAWBERRY GARDEN. By Charles Barnard.

A very practical story concerning the Wellson family and their strawberry garden. How it was planted, what it cost and what came of it financially and sentimentally. The writer is a close student of human nature as well as a practical market gardener. A book of 104 pages, bound in cloth. Postpaid, 45 cents.

A SIMPLE FLOWER GARDEN for Country Homes. By Charles Barnard.

A practical guide. Aunt Louisa assists Frank and Gertrude in beautifying their rural home. How to start a flower garden, what it will cost and how have flowers all the year round. This little volume tells you just what you should do in each month of the year. 76 pages. Bound uniform with "My Ten-rod Farm" and "The Strawberry Garden." Postpaid, 45 cents.

BRETHREN PUBLISHING HOUSE, Elgin, Ill.

Sunday School Supplies Free

Let us furnish you with all your quarterlies and papers free for one quarter. Here are a half dozen Sunday-school helps that you should give a trial. Our introductory offer applies to one or all of the publications below.

Brethren Teachers' Monthly

A manual of methods. Comprehensive comments on each lesson. Three or more copies to one address, 13 cents per quarter, or 48 cents per year. Single subscription, 50 cents per year.

Advanced Quarterly

For Intermediate and Adult classes. A popular lesson help. Single copy, 5 cents. Five or more to one address, 3 cents per quarter.

Juvenile Quarterly

The lesson clearly and forcefully presented for the Primary and Junior Pupils. Numerous illustrations. Single copy, 4 cents, five or more copies to one address, 2½ cents per quarter.

Our Young People

An illustrated 8-page weekly. Interesting, instructive and elevating. Single subscription, one year, 50 cents. Five or more copies to one address, 10 cents per quarter or 40 cents per year.

Our Boys and Girls

The best illustrated weekly for boys and girls. Choice stories, helpful poems and Bible incidents. Single subscription, per year, 50 cents. Five or more copies to one address, per quarter, 7½ cents per copy.

Children at Work

An attractive little paper for the little people of the Sunday school and home. Single subscriptions, per year, 20 cents. Five or more to one address, per quarter, 3 cents per copy.

If your school is not using these popular Sunday-school helps we will gladly allow you to use them for six months at half price. We could not afford to make this liberal offer if we did not feel quite sure that you will continue to use them for years to come.

Even though your school may be using five of our publications we will allow you to try the sixth one on our introductory terms. Ask for full particulars.

A sample copy of each publication sent on request.

From the Ball Room to Hell

Is there any harm in dancing? There can be but one answer to this question, facts are facts.

This little book, written by an ex-dancing master, will give you more facts about dancing than can be obtained elsewhere. It places a dark picture before the dancer, and one that is very convincing. It explains the natural and necessary effects of modern waltzing and why

thousands of girls are ruined every year through its influence.

Elgin, Illinois

The Sunday School Calendar

Issued annually. Enlarged and improved. Beautiful cover design containing reproduction of Hofmann's famous painting of the boy Jesus.

In addition to the International Daily Bible Readings, the calendar contains International Sunday-school lesson titles and references for every Sunday in the year, also the Golden Text for each week, printed in full. Each leaf contains choice selections from the best writers, helpful thoughts for every-day living. A calendar for the entire year is printed on the back, and an extra leaf is inserted containing Scripture selections, etc., arranged for easy memorizing.

This calendar is endorsed by the leaders in Sunday-school work and has proved very helpful wherever used. As a Christmas gift from teacher to pupil it is extensively used. Many schools distribute them at the Christmas season to every scholar. They are especially valuable to Home Department members.

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snow-drifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. 1.

J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

EMPIRE COLONY

IN "SUNNY STANISLAUS"

The CO-OPERATIVE COLONIZATION COMPANY is now locating a colony of our people in the lower San Joaquin valley, in central California. The new town of EMPIRE, as well as the colony lands, is located on the Santa Fe railroad, five miles east of Modesto, the county seat of Stanislaus County, thirty miles south of Stockton, seventy-five miles from Sacramento and one hundred and fifteen from San Francisco.

The colony lands join the new town site and are within a few miles of three different railroads. These lands are all under cultivation, and are free from brush, stumps, stones and other obstructions. Two large ditches cross the tract, affording ample water for irrigation of all crops.

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and Investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

NEW CHURCH ORGANIZED—NEW RAILROAD BUILDING.

A new Church of the Brethren was recently organized at Empire, with twenty-five members, and other families of our people are expecting to move there soon. The Modesto-Empire Interurban railroad is now being built. For further information address,

CO-OPERATIVE COLONIZATION COMPANY

North Manchester, Ind., South Bend, Ind.

Or Levi Winklebleck, Modesto, Cal.

Oregon,	Umatilla,	1,186,000	20,440	20% public
Utah,	Strawberry,	810,000	60,000	Private
		\$28,647,000	1,552,540	

To December 31, 1909, the Federal Government has already expended over 28 millions in preparing homes for probably 20,000 families, possibly more, and must spend millions more before these projects are finished. With the Government the railroads that serve this territory are vitally interested in seeing that these acres are successfully settled by prosperous farmers. Whether these farmers are on government lands or on private lands irrigated by the government, is of minor importance; the main proposition is to supply as many homes for as many people as possible on these government projects.

Parties wishing information about any of these projects with the view of securing Government land or private lands for future homes should write to the undersigned for printed matter descriptive of the section of the country they wish to locate in.

Elgin, Illinois

Two Centuries of the Church of the Brethren

This book contains the twenty addresses delivered at the Bicentennial Conference, Des Moines, Iowa, June 1908. The first large edition was soon exhausted and we have not been able to fill orders

for some time. The second edition is now ready and will be in demand, as several thousand of our readers neglected to purchase during the life of the first edition.

This new edition is printed on thin paper, making a volume about two-thirds the size of the former edition. Typographical errors have been corrected and the binding improved. Large, clear type, 400 pages.

The book is embellished with Twenty-five Full-page Photogravure Effect Portraits. These illustrations consist for the most part of portraits of the speakers who delivered the Bicentennial Addresses at the Des Moines Annual Conference. The frontispiece presents a splendid likeness of the five men composing the Bicentennial Program Committee.

The book is a fitting souvenir of the Bicentennial year and should be found in every Brethren Home.

Send your order by return mail.

\$400 Prize Cup Won by Colfax County, N. M. In Competition with Entire Irrigated West

Miami Ranch

is located in the choicest part of Colfax county, New Mexico, and it was largely due to the products grown upon and adjacent to this ranch that Colfax County won this valuable cup at the Interstate Industrial Exhibit held at Albuquerque, N. M., last October. Every State was represented—products from land selling as high as \$1,000 an acre were shown—but Colfax County won by many points.

Many other prizes have been won by this section of the country. New Mexico wheat took first prize at the World's Fair in Chicago, while apples raised in an orchard directly adjacent to Miami Ranch won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 an acre.

Miami Ranch

offers you health and pleasures as well as wealth. It's situated in a rich, cheerful valley, surrounded by picturesque mountains. Elk, deer, bear and other large game are to be found in the mountains, while thousands of wild duck and geese inhabit the surrounding lakes. The Rayado River which flows through this ranch, is noted throughout the central west for its trout fishing.

The rainfall is sufficient to insure big crops. But with the gigantic irrigation system recently installed, there is not the slightest chance of crop failure.

The climate is perfect, the air is pure, and the scenery beautiful. Excellent church privileges, a good school and pleasant neighbors are all to be found on Miami Ranch.

Write for a free copy of our booklet, "Westward Ho." It tells in detail all about Miami Ranch. Tells how and when you can get a round-trip ticket from Chicago for \$30, and from Kansas City for \$25, via the Atchison, Topeka & Santa Fe. Write at once and take your choice of the bargain offers which we are now making on both large and small farms.

Farmers Development Company, Springer, New Mexico

Southwestern Kansas Lands

For a home or a profitable investment.
THE GARDEN CITY LAND & IMMIGRATION COMPANY
 (Inc.), GARDEN CITY, KANSAS, Offers a fine selection of irrigated, sub-irrigated and diversified farming lands at attractive prices.
SOME SPECIAL BARGAINS.

640 acres in Brethren settlement, 12 miles from County Seat, on line of new R. R. Level, fertile land. All tillable. 480 acres cultivated. 340 acres winter wheat. 3 wells fine water 50 feet. Wind-mills, tanks, etc. Good house and outbuildings. 10 acres fine bearing orchard. Good shade trees. All fenced. 1/2 mile of school. Near church. Telephone. R. F. D. Only \$25.00 per acre. Easy terms.

160 acres choice level land 1 1/2 miles Garden City. Irrigated from the United States Pumping plant. All under cultivation. All high class alfalfa and sugar beet land. Price, \$10,000.00.

160 acres well improved irrigated farm. 12 miles from good town. A snap at \$25.00 per acre.

Write for descriptive literature and full information.

DO IT NOW.

The Home Model Washer

Contains new features that should concern all who are in need of a washer. By means of a thumbscrew, the lever can be quickly set for long or short leverage, for light or heavy work, a good feature.

The agitator, the part that does the washing is also something new in that line. It is Simplicity and Strength and

makes this washer noted for easy, fast and clean washing. Do yourself a favor by learning all about this washer. It is low in price. I pay all the freight whether the washer is returned or not after a thorough trial. The circular illustrates and explains it all. Send for circular at once. Agents wanted. Address: **WM. S. MILLER**, Meyersdale, Somerset Co., Pa.

CAP GOODS

Our business has almost doubled itself during the last year. We are sending goods by mail to thousands of permanent, satisfied customers throughout the United States. The reason is simple.

Our Goods are Reliable, Our Variety is Large, Our Prices are Low.

All orders filled promptly, post-paid. Satisfaction guaranteed or your money refunded. Send us a sample order and be convinced. Write us for a booklet of unsolicited testimonials and new line of samples, which will be furnished free. Send at once to

E. E. ARNOLD, Elgin, Ill.

Buckeye Pure Home Made APPLE BUTTER

Is pronounced by hundreds of our customers, the best they ever ate. It is the product of apples, apple cider and granulated sugar; very appetizing and wholesome. Our Motto: Highest class of goods and a square deal guaranteed to all. Write for circular and special prices.

C. J. MILLER & CO., Smithville, Ohio.

Arnold's Chart of Paul's Journeys

A useful teacher's tool that you should have close at hand while teaching the life of Paul. Prepared by Bro. C. E. Arnold. Clear outline journey maps; and the principle events and places arranged in easily read columns; all on one sheet of paper, 12 inches by 19 inches. Folds within stiff covers small enough to slip into one's pocket. Twenty cents.

BRETHREN PUBLISHING HOUSE
 Elgin, Illinois

NEFF'S CORNER

I now have another offer to make in keeping with our rapidly growing, progressive city. A specially desirable lot will cost \$375.00. A 4-room frame house 24x26, drop siding outside, ship-lap inside, nicely finished with canvas and wall paper, wood work stained and varnished, two coats good paint outside, outhouse built and painted, all complete, will cost \$575.00 Total, \$950.00. Such a property will rent readily for \$20.00 per month, which is a little better than 25 per cent on your investment. The demand is not nearly supplied for such properties, and you not only get a good income from such an investment, but outlook at present is, your property will rapidly grow in value. If you have less than \$950.00 to invest, try our Investment Association plan. Money invested on this plan earned 17 per cent last year over and above all taxes, insurance and other expenses, and every investor has received his money back who asked for it. Full particulars on request.

JAMES M. NEFF,
 Clovis, New Mexico.

J. A. Bowers' apple crop of 1907 netted \$1,000 per acre, and in 1908, \$700 per acre.

E. A. Blair gathered from seven and one-half acres of apples 3440 boxes of fancy apples which netted \$5,500.00.

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

No. 24.

EBB AND FLOW OF THE TIDES

JOHN S. FERNALD

TO the dweller in the interior or along the shores of the Great Lakes the rise and fall of the ocean tides prove one of the most interesting features of a visit to the seacoast. To stand on a pier at one of our seaports, Boston for instance, and see the waters of the harbor nearly up to the level of the

States government issues tide tables giving the hours of high and low water, the amount of rise and fall and other data, for Governor's Island, New York harbor, with elaborate tables showing the differences, in all the particulars, for other ports. These tables present, as regards the time and the amount of rise

High Tide at Belfast, Maine. Launching a Four-Masted Schooner.

top of the wharf, and again, six hours later, at the same place, to see the water surface from ten to twelve feet lower, then again, after another six hours, back to its former high level, is an object lesson in one of nature's most interesting forces.

While the general principles of the tides, as formulated by Newton, Laplace and others, may be read and known of all men, there is still much in relation to the matter that is a closed book to man. The limits of this article do not admit of our going into the scientific details, but we will simply look at a few of the more common features, which are of practical value to all who have to do with traffic on the seas.

For the use of navigators and others the United

and fall, not only a most interesting study but one which, as to causes, has baffled the most expert scientists, while the effects are well known and can be tabulated in advance with the greatest accuracy.

The greatest rise and fall of tides on the Atlantic coast is in the Bay of Fundy, between the Provinces of New Brunswick and Nova Scotia, where it varies from sixty to one hundred feet, according to location. At Annapolis, N. S., it sometimes exceeds the latter figures, varying several feet between the "spring tides" which follow the new and full moons, to the "neap tides" which come between. In some near-by harbor the rise and fall are very much less. At St. John, N. B., directly across the Bay of Fundy, they are

from sixty to seventy feet; at Eastport, just across the line, in Maine, eighteen feet; Penobscot Bay, one hundred miles west, but ten to twelve feet. With local variations the rise and fall diminish as we proceed south and west. Along the southern New England coast the range is from five to twelve feet; in the vicinity of Cape Hatteras, from two to six feet; and along the Atlantic coast of Florida from six inches to five feet. The difference in the range of spring and neap tides is two feet, or from three feet four inches to five feet four inches.

The time of the tides at different places varies more than the volume, as it depends on a great variety of

and thirty-eight minutes; while for Annapolis, Md., we subtract three hours and twenty-nine minutes; for Nantucket, Mass., add four hours and three minutes, and for New Bedford, Mass., subtract fifteen minutes. Similar variations at near-by points occur all along the coast.

In the early days of the coast settlements the tides were utilized for running saw and gristmills in localities where the conditions were favorable and there were no available rivers or streams to furnish the power. To operate a tide mill of the kind most in use it was necessary to have a landlocked harbor, opening by a narrow inlet upon some bay or harbor

Half Tide at Belfast, Maine. Same Shipyard as High-tide Picture. Observe the Position of the Water as to the Small Shop with the White Door.

local causes, such as the general depth of the water, depth, width and crookedness of the channels, width of bay and harbor openings, rivers flowing into the sea, etc. The time from one high or low tide to the next corresponding one, at any given place, is very constant, being one-half of the lunar day of twenty-four hours and fifty-four minutes, making a tidal period of twelve hours and twenty-seven minutes. This brings each day's tides nearly an hour later than those of the day before. The highest flood tides come in connection with the lowest ebb, hence a tide which favors the shipbuilder for launching his huge vessel, also favors the humble clamdigger by draining the flats to a greater distance than the tides of a week earlier or later. The variations of time or tide at different ports do not follow any general law, but depend very largely on local conditions, as stated above. To find the hour of high or low water for any given port, one must take the government table and add or subtract, as directed, to or from the figures given for that day for Governor's Island. For instance: for Point Lookout, Md., we add four hours

where there was a high rise and fall of the tide. A dam was built across the inlet and a suitable wheel was placed in a sluice built through the dam. The water drained out of the inner harbor at low water, and on the next flood tide the in-rush of the water as the tide rose outside kept the wheel in motion until the water had reached the highest point and receded again to near the level of the wheel; or, if the inner pond was small, until the back-water counteracted the force outside. In the latter case the inside pond was allowed to fill full, and furnish the power by the return flow when the outside tide was out.

In the first half of the nineteenth century many of these mills were in use along the coast between Boston and the Bay of Fundy, but improvements in water wheels for use on streams and the coming of the steam engine, in connection with the advances in transportation, wrought a change. The tide mill disappeared under the law of the survival of the fittest. Now electricity is making another revolution, and the tide mill, with improved turbine wheels, is coming to the front. Companies are being formed all along

the coast to build and operate tide mills for driving dynamos which shall furnish electricity for trolley lines, manufacturing, lighting, etc., at points many miles distant. One company operating near Portland, Me., utilizes a tide pond where, a hundred years ago, a tide mill drove two saws and one run of stones in a gristmill. The new plant will furnish 25,000 horsepower in electrical energy, for use in Maine, New Hampshire and Massachusetts.

NOW HE'S A MAN.

MARTHA SHEPARD LIPPINCOTT.

But just a little while it seems
Since Jesse was a baby boy,
With big, blue eyes of innocence,
Which were his parents' pride and joy.
Then soon his babyhood was past
And he had started into school,
Where he must study and try hard
To never break a teacher's rule.

He's always been a dear, good boy,
A pride to those who loved him well;
And half the joy he's given them,
The human tongue can never tell.
A baby's candy, he'd not take,
Nor snowball old men in his play,
Nor tie tin cans to doggies' tails;
His fun came not in such a way.

He's had his fun in life, but in
A harmless way and being kind.
A better, more contented boy,
We seldom, in this world, will find.
He may ne'er be a President,
Nor climb to fame's great height sublime,
But he will be his parents' pride,
And someone else's, too, sometime.

Our little Jesse's now a man,
So he can vote for what is right;
And may he be e'er guided by
A true, unerring, inner light.
May peace and happiness be his,
And all the blessings life can hold,
And, yes, we hope a loved one, too,
Within his heart he may enfold,

There's nothing in the world like love
To fill the heart and soul with peace,
And bring new pleasures every day
To make life's happiness increase.
The best of everything in life
We wish for our new grown-up man;
For he has been our joy and pride,
E'er since his precious life began.

Moorestown, N. J.

HIS ACCOUNT WITH ALCOHOL.

A STORY is told of a thick-set, ugly looking fellow who was seated on a bench in the public park, and seemed to be reading some writing on a sheet of paper which he held in his hand.

"You seem to be interested in your writing," said a companion.

"Yes, I've been figuring up my accounts with Old Alcohol to see how we stand."

"And he comes out ahead I suppose?"

"Every time; and he has lied like sixty."

"How did you come to have dealings with him in the first place?"

"That's what I've been writing. You see he promised to make a man of me, but he made me a beast. Then he said he would brace me up, but he has made me go staggering around, then threw me into the ditch. He said I must drink to be social. Then he made me quarrel with my best friends, and to be the laughing stock of my enemies. He gave me a black eye and a broken nose. Then I drank for the good of my health. He ruined the little I had, and left me 'sick as a dog.'"

"Of course."

"He said he would warm me up, and I was soon nearly frozen to death. He said he would steady my nerves, but instead he gave me delirium tremens. He said he would give me strength, and he made me helpless."

"To be sure."

"He promised me courage."

"Then what followed?"

"Then he made me a coward, for I beat my sick wife and kicked my little child. He said he would brighten my wits, but instead he made me act like a fool and talk like an idiot. He promised to make a gentleman of me, but he has made me a tramp."—*Exchange*.

THE GLADNESS OF NATURE.

Is this a time to be cloudy and sad,
When our Mother Nature laughs around;
When even the deep blue heavens look glad,
And gladness breathes from the blossoming ground?

There are notes of joy from the hang-bird and wren,
And the gossip of swallows through all the sky;
The ground squirrel gaily chirps by his den,
And the wilding bee hums merrily by.

The clouds are at play in the azure space,
And their shadows at play on the bright green vale,
And here they stretch to the frolic chase,
And there they roll on the easy gale.

There's a dance of leaves in that aspen bower,
There's a titter of winds in that beechen tree,
There's a smile on the fruit, and a smile on the flower,
And a laugh from the brook that runs to the sea.

And look at the broad-faced sun, how he smiles
On the dewy earth that smiles in his ray,
On the leaping water and gay young isles;
Ay, look, and he'll smile thy gloom away.

—Bryant.

I DON'T like to talk much with people who always agree with me. It is amusing to coquette with an echo a little while, but one soon tires of it.—O. W. Holmes.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LXII.

ON returning to my hotel one night I was informed by Mr. Gullering, the manager, that the Sultan on the following day would make his regular trip to the mosque for private prayers, and that if I went down to that part of the city along the route of his journey I would have a chance, with many others, to see him ride past.

With exultant throbbings of anticipation I took the elevator to my rooms, wrote out a few notes for these letters and retired early, hoping I would be able to see the great Sultan, Abd-ul Hamid the Second.

Had I known what tremendous odds stood against me I should not have gone out, alone, in that part of the city filled by the Mahomedans at the hour of the Sultan's appearance while on his way from his palace to the private mosque, to pray.

My estimate of the distance from the hotel was far short of the long walk it proved to be, and the garden where the crowd gathered to see him pass was much harder to find. It was all better in the end that I went alone, without a guide, and afoot, for my thrilling adventure brought me more knowledge and inspiring danger than any guide in the city would have cared to share with me.

It was a big day in Constantinople when the Sultan went to pray. Although he often made this trip, the occasion was marked by the assembling of thousands of Turkish and Arab soldiers, throngs of devotees of Islam, and a multitude of people from all parts of the earth who may be visiting the city at the time, with the leisure folk of the European districts.

After a long walk in the general direction of the palace I found myself on a low, winding street, along the sea, where, once down below the higher buildings and hills in the distance, I was unable to longer direct my steps, and lost the road many times. On one of these "side trips" I discovered to my dismay that I had wandered from the streets on which were situated the shops and had entered into the very midst of Moslem dwellers. Houses with latticed windows stood all about me. I had been walking fast, sometimes running, and I did not like to slow up now to take my bearings for fear I would be late, and also

for fear that I would excite suspicion among these Moslems. Whether I was in their back yards or their front yards, or on the street, I could hardly tell. It was like finding yourself right in the hornets' nest you have tried to evade.

My heart beat awfully. I tried to assume as natural an expression as possible, avoiding entirely the look of alarm, and while contriving with lightning thought how I could get out of the place, or through it, without getting any one after me, I tried to maintain a direct course. How those latticed windows stared at me! I knew that in them were Mahomedan women, inmates of harems, and that while they might even now be staring out at me, and inciting the men in the household, or the eunuchs waiting upon them, I could not see them at all.

Luckily, I suppose, for me, none of the women were in the act of running over to see their neighbors and no alarm was given of the presence of a dangerous-looking foreigner. Not a soul could be seen. Everything that was done around those homes was performed on the inside, or in small, latticed courts. I was in my bicycle suit, a costume differing from any other cyclist on the road. That alone was sufficient to betray me into trouble by its conspicuous appearance. My face was a foreign face, a Yankee's face, everybody knew that. It was wise for me to get out of this settlement as fast as I could move without running violently. On a dog trot, but going faster than any one looking on would have thought I was going, I ran, peering naturally and easily from place to place, and giving the impression that I was the footman of some noble or wealthy family who had lost his way while in the act of carrying a message. Later on when Mahomedans, in carriage and afoot, passed me, I met their quizzing gaze with a flat look of unconcern, turned my eyes from them instantly, and went on my way.

The policemen were the hardest to deceive, and several big-buttoned fellows would have "pulled" me if I had given them a good chance. Instead of avoiding these officers I threw them off their guard by running almost against them, making one of them get out of my way, and looking back at him with a serious frown as if to say "Goodness, man! for the

sake of your country and your monthly pay, get out of my way. I am an important officer, myself." Of another "keen"-eyed policeman who had made a step toward me from a drinking fountain, against which he had been leaning so long he was compelled to yawn and shake his trunk into life again, I asked, with the importance of a lord mayor and the authority of the Sultanas, what street I should take that I might reach the palace in time to see the Sultan. A few motions, the words "Sultan—Abd-ul Hamid—Allah"—pronounced by me, were all that was necessary. Every one in the capital knew what it meant.

I did not stop for his reply, but only slacked my pace to catch his answer. He would be offended at my hurrying, for he knew that the hour of the processional to the mosque was already nigh. Looking back as I ran, and throwing out my arms in several directions so that he could indicate to me the one nearest right, he nodded assent to the street turning off at a curving angle running along the side of a long hill, and pointed out forcibly the second street after this one, when I increased my speed to the limit, once more jubilant in the hope of my success in getting my view of the Sultan.

In the next street I met two eunuchs in a carriage with a Moslem lady who was veiled so that she could not "bid me the time of day." These emasculated men were taking the fair member of some Moslem's harem out for an airing. A small piece of lay directly in front of the horses, which one of the eunuchs removed, alighting from the carriage and getting in again, on legs so long and spindly, they bent in and out at the knee as he ambled along. He was probably twenty years old, but he acted like a man of sixty. Dark complexioned, dark enough for a negro, he was dressed in a European suit of long, tight trousers and long-cut Prince Albert, which with his high hat and delicate expression reminded me of an educated medicine fakir, or if I may pay compliment to some of the bookworn clergy at home, he seemed, in physical and mental calibre, like some dyspeptic theologian whose useless life at the desk of theoretical nonsense has turned his body into the grotesque figure of contemptible weakness.

With a pine bed-slat a boy could have broken this effeminate eunuch into three pieces at a single blow.

Again I came to a drinking fountain, for next to the dogs in Constantinople, and more pleasing, is the great number of these excellent aids to health and humor. These fountains vary from common stone tanks to quite elaborate temples of art dedicated to the goddess of water, clear, cold, pure water. Some of them, as those in Stamboul, are sculptured gems, set in jewels, and glittering with purest marble ornamentation. The Moslem is a temperance man, never taking intoxicants. Five times a day he washes, at least so much as his hands, before saying his prayers. His

religion forbids him to drink wine or beer. There are no saloons in Moslem-land, and hence no drunkards, no wife-beaters and no hungry children.

I took a drink at the fountain, washed my hands like a Moslem washes his hands, bathed my hot temples and walked rapidly on toward the Seraglio.

All Rights Reserved.

THE UNCOMPLAINING MAN.

"I bet I've twice the troubles of the folks who sit and growl;

I've had enough misfortunes to make Job arise and howl,
I go about in suffering no mortal man may guess
Because I constantly conceal my feelings of distress.
I never tell a human soul about the pains I bear,
For no one has for others' woes the slightest thought or care.

That's why I'm not complaining now, though suffering
all I can—

I never tell my troubles," whined the uncomplaining man.

"Last week I lost the finest horse I ever had possessed;
The week before my choicest cow sought out the land of rest.

I broke my leg one day in March—that set my planting
back,

And off and on 'most ever since I've writhed upon the rack.

I've had the hardest run of luck a fellow ever had;
I've never tackled anything that hasn't turned out bad.
A hoodoo's been pursuing me since first my life began,
But I'm not one to holler," groaned the uncomplaining man.

And thus he went about the streets or loafed about the bars,

Rehearsing to his fellow-men his countless knocks and scars.

His speech was just a loud tirade against the whacks of fate—

He started talking early and he kept it up till late.
He hadn't an acquaintance but was weary of the tale
Of how he'd borne the brunt of things and never made a wail.

At last, to every one's relief, he joined the silent clan,
And on his granite shaft they carved: "The Uncomplaining Man."

—Strickland W. Gillilan.

DISSIPATION IN READING.

SCHOPENHAUER said: "The surest way of having no thoughts of our own is to take up a book every time we have nothing to do." That is not the popular idea, for reading is generally regarded as the generator of thought and character. But it is not so of itself. One must do something besides read. He must digest what he reads. There are people who read a great deal more than other people, but know a great deal less. They read just to read—to put in time; for a pleasurable sensation that one gets lying in a hammock or drinking a glass of soda. There is no digestive force in it that builds up brain fiber. It is the sort of reading that sustains insipid talk, and makes one, in a little

social circle, turn away in disgust when a serious subject is referred to. The fact is, the only kind of reading that is worth the time employed is that which arouses the reflection and builds up ideals. Men and women can not put in all spare time reading. They

must have time to think, compare, idealize, apply, inquire of their own conscience and consciousness if what they read is true, pure and uplifting. If we had that sort of reading—the thought-inspiring kind—the country would be better off.—*Selected.*

THE SANHEDRIN

PAUL MOHLER

DOUBTLESS the term "Sanhedrin," as it occurs frequently in the Sunday-school lesson helps, brings more confusion than information to the mind of the average reader. Unfortunately when he "looks it up" he is not sure of getting correct information, for there are two sources of information to be had, which disagree very materially, both of which cannot be correct.

The earlier, and more trustworthy sources, are the Greek records, and the later are the Jewish records contained in the Mishni, which was written some time after the destruction of Jerusalem, when the Sanhedrin, was an entirely different institution from the body that called our Lord and his apostles to judgment. All statements based on the Jewish sources must therefore be examined very carefully before they can be accepted.

After the Jews returned from exile under Ezra, their government was nominally a theocracy under a friendly foreign authority which left the local government in the hands of the high priest, assisted by a council composed of priests and elders. This is the first Sanhedrin on record. From the beginning of the first Greek period on, the Sanhedrin existed in some form and with varying powers until the destruction of Jerusalem. A little of its history may be interesting as well as profitable.

It has always been true that a man's occupation has a great influence on the development of his character. How natural it was then that the ruling body of the nation, dealing with worldly affairs and with the officers of the heathen government, should become "liberal" on questions of theology. This certainly was true of the early Sanhedrin, insomuch that when Antiochus Epiphanes proposed to wipe out the Jewish customs, religion and all, it offered practically no resistance. When therefore the Hasmonean house came into power, the members of this aristocratic body were either put to death, or brought into subjection by the appointment of a majority of the adherents of the ruling power. The same process of development took place in this as in the former body, until it was soon just as worldly as before. But in the meantime the Pharisees had gained such great influence with the people that they secured a place in the ruling body. From that time on, the government was a house divided against itself, with the Sadducean king, priests

and elders on the one side, and the Pharisees, backed by the people, on the other. Then as now, the true representatives of the people had the greater influence on all questions of importance, even though they did not hold the highest positions. It was this divided condition of the government that made possible the dissensions that opened the way for the Romans. "United we stand, divided we fall" states no new experience.

The Sanhedrin did not always exercise the same kind of powers or the same extent of jurisdiction. Sometimes it undoubtedly had large administrative powers, while at other times it seemed to be simply a court of justice. Sometimes its jurisdiction extended over a large part of Palestine, sometimes over Judea proper. When the first Herod was governor of Galilee, he had no authority to execute a criminal without submitting the case to the Sanhedrin; and when he did execute a band of robbers without proper trial, that body summoned Herod himself to trial. It is interesting to note that instead of appearing before the court in mourning, as was the rule for prisoners, Herod came with his bodyguard, and overawed the court, which of course acquitted him. When Herod became king he put the members of the Sanhedrin, alive or nearly all, to death. It is needless to say that he gave those who were left but little power.

The Roman procurators found it convenient to allow the Sanhedrin much power and a larger jurisdiction than did the Herods. Perhaps it is necessary here to state that under the Jewish constitution each town had a council to govern the local affairs of the town and the villages belonging to it. The Romans recognized these councils, giving them certain prescribed powers. The procurators also had courts of their own. To the Sanhedrin they gave those powers that were not given to the inferior courts or reserved for their own. Offenses against the Jewish law fell naturally to this court, and it could try even a Roman citizen for one offense, transgressing the sanctity of the temple; but in no case could it pass sentence of death without the consent of the procurator. This accounts for Christ's trial before Pilate. Stephen's execution was not a legal act; it was the act of a mob.

The Sanhedrin met regularly twice a week. It

might be called oftener, but it never met on a Sabbath or a holy day. This effectually disposes of the contention that Jesus ate the Passover before his death, since the night and day following the eating of the Passover constituted a holy day, one of the holiest of the year. It was not even customary to try one accused of a crime punishable by death on the day before a holy day, as it was the rule to allow one day between the trial and the sentence. The irregularity of the proceeding was abundant evidence of the venomous hatred of his accusers. For this once, if never again, the court was prejudiced.

According to the Mishni, a rabbi always presided over the court, but all other sources agree that the high priest was the regular president. The full membership of the court consisted of seventy-one members; but a quorum of twenty-three might transact business. A majority of one might acquit a prisoner, but it took a majority of two to convict. So if a quorum were present and twelve voted to acquit, the prisoner was freed. If, however, twelve voted to convict and eleven to acquit, the court must summon two more members. If still unable to decide the case, the court must continue to call additional members until the entire membership had been called, when a majority of one might convict.

In ordinary cases, the votes were cast by each member rising and giving his opinion orally, beginning with the chief and most influential members of the court; but in trying capital crimes, this order was reversed in order that the weaker members of the court might not be influenced in their decisions by the stronger.

You will not find the term Sanhedrin in the New Testament, but the body is mentioned several times by naming its elements, "Scribes and elders," "Chief priests and elders," "Chief priests and the Pharisees," "Chief priests, scribes and elders," etc., in the accounts of the trials of Christ and the apostles.

While it was true that the court was unfit to try these men, and that it was composed of the most discordant elements, the worldly Sadducees and the fanatical Pharisees, it cannot be denied that its main influence throughout the province was for peace and order. Had the Jews listened to the conservative Sanhedrin they would not have risen in that last fatal rebellion against the Roman power which cost so many lives and so much of liberty. The Sanhedrin as a political factor was destroyed with Jerusalem. There was indeed a Sanhedrin organized at Jamnia afterwards, but it had no legal standing. It consisted of rabbis who engaged in theoretical discussions and which exercised great moral influence over the orthodox Jews; but it was a Sanhedrin in name only. Will the Jews ever again have political power? Let us hope that they will not until they have accepted Christ.

Bethany Bible School, Chicago.

A CHANGE OF HEART.

"Good morning! Are you the superintendent?"

"I am, madam. Can I do anything for you?"

"Deed an' you can that. I just wanted to tell you what I thought of that little upstart of a Jones girl that thinks just because she teaches school she can afford to get sassy to me about my boy Mike. The likes of her to tell me how I shall manage my child! I'll show her! If she dare lay a finger on him I'll pull every hair out of her head! And she'll 'consult' with me over it, will she? We'll see about that. Am I to leave my house and baby and come tramping through the hot sun 'way up here every time she takes a notion to put on fool airs? I'll tell her what I think!"

The portly, florid speaker paused for breath, and the superintendent found a chance to inquire whether Miss Jones had sent her a conduct-notice.

"She did, the impident hussy!" retorted the irate one.

"Have you ever met Miss Jones before?"

"No, but I'll do plenty to her when I do. What does she know about managing children?"

"Well now, I feel sure that when you and Miss Jones have a little talk together you will understand each other better, and you will not feel so displeased. Suppose you tell me your name, and I will send Miss Jones word that you would like to speak with her. I know that Miss Jones is anxious to do the right thing by your child, for she is very careful and conscientious, and perhaps if you would explain to her just how you want him managed, she might get along better. I am sure she would try. Really, I have great confidence in Miss Jones."

The superintendent himself went after the offending teacher, and as he presently ushered her in, his eyes twinkled, though his manner was perfectly serious. His confidence in Miss Jones had increased fifty per cent.

Miss Jones had a bright, decisive manner, and as she advanced with outstretched hand and cordial smile she did not wait for an introduction.

"Is this Mrs. Maloney? Michael's mother? I am so glad to meet you," she said heartily. Mrs. Maloney had involuntarily surrendered her hard, capable hand to the firm pressure of Miss Jones' no less capable hand, and she found herself trying to look sternly into a pair of clear, gray eyes, shining with pleasure and interest, as they looked straight into hers with a frank smile not unlike Michael's own. Mrs. Maloney's responsive Irish nature could not withstand that look, and before she knew it she began:

"I'm pleased to meet you, Miss—."

"Yes," interrupted Miss Jones, "and it was very kind of you to come away up here through the hot sun. Do sit here by the window and let me get you a fan. It is just as I told Michael yesterday. I felt

sure that you were anxious for him to get on well, and to do right, and that you would be willing to take any sort of trouble to have him grow up into the right sort of man. Especially since he will always be such an example to his little brother, as he grows older. And how is the baby? Is his cold better?"

"Sure, he's all over it now. To think of you knowing about Timmy, now."

"Oh, Michael tells me about him nearly every day. He is so proud of the little brother. That is a fine trait in Michael's character. And really, judging from the things that baby says and does, I think he will grow up to be as clever as Michael. You must be proud indeed with two such children, Mrs. Maloney."

"That I am, miss. Sure it's the good man their father is. I hope they'll grow up to be like him."

"I was sure of it. I knew Michael never came from a home where his parents wanted to know of his fighting on the way to and from school and throwing rocks, and such unmannerly conduct. You see Michael has told me that he means to be a policeman some day, and he must learn to obey the laws himself if he is to make others obey them, and how can he destroy property himself and then expect to preserve it from other people?"

"That's right, miss. That's just what his father would say. Mike would get a good thrashing if his father heard of such carryings on. If he ever gives you any trouble you let me know, and I'll fix him."

"Well, of course, boys are apt to be mischievous and they don't always stop to think. Sometimes they forget before they get home from school, and need to be reminded at both ends of the line. But I hardly think Michael needs whipping. He ought to behave because he wants to do right, and not because he is afraid to do wrong. You see, the home is where the great influence is, and if a boy understands that at home he is expected to be honorable and manly, he takes pride in being so at school. We can soon tell what kind of a home influence the child has."

"And it's yourself knows how to manage the children! I hope, miss, you may marry a man as good as the one I've got, and have a family of your own instead of spending all your time on other folks' brats."

"O Mrs. Maloney, you mustn't call them that. You don't suppose I am going to let any one say such a thing about Michael, when I think so much of him? There is the gong, and I must go to my line while they are on the stairs. If you will stand here in the hall you can see your boy as he comes past. He is the tallest boy in my line, Mrs. Maloney, and that is one reason why I am so anxious for him always to do right. He attracts so much notice, you see."

"Well, Miss Jones, I've got this to say. We want Mikey to do what's right, and he ain't to give you any trouble, when you try so hard to do what's right

for him. You know what's best for him, and if he gives you any sass, or bothers you with misbehaving, just you let us know; and he'll get such a licking he'll never need another. I'll make him mind you. And there'll be no fighting and throwing rocks at all. His father will see to that."

And as Miss Jones returned to her line Mrs. Maloney turned beamingly upon the superintendent.

"Ain't she the sweet girl, now? She's a perfect lady, she is. And she does think so much of my Mikey."—*Katharine Maxwell Bower, in Ohio Educational Monthly.*

THE HOLY CITY OF MECCA.

THE history of Mohammedanism is to a certain extent like that of Christianity—in that it tells of the suffering and persecution of its founder. Mohammed was born in Mecca 570 years after Christ. He was 40 years old before he announced his mission, making the declaration which has since become the watchword of the Mohammedan faith: "There is no God but Allah, and Mohammed is his Prophet." He did not inspire faith at once, and at length he was driven from the city. This departure took place July 16, 622 A. D., and from that day of the "Hegira" (meaning "flight") dates all Mohammedan chronology. Mohammed retired to the near-by city of Medina, gathered many followers, and eventually returned to Mecca and took the city, driving the idolaters out of the "Kaaba" or sacred court, as Christ drove the money-changers from the temple, and declaring that never again should any but the faithful enter the holy city. As a result of that solemn injunction, the most drastic measures have always been enforced to prevent any "giaour" or "infidel" setting our eyes on the sacred places.

All Mohammedans, following the example of the prophet and in obedience to the express command of the Koran, make it their prime duty in life to make the pilgrimage to Mecca. Thither from all parts of the Mohammedan world—from Algeria and Tunis, China and India, Russia and Persia, and all the Turkish dominions—flock the faithful. Often the journey occupies a whole year, and the pilgrims gladly spend on the pilgrimage the savings of an entire lifetime. Whoever makes this journey earns the privilege of wearing the green turban, which marks him as a "hadji," or one who has fully kept the faith.

The completion in the near future of the Hedjaz railway, connecting Mecca with Constantinople and the European railway system, will make the pilgrimage a comparatively easy matter. The present method is to go by steamer to Jeddah, on the Red Sea, and thence by caravan to Mecca, or to go all the way overland by the established pilgrim routes. Often 10,000 to 20,000 pilgrims will be gathered in a single camp, and it can

be imagined what a motley sight they present, with their tents stretching as far as the eye can reach, and their countless numbers of camels and other animals. Frequently the caravans are attacked by Bedouin bands, who secure rich booty, as the pilgrims usually carry large quantities of valuables with them.

It is the greatest day in the Mohammedan's life when he first sees, afar off, the minarets and cupolas of Mecca, the sacred city which he has so long dreamed of. But he is not allowed to enter it without undergoing numerous rites, intended to purify him and prepare him for the highest privileges his religion can confer. Sanitary ideas have not yet penetrated to Mecca, and the things that go on there are so unspeakable that they demand the attention of the civilized world. Water is scarce, and the sacred ablutions go on in the same tanks until they become cesspools of filth and contagion.

It is a well-authenticated fact that Mecca is a hot-bed of disease, for the germs of cholera and other scourges are there propagated and by the returning pilgrims conveyed to all parts of the globe. There is one main street in Mecca, about 20 feet wide, and the rest of the city is but a maze of alleys that a man can reach across. The houses are plain and rude, generally three or four stories high, and always with the flat roofs of the Orient. There is little attempt at cleanliness, and the variety of stench presented to the traveler as he passes through the crowded lanes would be too powerful for civilized nostrils. Sir Richard Burton, the English traveler, succeeded in penetrating Mecca in 1852 disguised as an Afghan pilgrim, and he and one or two others are the only Europeans who ever saw the city. Burton wrote a fascinating account of his visit.

It takes 10 days or more for the pilgrim to perform all the rites laid down for him at Mecca before he can call himself a full-fledged hadji. He must march a stated number of times round the great Kaaba or temple court, by turns singing and praying. In the center of the court, in a holy of holies, covered under a rich curtain embroidered with verses from the Koran, rests the famous "black stone" which the angel Gabriel is said to have brought from heaven. Tradition says that this stone was once as clear and brilliant as a diamond, but it has been kissed by such myriads of lips that it is now dull and opaque. A large number of "imams" or priests are attached to the Kaaba and the numerous shrines in Mecca, and they expect rich gifts to be left by the pilgrims for the support of the church. In addition to this every pilgrim has to make various sacrifices and burnt offerings, and the number of sheep slaughtered runs into the scores of thousands—the blood making a constant rivulet during the height of the ceremonies.

Outside of Mecca is the sacred mountain of Arafat,

where Mohammed was wont to retire to meditate, and where, according to the story, Adam and Eve found each other after being driven from the Garden of Eden. The pilgrims must camp for a time on this mountain, spending the nights in meditation and prayer, and it is here that they receive the holy title of "hadji." On their way back they must pass through a narrow gateway, analogous to the "needle's eye," etc., of the Bible. Then they come to three images representing the horned guardians of the lower regions, and they must cast at these images seven stones brought from Mt. Arafat. The scrambling and contention for place at the various shrines is so great that often there is a regular fight, in which many of the weaker ones are trampled and killed. Little wonder that the "hadji," after he has returned from Mecca, is venerated as a hero, for the pilgrimage means much of hardship, deprivation and danger, not to speak of the great cost in money.—*The Pathfinder*.

WHERE WOMEN LIVE LONG.

IN Norfolk County, England, there are in every village individuals of more than 80 years of age and not infrequently one or two over 90, and those of 70 and upward are regarded as not even old. Many farm laborers of 70 are quite hale and hearty, working from early morning up to 5 and 6 o'clock in the evening, and some are so vigorous as to earn a full man's wages. And the women in the country are more tenacious of life perhaps than are the men. In one village, containing about 300 people, within the past six months have died three women of more than 90 years of age, the oldest of these being no less than 96. In another Norfolk village with inhabitants to the number of 400 there live a man of 95, a woman of 90, a woman of 89, a woman of 87 and several of both sexes over 80. In yet another village there are a blacksmith aged 96 and the widow of a country medical practitioner whose years mount up to 92.

The longevity of the Norfolk peasant has a very interesting pathological side to it. The chief enemy of the farm laborer of the eastern countries, from the standpoint of health, is rheumatism. Not many reach even middle age without having been the victims of rheumatism, and a large number are crippled in their old age by this disease. But in spite of this the average of longevity seems to be very high, although, as well as rheumatism, he has to contend with the lack of adequate housing accommodation and want of proper sanitary arrangements. That to eat sparingly of plain, wholesome food, to be much in the open air and to work sufficiently to occupy the mind and to exercise the body will enable a man to defy more or less the evils of environment would seem to be shown by the toughness of the Norfolk laborer.—*Selected*.

NATURE STUDIES

THE POCKET-GOPHER

N. J. MILLER

THIS animal, found in Georgia, Florida, the States bordering the Mississippi on the east and westward to the Pacific, some naturalists claim is related to our field mice. Cranial likenesses are the basis of this view. To others, the possession of fur-lined pouches opening into the mouth, suggests relationship to the pouched mice. On the other hand the similarity in habitat hints at relationship to the African mole-rat. Almost anyone familiar with the animal's form and characteristics might guess it to be some kind of rat. Whether it is a pouched mouse, an overgrown field mouse or an average-sized rat matters little, for pocket-gophers are—pocket-gophers.

The rodent is responsible for the little mounds of fine earth one so often sees scattered in pastures, prairies, or fields, as the case may be. The mounds, usually about two to four inches high and from twelve to twenty-four inches in diameter, are usually built by the animal while digging its burrow or underground runways. Also the mounds are connected with or rather close openings to the burrows, since the animal pushes the loose earth out of the runway with his forefeet and does not carry it in his pocket as some seem to think. Those who absolutely know, especially Herrick and Herrick, who have made perhaps the most complete observations known, say that after the pocket-gopher has scratched the dirt loose with his big front claws and has thrown it into a pile behind him in the runway "he turns about and approximating the callosities of the two forefeet in front and with the claws well up he pushes the mass before him by the action of the hind limbs until it piles up in front of him and he looks like a diminutive earth scraper." By this method the animal removes the loosened soil from the entire underground channel, no matter how long. If the dirt must be scraped too far or, some other idea chances to come to the animal's brain another opening is made from the channel to the surface, the opening to be again covered with a mound of excavated earth. A pretty good idea may be had of the line of direction, though very irregular, of the underground channels

by noting the succession of mounds. The channels are sometimes surprisingly long.

While irrigating a field of alfalfa not long ago I discovered a runway over twenty rods in length. In the evening I "set the water" in the lateral as usual, but the next morning the water, instead of coming down the lateral, flowed into a hole farther up near some gopher mounds. In an adjoining piece of plowed ground water was pouring out of a hole twenty or more rods distant, which fact gave a clue as to where the water from the lateral was going. As soon as the hole in the bottom of the lateral was closed the flow from the hole so far away ceased. Here then was a gopher runway carrying water underground for more than twenty rods! This feature of the gopher runway is sometimes unpleasant in irrigating countries and the gopher often causes serious loss to a community by tunneling or honeycombing irrigating dams, banks, reservoirs, ditches, etc.

Besides the main runway, the gopher digs temporary branches, side runways, galleries or rooms, etc. Some of the rooms are used to store food—roots of grass, alfalfa, oats, potatoes, grasses, etc., usually carried there in his fur-lined pockets. Herrick and Herrick say the roots are stowed away intentionally in quantities varying from a pint to a peck—quantities large and yet small enough to generate sufficient heat to produce sprouting and growth. The animal here expresses his ingenuity as an underground gardener. His hotbeds always supply him with fresh, tender grass through the months of winter and early spring. (The animal does not hibernate.)

When a lad of eight I was taught how to trap the brown fellow. A fresh mound was brushed aside to find the opening leading to the runway. The bottom of the runway was excavated about an inch in depth and ten or fifteen inches along the channel. A steel trap was placed in the far end of the depression thus formed and covered over evenly with loose dirt. When the pocket-gopher came along with his pile of dirt to close the hole the trap caught him. And how my first gopher

really frightened me! In that trap when brought to the light he was most angry. That defiant attitude, when throwing himself back on his haunches, his head lifted up and that dreadful spit sound, produced by properly manipulating his breath, took all the pride out of me. It took some time before I could muster the courage to finish him. How furious he was when blinded in the light! How he opened his mouth and gnashed his teeth at me! How big those claws were! They seemed easily two inches long, though I now know they were no more than half that length. And that spit sound of defiance! It rings in my ears at this moment.

Perhaps the pocket-gopher will soon be an animal of the past, for the chief of the United States Biological Survey has charged him with producing to this country—especially in the West where lands are irrigated—a loss of twelve and a half millions of dollars. A loss like that may incite relentless death against the fine-furred animal just as the great loss charged to the prairie dog is leading to its extermination by poison. Twelve and a half millions quite likely will outweigh his life.

SUNFISH.

T. H. FERNALD.

THERE are two distinct kinds of sunfish, one being of the genera *Centracchus*, *Brythus* and *Pomatis*, and are small fishes about six inches long, and not good for food, found in the fresh waters of this country.

The other is of the genus *Orthogarisiscus*, generally found in temperate and tropical seas. It inhabits the surface and uppermost strata of the open ocean and approaches the shore only accidentally, or in search of food, or for spawning. The jaws are divided in the middle and well adapted to crushing the shellfish upon which it feeds. They develop by remarkable changes, the young being studded with spines. Two species are known, the common sunfish with granulated skin, and the oblong sunfish with smooth, tassellated skin.

The common or broad sunfish, though a native of warm seas, is found during the summer around the coast of Northern Europe, and is taken while floating on the surface, basking in the sun. They make a noise like a hog when touched. In the stomach of a broad sunfish there have been found a substance resembling coral, barnacles and seaweed, but usually nothing but mucus is found. Some claim the flesh is good to eat, and resembles the crab in flavor, but it has never been put on the market. The largest specimen we have read of was about eight feet long, and rather more in depth.

The oblong sunfish has a body one-half its total length. We are told of a specimen taken in England in 1734 which weighed five hundred pounds, but generally they are considerably smaller. It feeds upon crabs, worms and other animals of the sea, and does

not float upon the surface as does the common sunfish.

HOUSE MARTINS AT WORK.

THE spring of the year is the time the birds build their nests—which are their homes, you know. So if you are on the lookout, I am sure you can watch some birdies and see how they build. Here is a pretty story told in *Little Folks*, of how the house martins build their homes:

I dare say you have often seen bricklayers at work building a house, and have noticed how they lay the bricks neatly in rows, and fasten them together with mortar. I wonder if you ever noticed how the birds build their houses? Some birds use sticks, some leaves, and some moist earth, which dries hard in the sun.

Now, I have been very interested lately in watching the house martins. The father and mother bird help each other in building.

First of all, they choose a good spot, and that requires thought. At length Mrs. Martin says, perhaps, to her husband: "What do you think of this, my dear, for a nice situation? See, it is close under the eaves, and sheltered from the cold winds and the rain; yet it is airy, and out of danger from prowling cats!"

The father bird looks with his head perked on one side. "Excellent," he says, "I could not have chosen a better spot myself! You are certainly very clever!"

"All right," says Mrs. Martin; "since you approve the situation, let us begin to build our new house at once!"

Away flies the father bird, and soon returns with a tiny pellet of moist earth, which he presses to the wall, or to the eaves, with his bill. Then the mother bird brings a tiny pellet of moist earth, puts it on the top of the other pellet, and presses it with her bill, holding it fast while the father fetches another pellet. Sometimes one bird thinks the other is staying rather too long a time away, and so the one on the nest looks round and chirps, as much as to say: "My dear, I do wish you'd be quick; I am quite tired of waiting!"

So they work away, bringing one tiny pellet at a time, and just as the bricklayer puts hair with the mortar to help to bind his bricks together, so the martins weave into their house a bit of grass or straw now and then to help the nest to hold together.

Each day the nest gets a little larger and a little larger, until at last it is finished. It has a space or door at the side, just large enough for Mr. and Mrs. Martin to enter; thus the martin's nest differs from the swallow's nest, which is always left open at the top.

When the nest is finished it is lined with feathers, and on this soft, warm bed the mother lays four, five, or six white eggs spotted with dark red.—*Selected.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

VACATIONS and plans for the same outweigh almost all other matters of importance these days with many people. Whether one is in need of a vacation or how it is spent will determine the measure of its success or beneficial effects.

WE urge all our readers who are teachers—and there are few of us who do not teach in one way or another—to read the article appearing this week in the Quiet Hour department on “Christ the Teacher.” It is full of excellent helps and encourages one to further study of an inexhaustible subject.

IN a recent issue we called attention to the efforts of the U. S. Forest Service in interesting the women of our land in the preservation of the forests and other natural resources. On another page of this issue this same branch of the Department of Agriculture tells of the taking up of the subject as a study in the schools. Both of these fields of education will no doubt bring much real help to the Forest Service in its efforts. It argues much for the wisdom of those who are at the head of the service that they are giving so much attention to the enlightenment of the people on this subject for, while the method may be slower than some others in bringing results, it is in the long run the most permanent and effective.

PRESIDENT TAFT and his cabinet have decided not to interfere with Father Time's regulation of the clocks of the government, by turning them back an hour or two during the summer months so that business might benefit by the extra hours of daylight and especially by the wholesome influence of the early morning hours, as compared to the later hours of a summer day. However, this need not hinder us as individuals from getting out early enough to catch the inspiration of a

fresh new day. The secret of easily making the break with a comfortable bed lies in early retiring, so that the usual or necessary amount of sleep is secured by the time daylight announces the swift coming of the sun.

TEACHING AGRICULTURE IN THE COMMON SCHOOLS.

WE are just in receipt of a series of articles on “Principles of Agriculture,” by one of the INGLENOOK's well-known writers, designed to be of help to those who as teachers or pupils have taken up the subject of agriculture in the common schools. In the first paragraph of the first paper the author of the series says:

“The science of agriculture is being taught in many of our schools and the writer thinks very properly so. This is and will long continue to be an agricultural nation; therefore those who are to till the soil should have a knowledge of the soil with which they are to deal. Many of the boys and girls who are to be our farmers of the future will get no other education than what they get in the elementary schools. Are we as teachers doing our duty when we deny them the knowledge they need, while at the same time we instruct them in almost every other avenue of life?”

It is our belief that in the education of the children in the subject of agriculture as a science lies the most effective agent for turning the tide of our young men and women, which is now toward the city, back to the farm, where they will find prosperous and contented homes. In recent years farming as a profession has taken on new dignity from the fact that the old-time saying that “anybody can farm” is no longer true. When there is added to this a long list of interesting subjects a knowledge of which increases very materially the farmer's proficiency, the prospective farmer is at once impressed with the fact that he is to have a place among the foremost thinking men of the times. The series will begin in one of the August issues of the long one, but we believe it will do much toward arousing an interest in the subject, besides giving much valuable help to those who have taken up the study. The series will begin in one of the August issues of the INGLENOOK, so that it will come in seasonably for those who may wish to make use of it in connection with class work in school.

“ELIHU ROOT PEACE FUND.”

ABOUT two months ago Hamilton College, Utica, New York, was aroused to a high pitch of excitement and enthusiasm over the announcement by the president at the chapel exercises that Andrew Carnegie had just given two hundred thousand dollars to the college in recognition of the services to the cause of international peace of Senator Elihu Root, who is an

alumnus of the college. The gift was accompanied by the following letter:

"In recognition of the unique services of Elihu Root, as Secretary of State, in the cause of international peace, through arbitration treaties negotiated by him and in various other directions, I give the sum of two hundred thousand dollars to Hamilton College, the institution of which he and his two brothers and also his two sons are graduates and of which his father was so long a distinguished professor. In accordance with the wish of Mr. Root this sum is to be held and invested by the trustees of the college as a trust fund, the income to be devoted to the salaries of the instructors of the college. It is to bear the name of The Elihu Root Peace Fund."

This is surely a splendid tribute to earnest service in the cause of peace. Its influence is bound to give renewed zeal to many who are faithfully working to exalt the noble principle of international peace. Especially will it make a continued and forceful appeal to the students of Hamilton College to dedicate their vigorous strength to the banishment of war from the earth. May the college become a powerful center for the propagation of peace principles.

THE ESPERANTO MOVEMENT.

IN the present growing strength of the Esperanto movement we hear as a rule but two of its advantages heavily emphasized—first, the practicability of the language, as commercial houses are coming to use it more and more in their international dealings, for the simple reason that one language understood by people of any nation is more economical as there are races to be dealt with; and, secondly, its idealistic importance, on account of its being a genuine factor in the promotion of universal peace.

Its cultural side is mentioned, it is true, in that one can read in Esperanto many excellent works which are otherwise practically inaccessible, such, for instance, as the "Faraono" of Prus, translated from the original Polish into Esperanto by Dr. Kasimierz Bein, etc., and the pleasures of correspondence with educated European or Japanese Esperantists for those who have time to gain their knowledge of foreign life and customs in this first-hand method.

But the direct bearing of the language upon linguistic teaching is not yet fully realized. The claim that Esperanto should precede all language study in the secondary schools is worth examining for its foundation. First, in the matter of vocabulary, it may be worth while to quote Dr. D. O. Lowell, of the Roxbury (Mass.) Latin School, who from examination of an etymological Esperanto dictionary draws the following conclusions concerning the roots in this language: "Sixty-four per cent of the same roots occur in Latin, 88 per cent in French, 85 per cent in Italian,

82 per cent in Spanish, 76 per cent in German, 83 per cent in English, 81 per cent in Portuguese and 42 per cent in Russian. In learning Esperanto the student thus acquires 1,497 words out of the eight principal European languages. Esperanto is the least common multiple of them all." In addition to this, many names of animals and most names of plants are from the Greek and Latin, which languages have indirectly furnished a large proportion of the international vocabulary.

The existence and importance of grammar and syntax, however, are what cause Esperanto to be of value as a preliminary study to Latin and Greek and the modern national languages. Through this simple and methodical language the boy and the girl can be given an appreciation of grammatical categories and relations far more easily than in even their own tongue and are prepared to enter upon the complex or different syntactical construction of other languages with far more likelihood of grasping it. For instance, in the familiar catch, "I know that that *that* that is in that sentence that I read," English shows no differentiation, and the function of each word must be patiently drilled, or rather forced, into the head of the luckless child. If grammar in itself were not made a prominent feature until some Esperanto had been learned, the teacher need merely recall "*Mi scias ke tiu tio kiu estas en tiu frazo kium mi legis,*" and the difference between conjunction, relative and demonstrative is clear. Because Esperanto has different endings for noun, adjective, adverb, participle and infinitive, etc., and uses the accusative logically—not having "I : me" and "you : you," etc.—and has no exceptions to these rules, the language is not merely easy to learn, but illuminating at once. Moreover, being international in formation, this tongue is free from the idioms which render difficult as well as picturesque all the national languages. The pupil learning Latin or French *after having learned Esperanto* has by the aid of the international tongue gotten a realization of what the idioms in his own language are and has to some extent been able to get rid of them in his consciousness. He can write Esperanto without bringing in English idioms. From this point he can far more easily take up the idioms of French, Latin, etc., and deal with them successfully. He does not have to shake off the idioms of his own tongue and in the same moment acquire those of the new one. The transition is gradual and logical, and in the end the extra time spent in first learning Esperanto will be more than made up by the rapidity with which the next language is mastered.—*Ivy Kellerman, Ph. D., in Ohio Teacher.*

"If you tell the truth you can go on about your business; but if you tell a lie you have to go back every day or so and see how it is getting along."

THE HOME WORLD

AFTER MARJORIE WENT HOME

ELIZABETH D. ROSENBERGER

"I FOUND a house today over on Vine Street, and Rose if you are able, we will go over tomorrow evening and look at it," said John Myers to his wife.

Rose Myers was a little woman with pathetic brown eyes that looked down into your heart. She laid her head lovingly on her husband's arm and answered, "It is so good of you, dear, and we will go tomorrow evening."

Her husband held her close for a moment, then he said, "I do not regard it as a sacrifice to leave this place; I too am anxious to get away before the roses come." Very tenderly he said "good-bye," then took up his hat and went down town to his place of business.

"Before the roses come," she said it over to herself and she knew she was too weak to remain among the roses where her six-year-old Marjorie had wandered and almost lived the year before. She could not see the roses bloom while Marjorie was sleeping low beside her little brother Roy. The roses in bloom and no Marjorie to linger over their beauty; ah! that was hard, so hard that she wondered dully if the ache in her heart would ever grow less. "But I must try to live and forget for John's sake; not many men could be as patient as he has been," she said to herself.

The next evening they looked at the new house, and decided to take it. In a few days they moved and Rose was busy fitting up the new home and doing many things which only housewives attend to.

"I shall be better soon," she told her husband in the evenings. "You see it is not that we came here to forget Marjorie, but, dearest, I seemed to see her all the time in the old house; she seemed to meet me in all the rooms and on the stairways, until I sometimes feared—"

"Hush, don't say it, dear," he interrupted. Her friends had whispered among themselves that she would go insane unless she could be brought to think less of her children who had been called home.

Rose had met only a few of the neighbors who happened to be in Mrs. Frey's sitting-room one sunny afternoon in May. Their children were playing on the

front steps, and all the women were sewing on little garments. They had just run in to Mrs. Frey's and carried with them whatever sewing they happened to have in hand, when one of the ladies asked, "How do you like our new neighbor, Mrs. Ruhl? I saw you go in there yesterday."

Mrs. Ruhl hesitated. "Now really, I don't like to give my first impressions of any one, because they are nearly always wrong and I change my mind about people after I know them better. But since you insist I must confess that Mrs. Myers seemed rather cold and distant, not inclined to be friendly."

"I am sorry to hear my opinion confirmed," spoke up Mrs. Brown. "She seemed very reserved when I called; she had on a lovely afternoon dress; her house was spotless. When I thought of my sitting-room carpet at home with my three little ones tumbling around I was afraid she would not like my house-keeping."

"And your three are not as bad as my Davie," laughed Mrs. Frey. "He utilizes all the articles in my pantry, the egg-beater and potato masher included, for an electrical machine which he constructs with the aid of much string."

It was Mrs. Ruhl's turn now. These mothers enjoyed talking about their children. "My Allan went with his father to the country yesterday, and saw a man milk a cow. When he came home, he told me about it. 'Mother, I saw the man get the milk. He just squeezed them knobs back by the tassel and then the milk came; I could do it too.'"

The mothers all laughed at this; then the youngest mother there showed them how her little girl could stand when holding fast to a chair. And they all agreed that she would soon walk alone.

"The only home without children is the Myers home," said the youngest mother.

"I only hope our children will not worry her too much," said Mrs. Ruhl; "she should have known that this is a children's street before she moved here." And then the little group of women dispersed.

Mrs. Myers never heard the things they had said

about her. She watched the little groups of children playing, climbing around the various doorsteps, and always busy with their childish plans. When her husband came home Rose told him how they played. "They had a parade and Davie led off with his drum, followed by a fat little girl with a kitten in her arms; while a dog trotted slowly in the rear of an express wagon drawn by a boy of about five."

And in telling her heart grew lighter. "I am going to get acquainted with them. Marjorie would like me to be with them, I think."

And John Myers was thankful that they had moved from a house where every corner was peopled by sad memories which haunted his Rose. Here were voices of living children calling her back to health and strength, and he was hopeful once more.

Rose had returned her neighbor's calls, but there was no intimacy between her and the mothers. Then one day the dreaded disease diphtheria broke out on this street of little children. And Rose went to Mrs. Ruhl. "Let me help care for Allan, I have been through this," and her face was white and drawn with pain.

So Rose held Allan in her arms and told him stories. And Mrs. Ruhl's tears fell like rain as she overheard her telling of little Roy who had been so brave and patient when the pain came, how he said, "It does not hurt when you sing about the jewels, precious jewels."

And Allan recovered, but the little chubby girl, who always carried her kitten, lay down to die and it was Rose who remained to the last and helped the mother to bear the awful desolation of this first bereavement. And in doing this Rose's own burden grew lighter, her own sorrow not quite so hard to bear.

And the welcome given her by these warm-hearted mothers when they could visit each other again, brought tears to Rose's eyes. They said, "Never again shall you be left out of a single thing. We know now that you do not mind our disorderly sitting-rooms, and you love our children; forgive us for misjudging you."

So Rose found peace in ministering to other little children, her heart grew lighter, and her husband blessed the day when they moved among the children.

A FATHER'S QUIET POWER.

MANY years had elapsed since our former meeting and I expected to see the mother of sons grown tall, looking somewhat old and careworn, but *per contra*, her face was so youthful and her manner so care-free, that after I had been her guest for several days, I said:

"From your own account you have had your full share of care and sickness, and yet you are so little changed that it is a constant surprise to me."

"But sickness is very bearable when one is as love-surrounded as I," was the laughing rejoinder; "and work is a pleasure when it is appreciated as mine is."

"Your old schoolmate, Mrs. Blank, talks in a different strain," was my reply. "She is breaking down at such a rapid rate that she looks old enough to be your mother, but when she refers to what is evident to all, she says, 'Yes, sickness and care are telling upon me.'"

"She is too loyal a wife and mother to wear her heart on her sleeve, and few know that she is pining away for the love and appreciation which is her due; in other words, she is dying, by inches, of heart-hunger."

"Heart-hunger!" exclaimed I, "how can that be possible, with husband and four sons?"

"I do not hesitate, though, in saying that my poor friend would be happier were she a childless widow than, as she is, a wife and mother whose comfort and wishes are never consulted."

"But Mrs. Blank has, in the eyes of the casual observer, the advantage of you, even, in some ways, for she has wealth at her command."

Here I was interrupted by: "But I have a wealth of love which will outweigh all else, and love lightens labor as money is powerless to do. I hesitate to betray confidence, but recently when we were having a heart-to-heart talk, something rare in these days, my girlhood friend said: 'The world regards me as rich, but I would, oh, so gladly, exchange my luxurious surroundings for the proverbial love in a cottage.'"

"And yet Mr. Blank acted the part of a gentleman the day I dined there, and her sons are handsome fellows."

"Yes, and as heartless as they are handsome," was the curt reply. "They think only of their own pleasure without the slightest regard to the wishes of the one who is powerless to right the wrongs in the home, though she has always been an ideal wife and mother. No, it is not sickness and ordinary care that have so aged the poor woman, but heartbreak."

"Still I confess to being somewhat in the dark as to the cause of the difference between my old-time friends," ventured I. "In other words, I fail to see why you should have the loving respect of your sons to such a marked degree, while Mrs. Blank, according to your statement, is scarcely treated with civility. Is the difference all with the mothers?"

"No, indeed!" was the emphatic reply. "The difference is wholly with the fathers. Talk about mothers bearing the entire responsibility of rearing children while fathers go scot-free! It is an outrage! I admit that exemplary sons have been reared in the homes of men not worthy to be called father—as by fire, but the faces of the mothers of such sons are

usually in evidence that theirs had been a one-handed fight never intended for the 'weaker vessel.'"

"Go on," I urged, as with eyes alight and cheeks aglow, she paused for breath.

"You smile at my earnestness, but I know, beyond a doubt, that the fathers are wholly responsible for the difference between the sons of Mrs. Blank, who are breaking her heart, and mine, who have never given me a heartache. Mr. Blank has too much self-respect to show his indifference to his wife in public, or before strangers, but those who are in the home long enough to see him unmask, will bear me out in saying that he consults his own comfort regardless of the wishes of the one he promised to love and cherish. The indifferent, unappreciative husband early took the place of the ardent lover; so it was not strange that the sons readily fell into their father's ways and treated their mother with like indifference. Then, too, Mr. Blank has habits to which many society men are given. Consequently, when the anxious mother ventures to remonstrate with the sons who are fast going the downward road, she is met by a sarcastic 'We are only doing as father does; can you expect your sons to be more faultless than your husband?'

"But how different is my case! My husband is, as you can testify, my lover still; and he has always shown such deference to my wishes that the boys often say, 'We count on father, every time, after we get mother's consent.' Is it any wonder, then, that with husband and sons as devoted as ever wife and mother was blessed with that you find me so young at heart and so little changed, while my poor friend finds life a burden? But the fathers are responsible for both the joy of one home and the heart-break of the other. Ah, I tell you, my childless friend, that it is up-hill work for a mother to 'train up a son in the way he should go' when the father is going in the opposite direction. When, however, a wife can point with pride to a husband who leads a blameless life, and say, 'You are safe in following your father's example,' then motherhood is what God intended it should be when it was written: 'Her children arise up, and call her blessed; her husband also, and he praiseth her.'"—*American Motherhood.*

IN A KITCHEN GARDEN.

"Pray tell me why," the onion asked,

"In all this blazing sun,

I should be wrapped in seven coats

When I don't need but one?"

"I cannot see you, all my friends,"

The corn said—"I am blind;

But as for ears, no better ones

Than mine you'll ever find."

Up jumped a little vegetable

Whose face was round and red;

"I'd like to see the man alive

I could not beet!" he said.

"Your faculties," the pea-vine cried,

"Dear friends, I won't dispute;

But my bud has grown a pistil,

And I think it's going to shoot."

"I never," said a carrot small

That grew beside the walk,

"Heard anything in all my life

The way these string-beans (s)talk!"

For fear that I should laugh aloud,

I had to run away.

I met those funny folks again

At dinner time next day.

—Corelia Channing Ward, in the Designer.

KEEPING EGGS FRESH.

THE use of water-glass for preserving eggs has passed the experimental stage, and it is now claimed that among all the materials used for this purpose, the water-glass is the most reliable. While it has been demonstrated that the solution, once used, can be used again, it is always best to begin the new season with a fresh supply of the liquid. The water-glass can be had at almost any store dealing in country supplies, or at the drugstores, and if not kept in stock may be ordered for you. The price ranges from \$1.25 to \$1.75 per gallon for the liquid, and about 25 cents a pound for the dry. The druggist can tell you how to dissolve the dry. The vessel to contain the eggs may be a tub, pail, or stone jar, and should be perfectly sweet and clean to begin with. They must be set in a cool place, out of the sunshine and draught of air, as both these agencies tend to cause the liquid to evaporate. The eggs must be perfectly fresh, and put into the liquid day by day, as they are gathered. The liquid must at all times completely cover the last layer of eggs. The water used must be boiled and the mixture made while it is hot. Measuring carefully, the proportions are one pound of the dry material to each gallon of water; or, to sixteen pints of the water add one pint of the liquid. The mixture must be cold when the eggs are put in.

Be sure that the eggs are fresh—you will get out of the vessel only what you put into it. It does not pay to put up tainted, stale or doubtful eggs. Cover the vessel in order to keep out dirt, insects or trash.—*The Commoner.*

"In making the coarser flour breads the dough must not be made as stiff as for white flour, or the loaf will be 'sawdusty.'"

The Children's Corner

BETTY'S BURGLAR.

CLARA NORTH RULEY.

AND sure enough the Laddie from Lilliput Land came again and again. He became very fond of the Burton children and they of him, and many a pleasant

afternoon was spent in the grapevine playhouse, for John, with the unsolicited advice and assistance of Mary Belle, made a little gate in the dividing fence, which all thought to be a decided improvement to the unsatisfactory knot holes.

However, there were a great many days that they could not play together at all on account of bad weather. Mama and Papa Dan were afraid that Betty's old trouble would come back, and Laddie had to be very careful of his health "on account of his business," so he gravely told mama. Mary Belle grumbled openly when the rainy days would insist on coming, but Betty who was a small philosopher rather enjoyed them. "They make the sunshiny days seem so much nicer," she said. And then John, who always had a remedy for every ill under the sun, consoled Mary Belle and changed her grumbling into notes of joy, by installing a little telephone between the two houses. It was an amateur affair made of the odds and ends a kind-hearted lineman had given him. But it answered the purpose of amusing the children and one time at least was of great value indeed.

Betty had taken her doll around on the north side of the veranda and was busily engaged in making the young lady a jumper dress. John had gone swimming with Richard, Mary Belle had taken Baby Sister out for a ride in her gocart and even Laddie, who scarcely ever deserted her, was absent. He said he was going to write a letter to his mother and Betty was too loyal a little daughter of another mother to attempt to dissuade him, even though she was lonely. And then Betty had discovered too that jumper dresses were quite complicated affairs, and as she was learning to really sew she was taking great pains with her work. Mama had said if she made this dress nicely that perhaps—perhaps, mind—she might hemstitch some handkerchiefs for Christmas presents and adorn them with lace and insertion. Betty knew how to hemstitch already, but Mama said that whipping on lace was very particular work. One had to catch the needle in every hole, no matter how close together they were.

Suddenly Betty heard a footstep. It was over at the House just North. It was a queer-sounding footstep, too, as though the owner of the feet was too indolent to lift them, or he did not wish to be heard. It seems very strange for so small a girl to reason all this out, but you see when one has been ill for so long a time as Betty had, one gets to be different from other children, and one of Betty's amusements for many months was to guess at the footsteps as they passed on the walk. So it was no wonder that peculiar shuffling footstep attracted her notice. She looked up. Sure enough there was a man and not at all a nice one either, standing irresolutely on the veranda. Perhaps he was a tramp, she thought, and wanted something to eat, but tramps generally went around to the kitchen

where Black Mandy gave them what she called a "permiscous feed." This man stood there for some little time looking around furtively. Betty was quite sure he could not see her, for the spindles in the veranda railing were set so closely together, and as she was sitting on a cushion she was entirely hidden.

After assuring himself that he had not been observed, he turned the handle of the door softly, and entered the house. This was rather too much of a liberty, thought Betty, for she was sure he was no friend of either the Manager or the Leading Lady, so he must have entered the house for no good purpose. She wondered what she should do. She might run over and alarm Black Mandy, the cook, but then she was deaf and besides, by the time she could run around the house and across the lawn, the tramp or robber or whatever he was could get what he wanted and get away. Betty thought hard. She could see Laddie faintly, at his little desk in his room, but it wouldn't do to call. Suddenly an idea struck her. The telephone! She could attract Laddie's attention by that means she felt sure. So she hurried into the house and up the stairs to the boys' room. Tap, tap, tap, went the telephone, which, as it was a made one, had no real apparatus like those belonging to the Company, and in a moment that seemed to Betty like hours came an answering "tap, tap, tap."

"Hello, Laddie," said the little girl in a tense voice, "there is an awful ugly man in your house. I saw him go in and I think you ought to find him and do something." Poor Betty had a very vague idea just what should be done, but Laddie was quick to think.

"No use to try to tell Black Mandy," he said. "Whatever is done I'll have to do myself. Just stay at the telephone so I can call you." And there Betty sat, a trembling little figure. All at once she heard a door slam, and a volley of dreadful words. Betty couldn't exactly tell what the words were, but she did know the author of them was terribly angry. Then there came again a "tap, tap, tap." "Hello, Betty, came Laddie's voice, quivering with excitement, "I've got him, locked in the closet. Serves him right for trying to steal the Manager's Sunday suit. Now I'm going to call up the police station," which he did and in less time than it takes to tell you the officers had the thief locked behind a stronger door than that of Laddie's.

Every one praised the children for their presence of mind and they all said that if it hadn't been for the little homemade telephone Betty could not have warned Laddie, for the burglar would have been looking out for one of the ordinary kind and would have taken alarm at its ring. Both the Manager and the Leading Lady were very grateful to Betty and said that some day they would show their appreciation of her service, though they could never repay her.

THE QUIET HOUR

CHRIST THE TEACHER.

RICHARD BRAUNSTEIN.

OF the many phases in which Matthew's Gospel presents Christ, not the least engaging is that of teacher. We realize that he came as Lord of Glory on a mission to lost humanity, but we also find that he had a message—that he came as a teacher. So tenderly and truly did he tell it that this sinsick world has never ceased hearkening while it turns in truer measure nearer to the Sun of righteousness. Christ came with a life to live as well as a life to sacrifice. He could have dashed into the arena of salvation for man, and at once been lifted up on Calvary; instead he tabernacled among us, going in and out that his lips and life might so harmoniously blend that men evermore should find in him their highest Ideal, their *model Teacher*.

And this they are able to do; for however for one may advance along the way of a true teacher, one will always find the Master ahead and on the heights saying: "This is the way; walk ye in it." Be what you want your pupils to become is a basal pedagogical law. Christ fulfilled it as truly as he did the Mosaic law. He taught, "Be not anxious," and was satisfied to trust the Father's care for a place to lay his head. How many times we find him withdrawing, even in the Garden of Gethsemane, living his own message, "Pray to your Father in secret!" He told the disciples to shake off from their feet the dust of the cities that received them not, and with a terrible woe fixed the doom of the Galilean towns which had turned away from his mighty works. "He that loveth father or mother more than me," he applied when he said, "Whosoever doeth the will of my Father in heaven, the same is my father, my mother and my brethren." Did anyone more wisely practice the lesson, "Let your speech be yea, yea," than did Christ when on trial for his life? "Love your enemies" led him to answer the "Hail, Rabbi!" of Judas with "Friend!" "Resist not evil" had its echo in Gethsemane in "Put up thy sword"; and "He that loseth his life shall find it" was fulfilled on the cross even as he listened to the cruel taunt, "Come down!" In short, the life and teaching of this humble Nazarene so perfectly accorded that Judas could but testify that he had betrayed innocent blood; and Pilate that he found no fault in him.

The true teacher knows his pupils. Christ knew his disciples. He understood how slow of comprehension

they were. He had called them from the nets to be fishers of men. There was a long process of training before them; character is not made in a day. True, he charged them with their lack of perception, but patiently he taught them lessons of faith in himself and in their heavenly Father. When the time was ripe, revelation made it clear to them that he was, not only the Son of God, as Peter declared, but that he was the One to be heard, as the voice on the radiant mount testified. He knew how shortsighted had been their vision of what his life comprehended, yet at the last he took them up the heights of Galilee that he might lay out before them the field of their future labors, even all the world and all nations. They were in his confidence—in the most holy relation that ever comes to teacher and pupils. Little by little they had been grasping his teaching and setting it in its right light. The dayspring was in their hearts, and the Redeemer of the world was satisfied to leave what he had come to teach in their keeping. He knew the men he had chosen.

Like every other great teacher Christ knew his subject. He dealt with the Scriptures and with the human heart. He was the carpenter's son, the Prophet without honor in his own country; nevertheless no man ever put so much meaning into the words of the Old Testament. Even the Pharisees, who boasted of their knowledge of the law of Moses, received time and again from his lips the reproof, "Have ye not read?" He had divine comprehension of the human heart, yet his humanity served his divinity in the touch of his hand laid upon the leper; in the look of compassion given to her who had touched the hem of his garment; and in the cheering ring of the voice which fell upon the ears of the Canaanitish woman as he said to her, "Be it unto thee as thou wilt." How tenderly the human in Christ opened the avenue of ministration for his divinity!

In his methods of imparting instruction, Christ was a model for all ages. Matthew allows us to see the great discourses of the Divine Teacher, beautiful and complete as they are in literary qualities. Each one is studded with proverbial truth made trenchant with question after question and vivid with figures, as well as freely illustrated by simple and well-known objects. All these devices, together with the use of parables, aroused interest and put the truth in such striking or-

compact form that it lived in memory. Our Lord used no written discourse. He was speaking and teaching from the heart and head, in the heat of the spirit as he healed and wrought among the people. His work made the opportunity for his message. The opportunity led him into positive teaching against error, as in the case of warning his disciples against the leaven of the Pharisees. It opened the way for him to answer, to instruct his disciples, as in answering their question, "Who is the greatest in the kingdom?" It occasioned controversy, as in the debate with the Jews about Sabbath eating, Sabbath healing and casting out demons. In every occasion of this kind he showed the discernment of the true teacher in that he turned no questioner down who showed a willingness to know the truth. On the other hand he withheld directness when he noted the insincerity of the Pharisees in questioning, "By what authority doest thou these things?" In the case of his trial, after evidence enough had been given, he made no answer. He knew when to speak and when to keep silence, and under both circumstances no man ever did it so calmly.

He made no display of superior knowledge, but on occasion showed himself equal to every emergency with disciple, ruler and Pharisee. He was a master interpreter, a master logician, and it was the testimony of all that he taught with authority. The quietness of power is something men do not become used to, even though they move to destruction upon it. Christ possessed this quiet reserve of power; yet he was absolutely fearless. He had in excess that element of all who teach a new and mighty truth—disregard for man. No arraignment excels his invective of the Pharisees. The self-assertion he showed here was born of mighty truth and justice. Around the target of his wrath was a larger circle; it included his disciples, the multitudes, the whole world. Among these he was revolutionizing life; he was breaking soil as well as sowing seed. One can easily harrow the surface; it takes *plowing* to stir the depths.

Another characteristic of Christ's teaching is that it led his followers through right ideas to right conduct. This fact is not so apparent in Matthew's Gospel as it is in the subsequent history of the apostles and of the Church. The root of the matter, however, is in Matthew. Christ delegated to his disciples his authority and promised that whatever they bound or loosed on earth should be bound or loosed in heaven. Of the law, he said, he came not to destroy, but to fulfill. This is true today. As soon as he comes into a life and declares his manifesto, immediately existing circumstances assume a new relation; a new spirit comes into the old. His touch is so truly upon everything that it becomes a fact that we may tell what Christ has done *for us* by what he has done *in us*.

Christ was a true model. No one has yet found flaw

in his manner or method of instruction. He lived what he taught, he knew those he taught, and suited the lesson to their comprehension; he understood human nature, made no display of his wisdom, yet taught truth as broad as the ages and as enduring as eternity. He alone could say, "*Take my yoke upon you and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls.*"

HOW SWEET 'T WILL BE IN HEAVEN.

SELECTED BY LIZZIE HERRMANN.

How sweet 't will be in Zion,
With no more to endure,
To know that all our trials
But served to make us pure.

How sweet 't will be in heaven,
Where endless morn appears,
To meet our friends and know them,
The lost of other years.

And with them and the angels,
Whose songs eternal rise,
Sit at the marriage supper,
The banquet of the skies.

Riga, N. Dak.

THE JOY OF UNSELFISHNESS.

IF I could see my own life over again, say from the age of twenty, when the needs and sorrows of other people began to press upon me, I would pray every day and many times a day to be unselfish. I would pray that I might forget myself, my own career, my own ambitions, my own health, in order that I might spend myself in ministering to others. And I am sure that when I once more reached my present age I should be a much happier man than I am now. For if there is one certainty in my mind, it is that it pays to be unselfish. I know that in saying this I am open to the reproach of a low motive. And I should be content to start from a low motive. I should be content to be selfishly unselfish—that is, to start from myself with a view to working out and on. As thus: I wish to be happy, to be truly and permanently happy. The best way to attain happiness for myself is through the service of others. Therefore, I will pray and seek and strive to be unselfish, not at first, because I desire to alleviate the sufferings and promote the happiness of others, but because I desire myself to be happy, and this is the best way to attain that state.—*Great Thoughts*.

An imitation diamond, no matter how perfect, will not shine in the dark. A real one will. So it is with an imitation Christian. A genuine follower of Jesus shines anywhere.—*Peninsula Methodist*.

"SELF-SURRENDER to an ideal is equivalent to self mastery."

ECHOES FROM EVERYWHERE

The Pennsylvania railroad is proud of its record for 1908, as it carried nearly 14,000,000 passengers in that year, and not one of them was killed by the road.

Holes for tree planting have been excavated by the Long Island Railway by blasting with dynamite. Two men can excavate 250 holes per 10-hour day at a cost of about $7\frac{1}{2}$ cents per hole.

Andrew Carnegie has arranged to give to France \$1,000,000 as an endowment for a hero fund under the same conditions that he has established similar institutions in the United States, England, and Scotland.

Petitions are pouring in upon senators and representatives asking them to place a high tariff on post cards. This is done for the purpose of keeping out the post cards "made in Germany." The German cards which contain scenes of American cities place the American lithographers at a disadvantage.

The great Alaska-Yukon-Pacific Exposition at Seattle opened June 1 with a record-breaking attendance of nearly one hundred thousand. There was only one arrest for any cause whatever during the entire day. The sale of liquor on the grounds or within two miles of the grounds is strictly prohibited.

It is gratifying to learn that the application of block signaling on the railroads of the United States is increasing. The last report of the Interstate Commerce Commission shows that the total length of road operated under the block system at the beginning of the year was 59,548 miles, a net increase over the previous year of 879. The comparatively small increase is attributed to the financial depression.

There is gloom among the racing fraternity at Los Angeles, word having reached there from San Diego that President Diaz of Mexico has decided that he will not sanction the proposed race track at Tia Juana because he thinks that such action might be thought unfriendly to California, a State of a friendly power. A high Mexican official said that Diaz would do nothing to encourage sport on the Mexican border which has been barred by the United States.

Some of the most up-to-date hotels are making use of a novel device by which patrons can ascertain the time at any hour in the day or night. At the head of the bed in each room is a small telephone receiver which is movable, and may, if one likes, be placed under the pillow at night. The receiver is electrically connected with a master clock, and when the sleeper wants to know what time of the night it is, he merely draws forth the receiver, places it to his ear, and then presses a button. Immediately a set of gongs strike the hour, the quarter, and the number of minutes past the quarter.

The council of the Russian empire has adopted the marine budget, restoring the appropriation of \$1,700,000 which was rejected by the duma. This amount is to go toward the construction of four new battle ships, authorized in 1908, but as yet the work of construction has not been begun. The keels of the first two of these battle ships will be laid down June 18 and July 3. Vice Admiral Birileff, former minister of marine, during the course of his speech on the subject of new ships of war, advocated the sale of all the old vessels of the navy, which, he declared, have become useless.

How New York City grows is shown in the returns of travel on the subway and elevated lines for 1907 and 1908, furnished by the Interborough-Metropolitan Rapid Transit Company to the public service commission and made public last week. The sale of tickets in the subway increased from 182,559,990 in 1907 to 220,991,212 in 1908. For the same period there was a decrease of more than 15,000,000 passengers carried on the elevated lines, but the net increase would seem to confirm a recent statement of Theodore P. Shonts, president of the company, that the amount of travel in New York City was limited only by the ability to provide conveyances.

The Swiss government has taken over the St. Gothard railroad, having paid \$42,500,000 for it and assumed the debt of \$23,000,000 with $3\frac{1}{2}$ per cent interest. It also pays more than \$1,000,000 for expenses of the issue of the company's loans. In 1872 Louis Favre undertook to build the St. Gothard tunnel under the Alps, and thought to complete it in eight years at a cost of \$10,000,000, which was found to be insufficient. Favre never saw the completion of his great engineering feat, as he died in the tunnel in 1879, the first train not passing through until three years later. Since 1888 the dividends of the road have not been below 6 per cent. In 1879 the Swiss government reserved the right to buy the St. Gothard at any time, within 30 years for 25 times the amount of the net profits of the line during the last 10 years of its working. This is the basis of the present sale.

Announcement has just been made of the formation at Berlin of the Wright Flying Machine Company, Ltd. This company has a capital of \$125,000 and is backed by the Krupps, the Allgemeine Elektrizitaets Gesellschaft and the Ludwig Loewe Company. It is to purchase the exclusive rights for the Wright aeroplane for the German empire, its colonies and protectorates, as well as for Sweden, Norway, Denmark, and Turkey. The arrangement will extend over a period of fifteen years, the company to be entitled to all improvements made by the Wrights during this time. The brothers have also made arrangements with the Italian Government, while in England they are building a half dozen machines for private sale. No less than forty Wright aeroplanes are said to be under construction in France at the present time.

Emperor Nicholas will visit King Edward at Cowes Aug. 2. The Russian imperial squadron will go first to Cherbourg, arriving July 31 and staying until the next day. It will then cross over to Cowes, and, according to the present arrangements, return thence to Russia in time for the maneuvers of the Imperial Guard, which begin Aug. 12. This visit returns the call made by King Edward on Emperor Nicholas at Reval a year ago. The visit of Emperor Nicholas to the King of Italy apparently has been abandoned.

To bring the coffin containing the body of William Penn, which now reposes in a practically abandoned cemetery in Buckinghamshire, England, to this country and have it interred on the banks of the Delaware River, is the object of a movement just launched in Congress. Representative Palmer of Pennsylvania is one of six members of the House behind the plan, and he will confer with President Taft to enlist his support in the proposed removal. It is declared that, considering Penn's distinguished career, his grave is not appropriately marked.

What is known as the Greenland Society, of Copenhagen, has been formed for the purpose of developing the natural resources of Greenland. The annual report states that interesting results have been obtained from the explorations made for a large Danish syndicate during the years 1903-1907 in Greenland, by Norwegian and German engineers. Up to the present about the only products known were cryolite, which deposits are now extensively worked, and coal deposits. The recent explorations show that there is to be found graphite of a very good quality, besides asbestos, mica, and copper. It appears that copper is abundant in Greenland. At present it is already taken out at the Alangossak mines.

The army 16-inch gun, which is the most powerful weapon in existence today, is still at Sandy Hook mounted on the temporary carriage which was used for its trials. It has been proposed to ship the gun to the Philippines, and mount it in the fortifications which are now being built at Corregidor Island for the defense of Manila. The twelve-inch gun is not able to completely command the channel; but the 16-inch gun could strike a blow, even at a distance of 11,000 feet, which, if it got fairly home, would probably disable any modern battleship. Although there is no likelihood of another 16-inch gun being built, this costly weapon should at least be mounted in some position where it can render effective service.

More than 14 years ago the original act was passed by Congress calling for the perpetuation in bronze of the famous Gettysburg address of Abraham Lincoln, and about a year ago a subsequent act was passed. The plan was to place these bronze tablets containing the address in the 76 national cemeteries in the United States. The delay all along has been due to the controversy over the text of the speech, as from the day it was delivered there has been a friendly dispute as to the exact words. Among those who took part in it were John Hay, former Secretary of State, and John G. Nicolay, both of whom were secretaries to President Lincoln. It seems that there are three versions of the address, all being identical in thought, but varying a little in expression. At last, however, the Government has decided on what is known as the Baltimore version, and orders have been issued that bronze tablets containing the address be placed in the national cemeteries.

The government is calling for bids on a concrete tower 600 feet high, and tapering from a base 50 feet in diameter to 8 feet at the top. This tower is to be used for the 3,000-mile wireless telegraph station which is to be built for the Navy Department. The tower will be situated in Rock Creek Park, Washington, D. C., and it is hoped from this station that the Navy Department can keep in touch with vessels of the navy at any point on the North Atlantic Ocean.

Steel street cars, the first of their type to be used on surface lines in any city in the country, have been recently placed in service by the Chicago Railways Company. The cars have been built by the Pressed Steel Car Company of Pittsburg, and the supervising engineers who designed them believe they will be almost indestructible. A number of the cars are finished and are being fitted out with trucks at the shops of the Pullman Company. The only wood about the new coaches is in the doors and the steps.

Henry Meade Bland, a teacher in the State normal school of San Jose, Cal., and Herbert Bashford have been presented by Joaquin Miller with an acre of land each and expect to build cottages near the poet's home at Fruitvale. It is understood that Miller intends to establish a colony of poets and conduct a school of poetry. The Pacific Short-Story Club, of which Miller is an honorary member, has been informed that a number of men prominent in the literary world of the coast are to be given land and follow the example of Bashford and Bland.

Walter Wellman, who is about to undertake another expedition in search of the north pole, and, Melvin Vaniman, his engineer, have added considerable improvements to the dirigible balloon which is to be taken along with them. It has been equipped with an extra set of propellers, capable of being shifted while in motion, so that the balloon may be forced up or down at will. They also have perfected an ingenious sun compass, upon the principle of the sun dial, and have devised a theoretical system for arctic navigation by means of curves. The party will start for the pole about Aug. 1.

Dispatches from Rome outline an Italian colonization scheme which contemplates the settling of about 1,000 Italians in central Texas. A total expenditure of \$1,000,000 is planned. Two colonies of about 100 families each will be brought from the agricultural districts of northern Italy. A syndicate headed by Luigi Luzzatti, former minister of finance in the Italian cabinet, has secured options on 62,000 acres of land on the Keechi and Trinity rivers. The price of the land is from \$11 to \$12.50 an acre. A primary object of the scheme will be to relieve the congested condition of Italian districts of big cities—New York, Pittsburg, Boston and Chicago.

St. Petersburg is on the eve of a new and serious epidemic of cholera, according to the published views of the chief sanitary physician of the city, Dr. Ivanoff. Twelve cases of cholera were reported June 5 and nine the following day. These were spread in practically all quarters of the city, indicating that the infection is general. The sanitary commission is without funds and is unable to take many precautionary measures. The water supply admittedly is contaminated, 15 per cent of it being unfiltered. The epidemic is especially dangerous to newcomers, notably the workmen of the building trades, who came into the city from the country districts by the thousands during the building season.

Among the Magazines

EVERY REASON TO KEEP THE PEACE.

Ambassador Bryce said truly that "all the nations, both of this hemisphere and the other, have every possible reason for endeavoring to keep the peace," that "interest as well as conscience and duty prescribe that course." The mere expectation of war causes a great waste of energy and a misuse of capital amounting to billions of dollars annually. Labor and money might be far more advantageously employed than they are in the building of armaments, and the diversion would result at once in diminishing the tremendous burden of taxation.

Men who argue with great positiveness that war is inevitable for all time assume that the masses of mankind will forever act against their own interests because of a something that is conveniently classified as the fighting spirit. They assume that for the sake of the fantastic gains that have no value for the individual in the mass men will forever bow their backs to a worse than useless load. Against their shallow philosophy the interests of the laboring millions are constantly asserting themselves. The German workingman and the French workingman are going through the same struggle, and each of them needs all his fighting spirit to make a living. That is the practical question that faces them. It is the real thing, and is far more important than the cultivation of racial animosities and high political squabbles about worthless territory in Africa.

The truth is perceived more clearly from year to year by our great industrial armies, and their influence is becoming a most powerful factor in the cause of universal and permanent peace. Nothing could be more absurd, therefore, than to speak of the peace movement as if it were hopelessly visionary. It is intensely practical. It is encouraged by common sense arguments that afford a most refreshing contrast to military flubdub. And though the goal of general arbitration may not be reached in the near future and disarmament may seem far off, it is certain that substantial progress is being made all the time toward the peaceful solution of international problems and that retrogression is impossible.—Chicago Record-Herald.

CUBA: THE PROBLEM.

The news from Cuba is not encouraging, and the end of our experiment of trying to make a reputable republic in that island is not at present in sight.

Officially speaking, we drove Spain from her last stand in the Western world because she ruled there so inefficiently and so cruelly that unendurable complications arose year after year in the relations between Cuba and the United States. Actually, the official history of the affair is not greatly different from the account of it that an unbiased, unofficial historian would write. That in the long run events will justify the course that Congress and President McKinley's administration took, we believe.

Whether they have justified it already is a question over which dispassionate minds may differ.

We kept our pledge to make Cuba independent on condition that she should keep the peace. We did not actually cut the cable by which we had her in tow, but we gave her plenty of slack. She did not use her liberty in a way satisfactory to herself or to us. At the request of her own elected President, who acknowledged his incompetency to deal with domestic disorder, we intervened. Without bloodshed, and at a comparatively moderate expense, we restored order in the island in a very short time, and soon had public affairs smoothly running there. For the time being life and property were as secure there, and daily existence there was as humdrum as they are in Connecticut or Oklahoma.

This bit of discipline accomplished, we again gave the little craft plenty of slack, feeling this time quite sure that she would render a good account of herself. The disappointment that we necessarily feel over the reports of daily increasing crime and disorder is of a rather sobering sort. It compels us to face the question whether the course of events will not inevitably lead to annexation. As a Territory of the United States for a time and later on as a State, Cuba would become a safe and pleasant place of residence. There is no reasonable doubt of that. Left to govern herself in practical independence, Cuba will not live up to our standards of civic good behavior. Of that, too, there is no reasonable doubt.

The question that we have to answer is: To what extent should we tolerate crime, disorder, neglect of sanitary precautions, insecurity of property, ignorance and general indifference to "the opinions of mankind," rather than assume final and complete responsibility for Cuban civilization? If we could answer this question on grounds of reason and well-established expediency, it would still be difficult to decide just what we ought to do, and when we should begin to do it. The question is made immensely more difficult, however, by the circumstance that a majority of the voters of this nation certainly do not and will not look at the problem rationally. They range themselves on one or the other side of it, according to their prejudices and sympathies, influenced somewhat by business considerations. Capital would go in large quantities into Cuban opportunities if Uncle Sam assumed responsibility for its protection. But millions of Americans who have no business relations with the island, either present or prospective, shy at the proposition to "impose our yoke" upon "a free and sovereign people" under the pretext of doing our neighbors good.

If we can manage to keep our heads and our tempers, we shall, on the whole, do wisely to let the Cubans try a rather long time to solve their own social and governmental problems. There are excellent grounds for such a policy. The Cubans are probably, on the whole, not less capable of self government than most of the Central and South American peoples have been. It is not likely that

Cuba will become more lawless than the Latin-American republics have been. If we had known more about South and Central American affairs, if we had had larger economic interests south and immediately north of the Isthmus, and if we had had revenue "to burn," we probably should have heard an "imperious demand" of the *vox populi* to clean up the streets and the morals of our Latin-American acquaintances. We had none of these prerequisites. They have been left to create civilization in their own way, and all trustworthy observers assure us that of late they have made and are now making a remarkable and substantial progress.

Perhaps it will be just as well if we are not in too much of a hurry to conclude that the Cuban experiment has failed.—The Independent.

HEARING COLORS AND SEEING SOUNDS.

Those odd byways leading from one sense to another, through which some persons perceive what they call the colors of sounds and others the noises, perhaps, of odors or forms, are discussed in *Cosmos* (Paris, April 3) in an article crediting many of its data to a recent book by Henry Laures on "Synesthesia," which is the technical name for this phenomenon. Says the writer:

"It is surely odd that one person, seeing the letter A, or hearing its sound, should always have an impression of Monday as a triangle and the month of March as a man dressed in blue. These facts exist and have been duly established. It remains to interpret them, but all do not lend themselves to the same explanation and do not answer to the same mechanism.

"We may assert that in subjects having synesthesias, the brain centers corresponding to organs of sense may have special and somewhat abnormal connections. It is just as if two telephone subscribers were so connected that one could not be called up without the other also receiving the message. Such connections might be anatomic, by means of nerve-fibers, or purely dynamic.

"This hypothesis does not rest on the slightest basis of proof, and it is quite unnecessary. In the case of synesthesia, it is consciousness that unites the two sensations. In 'color-hearing,' in particular, it is consciousness that colors the sounds, and not the latter that color themselves. . . . This purely psychological explanation, however, cannot be applied to all cases.

"Every sensation, however weak or indifferent it may appear to be, has a determinate emotional coefficient. This coefficient may be measured in certain cases and with special subjects. Féré has published interesting researches on this subject. Under the influence of luminous or auditive excitation, more or less prolonged, the pulse is accelerated or retarded without any clear consciousness of the state on the subject's part."

The particularly exciting action of the color red has been noted. In an industrial photographic establishment, it was remarked that workmen occupied in a room lighted with red lamps were more irritable than usual and prone to quarrel over trivialities. When the illumination was changed their nerves were quieted and their fighting humor calmed. Further:

"A student writes to Mr. Flournoy: 'The different colors affect my nervous system. Green gives me always a feeling of repose, of calm; blue produces an agreeable sensation, red fills me with disquiet, and black acts similarly; reddish-yellow gives me a very agreeable sensation. When I close my eyes I see rays of different colors, according

to my state of mind. Sad melodies affect me as green does, singing is like blue. A very loud noise gives me a sensation of red (or sometimes of black); sharp sounds have clear tints, etc.' We get here a good idea of the relation of color-hearing with sensibility.

"An emotional factor is common to the two sensations. Messrs. Antheaume and Dromard have thus defined the emotional correspondences:

"An auditive and a visual map may present from the point of view of their affective resultant, a marked analogy, because both augment, diminish, or modify in the same way the moral tonicity. Thus bright colors are not only associated in our minds with joyous images, for reasons that we shall indicate presently, but they also really correspond, in the way that they stimulate our nervous activity, to the excitation that similar images produce. Sombre colors, in like manner, correspond to our feelings of sadness, and neutral tints to our vague feelings of fatigue, to the causeless griefs of a day of spleen or melancholy.

"Visual data change into auditive impressions; certain sounds in combination bring before our eyes forms or colors, to the point of really calling up within us scenes or landscapes. The mysterious correspondences which hold our senses in mutual bonds, have been accurately described by Baudelaire [in one of his sonnets]. . . .

"Perfumes, colors, and sounds all have their correspondences. Thus, Theophile Gautier, in a celebrated piece, noted the sensations that he felt after taking hashish, and declared:

"This time the vision was more complicated and more extraordinary. . . . My hearing was prodigiously developed; I heard the noise of colors. Sounds, green, red, blue, and yellow, reached me in perfectly distinct waves."

"It should be noted also that Hoffmann, the author of the fantastic tales, often associated, as his biographer tells us, different sensorial impressions.

"This author sometimes suffered a general perversion of the senses; he heard colors or odors and he saw sounds. 'In the state of delirium preceding sleep,' says he, 'and especially when I had been hearing much music, there is a confusion within me between colors, sounds, and perfumes. It is as if they all arose mysteriously together from one ray of light and then united to form a marvelous harmony. I fall involuntarily into a state of reverie and I then hear, as at a great distance, the notes of a horn alternately rising and falling.'

"The same writer associated, under the influence of alcohol and during a brief illness, in amusing fashion, the representations of his nurses with the sensations evoked in him by musical instruments. 'Today the flute has cruelly tormented me,' he cried, thus indicating a friend who spoke in low and languorous tones; and again, 'All the afternoon, that insupportable bassoon made a martyr of me; it was always coming in out of time.' The bassoon was X., who had a powerful bass voice.

"It may be said, as Laures remarks, . . . that our brain is a field perfectly prepared for the possibilities of indefinite association, and that toxic substances may be like sparks capable of causing them to burst out. Other causes also, known or unknown, may provoke them, in divers degrees of intensity and variety, and in permanent fashion, with some individuals.

"But in such cases we have to do with morbid, or more or less abnormal, phenomena. They serve to throw some light on the facts of spontaneous synesthesia in normal and healthy subjects."—Translation made for The Literary Digest.

SCHOOLS ARE INTRODUCING FORESTRY.

FORESTRY is attracting wide attention among the schools of the United States. Not only have many colleges and universities introduced courses and even professional schools of forestry, but elementary phases of the subject have been introduced into hundreds of the graded and high schools, and teachers give enthusiastic reports to the success which is attending the new study. Public schoolteachers say that they have found in it a subject interesting to children, and one which furnishes much attractive, tangible material to work upon, developing the child's observation, and being at once acceptable to the young mind, and most practical.

The public schools of Washington, D. C., and of parts of Iowa are in the vanguard of this movement. Every graded school in Washington and a large number of the rural schools of Pottawattamie County, Iowa, are now teaching the elements of forestry. In Iowa, the subject is being taught as a commercial course in connection with home geography and agriculture, while in the Washington schools it is used in the nature study courses. The four upper grades of the Washington schools are studying the forest and this year all are following practically the same outline; next year this outline will be confined to the fifth grade, while the other grades will follow an outline one step advanced, and so on until by the fourth year a four-year course will have been introduced. As a preparation for this work, forestry has been taught in the Normal School of the District of Columbia for several years past, and when the young student teachers take up the actual work of teaching they are already familiar with the details of elementary forest study. Prominent among the other normal schools of the country to take up work of this kind are those of Cleveland, Ohio; Rochester, N. Y.; and Joliet, Ill.

There is a section in the forest service of the U. S. Department of Agriculture which works in coöperation with schools in teaching forestry and its related subjects. This coöperation is not limited to primary and kindergarten grades; it is as willing to help teach tree study in a first year nature-study class as to assist in the establishment of a professional forest school.

This section of education, as it is called, is now working out model courses of study for graded and high schools, in coöperation with the public schools of Washington, D. C., and Philadelphia, Pa. The work in Philadelphia is being conducted by W. N. Clifford, head of the commerce department of the Southern High School where he is building up a modern equipment and evolving a practical system for the teaching of forestry in high schools.

In Washington, the section of education is directing a similar work for graded schools in four of the public schools of that city. Besides special lessons in

the class room, the pupils collect and mount specimens of leaves, twigs, bark, and seeds, and, in connection with woodworking, wood specimens of different commercial trees are prepared and placed in cabinets. Opposite each wood section is placed the name of the wood, its qualities and uses. Extensive fieldwork is planned for the spring months, and the different classes will be brought out into the woods, there to study the trees at first hand. As these courses are built up and tested they will be published from time to time for distribution among teachers, and it is expected that the practical line along which the courses are being evolved will win for them a wide application in other schools.

Most of the schools now teaching forestry are using as textbooks several of the publications issued by the Forest Service, including Farmers' Bulletin 173, "A Primer of Forestry." The service also issues many circulars dealing with local conditions, which teachers in the localities dealt with might find very useful. By writing to the Forest Service, Washington, D. C., as many copies of these various publications as are needed for classroom use, as well as other helpful material and information may be secured free of charge.

Between Whiles

A Delicate Hint.

Sandy and his lass had been sitting together about half an hour in silence.

"Maggie," he said at length, "wasna I here on the Sawbath nicht?"

"Aye, Sandy, I daur say you were."

"An' wasna I here on Monday nicht?"

"Aye, so ye were."

"An' I was here on Tuesday nicht, an' Wednesday nicht, an' Thursday nicht, an' Friday nicht."

"Aye, I'm thinkin' that's so."

"An' this is Saturday nicht, an' I'm here again?"

"Weel, what for, no? I'm sure ye're very welcome."

Sandy (desperately)—"Maggie, woman! D'e no begin to smell a rat?"—Success Magazine.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

BINDER TWINE—Highest grade standard 7½ cts. lb. Club together and send us your order. We save your money. Farmer agents wanted. Free sample.—Central Supply Co., Mt. Morris, Ill.

FOR SALE—5x8 Printing Press, including type, cabinet, ink, and unprinted stock. Worth \$150.00. A bargain at \$50.00 cash. Other business. Green stamp brings samples of work.—Dallas Kirk, Pentz, Pa.

SUNDAY SCHOOL RALLY DAY

Few days celebrated by the Sunday school are more important than that known as "Rally Day." By a united effort on the part of every worker at this time you should be able to reclaim every former pupil and many new ones besides. Personal visits and invitations should be supplemented by one of our illustrated post cards.

No. 47.—Boy's Rally Day card.
No. 48.—Girl's Rally Day card.
No 49.—Cradle Roll Rally Day card.

Our Rally Day post cards bring them back.

The International Sunday-School Lessons

FOR 1909

Are on the Acts of the Apostles

Every Sunday-school Teacher will need the helpful assistance of some first-class teachers' help. The lessons deal with the persecutions of the early church and the spreading of the Gospel which attended the dispersion of the saints. Lesson writers of splendid ability have been engaged for this year and we confidently hope to make the Brethren Teachers' Monthly the best teachers' assistant on the market. If you have never used the Monthly, ask for a sample copy. We will gladly send a copy to each of your fellow teachers if you will send us their names and addresses. Subscription price, 50 cents per year.

Real Art Mottoes

These "Real Art" cards are by far the finest specimens of lithography we have ever offered. The stock has but recently been imported from Germany, hence the line is entirely new. They are lithographed on heavy glazed stock, size 16x20 inches and represent the best in modern art. The subjects consist of bouquets and vases of Roses and other flowers. Suitable for the home, office, school room or Sunday school.

We can furnish "Real Art" mottoes in Eight designs and Fourteen texts as follows:

50. The Lord Is Thy Keeper.
51. He Careth for You.
52. In Me Is Thine Help.
53. Shew Piety at Home.
54. Lead Me in Thy Truth.
55. I Will Never Leave Thee.
56. Looking Unto Jesus.
57. Ye belong to Christ.
58. God is a Refuge for Us.
59. Seek and Ye Shall Find.
60. God is Our Refuge and Strength.
61. The Lord Bless Thee and Keep Thee.
62. Thou Wilt Shew Me the Path of Life.
63. Who daily Loadeth Us With Benefits.

The illustrations presented herewith can give but the faintest idea of the beauty and quality of the "Real Art" line. These same subjects have sold in art stores the country over for 35 to 50 cents each. We are pleased to announce a price so low as to place the best mottoes within the reach of every one.

LITERARY ACTIVITY OF THE BRETHREN IN THE EIGHTEENTH CENTURY

Prof. John S. Flory, Ph D.

Every one who has read this book is ready to speak a word of commendation.

"I have read with much interest Prof. Flory's book, 'Literary Activity of the

Brethren in the Eighteenth Century.' It is, no doubt, one of the very best contributions to our historical literature that has yet appeared. The style is transparent and pleasing. The most striking feature of the book is the scholarly conservatism which characterizes every state-

ment. Some of our writers have been disposed to jump at conclusions. This is not true of Prof. Flory. He always gives his readers the benefit of the doubt. The book is just what one would expect of its author, —A Great Book."—P. B. Fitzwater, Principal of Bible Dept., Manchester College.

"I wish to express my appreciation of 'Literary Activity of the Brethren in the Eighteenth Century,' by Prof. John S. Flory, Ph. D. I consider it a very valuable contribution to our church literature. The author is to be congratulated for the thorough treatment of his subject. His style is easy and attractive. It is a readable book and ought to find its way into many homes."—Prof. T. T. Myers, Juniata College, Huntingdon, Pa.

Bound in cloth, 335 pages,\$1.25

Brethren Publishing House
Elgin, Illinois

Life and Sermons of Elder James Quinter

We have just completed the second book and are filling orders every day. We feel certain that several of our customers neglected to place an order in advance, and have printed a few hundred copies besides those needed to fill the advance orders.

The work should prove helpful to thousands of our readers who know little of Bro. Quinter. In his day he was one of the most scholarly and devout men among us, and it will do the younger generation of members good to learn more of his life and experiences. His sermons will prove especially interesting.

The book contains 426 pages, large, clear print, on excellent book paper. The frontispiece is a splendid likeness of Elder Quinter and adds much to the appearance and value of the publication. The introduction is written by Eld. H. B. Brumbaugh. Besides the interesting sketch of Bro. Quinter's life and labors there is a full account of the funeral services and numerous tributes of respect from his coworkers.

Part Two contains some forty of Brother Quinter's choicest sermons; delivered here and there throughout the Brotherhood.

The binding is an artistic cloth, on which back and side titles are stamped in white foil.

If you are interested, order today.

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,

Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. 1.

J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

EMPIRE COLONY

IN "SUNNY STANISLAUS"

The CO-OPERATIVE COLONIZATION COMPANY is now locating a colony of our people in the lower San Joaquin valley, in central California. The new town of EMPIRE, as well as the colony lands, is located on the Santa Fe railroad, five miles east of Modesto, the county seat of Stanislaus County, thirty miles south of Stockton, seventy-five miles from Sacramento and one hundred and fifteen from San Francisco.

The colony lands join the new town site and are within a few miles of three different railroads. These lands are all under cultivation, and are free from brush, stumps, stones and other obstructions. Two large ditches cross the tract, affording ample water for irrigation of all crops.

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and Investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

NEW CHURCH ORGANIZED—NEW RAILROAD BUILDING.

A new Church of the Brethren was recently organized at Empire, with twenty-five members, and other families of our people are expecting to move there soon. The Modesto-Empire Interurban railroad is now being built. For further information address,

CO-OPERATIVE COLONIZATION COMPANY
 North Manchester, Ind., South Bend, Ind.
 Or Levi Winklebleck, Modesto, Cal.

THE INGLENOOK

F. H. Newell, Director.)

RECLAMATION PROJECTS

Location	Name	Total Allotments	Acreage	Ownership
Arizona,	Salt River,	\$ 7,050,000	240,000	Mainly private
Arizona-California, ...	Yuma,	3,455,000	79,000	25% public
California,	Orland,	585,000	14,000	Private
California-Oregon, ...	Klamath,	2,109,000	181,000	25% public
Idaho,	Minidoka,	2,491,000	134,000	90% public
Idaho,	Payette-Boise,	2,500,000	372,000	75% public
Nebraska-Wyoming, ..	North Platte,	4,230,000	97,000	75% public
Nevada,	Truckee,	4,108,000	200,000	70% public
New Mexico,	Rio Grande,	75,000	155,000	Private
Oregon,	Central Oregon, ..	75,000		Preliminary examination
Oregon,	Umatilla,	1,186,000	20,440	20% public
Utah,	Strawberry,	810,000	60,000	Private
		\$28,647,000	1,552,540	

To December 31, 1909, the Federal Government has already expended over 28 millions in preparing homes for probably 20,000 families, possibly more, and must spend millions more before these projects are finished. With the Government the railroads that serve this territory are vitally interested in seeing that these acres are successfully settled by prosperous farmers. Whether these farmers are on government lands or on private lands irrigated by the government, is of minor importance; the main proposition is to supply as many homes for as many people as possible on these government projects.

Parties wishing information about any of these projects with the view of securing Government land or private lands for future homes should write to the undersigned for printed matter descriptive of the section of the country they wish to locate in.

GEO. L. McDONAUGH,
Colonization Agent, U. P. R. R.,
Omaha, Nebr.

Revised Minutes

Contains the revised minutes of all the Annual Meetings up to and including 1896. Two hundred pages. Indexed under 1,200 subjects.

The Appendix.

This edition contains an appendix of almost one hundred pages, devoted to the minutes of the Conference held in 1897 and 1907 inclusive. A copy of this book should be in the hands of every minister and church worker in the Brotherhood. The book is printed on fine quality of paper and substantially bound in cloth.

The Price.

Single copy, prepaid,\$1.00
Six copies to one address, prepaid, 5.00

One Copy Free.

THREE TIMELY BOOKS for the FLORIST AND GARDENER

MY TEN-ROD FARM, or How I Became a Florist. By Chas. Barnard.

An interesting story of the successes and failures of a florist. Through an accident at the mill Mrs. Maria Gilman became a widow with two children to provide for. This she did by converting her small flower garden into a commercial asset which now furnishes an annual income of two thousand dollars. Attractively bound in cloth. 118 pages. Postpaid, 45 cents.

THE STRAWBERRY GARDEN. By Charles Barnard.

A very practical story concerning the Wellson family and their strawberry garden. How it was planted, what it cost and what came of it financially and sentimentally. The writer is a close student of human nature as well as a practical market gardener. A book of 104 pages, bound in cloth. Postpaid, 45 cents.

A SIMPLE FLOWER GARDEN for Country Homes. By Charles Barnard.

A practical guide. Aunt Louisa assists Frank and Gertrude in beautifying their rural home. How to start a flower garden, what it will cost and how have flowers all the year round. This little volume tells you just what you should do in each month of the year. 76 pages. Bound uniform with "My Ten-rod Farm" and "The Strawberry Garden." Postpaid, 45 cents.

BRETHREN PUBLISHING HOUSE, Elgin, Ill.

\$400 Prize Cup Won by Colfax County, N. M. In Competition with Entire Irrigated West

Miami Ranch

is located in the choicest part of Colfax county, New Mexico, and it was largely due to the products grown upon and adjacent to this ranch that Colfax County won this valuable cup at the Interstate Industrial Exhibit held at Albuquerque, N. M., last October. Every State was represented—products from land selling as high as \$1,000 an acre were shown—but Colfax County won by many points.

Many other prizes have been won by this section of the country. New Mexico wheat took first prize at the World's Fair in Chicago, while apples raised in an orchard directly adjacent to Miami Ranch won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 an acre.

Miami Ranch

offers you health and pleasures as well as wealth. It's situated in a rich, cheerful valley, surrounded by picturesque mountains. Elk, deer, bear and other large game are to be found in the mountains, while thousands of wild duck and geese inhabit the surrounding lakes. The Rayado River, which flows through this ranch, is noted throughout the central west for its trout fishing.

The rainfall is sufficient to insure big crops. But with the gigantic irrigation system recently installed, there is not the slightest chance of crop failure.

The climate is perfect, the air is pure, and the scenery beautiful. Excellent church privileges, a good school and pleasant neighbors are all to be found on Miami Ranch.

Write for a free copy of our booklet, "Westward Ho." It tells in detail **all about Miami Ranch.** Tells how and when you can get a round-trip ticket from Chicago for \$30, and from Kansas City for \$25, via the Atchison, Topeka & Santa Fe. Write at once and take your choice of the bargain offers which we are now making on both large and small farms.

Farmers Development Company, Springer, New Mexico

The Tabernacle of Witness

Every teacher or Bible student who desires to have the proper conception of the tabernacle should have this picture. The price is so low that many will want one for each member of their class. This picture is taken from a model which cost thousands of dollars and years of study and research. Shows the

linen hangings of the Court, suspended from silver tipped pillars, set in copper sockets. Within the court are found the Brazen Altar, the Laver and the Tabernacle. On either side may be seen the tents of Israel, the location of each tribe being designated by a banner. Size of illustration is 6 x 9 inches. Printed on heavy calendered paper.

I now have another offer to make in keeping with our rapidly growing, progressive city. A specially desirable lot will cost \$375.00. A 4-room frame house 24x26, drop siding outside, ship-lap inside, nicely finished with canvas and wall paper, wood work stained and varnished, two coats good paint outside, outhouse built and painted, all complete, will cost \$575.00 Total, \$950.00. Such a property will rent readily for \$20.00 per month, which is a little better than 25 per cent on your investment. The demand is not nearly supplied for such properties, and you not only get a good income from such an investment, but outlook at present is, your property will rapidly grow in value. If you have less than \$950.00 to invest, try our Investment Association plan. Money invested on this plan earned 17 per cent last year over and above all taxes, insurance and other expenses, and every investor has received his money back who asked for it. Full particulars on request.

speak in the language of the twentieth century. In school, they are taught the language of the present day. Is it natural then, that in their Bible study, they should be expected to understand the English of the seventeenth century? The

American Standard Bible

Edited by the American Revision Committee
is for you and your children. It is the Bible truth revealed in the clear, simple language of the twentieth century.

24-page Booklet Sent Free

This book tells about the previous translations of the Scriptures and shows how, by the growth, change and development of the English language in the past 300 years, the American Standard Bible became a real necessity. The booklet tells also of the thirty years of effort spent in producing the American Standard Bible and gives many endorsements from prominent clergymen and religious writers of all denominations, with names of colleges and institutions where it is used.

A postal will bring the booklet—write for it to-day

J. A. Bowers' apple crop of 1907 netted \$1,000 per acre, and in 1908, \$700 per acre.

E. A. Blair gathered from seven and one-half acres of apples 3440 boxes of fancy apples which netted \$5,500.00.

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

THE SUPREME TRAGEDY

RICHARD BRAUNSTEIN

WITH splendid insight Aristotle has discovered that tragedy is not a tale of horrors, nor a scene of unwanted violence. Tragic interest demands more than blood mingled with tears. Indeed, there are bloodless tragedies and some too deep for tears. We may say there are *four* essentials to a complete tragedy: a *victim*, a *process*, a *motif* and a *denouement*. Hence the tragic sphere is not limited to any specific time or place; but whenever or wherever these four elements are properly combined, then and there conditions of tragedy are present. The old chronicles were full of dramatic material in which contemporary readers saw only men and events; but Shakespeare's creative genius supplied motives and processes and thus formed immortal tragedies.

The tragic victim is neither a flawless saint nor an abandoned sinner. He is a man like ourselves. We are all potential victims. Therefore we are easily led to sympathize with the actual victim. In his struggles we share, into his testings we enter, and at last we weep over his fall. We do not condone his faults; we consent to his punishment as deserved; nevertheless we pity, for we see our own possible end. Our moral judgment draws its belt closer, and we take warning.

If the tragic hero is an average man with a probable leaning toward the good, the tragic process is the bewitching temptations that come to the average life. And sometimes a man is hurried on to the tragic end by the very virtues which he possesses; while smaller men are saved by sheer mediocrity. Macbeth's loyalty promoted him to the plane of the severest temptation. Delinquent and inferior men plodded on undisturbed by the tempests which swept his soul.

His bravery and loyalty bring him within one step of the throne, but can do no more; then Murder whispers, "Follow me: I will make you king." When noble men would do good, evil is present. Witness also Antigone's purity, Lear's paternal confidence,

Hamlet's integrity and Othello's overmastering sense of duty. All of these virtues only hasten their possessors to their pitiful fate.

Without staying, at this time, to discuss motives and ends, let us hasten to confess that tragedy is not an academic affair, confined to Sophocles, Shakespeare, and the great masters. Though Goneril, and Regan, Lear and Hamlet are gone, yet the tragic element in life abides. As Napoleon's legions betracked the Russian snow with blood, so always man's nervous way is traced by tragedy. The portals of each day swing wide on tragic hinge and at the twilight hour the heavens drop tears for the sins of men. Not all these sins are scarlet; some are of delicate tint and thereby many are deceived.

The supreme tragedy then is no specific historic event, no matter how portentous and fateful, not even mournful Calvary, nor the martyrdom of the saints, nor the slaughter of the innocents, but that process by which these became actual is the highest tragedy. Shall we speak plainer? The supreme tragedy is the *choice of the lower, instead of the higher good!* Only adopt this as a principle, or attitude of life and the floodgates are open to all evil. Let the seraphim but cry, "The Lower," instead of, "Holy, Holy, Holy," and how long would they remain about the altar? How long would they be worthy to escort a God to the unveiling of a man? Let this trisagion of the triple-winged seraphim be ours!

Now, holiness is not so much a state as an attitude and enlarging process. Here is the attitude of holiness: Covering our faces with shame and penitence—for that we have sinned; covering our feet in reverence and adoration,—for that we stand before the King; covering the irrevocable past with service, and the available future, with faith and hope, we cry, "Higher, Higher, Higher." A lower ideal than this is treason to our Lord.

Let the dazed soul remember that sin is also an attitude and graduating process. No rapturous youth plucks at once the full-blown flower of vice—nor is it offered him. There is first a choice between a lower and a higher *good*, with strong appeals from the lower. The enthronement of the lower, the binding and gagging of the higher, this is the Supreme Tragedy. It leads to a choice of onions and garlic instead of milk and honey. Absalom instead of David, Barabbas instead of Jesus. There is the denouement when the ideal is dead. The widow of Nain's only son may be called back to life, but even the Master stands *helpless before the bier of a dead ideal*.

Every choice of the lower stabs the ideal, and no power of earth or sky can stay the blow of a moral free agent when once it has chosen. However, ideals are very tenacious of life; they rarely die suddenly, but linger until oft-repeated thrusts despatch them.

History and biography are dark with the tragedies of those who have fallen by the choice of the lower. There is Daniel Webster with a call to the ministry and one to the bar. There was a sharp, decisive struggle between these two worthy calls and although the lower crowned him with feverish honors, still his last years were sad, pitiful. He died a disappointed and a heart-broken man. A matchless speaker, the lower offered a more dazzling field for his oratorical powers and his strength slew him. And there is the gifted grandson of Jonathan Edwards. For generations before and after Burr, a brilliant line of clergymen and college presidents was his. Nature had given rare beauty to his person and culture an indefinable grace and charm to his manner. Scholarship, too, was ripe in him. Now at the threshold of manhood the strategic hour arrived; a great revival was on at Princeton—the waters were troubled; young Burr's heart was aflame; his soul quivered and glowed; his nervous hand touched the door of grace, when alas! he retreated from entering! One week's plunge into revelry and he was an entered apprentice to high treason.

We linger not to tell of Esau and Balaam and Amnon, of Saul, all of whom began the slippery *decensus averni* by this choice of a lower good. Soon, however, this tragic process leads away from a choice betwixt a higher and a lower good to that of a higher and lower evil and in the end the victim chooses the baser evil, because by this time, he himself *is* evil. Like Milton's Satan the tragic victim says, "Myself am hell." The curse of sin is that it makes man a sinner and he *prefers* and chooses more sin because it is of his own nature and character. "The sting of sin is death" that is not sin.

Pushing this process further back, who knows but that it will throw light upon the very origin and continuance of sin? If we hold the traditional view and

identify Satan with the archangel Lucifer, then sin may be conceived as the last term of an infinite series of choices of the lower instead of the higher good. If, on the other hand, we think in terms of evolution, then sin is contingent with the animal about to become man. It is the manifest struggle incident to a transitory and evolving state.

Those who survive, by natural selection or election, are in the process of eliminating evil by a choice of the higher. Conversely, those who disappear, die, are those who choose the lower instead of the higher. This is the voice of Science saying, "To be carnally minded is death, but to be spiritually minded is life and peace." Whether, therefore, life and ethics be considered from the scriptural or scientific viewpoint we reach the same conclusion. The tragic element abides in every life and the supreme tragedy is the choice of the lower alternative.

Having spoken of the victim, the process, and the consummation, may we now notice the *motive*? Why will man choose the lower? What impelling force urges him on? Can he not read with profit the fate of Lot and Demas and Esau and Judas? The splendid heroism and self-mastery of Abram and Moses and Joseph and Jonadab—do these make mute and vain appeals to the youth of today? No; he admires these last and intends to shape his life after theirs, but the lower good offers quicker returns, more immediate results, instant pleasure or profit. It promises speedy harvests because it *is* the lower—there is nothing in it to require time for ripening or maturity. It cries, "Now or never," and answers the hot impulses of youth with maw-cramming sweets. Drinking deep of its intoxicating delights, the semi-dreaming explorer of life murmurs,

"When I shall awake
I will seek it yet again."

Another impelling motive is the reflex action of the dead hand—the force and impact of heredity. Man inherits not only from his own family, but also from the entire race. Whole generations inherit from preceding generations. The Napoleonic wars reduced the height of Frenchmen—the tallest being killed in battle. Every seismic upheaval or cataclysmic outburst of the race has stamped itself upon the individuals of succeeding ages. Beginning with the embryonic life and progressing through adolescence, every man repeats the history of the race from barbarism to modern civilization. In the technical sense no one is an individual until he has passed through the race gamut. A few princely ones have passed through and far ahead—such as Plato, Pascal, Shakespeare and Jesus. These are universal men because their powers of assimilation were great enough to absorb, in the passing, the best of each age and nation. Unfortunately the past ages have chosen largely of

evil; what wonder, then, that today men find themselves with a tragic bent to evil?

The one great detriment of character today is dualism, and this causes the young man to postpone his higher and best efforts until the tragic process has him already within its fatal grip. Now dualism is the division of life into two mutually exclusive departments, such as sacred things and things profane; religion and politics, religion and business; week-day life and Sunday life; society life and home life; public life and home life; obligations resting upon "professed Christians" and those not expected of sinners.

Life is one, truth is one, and duty is one. Since Jesus Christ has broken down the middle wall of partition there is no sacred and profane,—all is sacred, all is religious or *none* is. A man may not be more "spiritual" in church or on Sunday than he is in his office or business relations. If the "sinner" feels relieved from the law of the choice of the higher, and defers that principle of action until he shall have become a "Christian," he is already on the slippery steps. Let the Christian, too, learn that a choice of the lower in any sphere of his life,—political, business, social,—is the beginning of loss in his religious life—for his life is a unit.

So we may say that there are just two tragic motives: ignorance and depravity; ignorance of the inferiority of the present as compared with the future; ignorance of the inner forces of personality and character and ignorance of the unity of life. The ignorance may be cured by Christian education; the depravity by the renewing grace of God.

Summing up, we have found the tragic victim is

the average man, the tragic process is the repeated choice of the lower; the tragic motive is ignorance and depravity and the denouement is the death of the ideal and the loss of all.

Dormansville, N. Y.

WHERE ARE YOUR THOUGHTS?

WHERE are your thoughts? That fifteen or twenty minutes you were sitting alone in the twilight, dear girl, before the lights were on—that half hour before you went to sleep last night; young man, that little while before the clock struck the hour of rising this morning?

What thoughts come to dwell in your mind in those moments between duties? "As a man thinketh in his heart, so is he." Are your thoughts of loved ones whose lot you would make easier? Are they of noble services you would render men? Are they of the good things you have seen in others, of victories you would achieve, of successes you would win, are they of the beautiful and the good in the world of literature and song? Are they thoughts of prayer and praise?

Or are your thoughts of selfish pleasure or questionable sins you would indulge in? of books you hide from those who love you best? Do you think uncharitable things of others?

As you think today, you will be tomorrow. Thoughts are but seeds. If you foster them, the fruit is inevitable. Think mean thoughts today, you will be a mean soul tomorrow. Think great thoughts and loving, you cannot but grow great. Dream not your thoughts are secrets of your own. They mold your face, they make your character, they come forth and startle you when you least expect it in word and deed. They are your real self.—*Onward.*

LITTLE BROWN HANDS

"They drive home the cows from the pasture
And up through the long, shady lane,
Where the quail whistles loud in the wheatfields
That are yellow with ripening grain.
They find in the thick, waving grasses
Where the scarlet-lipped strawberry grows;
They gather the earliest snowdrops
And the first crimson bud of the rose.

"They toss the new hay in the meadows,
They gather the elder blooms white,
They find where the dusky grapes purple
In the soft-tinted October light.
They know where the apples hang ripest
And sweeter than Italy's wines,
They know where the fruit hangs the thickest
On the long, thorny blackberry vines.

"They gather the delicate seaweeds,
And build tiny castles of sand,
They pick up the beautiful seashells,
Fairy barks that have drifted to land.
They wave from the tall, rocking treetop,
Where the Oriole's hammock nest swings,
And at nighttime are folded in slumber
By the song that a fond mother sings.

"And those who toil bravely are strongest,
The humble and poor become great,
And from those brown-handed children
Shall grow mighty rulers of state,
The pen of the author and statesman,
The noble and wise of the land,
The sword and the chisel and palette
Shall be held by the little brown hand."

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LXIII.

ONCE more I reached the river road, to find that it was filled with flying horsemen as far as the eye could see in each direction. Thousands of soldiers, armed as in battle, flew past me, their fleet Arab horses, the most beautiful, graceful, quick-stepping animals I ever saw, barely avoiding running over me in the narrow part of the irregular street. The bays were all by themselves. The grays were also in one bunch, as also the sorrels. I made this note of them on my return to the hotel: "They rode at a gallop. Wild and terrible was the aspect. Brown and gray and blue were the costume. Their expression,—that dusky, dark, almost black fierceness, ignorantly and stupidly bold, exercises a weird power over the beholder." These were soldiers, Moslem cavalry, going to line the way along the streets through which would pass the Sultan. I had therefore plenty of time yet, for I knew the palace could not be far away, and by running with the horses, I could get there almost as quickly as the last of these.

The sight of these riders and the dare-devil spirit in their looks and actions was more terrifying than the same number of western cowboys in the same saddles. The cowboy uses his brains, and is a general, every one. These fierce fanatics start blindly in action, and stop only when run down. As each one flew past me, his coat and weapons flying back over his saddle, I saw that his teeth were set, his eyes were set, his head was set, his muscles were set. Many of them looked at me as I ran along by their horses, but not one spoke, not one smiled, not one looked twice. Their whole soul was included in sitting astride of the Arab horse and keeping it going straight to the line of procession. If my brains had been kicked out by one of these horses, they would never have stopped to help me pick them up. Once a week the Sultan goes out to pray. Once a week these horsemen gallop out and back to protect their Holy Father from would-be assassins. But they put as much thought in how they do it as if it were their first ride.

At last I came up to the end of the lines of soldiers and cavalry. On each side of the winding road, running through beautiful gardens, or shaded on both sides by magnificent trees, was a solid line of men on

foot, standing at elbows, while behind and in front of these were the horsemen. Countless police passed among these, arranging the men, and giving orders here and there.

For a mile possibly these lines of guards stretched along the road. As it seemed unwise for me to try to pass all of them, and as the moment of the Sultan's coming was apparently expected, I knew it would be impossible for me to walk through the middle of the road, between these lines of guards, toward the approaching Sultan. No one except a trusted Turk would be allowed to do that, and he would not be excused for so rash an undertaking. I crawled under the railing of the fence and made my way up toward the palace over the grass of the garden, behind the line of soldiers, for in here were numerous Turks, sitting under the trees, or leaning against the railing, all waiting for the passing of the Sultan. Standing out thus as the only foreigner I attracted rather more attention than I enjoyed, and so I climbed back and took my position among others just behind the line of guards. I was rejoicing in my fortunate position, for as the road was quite narrow here, I would be so close to the carriage as to look right into the face of the king of harems. After some minutes I noticed the police going to one another, talking aside, and looking at me. I admit that I did feel a little queer, myself, standing there among people all of whom were so vastly different in dress and appearance. It was certainly indiscreet of me, but what was I to do? I was afraid it would be worse farther up, for the crowd seemed to be much greater there. Then one of the policemen came over to me, spoke to me and found that I could not talk with him. A second one then came and took me to the other side. Now I stood in the line, or back of it, just as before. They left me here a minute or two, when a third man came and asked me to go farther up. I was glad to do this, and walked for some distance down the road between the lines of soldiers. But I no sooner found a good location when some suspicious policeman took me still farther up. No other tourist had ever mixed into this unmixable mass before. With personal guides they always had gone in carriages, and had confined their position to

one spot alone, that one near the gates of the Seraglio. Their hasty conclusion therefore was that I intended to make an attack upon the Sultan as he passed, for the Sultan, of all men in the world, most terribly fears death from some sudden attack. Ghastly ghosts of murderous apparition haunt his guilty mind. They knew that he would not forgive them if his scrutinizing eye ever caught a glimpse of me far from the accustomed position occupied always by Europeans and all other sightseers.

At last they had "wormed" me up the entire length of the flanking soldiery, to the beginning of the real procession. In a large open space were gathered, to one side, and up to a high wall, my kind of people. Between them and the soldiers were a big group of Moslems.

My "friends" were so far away from the road I pushed my way through the Moslems and stood first in the row behind the soldiers. As no horsemen were near this spot, my view to the carriage of the Sultan would be unobstructed, and at a very close range I would be able to study the face and figure of the man who puzzles and pains the mind and conscience of all the rest of the world.

There was a movement made along the line and among the visitors that suggested the approach of the royal carriage. My eyes must have bulged out in open delight at my prospects. The Moslems, however, who rubbed elbows with me, rather resented my presence. Fierce expressions some of them wore. I was an intruder. I was out of my place. To placate them I carefully avoided crowding them, stood so they might see over me, and showed a happy expression and a clear eye of good will.

Again an officer in uniform came up to me, asking me to move up towards the Europeans. I did so, but kept close to the line of soldiers, as before, for I was going to see what I had come to see.

News spread through the multitude that the carriage had left the palace and would be passing out of the gate and down through the lines of guards in a short time. Spectators, eager to hold their position, pushed forward and closer to one another, and talked to their friends more joyously.

I was intent on watching, as were all, but not so much so that I did not detect an unpleasant suspicion among the policemen and private detectives scattered through the mass. One of these came up behind me. Then, after looking me all over, though I did not turn around to see him doing it, rubbed close to my right hip pocket as he went away. I knew exactly why he did that. Then another came from the front and stood looking me in the face, but without terrifying me. He likewise rubbed against me, harder than the former one, having his hand in front of him so that he could feel anything that might be concealed in my *left* hip pocket. Wasn't I glad I had not acted on the advice

of some foolish friends who told me to carry a weapon,—a revolver, with me! How quickly I would have been jerked out of that crowd, arrested by the chief police of the Seraglio, and hurried away to prison as a stranger who had come armed for the purpose of shooting the Sultan! While lying in that jail I might have been shot or poisoned by fanatical Moslems, before my trial had been called. How could I have ever proved to those superstitious, suspicious Turks, my innocence?

They found no weapon. Still they were suspicious. My coming up through the line of soldiers, a way never taken by foreigners and seldom by natives themselves, had caused this suspicion. But now, having reached my own people, the officers noticed that I did not seek them out, but rather clung to the natives, holding my position, while politely inoffensive, with a determination that baffled them.

A private officer was trying to talk to me when we all caught sight of the carriage coming down the flowery road from the palace grounds. As the carriage drew near he tried to move me back into the crowd, asking me questions in Turkish and making signs, with his hands in his vest pockets for me to show him my "papers."

All of the standing room was already taken. If he forced me back behind the dense crowd of natives I would be unable at last to see the Sultan, as the ground rapidly fell away from the road that wound around the Seraglio hill.

IN FLORIDA.

M. M. WINESBURG.

WHEN we were in Florida, the nearest river was generally conceded to be about three miles from the village, but one man said it was five miles when you walked it, three miles when you rode it, and two miles when anyone told you the distance. I don't think that anyone had ever taken the trouble to find out just how far away the river really was, but I know that I once thought it was all of the five miles.

But five miles or not, several gentlemen of our party got the fishing fever bad enough to make frequent trips to the Escambia River, and they usually had pretty good luck, although they caused some of the lady members more or less anxiety, because there were alligators in the river, and whenever a diamond-backed rattler was found, it was usually in the river lowland.

One day the gentlemen had been fishing and did not get back until about ten o'clock at night, and then they had left their trout line in the lake, for one of them intended to go back the next morning. The morning dawned clear and had all the appearance of being a rainless day, though in Florida one never knew what moment a rain would come up and almost drown him, so our young fisherman asked me if I would like to go over to the river with him. As I had several times

expressed a desire to take the trip, I was only too glad of the chance to go.

We started early and part of the way I rather enjoyed the walk, but after we left the road it was not quite so enjoyable, for our way was through the pine woods, and deep tickle grass wet with dew. And then sometimes we'd strike a strip of soft sand, and sink in it over shoetop. Herds of cattle and droves of hogs were always to be found on the range along the river, and the cattle flies soon joined us and they bit so hard they drew blood on me several times before we reached the ditch, where we would take a skiff and go down the ditch into the lake, and from the lake out into the river.

The ditch was a narrow channel, which had been cut out through the swamp on which to float logs to the river, during the lumbering days. I have always regretted that I had no camera with me on that trip, for one could have taken some wild views. When we started down the log ditch the tide was still running in, and that made it hard to keep our boat going straight, for the ditch was not wide enough, or clear enough of obstructions to row any, and the young man had to stand up and paddle the skiff through the ditch, and we bumped into trees and got the skiff fast among the sunken brush and logs—all because I did not know how to handle a steering oar.

I had seen some wild looking places in the mountains of the Virginias, but the log ditch outrivaled the mountains in wildness, for it was water, trees and bushes and tangled vines. Dark and weird looking, some of the trees had trunks like inverted bowls, large where they were in the water, but above the water line they tapered off slim. These were the cypress trees. There were also the broad-leaved magnolias, and water oaks with long, gray moss dangling from their branches while the passion vines, which were matted over many of the trees—were flaming with long, scarlet spikes. This was the Florida of the novelist, but one had to get into the heart of the swamp to find it.

On our way down the log ditch we passed parties of negroes out on fishing excursions also. Finally our skiff shot out into a small lake bordered on every hand by trees and bushes, and not a foot of dry land anywhere in sight. Our catch that morning was a monstrous deep sea turtle, with a hard, ridgy shell and a head almost as large as a baby's head, while its sharp claws were fully an inch long. That turtle was something of a prize, and my companion was rather proud of it, when he landed it on its back in the skiff, and it

lay on its back in the bottom of the skiff and grunted and wheezed. Later on, it clawed and snapped its huge jaws until they clinked like a steel trap, and they held on like a steel trap too, when they got hold of anything, for it split an oar blade that I stuck in its mouth.

Then we went out of the lake into the river, and ascended it a mile or more. The scenes along the river were as wild and weird as those along the log ditch had been, but here were also willows drooping into the water, and squirrels barking in the treetops, and several times we heard the plunge of something in the bushes. Throughout the entire distance there was only one place where I saw anything like a dry bank where one could land and it looked as though it had been used for a fishing camp at one time, for there was a sort of shed yet standing.

"In Florida."

The waters of the river were clear, and I was told that no matter how high the river rose the water was never muddy. I know it was very clear that day and often a huge gar or sturgeon would leap away up out of the water, and once we heard a bellowing sound, which my companion said was made by an alligator. We spent some time on the river, and then went back through the lake and log ditch.

The trip home was not as pleasant as the morning trip had been, for now the sun was hot, and we had that snapping, clawing, thirty-pound turtle with us. I still have that turtle's shell as a trophy of that trip.

Down around Pensacola the land is low and level and also very sandy, but from the docks one can get a fine view of the bay with its white, sandy beach and can look far out and see long spits of land covered with pines jetting out into the water.

About six o'clock one morning a party of us sight-seers were out on the docks and saw the fishing smacks putting out for the fishing grounds, and also others coming in with their catch. One vessel was unloading its catch of fine, large red snappers, and there were also several large steamers at anchor. Launches and

tugs lay all along the docks, while far out on the bay were many white-winged vessels. I saw one fishing smack at the docks take on board a huge quarter of beef, which I was told they used for bait.

That wide sheet of water was a pleasing sight after seeing so much sand and pines, and I had a great desire to take a trip out on the bay as far as the forts and life-saving station, but some of the party did not have time to go, as they had to take the noon train. I promised myself that trip later on, but did not get to take it for I took the typhoid fever instead, and when I was able to travel again I left Florida.

On that same trip to the gulf I saw several patches of what is called shade tobacco—because it had to be grown in the shade; and some patches of cotton—which later on were white with cotton bolls. Some of the cotton I saw had a pretty pink bloom, while others had bloom a snowy white.

THINGS SEEN IN ICELAND.

THE six weeks which I spent in Iceland I count among the most pleasant that ever came into my life; the experiences they brought were all new, were tinged with poetry that I have never found elsewhere; they gave me dreams, not such as are to be had in the sunny fields of Italy or amid the luxurious flowers of Japan—dreams that are to be reveled in in Iceland alone, because it is far away from the beaten path and is not yet corrupted by the modern mania for Mammon; because it nestles in something like childlike simplicity away up there against the arctic circle, an epic all in itself from the time that the Vikings moored their ships of spoil in the many fjords that jut into the isle from the Arctic and Atlantic Seas. It was in the summer-time, and therefore the nights were not the least beautiful of the hours, and frequently I wandered from the house or camp, sat down amid volcanic rocks and watched the glory of the afterglow until far into the morning. Here in the land where the stern old gods of the Northmen may have reveled and slept, it was not hard in this dusk of midnight to imagine I heard the shout of old sea-kings above the waves that roared around the rocks on the coast far below, or caught the ring of steel or the step of steeds and saw dark figures pass in the distance—Mista, Sangrida, Hilda, and the rest, the twelve Valkyries hastening away to give safe conduct to those who were worthy of the mead and the ale. Far back in the mountains where hoary old volcanoes outwatch the crystal splendor of the Valdemar's Way, now and then could be caught the roll of falling rock or the plunge of a precipitous rivulet to the sea; or was it not perhaps the laughter peal and clash of cups around the board where gods and heroes made immortal quaffed the mead from skulls of horn in the distant halls of Valhalla? Who knows? Portions of this wild land are so out of the present that perhaps Woden

and Thor and the others are here making their last stand against civilization.

During the months of June, July and August the air in Iceland is almost as warm as it is in June in this country; it is rarefied and glorious, and so clear that for nearly a hundred miles you can see the great terraces of mountains piled one on the other, see as clearly as if they were but twenty miles away. Yonder are great steppes of volcanic rock, rent into thousands of precipitous chasms, and beyond leap up the great mountain heights, twisted and contorted as if in some fearful Dantesque passion they had writhed up from a persecuting earth. Here they stand—Hekla, Orafa Jokull, and others—silent witnesses of a time when Ragnarok, the twilight of the gods, seemed already come down upon that isolated portion of the boreal world. Outliving the age of fire, here they stand to-day hooded in a dazzle of ice and snow, proudly flinging their challenge for grandeur down to the Jungfrau and the Matterhorn. Down from these very crests, in a shimmer of silver or a mist of the Iris, streams and cascades plunge into the valleys to swell the gurge of the rivers that roar and boil through canyons in the primeval rock and then plunge in a torrent or slip with a murmur into the arms of the sea. Away there in the valleys lie the hyalescent little lakes, some gleaming like gold, others reflecting the hue of the violet or the amethyst, dotted here and there with wild swans which ply their way in undisturbed happiness. In all the landscape there is scarcely a tree to be seen, for the volcanic soil is not favorable to forest growth. The mountain ash occasionally is found, and in some districts a copse of birch, but these make a dainty morsel for the sheep and are soon devoured. For timber the Icelanders send to Norway. Green fields spread their velvety emerald on hillside and in valley; now and then bursting, steaming, shrieking great geysers leap into the air; and nestling in the quiet ravines that open on the fjords are the hamlets of the people, quiet and serene, always ready to welcome the weary stranger to a simple meal and a place of rest.

You must learn to love the saddle if you would travel in Iceland, for there are no Pullman cars to ride in, no railroads at all and until recently no telegraphs. The traveler must hire a guide, and usually he is a student who is making enough money through the summer to send him to college during the winter, mount a pony and set off across some of the roughest country on earth. Some of the streams you ford threaten to sweep the pony off his feet and whirl him and the rider into the ravine below; in crossing the mountains at times it is necessary to dismount and crawl across the dangerous crevasses on boards. But you are more than repaid for all your hardships, for you stand in the presence of glaciers that few eyes save those of the native Iclander have gazed upon,

and you tread upon soil that fewer still have ever trod; you witness scenery that is absolutely unique in its startling grandeur and the wonder of its variety, and you who have made the journey will carry the memory of it with you to your days of advanced old age.

Many changes have taken place in Iceland since the year 874, when Herald Haartaga, the "Fair-Haired," accompanied by lords and nobles and common men went over to the island from Norway. Claims were made out for the land by each man acquiring as much as he could encircle on horseback in a single day. Those early emigrants settled the site of their capital by throwing a pillar into the stormy sea and trusting to their gods to cast it up where they thought the mortals should seat their government. Three days later they found the pillar rocking in the waters of a rivulet, from the bed of which sprung the spouting column of a geyser. They called it Reykjavik, the "reeking or smoking bay," and it is still the capital of Iceland. My guide pointed out to me the very field where for 900 years these men and their descendants sat upon stones in the open air and formulated their laws and attended to their matters of state. But in 1261 Norway, by means of intrigues, took over Iceland, and in 1360 it passed on to Denmark. In 1800 the Danish government refused to allow the parliament, or Thing, to meet in the plain of Thingvalla, but 45 years later this action was rescinded. In 1874, the 1,000th anniversary of the settlement of the colony, King Christian went in person to the Icelandic capital and with his own hands delivered to the nobles of the country a free constitution. Since that time the parliament has met every other year. So much for the history of Iceland, unless I may say that the people there are dissatisfied, and they are longing for the time when they may add their own country's name to the list of the world's republics.

No one need expect to find a display of architecture in Iceland. The parliament house is about the only imposing building on the island, and many of our American public school buildings outrival it in appearance. The better class of houses are very plain, and most of those in the outskirts and on the farms are mere huts made of blocks of turf-roots, about a foot or 18 inches thick. The farmhouses are generally built in rows and have connections on the inside so that a person may pass from one to another without going out of doors.

I was especially interested in the spread of education in the island. No illiterates are in the land. There are only 80,000 souls in Iceland, and by the time each one of them attains the age of 16 he or she has received a fairly good general education. Perhaps in no country on earth is education so universal. Everyone is taught reading, writing, arithmetic, geography, history, and the English and Danish languages.

There are few elementary schools, but there are plenty of itinerant teachers who pass from district to district, teaching the children, and when the teacher is gone, the little ones are made to study under their parents' direction during the long winter evenings. At the end of each month the pastor of the parish subjects all the young students to an examination. There are a number of high schools on the island for both boys and girls, and they are all well attended.

To him who loves the folk-tales of a nation, who loves to sit in the quiet of the evening and hear the stories of the days of myth, to him Iceland will prove to be a veritable Arabian Nights; for these people love to tell over the sagas which thrill with adventure and the life of the sea. For a whole week I was the guest of a simple-hearted, yet highly intelligent family by the name of Thorwald, who lived near the town of Seydisfjord, at the head of the fjord of that name, and each night I listened to the saga stories as the father or mother told them over, or as one of the beautiful fair-haired daughters swept the strings of a harp and sung of Siegfried, the Vikings, or some simple tale of love that had melted the stern Northern heart in the bygone days. These people followed many of the old customs of their native land. How would you enjoy it, my young male friend, if you were received at the house by three pretty maidens who removed your coat and shoes and cleaned the one and blacked the others with their own hands? These young ladies spoke English about as well as I did, and I must confess that at times they had the advantage of me in our conversations on American history. Their ambition won my admiration, their intelligence my friendship and their naivete my very heart. I had always taken Washington's advice to his countrymen and had avoided "entangling alliances," and in my adherence to this sound doctrine I was glad as I looked at the prettiest of these young women that I was soon to seek another land. Otherwise—but that is another story. One of them, whether in simplicity or for tantalization, I know not, told me that the custom in Iceland of the daughters kissing the guest on retiring and arising was rapidly passing away. Only I inveighed against any civilization which could superannuate such splendid old customs, and half hoped that—but that is another story, too.

Ordinarily the dress of the women in Iceland is very simple, being of plain black with a close-fitting bodice opening enough in front to reveal a white undervest. But on fete days, on one of which I was so fortunate as to be at Thorwald's, simplicity was flung aside and the girls donned handsome costumes of gold-trimmed silk and even put on the "faldur," the white linen head-dress which is about a foot high, covered with a veil of white tulle and ornamented with golden stars. The men no longer cling to the garments of the past but have adopted the regulation European dress.

You would hardly expect to find women's rights in full swing in a country which is so quaint in many other respects, but in Iceland woman is perhaps freer and more respected on the whole than in any other country in the world. Even when she marries she does not take the name of her husband, but merely assumes the title "Frau." There are no surnames for the women in Iceland. Thelma Thormaldsdottir is merely "Thelma, Thor's daughter."

It is a beautiful, stern, yet appealing land, this Iceland that I saw, one in which many of the beauties of civilization have crept without carrying the distortions. But on account of the vast fishing possibilities and the growing facilities in the spread of commerce, the country is destined to adopt the ways of the world, and then who knows if charming old customs will not become still more obsolete, and if pretty maidens will forego their gentle amenities?—*The Pathfinder*.

THE RAREST AMERICAN COINS.

DEALERS say that the fifteen rarest American coins are worth a total of \$16,000. Here is a list of them:

First is the New York doubloon, coined in 1787 by Ephraim Brasher, a jeweler; it has a record price of only \$505, but is regarded as the scarcest of all American issues by experts, who believe that if a specimen were offered for sale today it would bring \$3,000 at least. It is the only gold coin of American coinage struck prior to the opening of the first United States mint. This coin weighs 411½ grains, and its intrinsic value is about \$16. There are only five of them known to exist.

The second most valuable coin is the half-eagle of 1822, which has a record price of \$2,165. This coin was bought originally by A. P. Smith for \$10 from a man in Wall Street, New York.

Third on the list is the half-eagle of 1815, which is valued at \$1,052.

Fourth is the 1804 dollar, only four or five being known to collectors in the United States. It is valued at \$1,000.

The fifth coin is the Washington cent of 1791, of which pattern one impression was made in gold, and is valued at \$1,000. The few copper impressions are also highly valued. The design was accepted by the government.

Ranking with this coin in point of rarity is the Washington half dollar of 1792, struck in gold. This was struck as a compliment to George Washington, and was carried by him as a pocket piece. It sold for \$500 in 1875. It is now practically unobtainable, and valued at \$1,000.

The Neva Constellatio series comes next in the list, with the 1,000 mill pieces ranking seventh, the 500 mill pieces eighth, and the 100 mill pieces ninth. These

three coins, dated 1783, were sold in a set some years ago for \$1,350, but would bring very much more now.

They were struck in pure silver, being the fore-runners of our fifty, twenty-five and ten-cent pieces. It is supposed that they were designed by Gouverneur Morris and coined as pattern pieces for a new United States coinage. They were found in the desk of Charles Thompson, first secretary of Congress, after his death.

The first two coins are known as the mark and the quint. The design of all three shows an eye in the center of thirteen points, these points intersecting a circle of thirteen stars. The legend is "Nova Constellatio."

The Massachusetts Good Samaritan shilling is well up in the list of our most valuable coins, the only specimen known having brought \$650. This shows the Good Samaritan, a fallen traveler by the roadside, a horse and tree in the background, and the inscription "Masathvsets." The reverse has "1652 XII.," within a circle of dots, and "In New England Ano."

The Lord Baltimore penny is worth \$550. This is the only coin of the denomination of the series struck by him in the seventeenth century for Marylanders. On account of this issue he was summoned to appear before the Council in London to answer the charge of usurping the royal prerogative in issuing colonial money. The other denominations were the shilling, sixpence and groat, or fourpence. The latter three denominations are worth from \$30 to \$50 each.—*Young Collector*.

THE CHIEF ELEMENT OF BEAUTY.

"How beautiful upon the mountains are the feet of him that bringeth good tidings." The figurative language of Isaiah has attracted the attention of every generation of readers. He saw beauty in the fact of duty discharged. Here is a bit of real life philosophy. At first sight one may appear exceedingly beautiful of face and form; if it is learned later that a wicked heart is concealed within, and that immorality has the throne, the former beauty seems to vanish. The ugliness within appears to the beholder, rather than the beauty which first attracted him.

On the other hand the facial appearance of a stranger may be forbidding; the form may be bent, twisted; but, if it is learned that the unsightly person is walking closely and carefully in the pathway of Christian duty, the repelling aspect disappears, and an observer sees the beautiful character instead. It is but Isaiah's philosophy of life showing itself anew. The dutiful are the beautiful, the beautiful are the dutiful, and these two are one.—*Religious Telescope*.

LET him go where he will, he can only find so much beauty or worth as he carries.—*Emerson*.

NATURE STUDIES

THE MULLEIN.

T. H. FERNALD.

THE mullein plant, considered by some to be of little value and very unattractive in appearance, is of the genus *verbascum*, of the tribe *antirrhinideæ*. (Of the same tribe as the snapdragon.) While there are eighty known species there are only five principal ones, —the great, the white, the yellow hoary, the dark, and the moth mullein.

It is a biennial plant, with an erect, stout, woolly stem from five to seven feet tall. The leaves are alternate, oblong, rough, indented at the margin; flowers golden yellow, arranged in a dense, spiked, club-shaped form; "calyx five partite; corolla rotate or regular, fine declinate, unequal stamens, the three upper ones, or sometimes all five, hairy; capsule of two cells and two valves, septicidal; bearing many seeds."

The mullein is found chiefly in Asia, Europe, and the United States, the great mullein, introduced from Europe, growing in large quantities in New England. It is found largely in tracts of land recently cleared, pastures, by roadsides, and blossoms from June to August. It is noted for its medicinal qualities, the leaves and flowers being the parts mostly used, having a faint, pleasant odor, somewhat bitterish, albuminous of taste, and yield their virtues to boiling water. It is soothing, diuretic, anodyne, and anti-spasmodic, the infusion being used for coughs, colds, catarrh, bleeding from the mouth or lungs, diarrhoea, dysentery, and piles. It may be boiled in milk, sweetened and rendered more palatable by aromatics, for internal use, especially for bowel troubles. A fomentation of the leaves in hot vinegar and water forms an excellent local application for inflamed piles, ulcers and tumors, mumps, acute inflammation of the tonsils, malignant sore throat, and many other similar diseases. A hand-ful may be placed in an old teapot with hot water and the steam inhaled through the spout in throat troubles. It is also made into salves for local application.

The flowers of the great mullein are dried in the sun, giving out a fatty matter, and used in the province of Alsace, Germany, and this country, as a poultice in hemorrhoids; the root is administered in India to prevent fevers; the flowers of the white mullein are used to destroy mice and other pests.

Why call it useless? There is nothing that God has

put upon this beautiful earth, however unattractive and to us seemingly of little value, but is of use and intended by the Maker to be beneficial to man or beast, so this little unattractive (yet not so unattractive as the places where it grows) plant has its value, and is protected by him who "doeth all things well."

I have recently learned that the great mullein is being cultivated in Europe in flower gardens under the name of "American Velvet Plant." We should not consider those things that the Maker has placed here and pronounced "good," of *little* value, for if he in his infinite wisdom saw fit to place them upon the earth, they must be for our benefit, and if the life of even one precious soul is saved to us by the use of some seemingly useless plant, is it not of *great* value to us?

Belfast, Me.

BUZZARD'S NEST.

IN the woods along the winding Riley road, my old friend, Dr. Trembly, discovered to me the rare find of a buzzard's nest. Often had we watched these great, heavily flying birds rise from the underbrush along the banks of the creek, and with loud cries flap themselves across the fields, but search as we might—and hunting for a buzzard's nest is fraught with risk—we have never found their nesting place. Two small boys first came across the nest and, knowing the leaning of Dr. Trembly to all matters ornithological, they hastened to inform him of the discovery and he, in turn, shared with me the secret.

Across the fields we tramped two or three miles, and down into the deep woods, and there, under the exposed roots of an old oak tree, we found the nest. When we reached the place the old bird was at home. But evidently suspicious of our intentions, she raised herself and sailed into the air, not alone with intent to retreat, but also to protect her home and taking, of course, the offensive. It required no little manoeuvring to keep out of her way, and only after she had left the vicinity could we come close enough to examine the nest and its contents. Here we found, snugly hidden under the roots of the tree, in a deep hollow and lying on the bare ground, two large eggs, in size like those of a turkey, though not quite so pointed at the smaller end. The large end was splotted with dark brownish red marks, and elsewhere the egg was covered with very light speckles, not at all an ugly egg.

To the fascinating spot we journeyed again and again, all through May and well into June, only to be cheated at last from a sight of the birds emerging from the eggs, for in an interval from one Friday until Sunday morning the eggs hatched about the third day of June. On our first visit after this event we found the mother bird covering her young, and only after much prodding with a stick was she induced to leave them, threatening us, as before, with divers things. There in the gloom of the almost hidden home lay two of the whitest, downiest chick birds ever hatched. Downiest of bantlings were they, like balls of cotton, and smaller than two newly hatched chickens; so small as to appear like two white splotches on the ground, inert, and quite incapable of holding up their heads or moving in any way.

Have you seen a buzzard? Than he there is scarcely a more repellent looking bird, black and brown and ugly; with bright red, featherless head and neck, and feeding upon carrion, he is an object of disgust. Fancy, then, our surprise at discovering the young to be of such singular purity of plumage. The tiny birds, though downy like young chicks, had none of the activity of the latter, but lay so still one might have thought them lifeless had not a little poking stirred them into uneasy motion.

From time to time we revisited the nest to note the progress of growth. They developed slowly, but by July 1 they had reached the size of a two-thirds grown duck and still contained their white plumage—a wondrous contrast to the parent birds with their glossy purplish black feathers and fierce red throats. The nest—the home, rather, for there was no nest—we always approached with great precaution, as one hardly cared to encounter the old birds, and yet hesitated to lose the chance so rare of studying the development of the bantlings.

At four weeks old the young birds walked about uncertainly in their wide dwelling place under the oak roots, and made no attempts at flying, for the very good reason that the long wing feathers had not appeared; but when they did start to grow it was with marvelous haste, and a week later they were an inch and a half long and were accompanied by a similar growth of tail feathers.

The birds now presented a striking and very beautiful appearance. The wings and tail feathers were purplish black, while the plumage on the rest of the body was still pure white, and, having had four or five weeks' growth, resembled nothing so much as downy white ostrich tips.

The old bird brought all manner of food to these youngsters, and laid it down in the nest for the young birds to peck at, which they learned to do at an extraordinarily early date. The contrast presented between the young birds and the old ones was startling,

and one dreaded to see the great ungainly mother settle down by the dainty young birds lest the black of her wings might rub off.

To watch the transformation of these young birds into a similar likeness to the old ones promised to be an interesting study, but just at this stage of their development some enemy discovered the nest and on a later visit to them we found the youngsters lying dead. Had this not occurred they would, in all probability, have been ready to fly by the end of the seventh or eighth week after they were hatched. This seems a long time in comparison to the early flight of our song birds, but the body of the buzzard is so much larger and heavier it naturally requires more strength to lift it into the air.—*Kansas City Star*.

COLOR SCHEME OF FLOWERS.

ONE of the most fascinating phases of the study of flowers is in watching the changes in the dominant color at different periods of the year. There is evidently a color scheme, and we cannot fail to detect it if we only take the pains to work it out. There is only one month which can be said to be absolutely devoid of flowers in this latitude, and even this is open to question. That month is January. In December you can easily find stray blossoms of self-heal, and here and there a belated dandelion. In February, unless the weather is unusually severe, seek some sheltered nook of the woodland, where a spring from the hill-side forms some marshy ground which is less frozen than the surrounding earth, because the water is warmer than the atmosphere. Here you are likely to come across a specimen of the skunk cabbage, with its unflowerlike flower. But we are speaking of the landscape as a whole, and not of single specimens, however beautiful or interestingly ugly they may be.

The snow will not have entirely disappeared from the northern sides of the fences before the woods are gay with the hepatica, in blue, white, and a purplish tinge which is neither. There will be thousands of blooms. But, treading upon the heels of this hardy flower, the whole landscape bursts out in white—bloodroot, anemones, and meadow rue filling the woods, and bluets the fields and grassy bottoms. The white of the bloodroot is glistening; that of the anemones and meadow rue has a suggestion of green in it, and that of the bluets a decided tinge of blue. Patches, too, of violets spring up, often covering many square yards, as if a patch of the sky had been placed on earth's garment. This profusion of white, with the relief of blue, is followed up quickly by a blaze of dandelions and buttercups, which cover the fields, and even invade the brick sidewalks of the town. Along the side of the creek and in the marshy ground this is matched by the deeper yellow of the erythronium, or adder's tongue.—*Philadelphia Ledger*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

WE give a good deal of credit to the man who is able to see the mistakes in other men and can dig into them with almost any sort of tool and bring them glaringly into view, but the man who can see his own mistakes and goes about to rectify them is much more deserving of our regard as a man of keen insight and discernment.

✽

THE man who is on this or that side of a live question, according to the views of the one with whom he converses may find a crumb of comfort in the fact that he is a keeper of the peace, but even this crumb will be lacking when he sees himself, as he must some day, as one who has subordinated the greater duty of standing by his convictions of right to the lesser one of being agreeable.

✽

UNLESS there is some influence bearing upon the matter now unforeseen, the coming generation will give the manual worker a higher place and greater respect than he is now accorded. This will come about through the industrial department of the schools by a real acquaintance with the nature of such work. The boy and girl will feel the dignity that crowns all work willingly, faithfully and well done, and they will make no difference between mental work and manual work, as we classify them today.

✽

At the closing meeting of the American Academy of Medicine at Atlantic City, June 7, a number of physicians advocated the "contract practice" as a solution for the problem of securing proper medical attention for the wage-earners at small cost. The plan is for the clients to make small monthly payments to the contract physician who is expected to attend them in case of illness without extra charge. Under the present system it is claimed the poor, unable to pay doctors' bills, often delay in calling a physician until the

disease is beyond easy cure. The new plan would also secure the doctor against loss by unpaid bills. It strikes us that the plan of paying a physician to keep one well, which this "contract practice" plan approaches, has much to commend it over the present one of paying him to attempt a cure after one has suffered the various losses that attend disease. If all would put into practice the knowledge they already have, or may have for the asking, of the laws of health, there would be a wonderful falling off in doctors' bills of all sorts.

✽ ✽ ✽

THE DISTRUST OF SCHOOLS.

EVEN those of us who do not consider ourselves old can well remember the time when the sentiment against having church schools was quite strong. We thought then that there was something wrong with a man if he opposed schools, for we were young and eagerly seeking an education. And our youth and inexperience kept us from seeing what the older men saw, and dreaded to see come into our midst. These men were just as honest as we, and they are still so today.

Talking on the subject a number of years ago, one of our faithful old brethren—he is still living and stands as firm as ever for what he believes to be right—said that if our boys and girls must have an education in college, it would be better for them to go and get it and not bring the college into the church. He realized that a very large per cent of those who thus went out to secure an education were lost to the church; and yet he believed that greater harm would come to the church with the college in her midst than the loss of those who went out to seek an education.

His belief was that the church could not remain true to herself, and still go in for so much higher education. We have not talked with him for some years, but the last time he said anything on the subject he held to his former belief and considered that he had had the experience which proved his position the right one. Whether he was right, is an open question; and it is not likely that the time will ever come when we shall all see alike on this question which is causing so much thought among us today.

We want to say just here that we are in favor of education, and one of our regrets is that we were not able to secure more of it. We like to see educated young men and women—if they have the right kind of an education. Most of us will admit that there is too much of the wrong kind. And here is the great problem—to have the right kind given out, to have our boys and girls imbibe only such ideas as will make them better, more faithful, more earnest in their search for the kingdom of God and his righteousness.

We know a good many young men who have been led astray by the views held by their teachers. Ten or fifteen years ago a large number of our ministers

went to a school noted for the ability of its faculty. And a little later a brother who was well informed, and who was much concerned because of the evil results following, said that hardly a man of them could preach a sound doctrinal sermon after being there awhile. And, so far as we were able to learn, that was just the result. Studying theology under a learned professor had destroyed their faith in the Book of God.

Would it not be better to have schools of our own, with loyal teachers, and avoid this loss? There is just the rub—our teachers have not always been loyal. And when one of our own number is disloyal he does much more harm, leads many more astray than does the one who makes no profession of believing as we do. The attitude of the young folks toward him is quite different from that toward the teacher not of us: they have more confidence in him, for they have not learned to mistrust his religious views. What he says is taken at face value; and in a short time it is possible for confiding ones to be led far from the right way.

As we look at it, the man who occupies a position in a denominational school, professing to be one of that denomination, is far from being the man he should be when he takes advantage of his fellow-teachers and seeks to mislead those placed under his instruction. We must put conscience into our work; we must do as we should like to be done by. That is the only right way.

And yet the wrong way has been taken a good many times. Young men and women have been taught in the school those things which make trouble in the home. Others did the same before we had schools. Men saw the effect, and did not want to take chances. It is not strange that their attitude has been as it has. They are men who desire only the right—the right as they believe God sees it. For the opinions and theories of men they care not. They have no great desire for the wisdom of the world; for the world and its wisdom will soon pass away, and the world's wisdom is foolishness with God.

The feeling of distrust is the natural result of what has too often come from schools—not from ours only. It is to be deplored. Ways should be sought to remove it. There is no use censuring the man who is honest in his opinion that more evil than good will come from the church school. We are going this way but once, and it behooves us to be quite sure that we go right. In a few years it will not matter to us what the most brilliant of our teachers have said, for our attention will be given to things of infinitely greater importance. It's no use to rail at him, to call him an ignoramus. He may be, from the scholar's standpoint. But that proves nothing; he may be right and the scholar wrong. Such has been the case many times; and in no other field so often as in the religious field. Ignorance

of the world is not necessarily ignorance of God and his will.

What shall be done under these circumstances? It seems to us that it is worth while so to conduct the schools that confidence in them will be general. It is natural that school men should be leaders—they would be very poor men if they were not. But they must lead in the right way if they would have the best kind of following. If they do this the feeling of distrust will vanish, and we will all go along together, conquering and to conquer.

CITY LIFE RUINS EYESIGHT.

"A GREATER number of persons than ever are now wearing eyeglasses or spectacles," says Dr. Eugene G. Winter of Boston. "The greatest defect in American eyesight is its inability to see at great distances. The majority of persons who wear eyeglasses or spectacles are near-sighted. Even those born with perfect eyes have been forced before they are very old to resort to glasses that they may see everything going on. This myopia is due almost entirely to the artificial conditions that surround a human being in this present age almost from his very babyhood.

"As cities increase in size and as the conveniences that are offered in any one city increase, so does the value of real estate increase. And with the rise in realty values, the height of buildings increases and partitions become more numerous. Skyscrapers are effective obstructions to long ranges of vision. The more or less vivid and tiresome colorings of their walls have usurped in man's vision the place of the sky.

"The apartments in these new buildings are of smaller dimensions than those in the old-fashioned buildings, for the air space allotted to each and every person in the community must be curtailed to make the investment on the building in any way profitable. In consequence, modern persons become accustomed to none but short distances. It makes no difference whether one be employed all day in a small office, poring over a set of books, or whether he is hurrying about the city streets, he can not see very far about him. And even in his home, the walls of his room have been grouped more closely about him.

"The fish that were found in the stream of the Mammoth Cave were discovered to be totally blind, although they at one time did possess sight. The same law that was operative in depriving these fish of their sight is operative today in the great congested centers of modern civilization, and it is only a question of time when the eyes of those who are compelled to work in artificial light all day long will become so unaccustomed to daylight that blinders will have to be resorted to."—*Selected*.

THE HOME WORLD

FOR BABY'S SAKE.

For baby's sake I do things strange and wild,
To please the changeful fancy of my child.
My mind-appearing self assumes the guise
Of a fierce quadruped with glaring eyes,
Which roams the forest dark of our front room,
And threatens pilgrims with an awful doom,
And hurls great sounds upon the shuddering air,
Which babe maintains sound very like a bear.
For baby's sake I search the household o'er,
And never think to look behind the door
Where she stands hidden, calling out to me,
Taunts of my utter inability;
Aye, for her sake I shave this grim old face
Both close and often, to afford a place
Of fitting softness for the shy caress,
Which on my cheek her red lips often press.
I sing great lusty songs with power immense,
And one small person for my audience.
But strange enough the words evade my tongue,
Until her lips supply them one by one.

—Ross H. House, in *American Motherhood*.

A TEST OF CHARACTER.

GRACE WOOD CASTLE.

YEARS ago, in a book by a very noted author who is one of my favorites, I came across this statement: "The last test of character is the ability or inability to spend money wisely." The exact wording I have forgotten but this version gives correctly the gist of it. I have always since kept it in mind and it has squared with my experience. Without this ability, a man or a woman may be honest and earnest, may be estimable and admirable in other ways and still become a thorn in the side of his or her nearest and dearest and be ranked with the well-meaning failures.

Especially is this true when the income is small and must be judiciously stretched if it is to cover the expenditures of a family and to make provision for the rainy day so sure to come sooner or later. "Out of debt, out of danger," is one of the most valuable and pithy of maxims.

Readers of Dickens will recall Mr. Micawber's graphic delineation of the folly of running into debt: "Annual income \$500, annual expenditure \$499—result, happiness; annual income \$500, annual expenditure \$501—result, misery." That is putting it very strongly, but the underlying idea harmonizes with the words quoted in the beginning and both are to the

effect that to be happy and useful one must be able to make a wise use of money.

We all know persons who maintain families in comfort, meet their obligations promptly and present a good face to the world on very small incomes. Do you suppose they attained to this ability after they had become men and women? Nay, verily. The child who squanders his pennies will, as a rule, grow up to be the man or woman who cannot make ends meet and who always—to quote a homely old saying—has his "nose on the grindstone." Some one, other than the child, is usually to blame that he was not taught the value of money in his early years.

I imagine that I see you smile when I explain what I mean by "early." Observation and experience have taught me that a child who is old enough to tease for pennies to spend for candy is old enough to have an allowance of his own and to learn that when it is gone he will have no more money until he receives another installment. It will cost the parents no more in the end than haphazard giving and the child will learn by actual experience the value of money. He will soon find out that by denying himself he can always have a little money in his pocket—a lesson that many grown people never learn. He finds that money in his pocket gives him prestige among his companions exactly as owning his home and having money in the bank gives his father prestige among his neighbors. An allowance does not tend to make a child miserly unless he has a strong, natural bent in that direction which few children have.

The mother, naturally, is the one to attend to this matter; she may be sure that the father will appreciate the results by and by. The allowance should be paid promptly at the same time each week—the one in charge of it always being careful that small change is kept on hand so that there shall be no delay. After school age is reached it should be sufficient for the purchase of small school supplies, the Sunday-school contribution and to leave a margin for the penny bank. Each year it should be increased as should also be the list of purposes for which it is to be used and thus gradually and unconsciously the child learns the great art of making the most of his income.

SOCIETY.

MAUD HAWKINS.

IT makes the heart sick to read the society notes in the city papers and observe how some people are spending their valuable God-given time and money. "Mrs. Proud entertained at bridge." Then the description of the elaborate menu. Time, money and energy spent for what? Worse than nothing, worse than idleness. Do they really enjoy it? No, but they try to make themselves believe they do.

What good might they not do with the same expenditure, and how much pleasure it would give to themselves to see the hungry fed, the naked clothed; the young saved from sin and educated. Silly dawdling away precious time which God gave them and which belongs to him.

If the church needs money often an entertainment or a social must be held in order to raise a few necessary dollars, but hundreds are spent in the so-called social functions; there is always plenty of ready money for that.

"Mrs. Lighthouse entertained at progressive eucher in honor of Miss La Belle Fashion of H——." A musical is better than a eucher party. A social meeting of the W. C. T. U.; the D. A. R.; the Y. M. C. A. or the Y. W. C. A. would be of more benefit to themselves and others. What good can a whist party do any one, particularly the participants?

Miss Society, turn your bridge into a Ladies' Aid or something of the sort. If more women would forsake bridge whist, pink teas, sofa cushions and kimonos, and spend more time exercising in the open air, there would be more robustness and fair-mindedness among our sex, and less work for the doctors.

Towanda, Pa.

**A FEW RECIPES.**

T. H. FERNALD.

THE white of an egg, beaten with castor oil until they are thoroughly mixed, will destroy the unpleasant taste of the oil.

PARSLEY eaten with vinegar is said to remove the unpleasant odor of onions from the breath.

RUBBING the new skin formed after a burn or scald, with good sweet oil, several times a day, for several days, will prevent any scar being left.

THERE are several ways of ridding the house of ants, both red and black. One is to grease a plate with lard and set where the insects abound. They will leave sugar, etc., for the lard. Place a few sticks around the plate for the ants to climb upon. Occasionally turn the plate bottom up over the fire and the ants will fall with

the lard as it melts. Repeat, as long as any ants remain.—Sprinkle powdered borax around the infested places and both red and black ants will be exterminated.—A few leaves of green wormwood scattered among the haunts of black ants will soon drive them away.

BRUISE smartweed so as to cause the juice to exude, and rub the animals well with the bruised weed, especially the legs, neck and ears, and neither flies nor other insects will trouble them for twenty-four hours; or better, make a strong infusion by boiling smartweed a few minutes in water, and when cold apply with sponge to the animals. (This has been given me as a sure preventive.)

SPRINKLE chloride of lime on a board in the stable and rats, mice, crickets, and flies, will soon leave.—Make a weak solution of chloride of lime and sprinkle vegetable beds, etc., and there will be no trouble from caterpillars, slugs, etc., being careful in using it. A paste composed of one part powdered chloride of lime and one-half part of some fatty matter placed in narrow bands around the trunks of trees will prevent insects from climbing up them.

Belfast, Me.

**AT MEALTIME.**

THIS world presents to us one unbroken line of opportunities. From morning till night, day after day, week after week, they come and go, some unseen, some wasted, some improved. They are borne upon the wings of moments, which present themselves but once, and if not improved then are gone forever. Life is a success or failure, as we allow these opportunities to go by improved on unimproved. The wide-awake see opportunity on every hand. Others allow them to go by unseen, because they are not looking for them. They are looking at some other phase of life which we have not now the time to notice.

As these opportunities present themselves, we should grasp them and make the most of them. But opportunity is not our subject. We simply gave this introduction that we might know what a blessed opportunity comes to every family at mealtime. Here again it may be necessary to say what opportunity is meant, or some might see only the opportunity for having a feast for the body, provided the table has the necessary ingredients for the feast.

In these busy days we do not get together too often any way, and mealtime presents to us a blessed opportunity for having a little family reunion. Whatever may be said of the other hours of the day, every family ought to make mealtime the opportunity for having three happy hours each day. These three-times-daily family reunions may be made pleasant memory-spots in the history of the family, and help to

confirm the boys and girls in the thought that home is the dearest place on earth.

We understand that there are conditions in every home which can not be dreamed away. Life is real. We must deal with the real family, not with the ideal family, if we would accomplish results. So let us take the family as it is, and as far as possible, aim to establish the following habits: (1) have a stated time for each meal; (2) if possible, have each member of the family there at each meal; (3) have this the happiest hour of the day. There are many reasons why these habits should be formed in every family, but we have time only to mention a few of them.

1. *It is conducive to good health.* First, it is healthful because of the regularity there is in it. The system knows how to adjust itself to conditions and disposes of each meal before the time for the next one comes around. Then it is healthful because, as the Bible says, "A merry heart doeth good like a medicine." At a time when all is cheerful and the cares of life are for the time being brushed away, the system is in the very best kind of condition to receive the food. Another fact worthy of notice is that an interesting conversation interferes with rapid eating, which more than any other thing, is the cause of overloading the stomach.

2. *It develops the conversational powers of the children.* Not only this, but this development goes on under the direction and with the help of parents and older children, under which circumstances the children are more liable to have this talent developed along right lines than if they learned the art of conversation among foolish associates. If parents and teachers and older children would be more active in cultivating the social natures and talents of the younger members of the family, they would receive culture in purity as well as in sociability, and we would witness a wonderful uplift in the morals and ideals of the rising generation.

3. *It adds to the attractions of home.* Every pleasant spot in the history of the family helps to bind the children closer to their homes. The boy or girl who looks upon mealtime as a delightful time needs no dainties or pastries as substitutes.

4. *It draws the different members of the family closer together.* Whether they are brought together at the table or any other place, it depends largely upon what takes place while they are together as to what impressions are left. No one loves a storm, whether the gale blows from a cloud or somebody's tongue. When we strike a cold atmosphere, we are liable to shiver. But when we get into the sunshine, whether the beams come from the sun or from hearts filled with love and good cheer, it makes us feel good and wish for more of it. Three pleasant associations daily means the weaving of a tie which can not well be broken.

5. *It paves the way for pleasant associations on other*

occasions. They who find associations pleasant on some occasions will naturally seek the same on other occasions. Thus it is that parents and older brothers and sisters will naturally become the companions and counselors of the younger children at mealtime, during long evenings, and at other times when duty does not separate them.

6. *It deepens a sense of gratitude to God for blessings received.* Our plea for cheerfulness and happy homes is not a plea for giddiness. Foolishness is never in order. The thought that we can not be cheerful without being frivolous and silly is an invention of the evil one. Real thanksgiving is impossible without a feeling of gladness that we have something to be thankful for. What time is more pleasant, therefore, than the time when we surround the table and thank the Giver of all good for the blessings before us. They who enter into the real spirit of thanksgiving are not liable to lose this spirit as soon as "saying grace" is over. Thus a family may be together, happy in the thought that they are enjoying the blessings of God in a Christian home.—*Gospel Herald*.

THE GIRL THAT WHINES.

THE whining girl. Do you know her? If you do not, you haven't missed much.

It isn't worth much trouble to make the acquaintance of the girl that whines. It may be, however, that you have among your casual, occasionally-met acquaintances a number who are classed among the whiners. If you do not know them intimately, particularly in their home life, you may not know them as such.

The chronic whiner does her whining at home. One reason for this may be that her insufferable habit of whining would not be tolerated anywhere else.

If she does not believe this, then let her try the experiment just once. Once will suffice. She will find herself speedily and effectually ostracized by her girl friends and shunned as a plague by the boys. The whining girl does not whine in company. She reserves this ugly part of her disposition to inflict on the home folks in private; and if you could see her there you would scarcely recognize her in the offensive role of whiner as the sweet-mannered, pleasant-faced girl you see posing and receiving compliments as the most agreeable and ladylike of girls. If perchance you should catch her whining, you would be shocked at the contrast; and she would be shocked at the discovery; and more discoveries might result in less whining.

She whines in the morning because she has to get up and at night because she has to go to bed; and the day is filled with her nerve-racking whining at everything that is, that isn't, or that might be—that is, at home, when there is no company. She whines about her work, she whines about the things to eat, about

the things to wear, about the weather, no matter what it is, and when there are no more material things to whine about she whines just because she whines.

She whines at her mother and her sisters and her brothers and her father; and no matter what they may do, what they may sacrifice, to please her, it is all the same, she whines because they did not do the other thing or that they did it at all; and the poor mother generally suffers her to whine, no matter what worry and care and trouble she bears because of it; and the rest of the family, provoked to desperation at times, put up with it the best they can just because "mother" tolerates it, for Milady Whiner is a spoiled child.

Girls, for your own sakes, don't whine! If you do, stop it! Stop it right now! Assert the womanhood that is your heritage and purge yourselves of the whining habit as though it were a mortal plague.

If there is any one thing that a man abhors, aside, possibly, from a nagging woman, it is the whining habit of a girl.—*Farm and Fireside*.

WHOLE WHEAT BREAKFAST CAKES.

ONE pint of whole wheat flour (or graham flour sifted), one tablespoonful of baking powder, teaspoonful of table salt, tablespoonful of lard, and one egg. This recipe will make twelve biscuits or "gems." Sift flour, baking powder and salt together, warm the lard in the gem pan to grease them, or in the biscuit pan. With a spoon stir the water and lightly beaten egg into the flour, add the warmed lard, and when well blended, dip with a wet spoon and lay by spoonfuls into the gem pans, and bake as other gems. When dipping the soft dough, wet the spoon every time it is used, and the "gem" will be smoother and drop more readily from the spoon. These are excellent, and wholesome.—*Exchange*.

The Children's Corner

GYP.

A True Story.

MRS. A. L. COLWELL.

GYP was a pure blood fox shepherd and when she was brought to her little master she was a fat little thing with long, silky hair of a beautiful golden brown. The little master had been very ill and was only able to sit up a few minutes at a time, so at the very first they became fast friends.

As soon as the little master was strong enough, Gyp's training began. He taught her to do many funny tricks, such as climbing ladders, jumping over fences or high poles and through paper-covered hoops, shaking hands, marching as a soldier with the boys, and carrying a flag in her mouth.

When teaching her the little master was always very

kind to her, giving her something nice to eat, if she had done well, and giving her many loving pats and calling her "good doggie," all of which she seemed to understand.

The little master belonged to a Band of Mercy, and they held a Fourth of July entertainment, and Gyp was taught to give her part. She sat up very straight and dignified, with red, white and blue draped through her collar, a red cap with white plume on her head and held two flags with staffs in her mouth.

Nothing on the program pleased the boys and girls so much, and at many meetings she was called on to "speak her piece," as the children called it. And Gyp was always proud, and happy, whether at some home, or the schoolhouse, when asked to mount a chair or table, and do her part. The children were very happy when each was given a chance to march by her and shake hands, which usually closed the meeting.

When Gyp grew to be a large dog the little master had a harness made to fit her and she would draw his wagon or sled. And thus they spent many happy hours.

It takes time, kindness and patience to teach a dog so many things. I hope the boys and girls who read the INGLENOOK will always be kind to their pets. The little master is a man now, but he prizes very highly a picture of Gyp, taken in Fourth of July costume.

Wellsburg, N. Y.

GRANDMOTHER'S SPECTACLES.

"WOULDN'T you hate to wear glasses?" asked a small boy of his little playmate.

"No-o," answered Donald, reflectively, "not if I had my grandmother's kind. She sees just how to mend broken things; she sees lots of nice things to do on rainy days; and she always sees what you meant to do, even if you haven't got things just right. I asked her one day how she could see that way all the time, and she said it was the way she had learned to look at things. So it must be the spectacles."—*Forward*.

THE GAME OF WOLF.

The Chinese and Japanese boys, thirteen years old and under, play a serpent game which is quite exciting. A dozen or more boys form in line, each fellow with his hands on the shoulders of the boy in front of him. One of the fellows is the "wolf." The boy at the head of the line is the "head" of the serpent, and the last is the "tail." The wolf stands near the head of the serpent until the signal is given. Then he tries to catch the "tail" without touching any other part of the snake. The boys who form the body of the serpent protect the "tail" by wreathing about in all sorts of twists, to prevent the wolf from catching the "tail." This must be done without breaking the line. When the "tail" is caught, the wolf becomes the "head" and the "tail" becomes the wolf. The last boy in line is the "tail." The game can be continued until every boy has been the wolf.—Selected.

THE QUIET HOUR

THE MEANING OF PAIN.

The cry of man's anguish went up unto God:

"Lord, take away pain—

The shadow that darkens the world thou hast made,

The close-coiling chain

That strangles the heart, the burden that weighs

On the wings that would soar—

Lord, take away pain from the world thou hast made,

That it love thee the more!"

Then answered the Lord to the cry of his world:

"Shall I take away pain,

And with it the power of the soul to endure,

Made strong by the strain?

Shall I take away pity, that knits heart to heart,

And sacrifice high?

Will ye lose all your heroes that lift from the fire

White brows to the sky?

Shall I take away love, that redeems with a price

And smiles at its loss?

Can ye spare from your lives, that would climb unto mine,

The Christ on his cross?" —British Weekly.

THE WORDS OF JESUS.

JOHN S. FERNALD.

WE sometimes meet a brother or sister who has a favorite chapter or passage of Scripture, something that specially appeals to him or her on account of association, it may be in connection with his or her own conversion or other hallowed experience, or with an experience of some near and dear friend or relative. And this is well. Such a favorite always tends to uplift the soul as none other can, though he who uses it may find rich spiritual food in many other parts of God's Word, and heartily endorse the words of Paul in his second epistle to Timothy, third chapter, 16th and 17th verses, where he says:

"All scripture is given by inspiration of God, and is profitable for doctrine, for reproof, for correction, for instruction in righteousness. That the man of God may be perfect, thoroughly furnished unto all good works."

No one can diligently search the Scriptures without finding, in every part, precious and valuable lessons in all that pertains to the highest phases of human existence, both here and hereafter.

In the historical books and prophecies of the Old Testament God's dealings with the people, as a whole and as individuals, furnish us lessons of his constant and loving care over us and his long-suffering and for-

givenness despite our many rebellions and backslidings. In the Psalms we have the petitions and trustful pleadings of the Psalmist under the extremes of human experience, even down to the most trying spiritual, mental and physical conditions, coupled with the most joyous songs of thanksgiving and praise.

The Proverbs give us instruction in worldly wisdom and in our duties to God and man. In fact, the whole Old Testament, from Genesis to Malachi, is a complete guide and inspiration, if rightly studied, leading us on and upward to the highest goal of the human race, the coming of the Messiah and redemption through his blood.

But it is from the direct words of our Savior that the Christian or seeker for spiritual light or guidance can find the most satisfying help. The work of the apostles, as recorded in the book of Acts, and the admonitions and encouragements of the epistles are sources of inspiration and faith and incentives to faithful service for the Master, while the book of Revelation brings before us the glories of that home which is prepared for us by our heavenly Father.

Yet blessed and helpful as the words and lives of God's prophets and Christ's witnesses may be, to us, they are all overshadowed by the direct words and holy life of the Savior himself, as recorded in the four Gospels. His talks with his disciples, his sermons to the people, and his words to all with whom he came in contact are truly the words of eternal life and appeal to the heart of the believer, quickening his spiritual life and increasing his love and faith in a way that we do not experience in reading the words of the most inspired of his earlier forerunners or the later witnesses of his truths. While their words are profitable and helpful, and all Scripture is given of inspiration, the words spoken by Jesus to those about him, and through them to us, possess a soul-satisfying element found in no other.

AN OBNOXIOUS WEED.

WEEDS in the garden are destructive. Weeds in the heart are equally so. If not removed they will eventually destroy or dwarf that which is best. A good clean garden can only be had at the price of constant vigilance and care. This is the price to be paid to maintain a clean heart. One of the most destructive and prolific weeds that is apt to spring up in the heart.

is worry. If not rooted out as soon as it manifests itself it will soon multiply and greatly hinder the growth of the good in the heart.

Some people think worries and anxieties are quite harmless, but Christ in no uncertain language spoke against them as forces of evil in our lives. His teaching in the Sermon on the Mount against worry is very clear and emphatic. It has been asserted that Christ's teaching here encourages a reckless neglect of the future. It is uneasiness and worry for the future that he condemns, and not a legitimate concern and provision for future needs. To worry about our stature is useless, he tells us, because we cannot change it. So there are hundreds of things connected with our welfare that are as much beyond our control as the course of the stars above us. He gives us life, will he not see to its sustenance without our worrying about it? He provides for the birds, the beasts and the flowers, how much more for us, the crowning work of his creation.

It is a curious fact that there is far more anxiety for the future in Christian countries than in many heathen lands, and that Christian lands lay up more wealth, toil harder, look out more for the future. All this in view of the fact that the Bible gives no possible excuse for uneasiness or undue concern for the future. Some say they can not help it. This is simply a confession of defeat, an unmistakable evidence that the overcoming life is not experienced. "I can do all things through Christ who strengtheneth me." Worry is destructive to body, mind and spirit.

Some one has said that there are at least two things about which we should not worry. First, "the things you can not help." If they are beyond your control it is the height of folly to be worrying about them. Second, "the things you can help." If you can help them or avoid them set to work and do it, and do not waste your powers and destroy your usefulness by brooding over them. Have faith in God, appropriate the powers of Christ which are at your disposal and worry and anxiety must take their flight, as Christ cannot dwell in the anxious and brooding heart.—*Christian Monitor*.

THE REAL MEANING OF LIFE.

You have to do the work of the world for a living and to enable others to live. You have to study, to learn and to practice your world's work well for yourself and others; to take an interest in it and to do it in the best possible way and with enthusiasm. But all this work and study and necessity to do for yourself and others is put on you, not for any ulterior material purpose, but as a mere means to an end, and that you may through them be enabled to follow out your noble task to make your soul—your moral and

spiritual self—great, capable, holy, beautiful and loving, a helper and a savior here and a prince of the world to come. All those things that are necessary to the existence and comfort of the race are made so in order to the development of soul forces in the struggle for existence. Whatever makes for volume and value in the soul is of concern to you, and nothing else ought to concern you so much. Whatever you do, settle it that you will be a soul bigger than your body, and that you will with divine help, at all hazards, keep it in all purity, generosity, gentleness and nobility; that you will be a man or woman with value in yourself, not for the things you have, but for the thing you are, and for what you can help others to become. That's religion.

Do your world's work along all lines on that theory with enthusiasm, asking God's help always, and you will make something of yourself and of others, too; something that will last beyond the grave; something that will have the splendor of the eternities; and you will then be a soul, a character, a sublime force in which God and the angels and yourself shall exult—a something that it will be worth while to make immortal. How else can you glorify God but by becoming yourself like him and by helping others?—*A. S. Fiske, D. D., in Christian Herald*.

HOME AND FOREIGN MISSIONS.

EVERY once in a while I hear some one argue against foreign missions because the money and strength put into them are needed at home. I did it myself when I did not know better. God forgive me.

I know better now, and I will tell you how I found out. I became interested in a strong religious awakening in my own old city of Copenhagen, and set about investigating it. It was then that I learned what others had learned before me, and what was the fact there, that for every dollar you give away to convert the heathen abroad God gives you ten dollars' worth of purpose to deal with your heathen at home.—*Jacob Riis*.

THE SERVICE OF SORROW.

AFFLICTION is a revealer of the deepest thoughts and intents of the heart. Often have we been surprised to see evidences of sincere religious trust and dependence upon God manifested by one upon whom distress had come, one in whom we had little suspected such spiritual resources. In times of calm there had been no outward manifestation of the inner grace. As the storm at sea stirs the ocean to its depths, so affliction called to the hidden deeps of the soul. Perhaps only the ministry of trouble had power to arouse the dormant spiritual life to expression, and to consequent growth. Many a person has profound reason for saying, Blessed be trouble!

ECHOES FROM EVERYWHERE

Territorial government for Alaska is proposed in a bill introduced in Congress by Delegate Wickersham. The bill would establish the capital at Juneau and would also make all Russians who resided in Alaska on March 30, 1867, American citizens.

It took Russell Sage 50 years to accumulate \$65,000,000, but it has taken only three years for his widow to spend \$25,000,000 for public purposes and for the benefit of humanity. Mrs. Sage is giving the money away at the rate of \$25,000 a day, and if she keeps up at this gait she will be broke in five years.

Finding that the government may easily become an innocent accomplice in handling stolen gold which robbers have melted down, orders have been issued to the assay office in New York not to receive any gold until a complete and satisfactory explanation has been made as to where it was produced.

The biggest locomotives in the world will soon be in operation on the Sierra Mountains. They were recently sent West from the Baldwin Locomotive Works, where they were built for the Southern Pacific Railroad. Each engine has 16 driving wheels and is 93 feet long. They will not make a high speed, as they were built for hauling heavy loads over the mountains.

The General Assembly of the Presbyterian church in session at Denver passed resolutions complimentary to President Taft, the Emperor William and Dr. Eliot of Harvard because of the stand that these gentlemen have taken on the subject of total abstinence. A resolution demanding that Presbyterians who are judges resign from their positions rather than sign licenses, was voted down.

In the wheat pit at Chicago has ended successfully the manipulation of the market in wheat by J. A. Patten, which was begun in October of last year, when the price of the cereal was at \$1. The price at the close of the Patten option was \$1.34, and the estimated profits to the builder of the corner and partners were \$3,400,000. The estimated increase to farmers was \$40,000,000, and the added cost to the consumers was \$60,000,000.

The government of Holland is fearful that there has been enormous loss of life in upper Padang and other islands of the Malay archipelago as a result of the earthquake and tidal wave. Dispatches from Sumatra said that at least 230 had been killed in upper Padang, but private messages received indicate that the loss of life there was trifling, compared with the havoc wrought in other islands of the group. Owing to the lack of adequate means of communication, it may be several days before the extent of the damage is learned. The government has sent instructions to its officials in the Dutch East Indies to make a thorough investigation as quickly as possible.

At the Interstate Intercollegiate Peace Oratorical Contest, arranged by the Intercollegiate Peace Association and held at the University of Chicago on May 4, during the second National Peace Congress, the first prize was won by Levi T. Pennington of Earlham College, Richmond, Ind.

Bottles of "Malt Marrow," a drink manufactured by the McAvoy Brewing Company in Chicago and extensively advertised as "non-intoxicating," and sold in no-license and Prohibition territory, analyzed by a prominent chemist in Chicago, shows 5.6 per cent of alcohol, exactly the same percentage shown in bottles of lager beer manufactured by the same company.

The German government has submitted to the Bundesrath a supplementary tax bill designed to yield \$35,000,000 in taxes on inheritances, fire insurance policies, stocks, bonds, deeds and checks. Chancellor von Buelow is to make a speech in the Reichstag on the question of taxation, and it is hoped that Parliament will pass the tax bill and adjourn July 10.

A note addressed to Parliament by the British War Office contains a comparative statement of the sums expended in 1908 by the governments of the principal nations of Europe in the construction of airships and the prosecution of experiments in aerial navigation. The approximate amounts, in American money, are: Germany, \$1,900,000; France, \$225,000; Austria-Hungary, \$26,000; Great Britain, \$25,000.

Reports from Marseilles, France, June 13, say that seven hamlets in the vicinity of Lafare and Saint Cannat were practically destroyed in an earthquake which gave a score or more of southern French towns a hard wrench. Every report coming in increases the seriousness of the quake and hundreds are believed to have been killed. A number of villages are in ruins and no accurate statement of the dead can be made until the wreckage is cleared away. All ordinary work has been suspended in the affected region and a call has been sent for volunteers to assist in the work of rescue.

There is the best authority for the statement that the Czar has abandoned his plan to include Italy in the itinerary for the forthcoming European tour through fear of assassination. Russian secret agents who were recently sent to Italy to prepare the way for the Czar have reported that Italian revolutionists have combined with Russian exiles to Italy in a plot to assassinate Nicholas and that the trip cannot be taken without the gravest dangers. The feeling against Nicholas is particularly bitter now, his agents tell him, on account of the recent reactionary triumph in Russia and the revelations of frightful prison cruelties resulting from the duma's debates.

The navy board of China, of which Prince Su is president, has completed for recommendation to the throne the programme for the creation of a new navy. It provides for two fleets, each consisting of four first-class battle ships, eight second-class cruisers and ten third-class cruisers, with gunboats, torpedo boats and transports, bringing the total for each fleet to forty vessels. Each fleet will be under the command of an admiral. One will be stationed north of the Yangtse and the other south.

Police Commissioner Bingham of New York City is preparing for a school census provided for under a new law that makes the police department of New York responsible for the capture of truant school children. Under the law every school child will have a number and if found on the streets during school hours will have to explain to the police why he is not in school. To put the new system in effect it will be necessary to employ several hundred census takers and expend \$100,000. There is much opposition to the law. The people say that it will subject school children to an undesirable police surveillance.

The Russian ambassador has sent a protest to his government against the continuation of massacre of Christians in Asia Minor. He declared Russian agents sent to Asia Minor report that 100 Christians have been killed within the last few days near Alexandretta alone, and that many of the murders have been committed almost under the eyes of the commission that was sent to investigate the terrible slaughter a few weeks ago. Grand Vizier Hilmi Pasha has given fresh pledges that the killing of the Armenians will be stopped immediately, but the Russian ambassador is skeptical of the Grand Vizier's ability to carry out his pledges.

The financial aspect of the plan to repopulate Palestine with Hebrew farmers was discussed at the annual convention of the Federation of American Zionists in New York City last week. During the discussion of the educational plans it was stated that a plan is almost perfected to erect a Jewish school in Boston where pupils may be imbued with the Zionist spirit by study after school hours. Professor H. M. Callen of Harvard was said to be one of the main supporters of the plan. At the suggestion of Rabbi J. Israeli of Boston it was resolved to provide a curriculum of Jewish education from the Zionist point of view.

With a view to ascertaining how many aliens there are in the prisons of New York subject to deportation Superintendent C. V. Collins of the State prison department has completed a census of the prison population. It shows that of the 990 alien convicts, 319 were convicted of felonies within three years after their arrival in this country, and under the law they may be sent back to the countries from whence they came. The Department of Commerce and Labor at Washington, which has jurisdiction over the deportation of such aliens, will be notified. Superintendent Collins will also recommend to Governor Hughes that the sentences of all such aliens, which vary from a few months to life imprisonment, be commuted in order that they may be deported en masse. Of the 319 aliens subject to deportation by far the larger number—187—are Italians. Russia comes next with 44; Germany has 20; Austria, 19; England, 16; Canada, 8; Hungary, 7; France, 6; Switzerland, 2; Roumania, 2; Holland, 2; Ireland, 1; West Indies, 1; Malta, 1; Denmark, 1; Greece, 1; and Sweden, 1.

Not long ago the Adams Express Co. delivered liquor to a Hart County, Ky., resident, who was known to be a confirmed inebriate, this being in violation of the local option law as passed by the Kentucky Legislature. The express company was haled to court and a fine of \$50 imposed. The company took the matter to the United States Supreme Court and an opinion has just been handed down which holds the Kentucky law unconstitutional because it violates the section of the federal constitution giving to Congress jurisdiction over interstate commerce. Inasmuch as the shipments in the present instance were made from Tennessee and Indiana they came under this provision. The law in Kentucky had been enacted under the police powers of the State.

According to a cablegram received at New York fears are entertained in Russia regarding the safety of the Czar during his approaching visit on July 8 to Poltova for the celebration of the bicentennial of the battle of Poltova, in which the Russian forces under Peter the Great routed the Swedes, commanded by Charles XIII. Believing that the Jews, who are very numerous in that city, are in large numbers affiliated with revolutionary organizations, the government, says the cable dispatch, has ordered all persons of that faith to leave the city before July 8. About 1,000 families have already complied with the order. As the Jews control a great part of the business of the city, it is felt that as a result of the governmental measure trade in Poltova will suffer to a considerable degree.

Mr. Marconi denies the statement which has recently been made that wireless waves are injurious to operators, and that they produce various diseases such as conjunctivitis, corneal ulcers, leukoma. To use his own words: "During the twelve years or so of our operations we have had to deal with no single case of compensation for any injury of this origin, nor, so far as I can ascertain, has any such injury been suffered. Speaking for myself, I may remark that my own health has never been better than during the often extended periods when I have been exposed for many hours daily to the conditions now challenged, and in the constant neighborhood of electrical discharges at our transatlantic stations, which I believe are the most powerful in the world."

The request of the University of Illinois to share in the benefits of the Carnegie Foundation for the advancement of teaching has been rejected because the trustees of the foundation are not satisfied with the standard of that institution, according to an announcement made by John G. Bowman, secretary of the foundation. The Illinois State school is not alone in feeling the rebuke of the Carnegie trustees. Harvard and Columbia have been notified that they are too easy on entrance requirements, and that they have too many failures on examinations, while New York University is so bad that the trustees threaten to drop it from the list, as was done with George Washington University in Washington, D. C., on June 4. State universities in general are declared to be unsatisfactory to Mr. Bowman who admits, however, that several of these schools are making the entrance examinations more strict and that within a few years they will be able to meet the requirements of the Carnegie fund. It is said that the most serious obstacle with which the foundation has to deal is the ever-present competition among the universities and colleges for numbers which the foundation considers the greatest cause of demoralization in all American education.

Among the Magazines

THE DAY OF THE CHILD.

It has come at last. While we have been pondering, in this country, the evils which affect child life, our mother, the ever-aggressive England, has taken the great forward step. While here one devoted band of enthusiasts has been fighting for child-labor restrictions, and another for child hygiene and a third for child rescue, our great mother nation across the sea has been formulating and has now passed a drastic act, revolutionary in its provisions which must bring joy and heartfelt relief to all those who have long since realized the import of proper legislation in regard to the child. To quote the newspaper reports of this great forward step:

"It provides for the stricter prevention of cruelty to children and the better safeguarding of infant life, institutes children's courts, arranges for the segregation of juvenile offenders and undertakes a wider parental control of the morals of children."

Pawnbrokers may not accept articles in pawn from children under fourteen years of age. Innkeepers may not allow them in their barrooms. Tobacconists may not sell cigarettes to boys apparently under sixteen, and constables must confiscate cigarettes or tobacco in their possession.

Much along this line has already been done in the United States, but surely here for the first time is the children's charter, and this is truly the day of the child. While we in this country have been fighting to arouse the American sense to the fact that there is a problem which concerns the child, England has solved it. She has blazed the way. We will come along some day with a "Children's Secretary," there will be a "bureau" to gather data concerning the child. We will have uniform State child-labor laws and child hygiene laws and child-rescue laws, and when we do we will have great cause for rejoicing. But meanwhile England has preceded us, and in the matter of sound forward legislation on this all-important topic we are only beginning. England has given us the Magna Charta of the Child.—Editorial in *The Delineator* for July.

AMUSEMENTS.

A writer in the *People's Forum* not long ago called attention to what she termed our insane demand that we be amused. Other writers, in letters now awaiting publication, have endorsed this criticism. Many more of us, while we might not be willing to agree that "grandmother's way" of entertaining herself was best, are at least willing to concede that the American people have gone to the extreme in their patronage of amusements. If there were any doubts on the subject, they have been removed by Mr. McWade's interview with Mr. R. L. Giffen, a New York theatrical manager. Mr. Giffen estimates that the people of this nation pay \$150,000,000 a year to be amused, and he does not include in this estimate the amount of money that is expended by patrons of athletic exhibitions, such as baseball, football, track events, etc. Eighteen million peo-

ple annually attend the 30 playhouses in New York, Mr. Giffen says, paying between 20 and 25 million dollars for the privilege. Taking the lower estimate of expenditure, this is at the rate of \$1.12 per person, each time the theater is visited. And many, of course who make up the 18,000,000 total of theater attendance are many-time visitors at the various playhouses during the year. If Mr. Giffen does not overstate the facts, the people of this country, figuring that there are 90,000,000 of us, spend an annual average of \$1.67 each in the playhouse ticket office. But of the 90,000,000 there are a great many who have never seen the inside of a theater, so that the per capita expenditure of those who have is greatly in excess of \$1.67.

The criticism to be made of this condition is not that people should desire amusements, but that they should so greatly desire to have some one else amuse them as to spend \$150,000,000 a year for the pleasure. "It would seem," from these figures, Mr. Giffen says, "that theater-going in America is no longer a luxury, but a necessity." That, undoubtedly, is the opinion also of a great many of the people who habitually attend the theaters. The total of attendance at our playhouses does not, of necessity, however, show that theater-going is not still a luxury. For the great majority, it is a luxury and must continue so. The people who go to the theaters in the spirit most to be commended are not the ones from whom theatrical managers derive their greatest profit. The actor has a nobler mission than merely to entertain, but those actors who recognize this truth are not always the ones who play to the largest houses, even though they may have the most appreciative audiences.

Those who go to the theater solely to be amused waste both their time and money; they merely evidence their own inability to entertain themselves or to entertain one another. They fail to recognize the value of good books; they are mentally too indolent to make an effort to help themselves. Theater-going, like automobile riding or whisky drinking, may be overdone. It is the thoughtless element that is creating the demand for the valueless and even harmful class of plays that now keep our theaters open for more than two-thirds of the winter season. There are many of us that need the same sort of prodding that the work-shirking horse receives, except that the prod, with us, should be applied to the mind instead of the body. There are a lot of people who should occasionally have an egg-beater inserted under their skulls and vigorously churned for a while in order to relieve them of the brain fag that comes of taking too little mental exercise. It is the spirit of laziness within that sends forth the Macedonian cry for something to amuse us. The amusement question does not worry men and women who do their own thinking, and they are not the ones who contribute any very large part toward the \$150,000,000 toll annually paid by the people of this country for the maintenance of the present demoralized American stage.—*Woman's National Daily*.

WHERE THE GAME GETS YOU.

We will also assume that you, dear reader, are dealing in Wall Street securities, and have intrusted Smith & Jones with authority to purchase 100 shares of that stock on your account. You naturally wish it as soon as you can get it. You only regret that you didn't purchase it before the market closed on the previous day; but the favorable news failed to be printed or circulated prior to the close of the market.

What happens? A lot of things may happen, and none of them in your interest—you may be perfectly sure of that. There is nothing in the world to restrain Smith & Jones from first buying 2,000, 5,000, or 10,000 shares of Union Pacific on their own dummy account. You cannot force them to execute your little order in advance of theirs. You may be in Harlem, Chicago, or Omaha. Wait until your betters are served.

The office manager also buys as much Union Pacific as he can afford. The "public" is in the market, and the news at once reaches the order clerk. He holds back the flood of buying orders long enough to take a small flyer himself. The same with the telephone clerk on the floor of the Exchange. Union Pacific has closed at 175 the day before. It opens a full point higher. There are transactions of 50,000 shares in the first quarter hour, but yours is not among them. The papers give vivid accounts of the wild scramble to buy Union Pacific. It rapidly mounts to 180, and then **you** get action on **your** little 100-share order.

Possibly the order clerk sells you that particular stock. He was there at the start; you were somewhere else. He is on the inside; you are on the outside. Besides, you are a "producer." The clerk nets nearly \$500 as the result of his sagacity. The floor manager sells his stock, Smith & Jones dispose of theirs, and the dummy account is richer by \$25,000. There's no difficulty in doing this. The firm's own customers stand ready to buy the stock at the market. The public's orders are now being filled, not at 175, but at 180, and perhaps higher. The market may rise still higher, and you may be able to sell at a profit, but the chances are ten to one that a professional bear clique will smash Union Pacific back to 175 or below.—Frederick Upham Adams, in the June Everybody's.

THE LINES OF EDUCATIONAL REFORM.

Judging by the specimens published in our news columns, the next report of President Schneider of the Chicago school board will furnish an abundance of food for thought. Principals, trustees, teachers, parents, legislators will severally find in it criticisms and suggestions worthy of their earnest consideration.

We have had frequent occasion to observe that these are critical days for our educational systems, high and low. The severest "blows" come from the best minds of the educational world, and of course, there is faith, enthusiasm reconstructive zeal back of these blows.

The educational problem of the future will be different from those of the past. But the experience of the past will guide to just solutions of the new problems. That experience teaches the need of consolidation, of more efficient administration, of stricter attention to the demands of life and industrialism, of insistence upon discipline and moral training.

President Schneider says little in the published extracts which other educators have not said just as vigorously of similar situations. He is emphatic in demanding a fair grounding in the fundamental studies and in dwelling on the value of hard work, method and application to duty.

He does not oppose the modern idea of making study as vital and agreeable as possible, but he reminds us that after all it is the results that count. The children must be trained for their obligations and functions in life, and any system which leads to inefficiency, to a smattering of futile knowledge, to aversion to sustained effort is a failure and a cruel wrong to the children themselves.

To increase the value and utility of popular education the curriculum and the methods of study must be tested by the pupils' fitness for the places in society and in business which they take after graduation. To test the merits of organization and administration of school systems we must inquire into the relations between boards and teachers, from the superintendent and principals down to the instructors in the first grade. Is there sufficient coöperation, proper coördination of activities, intelligent utilization of resources?

The American people are cheerfully making heavy sacrifices in the cause of universal and free education. They will tax themselves even more heavily to insure the right results. But they expect common sense, an understanding of actual conditions, a determination to avoid extremes, of the leaders in education.—Chicago Record-Herald.

THE MEXICAN GOVERNMENT AND THE RAILROADS.

No commercial conquest that the Diaz administration has made compares with the control obtained over the most important railroad lines in the Republic. The story of this conquest is one of the most fascinating and romantic in the history of finance. It marks an epoch in the movement toward government regulation or control of railroad lines. Mexico's leading men were keen enough to see that the railroads of the country, controlled by foreign capital and operated by Americans, were extracting all they could from the Republic and giving back as little as was politic. They were wasteful of capital in directions that served no public good, and left them poor for those developments that were legitimate and would have been beneficial to the shippers and the traveling public. In 1902 a start had been made through an investment of \$4,500,000 in the narrow gauge Interoceanic Railway running from the City of Mexico to Vera Cruz. A year later stock control of the National Railroad of Mexico, one of the main arteries of traffic from the American border to the City of Mexico, was obtained by giving up \$5,000,000 gold. This line was operated under government supervision three or four years before the idea was suggested of merging into one organization four separate systems, with a combined trackage of 7,000 miles, or about 70 per cent of all of the mileage in the Republic. This action was precipitated by the attempt of American interests to secure control of the Mexican Central, which was then nearly bankrupt.

Out of this idea has grown the government system of railroads which penetrates practically every part of the Republic, serving all of the important centers of traffic creation in the interior and extending its spurs to the gulf ports and to the ports that have just been opened on the Pacific side. By what almost seems to be a process of financial legerdemain the government secured control of this vast system, with an annual earning capacity of \$30,000,000 and an authorized capitalization of \$650,000,000 at practically no outlay of money. It bartered its original investment of \$4,500,000 in the Interoceanic for stock in the National Railroad, with \$5,000,000 gold as a bonus, which gave it control of both lines, the National having

previously bought a majority interest in the Interoceanic, and also controlling the International. Then, when the great merger was proposed, it still further exchanged its securities for those of the Mexican Central, and, in addition, caused to be created a large amount of common stock of the National Railways, or merger company, which it took for itself, and which gives it voting power and control. Having placed its guarantee behind one class of bonds of the new organization it demanded, as a quid pro quo, a block of bonds which was nearly equal in value to the amount originally invested in the Interoceanic and in the National Railroad.—From "The Finances of Mexico," by Charles F. Speare, in the American Review of Reviews for June.

SLAVISH SAVING AND WORKING.

"LIFE is worth more than a wooden pail."

That is what a sensible farmer's wife said the other day, and some little explanation seemed to be needed before I could fairly understand what she meant. This is the story as it ran:

"I know a farmer woman who has a nice, comfortable home, plenty of good clothes and money in the bank, but she is wearing herself out running all over the farm after a wooden pail that did not cost twenty-five cents.

"Life is worth more than a wooden pail. I would have more pails, if I had to go without some of her fine clothes."

I have been thinking about it a great deal since, and I am sure that a good many women, and more men, are foolish in the same way. We are wearing ourselves out, soul and body, chasing after a wooden pail, so that we may have a few more fine fixings to put on our backs.

Why is it that we think we must have things to show off with, no matter if we are hungry as dogs and tired to death working to save the price of a wooden pail?

I can show you men who have hundreds of dollars in the bank, but they actually need a comfortable pair of mittens. Cold dollars make up for cold hands and feet do they?

But think of other men you know. They are working every day just as faithfully as men ever worked to save money for those who will come after them; they never have anything comfortable themselves. Life is centered on that one thing of saving money. But what will the men and women who will get that money tomorrow do with it? Perhaps we might just as well let a great big interrogation mark stand in the place of the answer.

But we do know that the dollars these men worked so hard to gather up and save never will do the good they hoped they might. The dollars scatter like the wind and in a little while are gone.

I expect there are some folks who will get up now and tell me that there are worse things than the habit of saving. They may go so far as to say that I had better look out or I will be standing up for extravagance; that I would uphold men and women in

spending their money for wooden pails and such poor miserable things, instead of using it for better purposes.

But I should like to inquire to what better purpose we could put the money we earn than to save steps, which means life? If money is not to bring us help and comfort and peace of mind, to make ourselves and others happy, what is it for?

So I say, use it. Not wastefully, for that would be wrong, but use it for everything that will make us and those we love happier and better. Wooden pails will sometimes do this more certainly than silk dresses.

Silk dresses do nothing but add to our pride of heart. Wooden pails save life, and life is worth more than show.—*Farm Journal*.

What John Meant to Say.

A Chinaman was called as a witness in the police court of Los Angeles in the case of a driver who had run over a dog.

"What time was it when you saw this man run over the dog?" asked the judge.

"Me no sabe," replied the witness.

"I say," repeated the judge, "what time was it when you saw this man run over the dog?"

"Me no sabe," repeated John, smiling blankly.

"We shall have to have an interpreter," commented His Honor, as he realized that the witness did not understand English; and accordingly another Chinaman was haled into court to act as interpreter. "Ask the witness," commanded the judge, "when he saw this man run over the dog."

The interpreter turned to his fellow-countryman and said: "We chung lo, ho me choo lung wow, e-ho me no chow chee, loo kow so-loo bing gong tong yit ben."

To which the witness replied: "Wong lin kee, wo hoo, wing chong lung yue lee, kin sing, choy yoke coey ying lung ding wah, shing suey way san yick ling top bing coey bow tsue, po tong po gou hung mow kim quong yuen lee chow yo ben tong."

The interpreter then turned to the judge and said: "Him say 'Two o'clock.'"—June Lippincott's.

WANT AND EXCHANGE

BINDER TWINE—Highest grade standard 7½ cts. lb. Club together and send us your order. We save your money. Farmer agents wanted. Free sample.—Central Supply Co., Mt. Morris, Ill.

FOR SALE—5x8 Printing Press, including type, cabinet, ink, and unprinted stock. Worth \$150.00. A bargain at \$50.00 cash. Other business. Green stamp brings samples of work.—Dallas Kirk, Pentz, Pa.

WANTED—1,000 Sisters to send for sample of Bonnet Braids and Cap Goods. Satisfaction Guaranteed.—J. P. Holsinger, Mt. Morris, Illinois.

WANTED—You to send to 3207 Manitou Ave., Los Angeles, Cal., for a copy of the Berean Bible School catalog 1909-10.

FARMS FOR SALE—from \$40 to \$60 per acre. If you are in the market for a farm, write at once for 1909 price list giving full description.—M. H. Miller, Bristol, Ind.

WANTED—A minister to locate near Grinnell, Gove County, Kansas, where land is cheap, to help build up a new congregation. For particulars address Elder J. W. Jarboe, Quinter, Kans.

Six Popular Periodicals

The lesson helps and weekly papers play an important part in the development of a strong, soul-saving Sunday school. You cannot afford to place an inferior Sunday-school Quarterly in the hands of your pupils. That's why we call your attention to our **SPLENDID SUNDAY-SCHOOL HELPS.**

Three Months Trial Free

Let us furnish you with all your Quarterlies and papers free for one quarter. Here are a half dozen Sunday-school helps that you should give a trial. Our introductory offer applies to one or all of the publications below.

Brethren Teachers' Monthly

A manual of methods. Comprehensive comments on each lesson. Three or more copies to one address, 13 cents per quarter, or 48 cents per year. Single subscription, 50 cents per year.

Advanced Quarterly

For Intermediate and Adult classes. A popular lesson help. Single copy, 5 cents. Five or more copies to one address, 3 cents per quarter.

Juvenile Quarterly

The lesson clearly and forcefully presented for the Primary and Junior Pupils. Numerous illustrations. Single copy, 4 cents, five or more copies to one address, 2½ cents per quarter.

Our Young People

An illustrated 8-page weekly. Interesting, instructive and elevating. Single subscription, one year, 65 cents. Five or more copies to one address, 10 cents per quarter or 40 cents per year.

Our Boys and Girls

The best illustrated weekly for boys and girls. Choice stories, helpful poems and Bible incidents. Single subscription, per year, 50 cents. Five or more copies to one address, per quarter, 7½ cents per copy.

Children at Work

An attractive little paper for the little people of the Sunday school and home. Single subscriptions, per year, 20 cents. Five or more to one address, per quarter, 3 cents per copy.

If your school is not using these popular Sunday-school helps we will gladly allow you to use them for six months at half price. We could not afford to make this liberal offer if we did not feel quite sure that you will continue to use them for years to come.

Even though your school may be using five of our publications we will allow you to try the sixth one on our introductory terms. Ask for full particulars.

A sample copy of each publication sent on request.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

Paul the Herald of the Cross

By J. W. Wayland

The story of Paul's life is told in an interesting and instructive way. A splendid sidelight to the Sunday-school lessons for 1909.

It will appeal to boys and girls, and older persons, too, and will leave them the better for reading it. Brother Wayland follows the Great Missionary from youth to death, and all the way he holds the attention. One

cannot read the book without feeling a desire to help in spreading the Gospel.

Our Price,30 cents

(Postage extra, 6 cents.)

BRETHREN PUBLISHING HOUSE
Elgin, Illinois

TRAINING THE TEACHER

BRETHREN EDITION

Twenty lessons on the Bible by Dr. Schauffler.

Ten lessons on the Pupil by Mrs. Lamoreaux.

Ten lessons on the Teacher by Dr. Brumbaugh.

Ten lessons on the School by Mr. Lawrance.

Special Chapters

"How the Bible came to us," by Dr. Price.

"Organizing and conducting a Teacher-Training class," by Rev. Oliver.

The Gist of the Books.

Teaching Hints.

Test questions at the end of each lesson.

Review test questions at the end of every fifth or sixth lesson. The official textbook for Teacher-Training Classes of the Church of the Brethren. 272 pages. Paper bound, prepaid, 35 cents. Cloth bound, prepaid, 50 cents.

BRETHREN PUBLISHING HOUSE
Elgin, Illinois

The International Sunday-School Lessons

FOR 1909

Are on the Acts of the Apostles

Every Sunday-school Teacher will need the helpful assistance of some first-class teachers' help. The lessons deal with the persecutions of the early church and the spreading of the Gospel which attended the dispersion of the saints. Lesson writers of splendid ability have been engaged for this year and we confidently hope to make the **Brethren Teachers' Monthly** the best teachers' assistant on the market. If you have never used the Monthly, ask for a sample copy. We will gladly send a copy to each of your fellow teachers if you will send us their names and addresses. Subscription price, 50 cents per year.

CRADLE ROLL BIRTHDAY POST CARDS

The phenomenal growth of the Cradle Roll Department of the Sunday School calls for constant activity on the part of the publisher to supply novelties and helps that will suit this peculiar field. Among the most useful helps are the birthday cards of which a new and beautiful line is just issued which may be mailed as post cards. The cards bear appropriate photographic reproductions embellished with exquisite floral designs and having greetings and verses in colored lettering; on the address side of the card is space that may be used for a personal message or invitation.

Form P. First Birthday—Boys.—A beautiful madonna with dainty decoration of trumpet border and lily of the valley.

Form Q. First Birthday—Girls.—Photograph of girl baby with border of snowdrops and colored leaves. One candle burns at top of card.

Form R. Second Birthday—Boys.—A bright boy's face with decoration of apple blossoms and golden bells.

Form S. Second Birthday—Girls.—A chubby two-year-old girl with pretty

background of violets and dainty lace.

Form T. Third Birthday—Boys.—A stalwart boy's figure in panel embellished with beautiful floral designs.

Form U. Third Birthday—Girls.—The girl's picture on this card is bordered with delicate grasses and pansies; three candles are burning on shelf.

The cards sell at the rate of 2 for 5 cents or 25 cents per dozen, postpaid. Order any one form or assorted.

Ask about our "One Dollar Cradle Roll Outfit."

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. 1.

J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

Empire Colony in "Sunny Stanislaus"

The CO-OPERATIVE COLONIZATION COMPANY is now locating a colony of our people in the lower San Joaquin valley, in central California. The new town of EMPIRE, as well as the colony lands, is located on the Santa Fe railroad, five miles east of Modesto, the county seat of Stanislaus County, thirty miles south of Stockton, seventy-five miles from Sacramento and one hundred and fifteen from San Francisco.

The colony lands join the new town site and are within a few miles of three different railroads. These lands are all under cultivation, and are free from brush, stumps, stones and other obstructions. Two large ditches cross the tract, affording ample water for irrigation of all crops.

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and Investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

NEW CHURCH ORGANIZED—NEW RAILROAD BUILDING.

A new Church of the Brethren was recently organized at Empire, with twenty-five members, and other families of our people are expecting to move there soon. The Modesto-Empire Interurban railroad is now being built. For further information address,

CO-OPERATIVE COLONIZATION COMPANY

North Manchester, Ind., South Bend, Ind.

RECLAMATION PROJECTS

State	Project	Total Allotments	Acreage	Ownership
Arizona	Salt River	\$ 7,050,000	240,000	Mainly private
Arizona-California	Yuma	3,455,000	79,000	25% public
California	Orland	585,000	14,000	Private
California-Oregon	Klamath	2,109,000	181,000	25% public
Idaho	Minidoka	2,491,000	134,000	90% public
Idaho	Payette-Boise	2,500,000	372,000	75% public
Nebraska-Wyoming	North Platte	4,230,000	97,000	75% public
Nevada	Truckee	4,108,000	200,000	70% public
New Mexico	Rio Grande	75,000	155,000	Private
Oregon	Central Oregon	75,000		Preliminary examination
Oregon	Umatilla	1,186,000	20,440	20% public
Utah	Strawberry	810,000	60,000	Private
		\$28,647,000	1,552,540	

To December 31, 1908, the Federal Government has already expended over 28 millions in preparing homes for probably 20,000 families possibly more, and must spend millions more before these projects are finished. With the Government the railroads that serve this territory are vitally interested in seeing that these acres are successfully settled by prosperous farmers. Whether these farmers are on government lands or on private lands irrigated by the government, is of minor importance; the main proposition is to supply as many homes for as many people as possible on these government projects.

Parties wishing information about any of these projects with the view of securing Government land or private lands for future homes should write to the undersigned for printed matter descriptive of the section of the country they wish to locate in.

\$400 Prize Cup Won by Colfax County, N. M. In Competition with Entire Irrigated West

Miami Ranch

is located in the choicest part of Colfax county, New Mexico, and it was largely due to the products grown upon and adjacent to this ranch that Colfax County won this valuable cup at the Interstate Industrial Exhibit held at Albuquerque, N. M., last October. Every State was represented—products from land selling as high as \$1,000 an acre were shown—but Colfax County won by many points.

Many other prizes have been won by this section of the country. New Mexico wheat took first prize at the World's Fair in Chicago, while apples raised in an orchard directly adjacent to Miami Ranch won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 an acre.

Miami Ranch

offers you health and pleasures as well as wealth. It's situated in a rich, cheerful valley, surrounded by picturesque mountains. Elk, deer, bear and other large game are to be found in the mountains, while thousands of wild duck and geese inhabit the surrounding lakes. The Rayado River, which flows through this ranch, is noted throughout the central west for its trout fishing.

The rainfall is sufficient to insure big crops. But with the gigantic irrigation system recently installed, there is not the slightest chance of crop failure.

The climate is perfect, the air is pure, and the scenery beautiful. Excellent church privileges, a good school and pleasant neighbors are all to be found on Miami Ranch.

Write for a free copy of our booklet, "Westward Ho." It tells in detail all about Miami Ranch. Tells how and when you can get a round-trip ticket from Chicago for \$30, and from Kansas City for \$25, via the Atchison, Topeka & Santa Fe. Write at once and take your choice of the bargain offers which we are now making on both large and small farms.

Farmers Development Company, Springer, New Mexico

Webster's Imperial Dictionary

New and Up-to-Date. Reset from New Type. Thousands of New Words. This is the Only New and Complete Webster Dictionary issued since 1890. For it is the Only "Webster" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the Best and Most Practical, as well as the Latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations.

J. A. Bowers' apple crop of 1907 netted \$1,000 per acre, and in 1908, \$700 per acre.

E. A. Blair gathered from seven and one-half acres of apples 3440 boxes of fancy apples which netted \$5,500.00.

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

BOXING THE COMPASS

JOHN S. FERNALD

ONE of the first lessons which a man or boy learns when he enters upon a seafaring life is to "box the compass." This is not, as might be supposed, the making of a box or other receptacle in which to keep the compass, but is the repeating, in their regular order, the names of the thirty-two "points." In ordinary sea language, both in the forecabin among the men and on the quarter deck, bridge and pilot house by the officers, the names are considerably clipped, and the names north and south each has two or more different pronunciations, in different points. Thus: northeast becomes no'theast, and northwest becomes nor'west, and we have also sou' s'utheast and sou' s'west.

Boxing the compass, either by a deep sea sailor, a harbor fisherman or an amateur yachtsman, is as follows:

No'th, no'th b' east, no' no'theast, no'theast b' no'th, no'theast.

No'theast b' east, east no'theast, east b' noth, east.

East b' south (or sou'), east s'utheast, s'utheast b' east, s'utheast.

S'utheast b' south, sou' s'utheast, south b' east, south.

South b' west, sou' s' west, sou'west b' sou', sou'west.

Sou'west b' west, west sou'west, west b' sou', west.

West b' no'th, west nor'west, nor'west b' west, nor'west.

Nor'west b' no'th, nor' nor'west, no'th b' west, no'th.

The system of naming, while puzzling to one not familiar with it, is in reality both simple and ingenious. Any eighth segment of the circle is a key to the whole.

While George Washington was easily the "first in war, first in peace and first in the hearts of his countrymen," the Chinese people, in the matter of mariners' compass, as in several other matters, claim to be the original inventors, placing the date of the discovery of the properties of the magnetic needle, and its use for determining direction on land and sea, at 2634 B. C., or more than two thousand years before Confucius. Whatever credence may be placed in this claim, it is universally acknowledged that the Chinese were the

first to make use of the magnetic compass for guiding the course of ships at sea, but the earliest authenticated record of such use was about the year 300 A. D., and it was nearly a thousand years later that the use of the compass became general among the maritime nations of Europe.

In its earliest form the compass was merely a bar of magnetized iron so balanced as to turn easily on its center. To this was later added the card marked with the cardinal points, north, east, south and west, the other graduations, as at present known, coming in as nautical science advanced. The thirty-two points which have names are now subdivided into quarters, thus giving one hundred and twenty-eight different courses to the compass. In the earlier compasses and some of the cheaper and smaller ones of the present day the needle with the card attached was balanced on its center on a fine point, allowing it not only to turn freely around the circle but to tip in any direction, within certain limits, as the vessel rolled or pitched. In the better and more expensive instruments the card is enclosed in an air-tight metal bowl filled with alcohol, which neutralizes any sudden shock or jar, and prevents vibration of the card from the machinery of the ship or other causes.

To keep the compass always in a horizontal position it is hung by an arrangement known as "gimbals." The bowl is balanced by two opposite sides inside a metal ring, which in turn is similarly hung inside another and larger ring, by points at right angles to the others. This is also hung to the inside of the box, making a threefold universal joint, which permits the outside box to assume any position and the compass card still maintain the horizontal.

In all seagoing vessels the compass is carried in a receptacle called the binnacle, a double box of wood or metal, one side holding the compass and the other a lamp. The light is so shaded that its rays fall only on the face of the compass, as an open air light would dazzle the eyes of the steersman. The binnacle is placed just forward of the steering wheel and has a window through which the compass can be readily

seen by the wheelsman. In some vessels the binnacle is built into the wall of the after house, and there is a window inside through which the officers in the cabin may see the same compass by which the vessel is being steered.

Inside the compass box, at a point exactly in line with the bow of the vessel, is a short black mark called the "lubber line," the word lubber being a sailor's term for a landsman or for any person not familiar with sea life. But very few, however, of the best steersmen, would care to acknowledge how much they make use of that same despised lubber line.

YOU ARE A GOD.

JUDGE LINDSEY of Denver: "Every man found guilty in my court of cruelty to animals must go to jail. I will have no other sentence in my court for that crime."

O just judge!

A jail sentence is not too severe for the man who maltreats the brutes that serve him. Let that sort of man meditate in his cell the responsibilities of a living soul that has been given dominion over the beasts of the field and the fowls of the air.

"He is my property!" says the owner.

Yes, in a sense, but your defense is the defense urged by all the cruel taskmasters of all time.

What a noble friend is the horse!

He was man's helper from the earliest times. He has plowed man's fields, carried his burdens and borne

him in battle. Civilization would have dawned more slowly but for him. Often abused, often neglected, he is always the willing, ready slave.

What right have you, simply because you have a bit of paper called a bill of sale, to mistreat your horse? YOUR RACE owes HIS RACE more than YOU can ever PAY.

And the dog.

He was the staunch friend of the stone-age man. Always, everywhere, he has been trustworthy helper, constant companion, devoted guardian. His name is a synonym for loyalty.

And the cow.

Why, that gentle creature has been the foster mother of the race of men for thousands of years.

To all these MAN IS GOD.

Will you, their deity, to whom they look up with dumb and humble reverence—will you give them for their worshipful fidelity to you and yours injustice and harshness and cruelty?

For shame!

As your God rules you, willing subject, with gentleness and compassion, so ought you to rule in kindness.

To your dumb servitors you are God.

And as you hope by your service and worship of your Master to merit his loving and tender care, so ought you to reward the dumb suppliants who serve and worship you.

"The merciful man is merciful to his breast."

If you are unmerciful, how can you hope to obtain mercy?—*Daily Chronicle, Centralia, Wash.*

INDEPENDENCE

WALTON F. STOVER

Behold from England's darkened shore,
Beyond Atlantic's awful roar,
A ray of hope from out the West—
A star to guide the world's oppressed.

The Pilgrims and the Puritans
Must needs remove to foreign lands,
And though they know not what's to be,
Their mission is sweet Liberty.

They sail, and lo! they reach a clime
Where, though 'tis winter, bright sunshine
Pours down and melts untrodden snow,
And warms the hearts of those below.

Five generations come and go,—
The New World that was all aglow

With Freedom and with happiness
Now finds its mission profitless.

For colonists can have no seat
In Parliament, nor can they treat
With equals, yet they tribute pay
To keep the soldiery away.

This is, my friends, the reason why
Our colors float against the sky,
And so the flag our fathers bore
Through shine of sun and shades of war.

The spirit born at Bunker Hill,
Unchanged today, is with us still,
For Saratoga buried deep
The Western Empire so complete.

Linton, Ind.

INDEPENDENCE DAY.

D. Z. ANGLE.

RICHARD HENRY LEE of Virginia introduced into the Continental Congress at Philadelphia the resolution "That these United Colonies are and ought to be free and independent States." John Adams seconded the resolution and it was passed July 2, 1776. The Declaration of Independence, having been favorably reported by the committee appointed to draft it, it was adopted July 4, 1776. This committee was composed of John Adams, Benj. Franklin, Roger Sherman, Robert R. Livingstone, and Thomas Jefferson. It is said that Mr. Jefferson wrote the Declaration, it being also chiefly his own composition and was adopted with only slight changes. With the passage of that daring and momentous Declaration severing all allegiance to the British Crown, was born practically that day a new nation, a great republic in the western hemisphere, founded upon a system of equal rights and justice to each and every one of its citizens.

The doctrine, "That all men are created free and equal and that they are endowed with certain inalienable rights among which are life, liberty, and the pursuit of happiness which in order best to secure, governments are instituted among men, which derive their origin and just powers from consent of the governed," was now enunciated. Verily this was a broad and solid foundation upon which to build the new republic. It was satisfactory to a large majority of the liberty loving, bold pioneers of the English colonies. It was also attractive to the common people, the distressed and oppressed of the nations of the Old World.

Upon the successful termination of the American revolt against King George III, aided in no small degree by French jealousy of English power, which was manifested by substantial assistance to America in men and money, the affairs of the newborn republic gradually shaped themselves from a state of chaos and confusion into a firm and stable government, which was able to maintain order and establish the much desired tranquillity and peace. With the advent of peace came renewed immigration from Europe, and the best and bravest of the Old World came over to find a home and help develop our new nation, which has continued with a rise in population, wealth, power and influence to a degree unequaled and probably in a like period of time unknown within the world's history.

Therefore on July 4 our people see fit to celebrate the passage of the Declaration as the birth of the Great Republic. And though we glory not in war or the slaughter of our fellow-men, still those dauntless souls of old saw fit to risk their lives or take life in Freedom's name. Accordingly we can do no better than thank our heavenly Father who doeth all things well, for the measure of freedom which we enjoy and that

we live in a land of civil and religious liberty. But in order to properly observe the holiday which is commemorative of Freedom's birth it seems unnecessary to expend thousands of dollars in fireworks, etc., which are used to the bodily harm of thousands, and to the untimely and unnecessary death of many of our citizens. Instead is it idle to suggest giving money, thus wasted, in furthering education, and to the poor or helpless ones who scarcely realize the fact that they too have a home in "The land of the free and the home of the brave"?

Mt. Vernon, Ill.

ESTIMATE YOURSELF.

IF we wish to be sure of the quality of our goodness, let us test it on the secular side of life, rather than by its professional and ecclesiastical implications. When we recall the reverential manner in which we handle the holy Book, let us be sure of the integrity of our business books; when we complacently reflect upon the orthodoxy of our creed, let us examine ourselves as to how far we keep faith with men; when we remember our devout behavior in God's house, let us give a thought about our conduct in our town; and when we flatteringly estimate ourselves in our Sunday clothes, let us inquire as to how our neighbors reckon us up in our shirt sleeves.—*W. L. Watkinson.*

IN WHEATEN MEADOWS.

There are winds that riot o'er meadows still,
Over slopes of harvest gold,
From the fir-set rim of an orient hill,
With a vibrant melody athrill,
And a music all untold.

There are shadows and ripples, uncharted and fleet,
Where the fretted tassels sway;
The call of the bluebird is lyric-sweet,
And the crimson poppies among the wheat
Look up to the mellow day.

Widely the ministrant meadows lie,
Lavish of rapture and rest;
White are the clouds in the slumberous sky,
And elfin the voices that wander by
The grass-hid field-lark's nest.

Perhaps o'er the shadowy hills afar,
Unresting souls may throng,
And there may tumult and strife and jar
And ignoble discord and struggle mar
Earth's full-voiced, matchless song.

But here, where the silken poppies burn,
And the air is pure and sweet,
We may hark to the rhythm for which we yearn,
And many an ancient lesson learn
In the meadows among the wheat.

—L. M. Montgomery.

To love one's country means to obey its laws. Only the truly obedient are the truly loyal.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LXIV.

AFTER the officer, came a private detective, just at the moment when the horses of the carriage bearing the Sultan, could be seen by me as I stood some five or six feet back in the crowd from the road. He tried to stand directly in front of me, obstructing my view, and asked me a question. I understood him to say, "Are you a prediger,—preacher?" for I thought he was using a German word,—that for preacher.

Not knowing what he said I was unwilling to answer, and as I did not care very much what happened after I saw the Sultan, I avoided him, craned my neck, from my tip-toes, and looked full in the face of Abdul Hamid II.

He wore a large size of the regulation fez, sat stooped over with his shoulders drooping, the left one lower than the right, with dark, knowing eyes that took in at a glance everything within, and a good deal without, his angle of vision. Any one experienced with the public appearance of great rulers would have recognized in the first appearance of this man and the first impression produced, a force in rulership that had to be reckoned with to the square inch and full yard of obedience.

The detective threw himself before me, jabbering something at my attention that was all absorbed in the Sultan. "Don't!" I tried to say to his rude behavior; "I'm busy looking at your ruler. Wait until he has passed."

The carriage was being driven at a moderate pace by a single servant, I think, although as my attention was all riveted upon the one central figure in the scene before me, I saw only the wonderful *Sultan*. "All alone" was the sum total of what I saw, "all alone," was his facial expression, "all alone" was his bear-

ing, "all alone" were his thoughts. The one-man-ruler was passing before me. His glance into the crowd was furtive. His head was inclined over his chest. His full-bearded chin rested upon his clothing. His nose was large, with the Turkish curve or beak at the end. The eyes thus turned up to catch sight of the people sent out a sinister feeling of strength without principle, of a man whose position had allowed, but whose conscience had passed upon as wrong, deeds darker than the shades of night could hide. Absolute unconcern, studied neglect of others, pre-derived opin-

ions, unhesitating violence, rode by. He was the world's one tyrannical ruler, and enjoyed a popular reputation greater than any other on the earth. Wicked, he was dignified. Subtle, he was manly in certain elements of greatness. On no one would he fawn, not for his life. Demanding absolute obedience, he was ready to obey nothing, and no one, save that which would bring him personal ease, or selfish enjoyment. To act with him in the affairs of state he had gathered

In the Safe Parlors of the Bristol Hotel.

about him men known to be unscrupulous, dismissing those whose policy was for play fair. The open sesame to court favor in Turkey has been utter willingness and ability to play false. The Sultan maintained an army of spies whose duty it was to follow in the shadow of every public official, note what he said, and relate what he did, to the Sultan. It is said that members of the same family have been compelled to spy upon one another. This espionage hung over the press, for the censorship of papers published in Turkey has been so great as to make it almost impossible to issue a paper worth reading. Facts that ought to be known to the public were suppressed. Attacks upon rulers of other countries were ruled out of the news

department. The report of any success of revolutionists was under the ban. Only such news as would strengthen the seraglio and weaken the power of the people passed the censor.

It is reported that once while his barber was shaving him, the Sultan shot him dead because his razor opened a small pimple causing the blood to flow upon his neck. At another time while walking in his gardens, the gardener, at work among the shrubbery, suddenly emerged from the shrubbery, which frightened the Sultan into the thought that he was about to be assassinated. Drawing his revolver he fired upon the innocent gardener, killing him. In his seraglio harem were many pretty girls. No one of them is assured of their lives from one hour to another. Finding one of them, a very beautiful young girl, once looking about among the curious novelties of his rooms, as he awoke from a day doze, he asked what she was looking at. She replied that she was examining a little revolver. He then asked her what it was used for. "To kill somebody, your majesty," she replied. He raised his own revolver to his eyes, took aim at her heart and fired. Covered with a rug, her body was carried from the palace by the attendant and secretly sunk in the depths of the Bosphorus.

By his brutality toward his mother she became insane. Fearing his brother might usurp him, he made him a common prisoner in an underground dungeon. His uncle is believed to have been murdered by him while in the palace bathroom.

After such treacherous cruelty in the palace the Sultan found no pleasure in the magnificent halls that the people's money had built for him. The walls echoed the death cries of his victims and his guilty mind believed the palace was haunted by ghosts. Another expensive palace, the Yildiz Kiosk, was wrung from his poor countrymen, where he later sought in vain to escape the hell of torment that breaks his fitful sleep.

This was Abdul Hamid who was now entering between the two lines of his bodyguard composed of sixteen thousand Arabs, Kurds, and Albanians. This was the despot whose soldiers were paid fifty cents a month when he felt like paying them, and told to burn and pillage when the fifty cents was not coming. This was the ghoul with irascible passion, studied cunning, malevolent suspicion, fickle judgment, whose sceptre of pitiless cruelty was already trembling in the uncertain grasp of enfeebled iniquity.

Already the New Constitution drawn up by the Young Turks, with the several cardinal principles of

liberty assured, was being inscribed on the banner of the growing Revolution:

1. Sultan to serve the people.
2. Liberty of subject inviolable.
3. Free press, religion and education.

When the leader of the revolution telegraphed to the Sultan some time after—"Grant the Constitution immediately or I will march on the city with 300,000 men," the Constitution was granted. Some days later several Turkish men-of-war were lying in the harbor with their guns aimed towards the palace. Calling his prime minister he inquired the reason of it, and was told that the new order of government had sent them there. The Sultan became insanely mad, and tearing down a chandelier, threw it in the face of the frightened prime minister.

The revolution of social forces that has been at work in Turkey for years is now bearing fruits, for the young men of the nation, abreast of their own government, have forced upon the Sultan the new constitution. It would be erroneous, however, to suppose that Abdul Hamid II wishes anything but glory to his reign and prosperity to his subjects. It would be unkind to his good points of honor, if his enemies will permit him to have any, to believe that there is not some yeast of kindness, howsoever small, in his heart, that under the right influences at the opportune time, may yet permeate the whole

batch of autocratic dough, raising his government from under the ban of universal contempt, freeing it from the studied oppression by corruption, and bringing to the irresistible power of the Mohammedan church a Christly spirit of tenderness that, supplementing the stern rigor of faith, and honest but fanatical enthusiasm of the devotee to Mohammed, may yet produce a new power in the world that shall tell mightily for righteousness. Millions and millions of men today bow toward Mecca,—millions who would die rather than recant. The Sultan, Abdul Hamid II, under whose reign the city of Constantinople has flourished in palace, mosque and thriving business, sparkling upon her seven royal hills like a mountain of diamonds,—this Sultan, having kept to his country the most glorious situation in all the world, this capital city with her blooming suburbs, and having stayed the hand of greed reached out from the muzzle of thirteen-inch pounders, may yet turn enemies into friends and critics into eulogists, when the more contemptible rascals of capitalism in our own land who have sought only their own indulgence by robbing others under the name of industrial superiority, will occupy the focal point of hate of all good people and the works of the Sultan, known as the "Sick Man of

Europe," will glow in ineffable beauty when put in contrast to the human vultures that flit, with foul wing, in the sunshine of today's moral awakening. Where the Sultan's tyranny kills one, the thieving trusts kill hundreds.

Abdul Hamid II has less sin to answer for than the American grafter.

When the carriage rolled through the immense crowd, I turned to the fellow who was seeking my identification. No, I could not show him my passport or any other official paper. That was in the office of the consulate, and the *teskere* had not yet been issued. Numerous guides in the city were present with their tourist parties. One of these had met me at the hotel, and had gone with me over a section of Stamboul. He came at once forward, assured the officer that I was a tourist stopping at the Bristol and asked that I be allowed to enjoy my freedom.

The crowd immediately broke up, equestrians and carriage drivers started at once for the European part of the city, or, if natives, left for their own section. Keeping close to one of the carriages I followed it back to Pera, to tell in the parlors of the Bristol the story of my afternoon's adventure.

Returning to the consulate I was informed that the fine had been remitted, and that for my new passport for Turkey the consul himself would pay half of the expense. With these two papers in my pocket I was prepared for several stirring incidents encountered after I left the Balkans. Both were necessary in

Turkey. The one insuring me the greatest safety and protection was the paper issued at Washington and not the one issued at the Sublime Porte.

Few tourists up the Dardanelles had seen more than I of graphic glimpses of Turkish customs and manners relating to personal freedom and political policy. I was about ready to arrange passage over the Black Sea in a Russian vessel for Sebastopol when the blowing up and sinking of a Turkish vessel near Constantinople with the loss of all on board and the dynamiting of a train back of the city, with the dying and dead carried through the streets from the wreck, urged me to return to Smyrna by the next boat out. The honor of a probable position as stenographer to the embassy was declined by reason of the riotous threatening of the population of the city. While I had been in the city an Armenian had fled from the Turks to the U. S. consulate where he was being lodged and fed lest his going out from there should forfeit his life to his unrelenting enemies. But the Armenians themselves are sometimes the cause of trouble in Turkey.

On leaving the port, in passing through the custom house my *teskere* was called for, stamped, and notation made upon it of the destination of my voyage, the nature of my business, and the length of time I would probably spend in the country.

Porpoises played about our boat on the way, jumping about in gleeful freedom without the need of passport or fare, and enjoying their sea life without fear or favor.

SCIENTIFIC EXPLANATION OF WIRELESS TELEGRAPHY

J. S. FLORY

IGNORANCE as a rule precedes superstition and superstition precedes and often hinders the finite mind from properly investigating the real truth of natural science. True science is often very simple if we are willing to look into it. Common sense and true science are really the same thing and apply alike to the natural as well as the spiritual plane, to things seen as well as to the things unseen—the one material and transitory—the other spiritual and eternal. I remember very distinctly when first the use of electricity was being utilized in a general way in sending messages by telegraph over material wires stretched on poles, how many otherwise good, sensible men allowed the wonderful mystery to puzzle their brains. One minister of the Gospel riding along with another of the same profession, coming to a point where some men

were putting up telegraph wires, said to the other, "See the mark of the beast; I tell you we are nearing the end of the world!" When wireless telegraphy was first spoken of many seemingly wise men looked askance at the informer as if he thought he was a fit subject for the asylum and a dangerous person to be at large. "Such nonsense!" said some. All simply because the law back of it was a great mystery to the lay student.

To the student versed in the rudimentary principles of true natural science it is very simple. It is well known that there is an entity of the universe called ether, of a finer composition than air and that it is of a nature that it fills all space, so to speak. It is the home of electrical fluids to such an extent that it becomes luminiferous, as shown when disturbed. The lightning

flash is an evidence and it also has potent power of a marvelous nature. It also differs greatly from the air about us, insomuch that it permeates solids of every conceivable nature. This is shown in the power of the X-rays to pass through highly concentrated solids of various kinds. It is claimed, and no doubt rightly so, that ether is the seat of all electrical phenomena as well as light and heat. These in their distinctive natures are the results of waves or vibrations on the ether, the apparent differences being governed by the length of vibrations or density of the waves and rapidity of their occurrence.

In the ordinary telegraphic methods what is termed the current of electricity is really an embodiment of ether surrounding the wire charged with electric energy and the wire keeps it from flying off or away from the wire, hence the vibrations occurring at one end of the wire and identical at the other, no matter what the length of the wire. But in wireless telegraphy the vibrations of electricity are projected into the ether that fills all space with such force that the vibrations are caught by all instruments that are turned alike, no matter where situated.—anywhere in the zone of ether disturbed by the powerful waves of vibrations that are set going by the instrument of projection. Not being held closely together in their path by any material medium, as in wire telegraphy, much is lost, yet there is enough of the energy in a condensed form to cause vibrations to reach the receivers. This is apparent as results prove. This is why it takes a larger force of electric force in wireless work than where a wire is used. Results are the same so far as intelligent communications go.

How very simple when we understand. It is said in Holy Writ the "wise shall understand," and no wisdom so clears the puzzled or muddled brain as the simplicity of God's truth—whether it be of things earthly or things spiritual. God's truth is clear as the noonday sun. It is the natural man that is troubled with a bundle of contradictions, eccentricities, and superstitions.

Pasadena, Cal.

OUR GLORIOUS COUNTRY.

MAUD HAWKINS.

Do we ever stop to consider what a grand country we live in, and how it is fast coming to take the lead in almost all enterprises? It is surprising when we look the matter up and realize the vast progress that has been made in a little more than four centuries since white men set foot on the continent and changed it from a wild wilderness to the mighty nation that it is today, and only 133 years since it gained its liberty.

Take Chicago for instance. It is the greatest railroad center and lake port in the world. It is also the greatest meat, lumber and grain market.

New York employs 50,000 tailors. All the gold mined yearly in the United States would not pay for the cigars and cigarets made in New York City in that length of time. Within a circle of sixty miles in diameter with its center in New York City there are more telephones than in all Great Britain. The railroads of the United States are long enough to reach seven times around the world, which is one-third of all the railroads in the world, and all the freight trains would make a solid train from New York to Manila. The United States produces more coal than any other country. New York is the second coal market, London being first. Connellsville manufactures the most coke. Cleveland leads in the manufacture of oil, Philadelphia in leather, Boston in shoes; also is the largest manufacturing center. Minneapolis leads in making flour. Louisville, Ky., surpasses all other cities as a market for tobacco. Leadville is the greatest mining district in the world. Baltimore is the center of the largest source of oysters in the world. New Orleans is the largest cotton shipping port. Cedar Rapids, Iowa, has the largest cereal mills in the world. The irrigation dam in the Shoshone River is the largest of its kind. The largest telescope yet made is at the Lick Observatory, Mt. Hamilton, Cal.

The recently burned shingle mill on Puget Sound was the biggest in the world. Brooklyn bridge is the largest suspension bridge in the world. California has the largest trees, Eastern and Southern United States have the greatest yellow pine forests and Savannah leads the world in the export of rosin and turpentine. The largest copper mines are in Montana. The water way along the Great Lakes is more important than any other lake or river route. The coasting trade of the United States leads the world. The lava beds in the West are the greatest in the world. The Missouri-Mississippi is the longest river on earth. The western prairies are the richest grain region.

Our country also leads in the production of wheat, oats, cotton, coal, pig iron, gold, copper, lead, aluminum, zinc, petroleum, meat. It supplies most of the silver used in the world. It produces the most bread, leather, footwear, lumber, woodenware, machinery and woolen carpets. It has the largest iron and steel works, most extensive oyster fisheries and largest gold mines. It has most railroads; the value of all the gold and silver money in the world would not be sufficient to rebuild them.

In regard to area we are not so much behind, when we consider that France is smaller than Texas, Wyoming almost one-half as large as Spain and nearly twice as large as England; Texas is three times as large as Great Britain. These are only a few of the leading points of Uncle Sam's greatness. One could go on enumerating them almost indefinitely.

Towanda, Pa.

NATURE STUDIES

CHIMES OF NATURE.

The little brooklets skip along
O'er pebbles gray adown the dell,
Serenely lull their rippling song,
And help the world with music swell.

The lisping winds from ev'ry deep,
Awake the echoes in their call,
While o'er the hills and plains they sweep,
And mingle with the waterfall.

The thunders play their magic drum,
O'er plain and hill and rolling sea,
They make a grand and thrilling fun,
And fill the sky with jubilee.

The feathered friends in forest trees,
Delight to chant their merry lays—
Bestowing free as air we breathe,
Their lays of joy through all their days.

Why not our voices freely tell
The nature chimes so full of cheer,
That ring as clear as silver bell,
Around the world throughout the year?
—C. Edward Bender.

TWILIGHT AND DAWN IN JUNE.

M. E. S. CHARLES.

WHEN twilight comes we lose sight of the busy bees and ants. The butterflies hang motionless like gorgeous leaves to the plants. The birds' little heads are all tucked under their wings, taking their rest.

But what are the flowers doing, and the kitchen garden, what is going on there? Can it be that they, too, go to sleep? We can hardly imagine sleeping bean-vines and dozing onions. But such things may be seen if we take the pains to visit different plants and flowers.

Portulaca goes to sleep first. Its saucer-shaped flowers close at or before sunset, taking the form of opening buds. They seem to worship the sun and have no real life except in his presence. If the morning be cloudy the portulaca will not have the heart to open a single flower. After the flowers are settled for the night the leaves grow sleepy, and gradually take their nocturnal position. They raise themselves upright, nestling close to the stalks of the plant and close to each other.

When dusk begins to gather, it is bedtime for the clover leaves. The two side leaflets of each cluster approach each other face to face, till they take the position of the covers of a closed book. Then the

central leaflet bends forward till it touches the edges of the other pair. The attitude of the little sleepy heads expresses devotion rather than repose, for they look as if they were offering prayers with their heads bowed low over their folded palms.

It is a pretty sight to see a field full of dandelions wake up under a bright spring sun, despite the dislike the ordinary farmer has for it. They twinkle out, one after another, as stars do at night.

The wisteria vine stays awake late at night. Some one has suggested that living in town so much they have taken on city ways. The leaflets droop in sleep and one expects to find them quite limp and is surprised at their crisp firmness upon touching them. This curious crispness seems to be a characteristic of all sleeping foliage.

The grape leaves go to sleep about the same time the wisteria does. When in sleep the leaves are turned up at the edges and depressed in the middle so as to form shallow saucers.

The common locust settles down early. The end leaflet of the long cluster hangs like a plummet, and the side leaflets turn their points toward the ground, and dangle in two rows back to back. The leaves of the little oxalis also sleep with their backs to one another and their tips pointed toward the earth.

But some of our flowers wake and keep watch while others are fast asleep. The honeysuckle grows more alive and alert as the darkness increases. Fresh flowers open soon after sunset. They are slender vases filled with perfume, which is shed forth on the night air. This perfume is a silent invitation to the hummingbird and hawk moth, and while twilight yet lingers we may see him among the flowers, beginning his night of revelry which will keep up until the faint rays of dawn begin to appear in the east.

The white day lilies, like the honeysuckles, open at evening, and live for a night and a day. Indeed, most deep-throated flowers open at night. The insects that visit and fertilize them are large and conspicuous, and if they flew by day they would soon fall a prey to the birds and other enemies.

Yucca filamentosa is another night flower. The flowers through the day hang limp, half closed and scentless. As evening comes on the petals begin to draw backward, the blossoms open widely and become great six-pointed stars. But the friend this southern

flower waits in vain for is probably a thousand miles away in Mexico. As the night wanes the stars lose their star-like form, and daylight finds them drooping bells once more, dangling in limp dejection.

One of our nocturnal flowers is the evening primrose. The plant is a sturdy, upright affair from two to eight feet high, having the aspect of a weed. Towards evening the buds begin to swell. A few minutes after sunset they grow so fast that the increase is visible to any one who may be watching. Little starts and thrills go through the expanding blossom like the slight stirrings and long breaths of an awakening child. Then the four yellow petals draw back, showing the heart of the flowers. As twilight falls, the primrose begins to breathe forth a fragrance which grows stronger and sweeter as darkness closes in. By this and by the glimmering of the yellow petals, the night-moth is lured to fertilize the flower.

After all, it is a mere figure of rhetoric to speak of the "sleep of the earth." Mother Nature has no sooner hushed one set of children to rest than she begins to attend to the needs and to superintend the labors and frolics of many more.

Night is as full of life, as beautiful and intense as the day, and as unknown to many of us as another planet.

Spiceland, Ind.

AMONG THE FEATHERED WOOD FOLK.

Bird Songs.

I thought the sparrow's note from heaven,
Singing at dawn on the alder bough;
I brought him home, in his nest, at even;
He sings the song, but it pleases not now,
For I did not bring home the river and sky;
He sang to my ear—they sang to my eye.

—Emerson.

AND now the days have come once more when the birds carol to our ears, and the river and sky, the meadows, hills, and dales, all "sing to our eyes," if we are but ready to look and to listen—"For, lo, the winter is past, the rain is over and gone; the flowers appear on the earth; the time of the singing of birds is come."

"I did not bring home the river and the sky," says Emerson, and lacking these, the bird's song pleased him not. With perfect freedom comes perfect joy to the hearts of the feathered wood folk, and all unconsciously they reflect in every trill and warble and musical call one to another, the never-ending beauties of field and forest. And, as we listen to their notes of gladness, we, too, drift into the mood of the little singers, and look with a more wondering admiration upon the beauties that surround us. We discern the face of the sky and the earth, we lift up our eyes unto the everlasting hills, we note the river and the streams thereof that make us glad.

Not always, however, is it possible for a joyous

singer to transfer the happiness of his own heart to the heart of another. The verses of the poets are as often touched with melancholy as with gladness by the ringing notes of a woodland songster—

"My heart aches, and a drowsy numbness pains
My sense, as though of hemlock I had drunk,"

are the opening words of John Keats' "Ode to a Nightingale," and later in the poem he gives us this exquisite tribute to a peerless singer:

"Thou wast not born for death, immortal Bird!
No hungry generations tread thee down;
The voice I hear this passing night was heard
In ancient days by emperor and clown:
Perhaps the selfsame song that found a path
Through the sad heart of Ruth, when, sick for home,
She stood in tears amid the alien corn;
The same that ofttimes hath
Charmed magic casements, opening on the foam
Of perilous seas, in faery lands forlorn."

And listen to Robert Burns, speaking to the warbling woodlark—could anything be sweeter, more charming, more full of a perfect understanding than these characteristic words of his?

"Say, was thy little mate unkind,
And heard thee as the careless wind?
O, nocht but love and sorrow join'd
Sic notes o' woe could wauken!
Thou tells o' never-ending care,
O' speechless grief and dark despair—
For pity's sake, sweet bird, nae mair,
Or my poor heart is broken!"

But would you have poems ringing with the pure joy and gladness of the very birds themselves, these, too, you can find among the songs of men, and none is more lovely than Shelley's "Skylark":

"Hail to thee, blithe Spirit!
Bird thou never wert,
That from heaven, or near it,
Pourest thy full heart
In profuse strains of unpremeditated art.

"What thou art we know not;
What is most like thee?
From rainbow clouds there flow not
Drops so bright to see,
As from thy presence showers a rain of melody."

Before turning our attention from the songs of the poets to those of the birds, one verse from Robert Herrick's "Going A-Maying" might well be cited as a motto for enthusiastic nature students, since early dawn is the time of all others to hear the sweetest songs of many of our bird musicians:

"Get up, sweet slug-a-bed, and see
The dew-bespangled herb and tree!
Each flower has wept and bow'd toward the east
Above an hour since, yet you not drest;
Nay, not so much as out of bed?
When all the birds have matins said,
And sung their thankful hymns, 'tis sin—
Nay! profanation, to keep in!"

So we shall imagine "Sweet Slug-a-bed" is up and dressed and out exploring, first hearing, perhaps, the "sparrow's note from heaven" as a reward for early rising. The song sparrows are our near neighbors. They visit impartially our gardens, orchards, parks, and hedges, coming into full view quite fearlessly, ready at any time, it seems, to sing their sweetest and best. Even at midnight their voices may sometimes be heard in cheery song, if they happen to be in the right mood.

But the most charming music of the song sparrow is heard usually while the bird is on the wing, when for

With what enchanted music thou dost fill
The fragrant dusk! A song that is a sigh!
Afar the echoes quiver, faint, and die:
Silent the air; then, once more, Whip-poor-will!"

This nocturnal bird is hard to find in the daytime, as usually he harmonizes so perfectly with his sur-

Bluebird's Notes

roundings, the soft brown and yellow tones of his pretty feathers making him appear like a bit of dried lichen, or a cluster of dead leaves against the rocky ledge or tree branch on which he stretches himself out to rest. If disturbed he flits away quietly and with as little disturbance as a huge butterfly might make in flying from one flower to another. Quietly resting and sleeping during the daylight hours, he makes his voice heard shortly after sunset, and—

"Mourns unseen, and ceaseless sings
Ever a note of wail and woe."

And yet the call of the whip-poor-will, though mournful, is rather pleasing to hear. There is a certain rhythm in his notes when heard from afar. If very near to the bird a peculiar "cluck" may be heard between the notes that form his name, and his wings will be seen to be kept in a constant tremble during his entire evening song.

Bobolink is another bird that calls forth his own sweet name to the delight of his friends—

"Robert of Lincoln is telling his name
Bobolink, Bobolink,
Spink, spank, spink,"

are Bryant's familiar lines. Sometimes the little rascal

Robin's Notes

will hide from you in the meadow grasses, but he is too fond of the lime lights of popularity to remain a recluse for very long—

"Down among the tickle-tops,
Hiding 'mid the buttercups,
Bobbing in the clover there,
See, see, see!"

With a sweet little musical gurgle he tunes up for

a display of his vocal powers. "Pl-leu, pl-le-ah" he begins, as much as to say, "Ready, now, ready." Soft and mellow these first notes are, a sweet smothered trill, as if the little songster had tucked his head under his wing for the opening bars of his carol. But soon his song of joy begins in real earnest, until for pure ecstasy he can no longer remain on the swaying branch upon which perchance he has sung his first notes, but shoots up into the air, not very far above the meadows, however, hovering rather near the earth, swayed this way and that by the wind, singing with such reckless abandon of joy and merriment and rollicking good humor that one laughs in pure sympathy to hear him—

"Now they rise and now they fly;
They cross and turn, and in and out,
And down the middle and wheel about,
With a 'Phew, shew, Wadolincon,
Listen to me, Bobolincon!"

The blue bird carols, "Tru-al-ly, tru-al-ly, tru-al-ly" early in the year, and how glad we are to hear his

First Line, Pewee's Notes
Second Line, Oriole's Notes
Third and Fourth Lines—Meadowlark's Notes

sweet notes of welcome to opening buds and warm sunshine and springing grasses!

"Hear me, hear me," he insists while the weather is still cheerless and cold, but as the sun grows warmer day by day he encourages the croaking weather prophets by his blithe singing, answering the robin's cheery—

"Lit, lit, lit, lit, lit, leu, leu!"

with his pretty call of—

"Chee-oo-wy, chee-oo-wy, Chee-way, chee-chute!"

"Wait, wait, wait," chides the nuthatch, as if in answer to both, and then, responding to roll-call, we hear the pewee's clear notes, while the oriole fills up all pauses in bird conversations by sending out loving invitations to his pretty mate—

"Sweetheart, sweetheart, come out and play with me."

It would be impossible in a short article, of course, to touch upon all bird-songs and bird-calls. Each person has his favorite songster, for birds have a way, as

THE INGLENOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

HE serves his country best who serves his fellow-men, ministering to the poor and unknown as well as to the rich and worldly great.

TRUE patriotism is as much in evidence when the country is bowed beneath some loss or defeat as when with flying colors and joyous shout it celebrates some victory.

Breathes there a man with soul so dead,
Who never to himself hath said,
"This is my own, my native land!"
Whose heart hath ne'er within him burned,
As home his footsteps he hath turned,
From wandering on a foreign strand?
If such there breathe, go, mark him well:
For him no minstrel raptures swell,
High though his titles, proud his name,
Boundless his wealth as wish can claim;
Despite those titles, power and pelf,
The wretch, concentered all in self,
Living, shall forfeit fair renown,
And, doubly dying, shall go down
To the vile dust from which he sprung,
Unwept, unhonored and unsung.

—Walter Scott.

PATRIOTISM—love of country and devotion to its welfare—to be of the genuine sort does not mean simply love of the flag, the constitution, the soil over which they hold sway and the institutions through which they seek to express themselves. More than anything else it must mean love of the people for whom these things were secured at terrible cost. For the people—their well-being and prosperity—are of more importance still than the agents through which their welfare comes, and any show of patriotism that does not recognize this fact is altogether a pretense. Is there any patriotism in the present accepted observance of the historic July the Fourth?

IMPRESSIONS. No. 1.

Our plans for attending our Annual Conference at Harrisonburg, Va., worked out successfully and the iron horses of one of the main roads crossing the level stretches of the East Central States and winding over the mountains of the middle East, brought us safely to the meeting grounds. Besides the usual attractions of such a meeting this one was of particular interest to the writer because of its location. Hitherto our journeys toward the East had been bounded by the hills of southeastern Ohio, among which the writer was born. The mountains of the East, therefore, were a revelation of beauty with their timber-clad slopes and little valleys nestling between, for they differ widely from the rugged Rockies and not a little from the mountains of the Pacific slope.

The imagination, directed by what we had heard and read, had given us some idea of what these eastern mountains were like, but we forgot the pictures of the mind in the beauty of the real thing. In only one case did our imagination get the colors mixed or overdraw the real, as it were. That was in painting the far-famed Shenandoah Valley. We had been led to believe that it was richer and more beautiful than anything we had ever seen and consequently we had associated it in our mind with the rich rolling prairies of Iowa and Illinois,—the best with which we were acquainted,—to its serious injury. True, we did not see *all* the valley, and it is true also that we *did* see some very beautiful land and some rich farms, as was evidenced by the farm improvements, but the poet's

"Fair as the garden of the Lord"

has more than one figure of speech in it in our opinion.

A farmer going from the East to the West or from the West to the East will have to readjust his idea of what constitutes good soil. In the middle West he can tell about all there is to be said of a piece of land by saying it is "good, black soil." In the East very probably the best he can say of a farm is that it is "good *red* soil." Judging by the cultivated fields and meadows and the fine gardens, the "good, red soil" makes good, all right, and contributes a large share toward the support of the population of that section.

But if the Valley of Virginia must take second or third place as an agricultural country, it need not yield the palm to any section when it comes to the production of fine people. By this we do not mean fine in the sense of world-brilliance and polish, but in the best sense—simple goodness and kindness of heart,—the qualities that outwear all others in practical, everyday life. We had heard that these were characteristics of the people of this country, but we know it now in the unforgettable way in which real personal experience fixes such things in one's heart.

And this goodness and this kindness of heart do not exhaust themselves on Sundays and in the people's

intercourse with strangers. They have, perhaps, their most beautiful expression in the attitude of neighbor toward neighbor, of parents toward children and children toward parents. We were especially impressed with the tender concern of a boy of perhaps sixteen for the welfare of his feeble mother. He worked at one of the lunch counters and was running over with life, as boys of that age usually are. He might have staid "with the boys" all the time and taken it for granted that "somebody would look after mother," as many boys do, but he did no such thing. He brought her fruits and many refreshing drinks from the stand and helped her to the dining hall at mealtime unless her meals were brought to her by some other member of the family. On the train we heard a man give this simple illustration of the difference between the man or boy of the Virginias and the man or boy of the West in their regard for the opposite sex: If a woman in the West drives to church unaccompanied she must tie her horse and look after it herself, no matter how inconvenient the hitching place, though the churchyard may be full of men and boys. On the other hand, the unaccompanied woman of the Virginias is relieved of any further care concerning her horse as soon as she drives up to the churchhouse. This is simply the illustration of a principle which un-

Declaration of Independence

When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty and the pursuit of happiness. That, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundations on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be exchanged for light and transient causes; and accordingly all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security. Such has been the patient suffering of these colonies, and such is now the necessity which constrains them to alter their former systems of government. The history of the present king of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute tyranny over these States. To prove this, let facts be submitted to a candid world.

* * * * *

We, therefore, the representatives of the United States of America, in general congress assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the name and by the authority of the good people of these colonies, solemnly publish and declare that these united colonies are, and of right ought to be, free and independent States; that they are absolved from all allegiance to the British crown, and that all political connection between them and the state of Great Britain is, and ought to be, totally dissolved; and that as free and independent States they have full power to levy war, conclude peace, contract alliances, establish commerce and to do all other acts and things which independent States may of right do. And for the support of this declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes and our sacred honor.

ostentatiously reveals itself in numberless ways, showing the high regard of the stronger for the weaker sex. We hasten to state that there are indeed exceptions in the West to what the speaker above laid down as a rule in that section, but we further state, without fear of contradiction, that the exception's name is "Rare"; the rule which it resembles still lives and flourishes back in Virginia where it heaps much honor and glory to itself.

What is the influence that makes these commendable traits characteristic of these people? We are not sure that we know, but there are other distinguishing traits present which, while they may not have given rise to these are very closely related to them and have, in some degree, the same power to ennoble and strengthen character. We refer to pride of ancestry and attachment to old homesteads. Of course the active, energetic, pushing West has no time for such sentiment, but it is the poorer because it has not,—poorer in the priceless qualities of mind and heart that have their root in such sentiment. No one can be familiar with the lives of his ancestors, especially if they were upright men and women, without feeling an additional responsibility for his own conduct as well as a greater respect for those who carried on the work of the world before him and

(Continued on Page 647.)

THE HOME WORLD

THE GREAT WHITE PLAGUE

O. G. BRUBAKER, M. D.

IF the last remark in my former paper is to become true, namely, that it begins to look like there may come a time when tuberculosis will be as rare a disease as smallpox and diphtheria, we must plan a most rigid and national campaign. Every one, both the tuberculous and the well man, must lend a hand. No individual can accomplish much, but if the nation with her various institutions, viz., the church, the school and the state, can be enlisted in the warfare, much, and very much can be accomplished. This means that time, money and energy must be used. We need more fresh air and sunshine in our houses, in our schools, in our churches and in our public halls.

If we accept as proven by science and research that the germs of tuberculosis are spread from host to host largely by means of dry sputum carelessly expectorated on our streets, in our cars and on our floors, we can readily understand why anti-spit ordinances are passed by our cities and why it is that public health boards insist on everybody becoming an anti-spitter. It occurs to me that it would be a good thing for our school-teachers to give a morning talk now and then on the dangers of pupils using each other's pencils, slates, handkerchiefs, and exchanging gum, whistles, etc. I also think that a few rules like the following ought to be hung in every schoolroom and public gathering place:

Do not spit except into a spittoon, or a piece of cloth used for that purpose alone.

Do not put your fingers into your mouth.

Do not wet your fingers in your mouth when turning the leaves of a book.

Do not put pencils into your mouth.

Do not hold money in your mouth.

Do not swap apples-cores, candy, chewing-gum, bean holders or anything that is put into the mouth.

Peel or wash your fruit before eating it.

Never cough or sneeze in a person's face.

While these rules are intended primarily for pupils in the public schools we can all profit materially by putting them into practice. And education along this line

as well as along any line should not stop in the school-room, but we should be enough interested to read articles and attend public lectures on sanitation and public health.

Dr. Woods Hutchinson, of New York, says that, "*Underfeeding and overwork are responsible for more deaths from tuberculosis than any other ten factors.* Rest and abundant feeding are the only known means for its cure." This is why so many more deaths occur among the poor than the well to do, and this too is one reason why the physician can not fight the battle alone. What can a doctor, though he be the best in the land, do if his patient can not have the three essentials for his recovery, namely, rest, fresh air and abundant food? A doctor under such deplorable conditions could have little more hope of success than if his patient were already dead.

Since it is in the early stages, the so-called incipient stages, that most of our cures are perfected, it will be worth while that we look into some of the symptoms and manifestations of this dread disease so that we may seek the aid of competent physicians before it is too late. Now I do not mean that it is early enough when you have lost several pounds in weight, have been nursing a vanishing appetite for several months and perhaps have been trying to make yourself believe that that nagging cough is only a cold or bronchial imitation, although it has been bothering you for a half year or more and gradually getting worse, but I mean that while it is true that anorexia (loss of appetite), general malaise, constipation and indigestion are found in a large number of diseases and conditions, the presence of such conditions should be sufficient reason for consultation with your physician. We should especially be on our guard when along with loss of appetite, gradual loss of weight, languor, more or less nervousness, constipation and indigestion we find that we are suffering with pain and weakness in our muscles and are bothered with a nagging cough and thick, tenacious expectoration. It is claimed by most authorities that some or all of these symptoms will be found

in a carefully-prepared history of every case of pulmonary tuberculosis and that most of these symptoms are present from two to three years before the disease can be diagnosed as undoubted consumption.

Do you not see how important it is that these conditions and symptoms be looked after? If they were rightly treated and cared for during this pretubercular stage a large number of patients would never reach the destructive stage. This may seem a little too ideal and no one knows better than the physician how very difficult it is to be sure of a diagnosis in these earlier stages of tuberculosis. But we are becoming more proficient; new instruments of precision as aids to diagnosis are being perfected constantly, so that to-day a physician with his microscope and well-trained eye and ear can be much surer of his ground than he could five or ten years ago. So, if you, the patients, will assist in watching your symptoms and giving your physician a clear, honest history and submit to a careful painstaking examination, you will be saved in ninety cases out of a hundred from the disease we all dread so much—the Great White Plague.

Now, in concluding these articles let me say a few things relative to the fallacies and benefits of a change in climate. I use the word fallacies advisedly, for if you could read the reports in the medical journals from practitioners in Arizona, Colorado, New Mexico, California, as well as elsewhere, or if you were to visit some of these too-highly lauded health resorts and see the hundreds of poor, destitute, homesick, disheartened, careworn, miserable creatures of the dust dying away from home in a strange land, you, my fellow-physician and kind parent, husband, wife, daughter or son, would think at least twice before you sent your patient, friend or relative to another climate. While I am a firm believer in the beneficial effects of certain climates and I know to a certainty that a great many have been helped and others saved by an early change of climate, yet I want to say that climate, though it be the most favorable in God's great world, alone without the aid of other more essential factors, never has, does not today, and *never will* save a tubercular patient. He who says that it will is either a notorious prevaricator or a poor ignoramus, neither of whose advice should be considered. As to the truthfulness of this statement I refer you to any competent physician who is practicing in any of these so much vaunted health-giving States, or any other honest individual who has investigated the subject carefully. It is a shame and a disgrace that we have men in the medical profession who still insist upon sending every tubercular patient out West. Again I repeat that a great many patients are greatly helped by a change in climate, but to send poor (financially) consumptive who is already succumbing to the dread malady to one of these western climates where eggs cost 50 cents to

\$2.00 per dozen, and milk 25 and 50 cents per quart and all other food in like proportion, and where rooms and tents or any place to lay one's head can scarcely be had without a large bill, and where hundreds of other woe-begone unfortunates are dying all round them and where relatives and friends do not exist save in the mind—is either most hideous malpractice or ignorance too gross to be endured in this enlightened age. But lest you think I am overdrawing this thing or am wrongly informed I take the privilege of quoting from Dr. W. Warren Watkins of Phoenix, Arizona. I could as well quote from a dozen other more or less eminent authorities, but 'Dr. Watkins' article is before me in a recent copy of the *Journal of the American Medical Association*, Vol. LII, No. 15. Here are some things he says:

"There is no intention here to disparage the value of a suitable climate in the treatment of pulmonary diseases, but every intelligent physician knows that climate, however favorable, is valuable only as a subsidiary adjunct to one of the three essentials for the constitutional upbuilding required to check the process of a pulmonary tuberculosis,—these essentials being rest, proper food and fresh air. . . . Any physician who advises a patient to sacrifice the first two essentials for the sake of the third is guilty of something more than mere ignorance, for in this day of free knowledge ignorance on this point is sin. . . . If the patient has not the means to place himself under the direction of a physician, if he is not able to pay for the necessary care when he is required to rest in bed or otherwise, if he is not able to provide himself with the very substantial food which is always required, then he can hope for absolutely no more improvement in Arizona or any other resort than will come to him at his own home, wherever that may be, with the advantage of the solicitous care of family and friends. The physician who advises him otherwise is guilty either of ignorance or malpractice; and even with all these advantages possible moribund patients can hope for nothing more here than at home and should be so advised." The histories of case after case could be given illustrative of these deplorable conditions but space forbids me giving them here.

When we fully realize that climate is only to be considered an adjunct to the successful recovery of the tubercular patient it seems to me we shall be much farther along the right path than we are now. That patients in the earlier stages can be cured and are being cured at home in the most unfavorable climatic conditions is being proven every day. Then why should we place so much confidence in the great elusive hope of a change in climate? You will say, what shall we do with our relatives and friends who are moribund and are growing worse all the time? There is only one thing to do—if you do right—and that is, unless you

can make the patient as comfortable and happy in the new climate as he would be at home, for the sake of humanity and the poor unfortunate, sick, moribund patient keep him at home. You and your physician should meet the conditions honestly, courageously and firmly. You should ease the patient's pathway to the Great Beyond and not deliberately shirk your duty by sending him across the continent to die away from the solicitous care of friends and kind ministrations of a family.

Now I do not want to close this article with such a gloomy picture, for I am optimistic on this subject. And my purpose in writing on this subject at all is that all of us may be aroused to a fuller sense of our duty and that we may lend a hand, and in lending a hand not only prevent but aid in the curing of those who are so unfortunate as to have the disease. Let me say in conclusion that we see to it that we are in no way responsible for making any one hungry, let us see to it that we deprive no one of a breath of fresh air or a drink of pure water and let us be sure to have plenty of sunshine and good fresh air in our homes. Above all things, remember that the absence of rest, fresh air and proper food is the deathblow to many a consumptive and that the presence of these with the careful ministrations of family and physician is the means of saving hundreds of our fellow-men.

Mt. Morris, Ill.

A CHILD'S IDEAL.

"MOTHER, you can't think what I heard Miss Elliott say!" This in dismay, from my eight-year-old daughter. "She said, '*you bet.*'" A thoughtful little pause—"Well, anyway, I know *Miss Laura* wouldn't speak that way," she concludes triumphantly. Troubled faith is firm again.

Miss Laura is the child's ideal. She lives in that enchanted land of "when I'm a young lady," of which this little girl so often dreams. Miss Laura's dresses are lovely, and she plays beautifully. She goes to parties and has such pretty hands and teaches a class in Sunday school. Best of all, she likes little girls. She lets them walk home with her, and sometimes asks them in to tea and plays duets with them. Miss Laura has confided to Eight-Year-Old what *she* used to name *her* dolls, and that *she* used to think the multiplication table was hard, too.

Little Eight-Year-Old always sees out of the tail of her brown eye just when Miss Laura comes into church, and tells her mother, when she gets home, which hat she wore, and tries to make one just like it for her best paper doll. When she comes running in from school with shining eyes and says, "Mother dear, *guess* whom I saw on the street just now," it isn't hard to guess, "Miss Laura."

"Yes, isn't she just lovely! Do you 'spose I could ever be like her?" she adds, wistfully.

If you chance to see Eight-Year-Old holding up her diminutive skirts with a queenly air as she trots across the street, you may know she is thinking of Miss Laura. Perhaps she tries to tell us in grown-up phrase that she "misfortunately forgot her 'rithmetic," or she assumes some grand seriousness of manner or purpose that is ludicrous in one of her years. Miss Laura is responsible.

When bedtime comes, Eight-Year-Old thoughtfully surveys her sturdy little night-gowned figure in the glass, and asks, "Do you think I ever can be *really* like Miss Laura, mother?"

"Perhaps so, dear," I answer, absently, for I am tired; "time for little girls to go to bed."

"I'm sure I can't," she sighs, "'cause I'm not slim enough."

The little prayer is said, and the petition, "Bless Miss Laura," is never forgotten. Then, after Eight-Year-Old has been kissed and tucked into bed, she calls me back once more: "Mother, do you 'spose Miss Laura ever got naughty when she was a little girl?"

I think it is beautiful and sacred that Miss Laura, with her sweet ways, has called forth such love and loyalty from my romping little daughter. It is lovely—and prophetic.—*The Congregationalist*.

The Children's Corner

WILLIE HOWARD'S FOURTH.

T. H. FERNALD.

IN the town of Bedford there lived a boy whose age was about twelve years—Willie Howard. Willie was brought up in a Christian family, both his parents being active members of the church.

Willie's grandfather, Nathan Gray, was a minister in the church to which his parents belonged and with his good wife lived some fifteen miles from Bedford, upon a very large farm which was well stocked with cattle, sheep, etc., and employed much help.

One evening just before our national holiday, Elder Gray's church met at his farm to plan for a picnic for the young—and old as well—of the congregation, to be held on the Fourth of July. After arrangements were completed, the elder's wife suggested that the Bedford congregation be invited to join them, which met the hearty approval of all, and it was decided upon. This big picnic was to be held at the Gray farm, which was the largest in the community.

Elder Gray accordingly sent the invitation to the Bedford brethren, which was accepted with as much pleasure as it was given.

The Bedford people decided to meet at their church at 8 o'clock upon the morning of the Fourth to await

the "large wagon" from the Gray farm, that was to meet them.

Willie—as were all others—was perfectly delighted, and after getting the permission of his parents to invite his friend Freddie Brown, he hastened to his home to tell him about the "big picnic" and invite him to go.

Freddie's first question was a great surprise to Willie, who had been brought up to observe the Fourth in a sane manner, for he said: "Are they going to have any firecrackers and fireworks?"

"No!" said Willie, "we don't have such things over to grandpa's and grandma's."

"I don't want to go then," said Freddie, "for it will be *awful dull* without them on the Fourth of July. What is the day for but to make all the noise you can?"

"I am afraid of them and don't want any. Then we can have lots of fun without them. We can play ball, croquet, go boating and swimming, ride horseback, climb trees and oh, how jolly it is on a farm!"

"I'd rather stay home and have more fun."

Willie was rather disappointed and returned home to tell his parents. He knew that where "grandpa and grandma" Gray were there would be "lots of fun."

The morning of the Fourth dawned bright and beautiful with just breeze enough to be comfortable. Willie was up bright and early, happy as a lark, and as excited as only a little boy who is going on a picnic to grandpa's, can be. It was always his great joy to go to the farm. This day his Sunday-school class, as well as the whole congregation, with his parents, would be there.

At 7:30 o'clock the grounds about the Bedford church were filled with as happy and jolly a party as is generally seen. The well-filled lunch baskets were to be seen upon the steps of the church.

Suddenly Willie, who was the most eager of the party for the ride and to visit the farm, started down the street as fast as he could run, waving a little flag—each child was given a flag—and shouting, "There comes James with the hayrack and four horses." All was now excitement among the children. Soon the large wagon drawn by four beautiful horses came up in front of the church, and Willie was sitting with the driver, who was Mr. Gray's oldest and most trusted farm hand. In the bottom of the rack was a liberal supply of straw covered with new horse-blankets and robes, and the sides and ends draped with the "stars and stripes"; while a large flag floated from a pole at one end. In each horse's bridle a tiny flag was placed, and they seemed to enjoy the "fun" as much as the children.

The baskets were safely placed in the rack, then the people got in. All being ready, the big wagon started for the farm. This was one of the merriest parties that ever took a ride in a hayrack.

Upon arriving at the farm they found the elder and

his wife and their congregation and all the farm help, awaiting them with a hearty welcome. A large awning had been placed in an orchard near the house where the meals were to be served.

After a cordial welcome the farm was given over to the young people, who made a tour of the big barns, the fields, pastures; everywhere they *could* go they *did* go. A short service was held at the farmhouse by the older ones, that the day's enjoyment might be begun right.

At 12 o'clock the large farm bell sounded to call to dinner, and you should have seen the scrambling of the children to get under the "big tent," as they called it. The ride in the pure country air, and the romping about the farm, had given them all very good appetites. They were in all things led by our "real boy" Willie, who had cut up many pranks. At the word from Elder Gray all took their places at the big tables, and remained standing until God's blessing had been asked upon the bounties there spread.

Dinner being over the young people were again given the freedom of the farm, and things were very lively for some hours. There were ball games, swinging, foot-races, jumping, and riding horseback. The more timid looked to Willie and took courage from him and entered into the sports with much of his life. Anything and everything they could find to do, and everywhere they could go, he led them. There were boating and swimming in the river and more than space will allow us to mention.

At 5 o'clock the big bell again sounded and all gathered under the large elm trees in front of the house. Here all entered heartily into the singing of hymns and songs appropriate to the day. There were short talks upon "Freedom—True and False," and stories told about the early history of our country.

At 6:30 the party again assembled under the "big tent" for supper, after which the horses were harnessed to take the visitors home. A most glorious Fourth had been spent without an accident or anything to mar the pleasure of the occasion.

One of the most tired of the party was the "real boy" Willie, who had been everywhere a young boy could go. He went directly to his bed, thinking in the morning to go see his friend Freddie, and tell him all about his Fourth of July.

It was a late hour when Willie awoke next morning—the sun was streaming into his room and the birds singing joyously. His first thought was to see Freddie but what was his great surprise and sorrow to learn that his friend was in the hospital, having been badly burned while playing with firecrackers and toy pistols.

Willie and his companions upon the picnic returned home unharmed and happy, which occasion they will always remember with pleasure, while Freddie Brown will always think of his Fourth with regret. Which of these two boys spent the *best* Fourth?

THE QUIET HOUR

SUNSHINE.

D. D. THOMAS.

IN the beginning God was. His spirit moved upon the face of the great deep, whose depths were in every direction. There was no bottom anywhere. Somehow shut behind some great wall that was invisible God had laid away his glory. He moved away from his shekinah to exert his power in the eternity of space. Some yearnings must have moved him to go, but the wisest man does not now know just why he went. One cannot think that God was an adventurer, nor can one believe that he did it as a pastime. Somebody says that his purpose is eternal. He knew just what he was about to do and what he was doing it for. Most mortals have never just exactly found out. Now God is not so diplomatic, can we think, as to regard our knowledge an injury to the interest of the kingdom, but he knows we mortals would not understand anyway.

Then for some unseen reason God began to make worlds. He spoke laws into existence and like the wheels of some great factory they began to turn, and out came ready-made worlds starting on their course with as much contentment and meekness as a single file of sheep on their way to the pasture at the early dawn of a beautiful day. The birds were not there to sing, but this new motion which would far things had there not been perfect laws went forth as the most beautiful warbling at the spring day sunrise. I think that God likes music else he would not have placed it so largely in his creatures. He does not need tongues and vocal organs in them to express it either. His will goes forth and the oratorios of heaven and earth resound with perfect harmony. Complete arrangement has been made for it when he shall pass through the universe again and gather his jewels home.

How long God looked upon these worlds flying through space is not told. He saw that it was good. Whether he saw it right away or whether it took some time does not matter. It is enough to know that he saw. His workmanship pleased him and his mouthless creatures did not forget to praise him. I wonder whether his pleasure was akin to that of a little child when it looks upon a piece of machinery and sees the wheels go round. Then one can have some idea of it, for we have all been little children and touched that pleasure.

So God saw that it was very good. God had set

the candles in heaven, but there was too much space for so dim a light. God saw that it would be good to have a greater light. And just as the spheres were sounding forth their loudest praise and the creative spirit was strongest in the Great Being, he took a handful of his glory and clothed the largest sphere with it. He wanted enough light, so he took the largest sphere. And from it that glory has been shining forth through all the ages. Such is this handful of glory that men have forgotten that it is the creature and have praised it as the creator. Well, if a little of God's glory is so much how will it be when we shall see him in the fulness of it?

This very sun seems to be God's strongest, best servant. God brought forth the plants and animals and the sun keeps them alive, gives them food to eat and shelters and protects them. Like the squirrel in the forest he stores up for future use. The depths of the earth contain great beds of coal that the sun placed there ages ago. And there are great vats of oil that he knows all about. When one lights them they give off those old rays of light, and we see by them, and the old heat and we warm by it. We know that there is very much more down there waiting to be brought up to cheer us. Through the sun God shows his love for us. The sun is one of God's best servants.

The sun is a great artist. He gives the leaf its beautiful green and the flower its brilliant white. The flowers must have been all white once. The sunshine and the wind rippling made the variety, and Adam and Eve loved the flowers in the garden. No wanton colors or tempting beauty. The lure came, the twain fell, and when the sensitive flowers saw they blushed. The shadow and the sheen have tinted and varied them. But back to the white robes and great white throne we shall go at last for heaven's glory is an eternal white.

Sunshine is all the time. We may not be in it. It may be above the clouds and we below. One might rise higher, but the forces hold us down and they are not all physical. The old earth sin-cursed, as it is, for our sakes, is trying to retrieve by treasuring up sunshine and warmth for our sakes too. Let it teach us a lesson to treasure sunshine and warmth in our hearts while the sun shines, preparing for the darker, colder day. And if we have kept the fires burning upon the altar with the spark of light from the heavenly

shekinah the affinity for likes shall merge us into the eternal sunshine at last.

PRAYER.

The twilight falls, the night is near,
I fold my work away,
And kneel to one who bends to hear
The story of the day.

The old, old story; yet I kneel
To tell it at thy call;
And cares grow lighter as I feel
That Jesus knows them all.

Yes, all! The morning and the night,
The joy, the grief, the loss,
The roughened path, the sunbeams bright,
The hourly thorn and cross.

Thou knowest all—I lean my head,
My weary eyelids close;
Content and glad awhile to tread
This path, since Jesus knows!

So here I lay me down to rest,
As nightly shadows fall,
And lean, confiding on his breast
Who knows and pities all!

—The Shadow of the Rock.

THE WORK OF CHRIST.

THERE are seven marvelous truths contained in John 3:16—

- I. The greatest possible gift: God gave his Son.
- II. For the greatest possible number—"the world."
- III. On the easiest possible terms, "whosoever believeth."
- IV. For the most blessed deliverance from eternal perdition, "shall never perish."
- V. The greatest blessing—everlasting life.
- VI. On the highest possible security, the witness of Christ himself.
- VII. From the highest possible motive, God's love—"God so loved the world."—*Marcus Rainsford.*

A CROSS Christian, or an anxious one, a discouraged, gloomy Christian, a doubting Christian, a complaining Christian, an exacting Christian, a selfish, cruel, hard-hearted Christian, a self-indulgent Christian, a Christian with a sharp tongue or bitter spirit; a Christian, in short, who is not Christlike, may preach to the winds with as much hope of success as to preach to his own family or friends, who see him as he is.—*Hannah Whitall Smith.*

DOING nothing for others is the undoing of one's self. We must be purposely kind and generous, or miss the best part of existence. The heart that goes out of itself gets large and full of joy.—*Presbyterian Banner.*

AMONG THE FEATHERED WOOD FOLK.

(Continued from Page 635.)

John Burroughs says, of linking themselves to one's memory of seasons and places—and, he might have added, friends—so that a song, a call, a gleam of color, will set going a sequence of delightful reminiscences in your mind.

This expert naturalist, who has added so much to the wealth of bird lore in the past few years, makes very clear the fact that many birds have a wide selection of songs and trills with which to cheer the passer-by; especially is this true of the song sparrow, to which reference has already been made.

He also tells us, as perhaps every bird student has discovered for himself by observation, that one bird may be far more gifted in song than another of the same species, and, indeed, of the same neighborhood. There was a favorite robin, for instance, to which he listened with delight, that sang the song of the brown thrasher with all the sweetness and accuracy of its feathered teacher—for teacher it must have had, not long after fledgling days, when it was first learning to sing. Also John Burroughs tells of a thrush that had caught the first three or four notes of a popular song, a Scotland bird, that carried the air clearly and distinctly for a few notes, then, losing the tune, would extemporize according to his own pretty fancy. A shepherd, doubtless, whistling about his daily tasks, was this bird's teacher, but whether knowingly or unwittingly, none will ever discover. From such incidents as these it will readily be seen how delightfully fascinating the study of bird songs might become, so inexhaustible is it in its charming surprises.

Summer time is at hand, June days mean vacation for many boys and girls throughout the land; let those who can and will take William Wordsworth's advice to heart for a few brief weeks—

"Up! up! my friend, and quit your books,
Or surely you'll grow double."

Make for the open fields, where the grass and the flowers grow in rich luxuriance, and the butterflies hover over the clover; turn your faces toward the mountains, "a hundred and a hundred savage peaks," as Carlyle calls them, "all glowing of gold and amethyst, like giant spirits of the wilderness"; steer straight for ocean shores where the white spray rushes along sandy, pebbled beaches, and the sun gleams on flying fragments of tossing billows; find your way once in a while to the city parks, "oases in the desert," where the birds sing right merrily; watch the miracles that take place daily in your own garden, however limited your resources and your time, make vacation days the best days of all the year; do as Wordsworth further advises his too studious friend—

"Come forth into the light of things,
Let nature be your teacher."

—*Anne Spottswood Young in Epworth Herald.*

ECHOES FROM EVERYWHERE

The Radium Institute of Heidelberg will be the first of its kind to commence actual work, as an endowment has been secured for it. It is to be opened for work before the end of the year.

The steamer Jefferson has arrived at Seattle from Juneau, Alaska, bringing six and a half tons of virgin gold, valued at \$3,200,000. This is the largest single shipment ever sent from Alaska.

Vessels report that the gulf oil pool is now a mile in diameter and that the oil on the surface is so thick as to delay vessels. The lake is south by east of Galveston about 120 miles, and it is thought submarine disturbances have aroused the vein.

The treasurer of Cook County will receive \$185,000 from the estate of Nelson Morris as an inheritance tax from his estate, which was valued recently at more than \$16,000,000. This will be the largest amount ever received since the enactment of the Illinois State inheritance law.

Dr. Thomas Green, who has been in Japan investigating labor conditions, says 200 Chinese were deported from Yamaguchi in southwestern Japan because they underbid Japanese workmen. The action of the provincial government has established a precedent which will embarrass Japan in dealing with the Hawaiian situation.

A number of important questions vitally affecting the welfare and prosperity of towns and cities throughout the United States and our neighboring Dominion of Canada are booked to come up for discussion at the thirteenth annual convention of the potential League of American Municipalities, which is to be held in Montreal on August 25, 26 and 27.

Last year's cotton crop, according to the Missouri State bureau of labor and statistics, was the largest ever raised in the State. Dunklin County alone raised more than the entire State of Florida. There are but ten cotton growing counties, and they produced 61,907 bales, or 30,953,500 pounds, as against 26,243 bales, or 12,121,500 pounds, in 1907.

Awakened by the passage of the old-age pension law in England there are now plenty of advocates of such a law in France. A senatorial committee has drafted a bill calling for such pensions, and to it the minister of labor strongly objects, while the ultra-socialists as earnestly support it. According to this bill the age of beneficiaries would be fixed at 65. Both males and females would be eligible, and if the bill became a law, there would be about 11,000,000 persons in line for pensions. The measure is crude in many particulars, but it is not unlikely that it will force the government to put up a counter proposition.

At the synod of the diocese of Saskatchewan, Archdeacon McKay, in charge of the Indian work in the diocese, said he wished to correct the impression that the Indians were dying out in Canada. In reality, he said, the Indians were increasing. He quoted government statistics for the past 10 years, showing an increase of 10,000.

The new green special delivery stamp has been put out of commission by the Postmaster General owing to its similarity to the one-cent stamp. A good deal of confusion, and many complaints and delays have arisen from the new stamp, and it is considered best to return to the old blue color which has been on special delivery stamps heretofore.

After nine months' study of English, 15-year-old Pauline Garba, who arrived in New York with a party of Russians, unable to speak a word of the language, was awarded a prize for the best English composition at the Baron de Hirsch school. The girl has attended the school for nine months and in her study has outstripped the 200 members of her class.

Students and friends of the Nebraska University had decided to ask the dispenser of the Rockefeller wealth for a contribution of \$50,000. The matter had been approved by the athletic board, but the proposition was promptly vetoed by Chancellor Avery and Gov. Shallenberger. They do not want any of John D. Rockefeller's wealth to influence students.

Local option contests will soon begin in the State of Washington under the law passed by the recent Legislature and taking effect Saturday, June 12. The first fight will probably be in Clarks County in the southwest part of the State, which has a population of about 25,000. The city of Vancouver, with a population of 10,000 and having a big brewery and twenty saloons, is the county seat.

In a special message to Congress, June 16, President Taft recommended the adoption of a joint resolution by two-thirds of both houses proposing to the States an amendment to the constitution granting to the federal government the right to levy and collect an income tax. He also recommended the enactment, as part of the pending tariff bill, of an excise tax upon all corporations of 2 per cent of their net incomes.

The city of London has increased from an area of 0.3 square mile in the year 1200 to 117 square miles in 1908. At present the annual supply of water is about 82,125,000,000 gallons. Liverpool, which had an area of 0.1 square mile in the year 1300, covered 27.8 square miles in 1905. Its present population is 793,000, while the corporation water works provide a supply of 10,801,000,000 gallons to a population of 907,000 people.

Panama has just passed a stringent law which makes emigration from that country very difficult. Recently W. G. Spiller, a hotel keeper, shipped 200 European laborers to Brazil for construction work on the Amazon. Spiller purchased the steamer Oteri for passenger service to Brazil, but his vessel is tied up at Colon. The Panama Railroad Company refuses it permission to land at its wharf and Panama withholds clearance papers. Two hundred and fifty Spaniards are booked to sail on the Oteri to Brazil.

In Manchester municipal ownership of the gas plant seems to have been profitable to the city and cheap to the consumer. Twenty-five years ago the plant was taken over by the city, and since that time more than \$6,750,000 has been cleared, a success that has caused a movement to be started for reducing the price of gas from its present low cost of 55 cents a thousand to 49 for large consumers, and a general reduction for the smaller consumers. Manchester is a city of about the size of Boston. The capacity of the plant has been doubled since 1883.

The new North German Lloyd steamship *George Washington*, the largest German trans-Atlantic steamer afloat, arrived in New York June 20 on its maiden trip and received an enthusiastic welcome. The vessel is named in honor of the first President of the United States and the builders have made special efforts that in every way it should be worthy of the great name. The *George Washington* is 720 feet 5 inches long, with a beam of 78 feet, a gross registered tonnage of 27,000, a 33-foot draught and a displacement of 37,000 tons. The average speed is 18½ knots an hour.

The reports of a recent battle at Djakivitch, northern Albania, between 10,000 Albanians and twelve battalions of Turkish troops, have been confirmed. It appears that the Albanians rebelled against the new regime and refused to obey the local governors or to pay taxes. Djavid Pasha, military commander at Uskub, was ordered to suppress the rebellion and enforce compliance with the government's orders. The first encounter was in favor of the Albanians, but afterward Djavid Pasha, reinforced by artillery, bombarded and destroyed the Albanian villages and compelled the rebels to take refuge in the mountains. Some of the tribes continue guerilla warfare, but it is reported that the government, fearing the insurrection will become general, has ordered Djavid Pasha to suspend hostilities and to endeavor to reach a pacific settlement of the trouble by negotiations.

Of the total exports of Japan, the United States takes about 32 per cent, or \$61,000,000, while Japan buys in the United States only \$39,000,000 worth of merchandise, or about 18 per cent of her total imports. Ten years ago Japan's exports to this country were \$10,000,000 larger than in 1908, while her imports from this country have doubled during that decade. This showing of a marked change in the balance of trade as shown in an official bulletin just issued by the Japanese government is regarded as encouraging. Raw cotton forms the largest single article in value imported into Japan from the United States, amounting last year to \$13,000,000, or not quite one-fifth of our total exports to Japan. The export of American printing paper to Japan is increasing. This country also competes with satisfactory results with Europe in furnishing the iron and steel manufactures used in Japan.

A system of wireless telephony was recently tested by the French navy between the armored cruiser "Condé" and shore stations. It is reported that conversation was carried on over a distance of 100 miles. The inventors of this system are Lieutenants Jeance and Colin of the French navy. Their work is quite remarkable in view of the fact that in our own navy we have had difficulty in maintaining wireless telephone communication over a distance of 20 miles.

Warrick County, Indiana, voted "dry" June 17 by a majority of about 250. There were a number of attempts at illegal voting. The vote kills nineteen saloons. Warrick is the seventieth county to be made "dry" by vote or by remonstrance, and twelve have voted to retain the licensed saloon. There are ten counties in which no elections have been held, but there are dry spots in the most of them, made so by remonstrance. It is understood that the saloon league will not push any more elections in the near future.

Orders for 60,000 cars will soon be placed, according to iron and steel papers. The Pennsylvania is in the market for 25,000 cars and the Baltimore and Ohio has completed arrangements and will receive bids on from 8,000 to 10,000. The Harriman lines have received figures on 4,300 freight cars, of which 1,300 are the box type. The American Car and Foundry Company has received a contract for 2,250 freight cars for the Western Pacific. The Chicago Great Western is in the market for 1,000 and the Northern Pacific for 2,000 cars.

The railroad companies are closely watching the use of a mechanical "fireman" on some of the big engines of the Chicago and Alton road. These devices have been installed to meet the necessity of a more satisfactory way of feeding the furnaces on the monster locomotives which are now being employed, the human fireman being hardly equal to the task of feeding in the fuel. The mechanical stoker which the Chicago and Alton is using seems to be giving satisfaction and it is probable that other roads will adopt it. Coal is thrown into a bin, from which it is delivered to different parts of the grate by varying the speed of a plunger, which is controlled by a starting lever. Air admission is controlled, small amounts of coal are fed at frequent intervals, larger nozzles may be used, and back pressure reduced.

President Taft's wholesome and business-like requirement that all United States army estimates of appropriations for the fiscal year beginning July 1, 1910, be made up and submitted by the various bureaus by May 1 will necessitate many changes in various items by the time the appropriation committees of Congress begin making up the appropriation bills next winter. One schedule which will have to be altered, owing to fluctuating market prices, is that for army subsistence supplies. These estimates were based upon the supposition that the army ration would cost 20.97 cents each. The price was based on reports received for the first four months of the present fiscal year. Later reports showed that the price had advanced to 21.02 cents, and on account of the increased price of such articles as beef, the indications are that the cost of the ration will advance to 21.10 cents. A year ago the estimated cost of the ration was 19.65 cents. While the increase per ration may seem small, the aggregate increase amounts to many thousand dollars, when it is considered that several million rations are consumed by the army annually.

Among the Magazines

DOORLESS AMERICA.

A wise man used to say that doors were made to be shut, not necessarily opened. The hovel of the poor has doors, as well as the palace of the king, sings the Roman poet. So with gardens. In art, the garden of Eden is an enclosure and the armed cherubim stand at its doorway. "In New York," writes Mary Mortimer Maxwell in *The Daily Mail* (London), "one might almost say there are no doors, except the outer one which closes the house to the street."

The consequence is, "there is no privacy" in the American home. She tells of an American public man who was asked by a friend "Where's your den?" This is how she proceeds with her story:

"'Den!' said the American. 'Man, I haven't an inch of room in this whole house that I can call my very own. It belongs to all of us to share and share alike. There isn't a room I may go into and lock the door to keep the rest of the family out. This house has everything in it except privacy. There's mighty little of that to be found in any American home, I can tell you! My house is a typical doorless American home.'

"The New Yorker laughed as he said it, but his laughter had a pathetic ring to it."

This, declares the writer, is the only thing that mars the perfection of American homes in the eyes of the reserved and insular English. To quote her words further:

"It is true that privacy is the one thing lacking in the New York home, and the New York home is typical of most American homes. In England we hear of 'mother's room,' 'father's room,' 'my own little cozy corner.' It is only on the rarest occasions that one finds an American house fitted up in this fashion with any thought for the privacy of its inmates, and when one does find such a thing there are simultaneous whispers going the rounds that the master and mistress of it 'do not get on well together, and so they keep up private establishments in one house!'

"If it were not for this lack of privacy, the American home would be the most delightful place in the world. For solid creature comforts it certainly surpasses the English home. Hot and cold running water in every room of the house, and the wonderful apparatus for heating water in the apartments, one cannot but appreciate. In visiting the American kitchen one notices that the cook has every convenience to hand for her work. The whole house or flat is built upon a labor-saving plan that must appeal to every feminine heart, regardless of nationality—a plan which, I believe, will be the only salvation of London's housewives as the servant problem over here becomes more and more acute.

"But the American lives constantly in the open."

She has the same criticism to make in speaking of gardens, and tells us:

"English visitors to the American small towns and villages are usually charmed with the beauty of well-designed houses, with their nicely-kept lawns, their graceful window

draperies. Fenceless the lawns of these houses are, extending directly to the pavement. Wandering street boys, dogs, and marauding cats pass in and out at will among the flower beds of these village homes.

"'Why do you not have a fence?' I asked a country friend. 'Your garden would be so delightful for afternoon tea if one could find a private nook in it.'

"'Our garden is so pretty we like the public to see it,' was her reply. Then she added, 'It would spoil the look of the rest of the street if we had a fence and the neighbors did not. You must admit that our street is beautiful.'

"Beautiful, yes, but, oh! it was not in gardens such as these, surely, that poets and artists have found their inspiration. Sometimes I think that the fenceless American village garden is pure benevolence carried to its extreme, the benevolence which, having something beautiful to enjoy, desires all the world to enjoy it too. At other times I put it down to the desire for public display and showing off.

"A few years ago on going to New York I was impressed with the doorlessness of the city's life. I visited persons living in twenty-roomed houses where there were in all, perhaps, five or six doors. In New York flats room after room opens the one into the other by means of archways of fancy fretwork, with sometimes a chenille or damask portière as substitute for a door. The whole idea of building is what may be called 'en suite.' Often five or six rooms of a flat open the one into the other, with only one door into the hall, and even this is frequently taken off its hinges and a pretty bamboo curtain hung in its place. The effect is one of space and elegance, but an effect that is out of place, it seems to me, in a small private home. Opening the door (if there is one) of the outer hall into the drawing-room, you go from this through an archway into the dining-room. Through other archways you pass into the family bedrooms. I know of homes where the only room that is properly shut off is the bathroom. The kitchen often is separated from the dining-room by a swing door, opened easily by a push of the knee against it, as the waitress brings in the dishes for laying the table. In such a flat it would be absolutely impossible for two persons to have a conversation in an ordinary tone of voice without constant danger of being overheard."—*Literary Digest*.

STATION ANNOUNCERS ON TRAINS.

One of the greatly needed improvements for rapid-transit service is some form of automatic station announcer placed in a conspicuous position on the car. The present method, under which the name of the next station is called out by the guard, is little better than a farce. On some lines, and this is particularly true of the surface trolley roads, the name is frequently never announced at all; and on other roads the din and confusion of traffic is so great, that the station name is inaudible

to the greater part of the passengers on the car. Add to this the fact that many of the conductors and guards draw out the names with a pronunciation, or rather a mispronunciation, which renders them completely unintelligible, and it will be understood that, while the present system is confusing to the regular patrons of the line, it is "confusion worse confounded" to the "stranger within our gates." Since the vocal announcement of stations is a failure, the question arises whether some other more satisfactory system cannot be devised.

The simplest solution of the problem would be to place in some conspicuous position on the car a visual announcer, on which, immediately upon the car leaving a station or street crossing the name of the next following station or crossing would appear in clear and easily readable letters or numbers, the change of sign being made by the conductor or guard, or, preferably, by means of some automatic trip or other form of contact arranged between the car and the several stations or stopping places. That the idea is mechanically practicable is proved by the many very creditable devices of this kind which have been invented, a large number of which are recorded in the files of the Patent Office. The advantages of station announcers are so many and obvious, that these devices began to make their appearance early in the development of the trolley car. At first they were operated merely by mechanical means; but later, with the advent of electrical traction, the many advantages of electricity for the purpose led to the invention of electrically-operated signs.

In view of the conspicuous usefulness of this system, it is a matter of surprise that it was not universally adopted long ago; and there is little question that its failure to come into general use has been due not a little to the reluctance of the transportation companies to go to the expense and trouble incidental to the operation and maintenance of the necessary apparatus. A notable instance of this occurred only a few years ago, at the time of the opening of one of the most important subways in this country. The management instructed its engineers to work out an automatic, electrically-controlled announcer, which was to consist of an oblong case, depending from the roof at the center of the car, which would display on each side of it the name of the next station at which the train stopped. The scheme would have been an immense convenience to the traveling public; but at the eleventh hour objections were raised on the ground that it would interfere with the advertising signs in the car, obscuring them or detracting public attention from them, and the system was never installed. That the objection was altogether absurd and puerile is shown by the fact that a device of this general character has recently been installed in a car of the Hudson and Manhattan tunnel, which, according to the latest reports, is working greatly to the satisfaction of the public. The new indicator consists of an oblong glass box, attached at the center of the car. A lettered sign bears the words "Next Station." Below this is a blank space, in which the name of the station following appears in brilliant letters. Undoubtedly the Public Service Commission will observe the operation of this device with close attention. Should it prove to be thoroughly practical, as we have no doubt it will, the Commission would add one more to its many valuable services rendered to the public, by ordering the equipment of all rapid-transit cars with devices of the same general character.—Scientific American.

MEMORIAL TO CALVIN AT GENEVA.

Hitherto there has been no monument to Calvin or to the Reformation in Geneva. Calvin requested that his grave remain unmarked, and so faithfully was this wish carried out that even the place cannot be identified. Tradition points to a certain spot in a quiet old cemetery, but otherwise no man knoweth his sepulcher. It is natural, therefore, that the nations whose early history owed so much to Geneva have responded to the appeal for a worthy visible testimony to the Reformation. This response is due in part to reverence for Calvin's religious views and in part to recognition of the historic significance of his career. It is the desire of the promoters of the movement to perpetuate the memory of the reformers as great historic figures, whose ideas contributed to religious and political liberty. While Calvin was no advocate of popular government, he was, in fact, the father of Puritan democracy. The Huguenots and the Puritans were sufficient unto themselves and found no need of state help in founding their church government. Fortified with Calvin's doctrines of the sovereignty of God and of law, they were equal to any political undertaking.

The monument will rest on interesting historic ground. The authorities have allotted for the purpose a portion of a public garden which was laid upon the line of a former wall of the city. In a view of Geneva dated in 1654 will be seen a strong rampart in the foreground which was built in Calvin's day as a protection against renewed threats of trouble with Savoy. In the anxiety of the time citizens, professors, and students contributed their labor to complete the defense, and the fortification became known as the "Wall of the Reformers." This was removed in the nineteenth century and the vicinity laid out in a botanical garden and the "Promenade des Bastions." Upon the base of a portion of the ancient wall, at a point just to the right of the central gate, a new "Mur des Reformateurs" will be erected to serve as a background for the statuary and inscriptions. A central group of figures will represent the reformers of Geneva itself, Farel, Calvin, Knox, and Beza. On either side at regular intervals will be representative men like Coligny, of France; William the Silent, of Holland, and Oliver Cromwell, of England. The figure for America will probably be a typical Puritan father. The wall itself will be adorned with historical inscriptions and pictorial reliefs.

The site is one which lends itself admirably to architectural and natural decoration. Viewing the monument from the promenade, the spectator will have behind him the buildings of the university, founded by Calvin, but long since housed in modern quarters. Before him rise behind the monumental wall the terraced slopes of the hill on which Geneva sits, with many of its aspects unchanged from the days of the Reformation.—From "Geneva and John Calvin," by John Martin Vincent, in the American Review of Reviews for June.

IMPRESSIONS.

(Continued from Page 637.)

made possible many of the advantages he now enjoys. And the one in whose family there is an old homestead where father, grandfather and a host of relatives have come and gone, weaving the events of their lives in and out around the old walls, the spring, the creek, the old bridge, the lane, and the pasture lot, who can estimate its value to him? Even though he wanders afar, it is like an anchor whose cable never

breaks, bringing him back now and then to renew those memories and the noble resolutions which they inspire.

We have some southe'ners among us here in the middle West and hear some of the peculiar expressions credited to them, but to hear them in their fullness and richness one must go to those sections where they are in everyday use. Here are some of the expressions that struck us as being particularly Virginian: "Well, how-do-you-do? How are you, anyway?" "Oh, I'm real *peart*." "I think I'll walk *out* awhile ("out" being pronounced with a peculiar short sound of ou). Do any of *you all* want to go along?" Some one expressed regret at not having met a certain friend. His sympathizer replied, "Well, maybe you'll *come up with them* after while." A lady who was unmarried and no longer young described her position by saying, "I'm done been passed over." (This expression made a deep impression on the mind of the writer.) Another lady, a great grandmother who was as active as any woman of forty, at mealtime generally went to a lunch counter and got a "snack."

And so we saw Virginia and the Virginians in the few short days of the Conference.

HEN'S BRAIN POWER TESTED.

Two German scientists have been amusing themselves studying the intellect of the hen. No, amusing is the wrong word; nothing is amusing to a German scientist, and the idea of watching the attempts of a hen to pick glued rice from a strip of paper and counting the number of pecks she will give a refractory grain before being convinced that it won't come loose does not seem funny to the bewhiskered and bespectacled scientist; to him the experiment is as full of dignity as Newton's reflections on the law of gravitation. And really, it seems that we have misjudged the hen. The immortal query, "Why is a hen?" is a feeble effort of the ignorant to cast reflection upon the workings of a well-developed intellect.

The method these savants used was ingenious. They stuck to a card twenty grains of rice, placed ten grains of wheat loose among them and then offered the card to the hen. At first she tries to pick up all the grains; but after ineffectual attempts at the rice she becomes convinced that this is effort wasted, and devotes her time to the wheat. After three or four such tests she lets the rice alone entirely. But there is no use in hurrying her education. If these cards are offered her one after the other she will make mistakes up to the sixth grain before she remembers that this is the same old sell. But let her have an hour to ponder, reflect and sort out her impressions and then offer her another of these deceptive cards; then the third grain will be enough to show her that wheat alone is good to eat today.

Her education is sometimes at fault. When she

has been trained to eat only the wheat, if you throw before her a lot of rice she will begin to eat it. But suddenly she remembers her sad experience of other days and hastens away before the spectator can have a chance to laugh at her for being fooled by rice that cannot be picked up.

Lest humans be too puffed up it may be added that when similar experiments were tried with children those less than 3 years old made worse mistakes than did the hens.—*Boston Globe*.

Between Whiles

The Answer.—"What's the purpose of that freak bill you've introduced?"

"Nothing simpler," replied the western legislator. "You read about the bill in the papers, didn't you?"

"Yes."

"And heard many people discussing it?"

"I did."

"Well, that's the answer."—*Philadelphia Public Ledger*.

His Transformation.

Little Harold, aged six, felt very proud when he donned his first pair of trousers. Taking his three-year-old brother behind the door he was overheard to say, "Willie, Willie, do you remember me?"—*The Delineator* for July.

 ✿ In Union Pacific ad on inside cover page for
 ✿ date of California excursion read, "Leave Chi-
 ✿ cago Wednesday, July 7, leave Omaha July 8,"
 ✿ instead of dates appearing in ad.
 ✿ By order of Geo. L. McDonough.

Sunday Half Hours with Great Preachers

by

Rev. Jesse Lyman Hurlbut, D. D.

How would you like to have fifty-two of the greatest preachers of the world for the past 1,700 years come before you one at a time for fifty-two consecutive Sundays—every Sunday for a full year—and each one preach to you the eloquent sermon which made him famous for all time? The possessor of "Sunday Half Hours with Great Preachers" will have conferred upon him, in the nearest possible manner, this inestimable privilege and benefit. Dr. Hurlbut has selected the fifty-

two most famous preachers of the world, both from the Catholic and the leading Protestant churches throughout the world from the days of St. Augustine and Chrysostom, who lived three hundred and fifty years after Christ, down to, and including John Bunyan, John Wesley, Whitefield, Henry Ward Beecher, William Ellery Channing, and other greatest preachers of the world. It contains 681 large pages, bound in elegant cloth.

R. E. ARNOLD, Elgin, ILL

NEFF'S CORNER

Contracts are now all let for the 176 miles of new railroad that will complete the connection between Galveston, Texas, and Clovis, which will put us on a short, through line from the Gulf to the Pacific. Through traffic from Chicago and from the Gulf will meet here on its way to the Pacific and Clovis will be a division point for both lines. That means that the capacity of the car shops, round house and railroad yards here will be doubled, and that Clovis will soon be a city of 10,000 people. Property values have doubled during the last few months and we expect them to double again in the next few months. Beauty about investments here, if a man buys he can sell again. Evidence that people are satisfied with their investments here is to be found in the fact that after they have put in some money and tried it awhile, they invest again and again. If you would like to correspond with some of these people, drop me a line and ask for their addresses. If interested, don't hesitate to ask for any information you desire. We are having fine rains, prospect of good crops, and our farmers as well as our business men are happy and prosperous.

OLIVE BRANCH OF PEACE

AND GOOD WILL TO MEN

Elders S. F. Sanger and D. Hays

An interesting history of what the Brethren and Mennonites endured during the Civil War period because of their Anti-war principles.

"Upon the whole, the object in publishing this little volume especially as it relates to the Civil War is threefold: 'First, to give a true and faithful record of the sufferings and experiences of these Christian People.

"Second, to testify to God's goodness in protecting them.

"Third, to strengthen the faith of Christians who may yet be required to suffer persecution for the sake of Christ and his Gospel of good will to men."

One of our agents reports: "I took 12 orders for the book in one hour. It sells on its own merit." Ask for terms to agents.

Bound in cloth. Two hundred and thirty-two pages. Back and side title stamped in gold. Illustrated. Do not fail to order a copy.

Price, postpaid,75 cents

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

From the Ball Room to Hell

Is there any harm in dancing? There can be but one answer to this question, facts are facts. This little book, written by an ex-dancing master, will give you more facts about dancing than can be obtained elsewhere. It places a dark picture before the dancer, and one that is very convincing. It explains the natural and necessary effects of modern waltzing and why thousands of girls are ruined every year through its influence.

The Saloon Under the Searchlight

By George R. Stuart.

A book of sixty-four pages. The best thing we have seen on this subject. A new book, dealing with an old question.

Simple, Practical and True.

"I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

Bright, Breezy—Not a Dull Line.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."—United Presbyterian.

Every minister of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village, town and city in the United States.

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. 1. J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

Empire Colony in "Sunny Stanislaus"

The CO-OPERATIVE COLONIZATION COMPANY is now locating a colony of our people in the lower San Joaquin valley, in central California. The new town of EMPIRE, as well as the colony lands, is located on the Santa Fe railroad, five miles east of Modesto, the county seat of Stanislaus County, thirty miles south of Stockton, seventy-five miles from Sacramento and one hundred and fifteen from San Francisco.

The colony lands join the new town site and are within a few miles of three different railroads. These lands are all under cultivation, and are free from brush, stumps, stones and other obstructions. Two large ditches cross the tract, affording ample water for irrigation of all crops.

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

NEW CHURCH ORGANIZED—NEW RAILROAD BUILDING.

A new Church of the Brethren was recently organized at Empire, with twenty-five members, and other families of our people are expecting to move there soon. The Modesto-Empire Interurban railroad is now being built. For further information address,

CO-OPERATIVE COLONIZATION COMPANY

North Manchester, Ind., South Bend, Ind.

Or Levi Winklebleck, Modesto, Cal.

New Mexico,	Rio Grande,	75,000	155,000	Private
Oregon,	Central Oregon, ..	75,000		Preliminary examination
Oregon,	Umatilla,	1,186,000	20,440	20% public
Utah,	Strawberry,	810,000	60,000	Private
		\$28,647,000	1,552,540	

To December 31, 1908, the Federal Government has already expended over 28 millions in preparing homes for probably 20,000 families, possibly more, and must spend millions more before these projects are finished. With the Government the railroads that serve this territory are vitally interested in seeing that these acres are successfully settled by prosperous farmers. Whether these farmers are on government lands or on private lands irrigated by the government, is of minor importance; the main proposition is to supply as many homes for as many people as possible on these government projects.

Parties wishing information about any of these projects with the view of securing Government land or private lands for future homes should write to the undersigned for printed matter descriptive of the section of the country they wish to locate in.

Paul the Herald of the Cross

By J. W. Wayland

The story of Paul's life is told in an interesting and instructive way. A splendid sidelight to the Sunday-school lessons for 1909.

It will appeal to boys and girls, and older persons, too, and will leave them the better for reading it. Brother Wayland follows the Great Missionary from youth to death, and all the way he holds the attention. One

cannot read the book without feeling a desire to help in spreading the Gospel.

The Brethren Family Almanac for 1909

A FIRST class almanac for the home. The twelve calendar pages contain the date of over 300 important historical events. Every member of the church will be interested in the biographical sketches of such men and women as Elder R. H. Miller, Sister Sarah Major, Elder John H. Umstad, John H. Filmore, Elder Peter Nead and Elder Jacob Mack. Announcements concerning the Annual Conference for 1909, and a History of the Brethren Church in Franklin County, Virginia, are unusually interesting. The Ministerial List occupies nearly 19 pages and gives the name and address of the 2,938 ministers of the Church of the Brethren together with a list of the Gish Fund Books. Several pages are devoted to a list of the Home and Foreign Mission Boards of the church with name and address of the members of each board. Sunday-school workers will be interested in the list of State Sunday-school Secretaries. A cyclopedia of useful information. Sixty-four pages. Price, postpaid, 10 cents.

\$400 Prize Cup Won by Colfax County, N. M. In Competition with Entire Irrigated West

Miami Ranch

is located in the choicest part of Colfax county, New Mexico, and it was largely due to the products grown upon and adjacent to this ranch that Colfax County won this valuable cup at the Interstate Industrial Exhibit held at Albuquerque, N. M., last October. Every State was represented—products from land selling as high as \$1,000 an acre were shown—but Colfax County won by many points.

Many other prizes have been won by this section of the country. New Mexico wheat took first prize at the World's Fair in Chicago, while apples raised in an orchard directly adjacent to Miami Ranch won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 an acre.

Miami Ranch

offers you health and pleasures as well as wealth. It's situated in a rich, cheerful valley, surrounded by picturesque mountains. Elk, deer, bear and other large game are to be found in the mountains, while thousands of wild duck and geese inhabit the surrounding lakes. The Rayado River, which flows through this ranch, is noted throughout the central west for its trout fishing.

The rainfall is sufficient to insure big crops. But with the gigantic irrigation system recently installed, there is not the slightest chance of crop failure.

The climate is perfect, the air is pure, and the scenery beautiful. Excellent church privileges, a good school and pleasant neighbors are all to be found on Miami Ranch.

Write for a free copy of our booklet, "Westward Ho." It tells in detail all about Miami Ranch. Tells how and when you can get a round-trip ticket from Chicago for \$30, and from Kansas City for \$25, via the Atchison, Topeka & Santa Fe. Write at once and take your choice of the bargain offers which we are now making on both large and small farms.

Farmers Development Company, Springer, New Mexico

Six Popular Periodicals

The lesson helps and weekly papers play an important part in the development of a strong, soul-saving Sunday school. You cannot afford to place an inferior Sunday-school Quarterly in the hands of your pupils. That's why we call your attention to our **SPLENDID SUNDAY-SCHOOL HELPS.**

Three Months Trial Free

Let us furnish you with all your Quarterlies and papers free for one quarter. Here are a half dozen Sunday-school helps that you should give a trial. Our introductory offer applies to one or all of the publications below.

Brethren Teachers' Monthly

A manual of methods. Comprehensive comments on each lesson. Three or more copies to one address, 13 cents per quarter, or 48 cents per year. Single subscription, 50 cents per year.

Advanced Quarterly

For Intermediate and Adult classes. A popular lesson help. Single copy, 5 cents. Five or more copies to one address, 3 cents per quarter.

Juvenile Quarterly

The lesson clearly and forcefully presented for the Primary and Junior Pupils. Numerous illustrations. Single copy, 4 cents, five or more copies to one address, 2½ cents per quarter.

Our Young People

An illustrated 8-page weekly. Interesting, instructive and elevating. Single subscription, one year, 65 cents. Five or more copies to one address, 10 cents per quarter or 40 cents per year.

Our Boys and Girls

The best illustrated weekly for boys and girls. Choice stories, helpful poems and Bible incidents. Single subscription, per year, 50 cents. Five or more copies to one address, per quarter, 7½ cents per copy.

Children at Work

An attractive little paper for the little people of the Sunday school and home. Single subscriptions, per year, 20 cents. Five or more to one address, per quarter, 3 cents per copy.

If your school is not using these popular Sunday-school helps we will gladly allow you to use them for six months at half price. We could not afford to make this liberal offer if we did not feel quite sure that you will continue to use them for years to come.

Even though your school may be using five of our publications we will allow you to try the sixth one on our introductory terms. Ask for full particulars.

A sample copy of each publication sent on request.

J. A. Bowers' apple crop of 1907 netted \$1,000 per acre, and in 1908, \$700 per acre.

E. A. Blair gathered from seven and one-half acres of apples 3440 boxes of fancy apples which netted \$5,500.00.

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

No. 27.

HOMESTEADING

H. D. MICHAEL

YEARS ago when our nation was in her infancy our legislators saw the need of her great uninhabited domains being settled by a class of people that would build up homes, till the soil, and thus increase the wealth of the republic. Accordingly laws were enacted to permit people to earn their homes by a stipulated amount of farming, improving, or residence on the land they chose to make a home of.

Several ways were provided by which a person could come into possession of one hundred and sixty acres or more of the government land. There were the Pre-emption and Timber Culture Acts, the Homestead Act, to which we expect to refer in this article, and later numerous other ways were provided, among them being the act providing for the sale of the timbered lands, and others such as the Carey Act by which the land was earned by reclaiming it, laws being made pertaining to the irrigation of arid or semi-arid lands and for the draining of swamps.

The difference between the Timber Culture Act and the one for the sale of timbered lands known as the Timber Claim Act is that under the first act one must earn his one-fourth section, or one hundred and sixty acres, by the planting of a given number of trees to help overcome the droughts, while under the latter he was required to pay the government price of \$2.50 per acre after proving that the land was more valuable for the timber on it than for agricultural purposes.

There have been numerous changes made in regard to the details of the homestead law but though it has been changed or amended with nearly every change of the moon or at least nearly every year, still the gist of the law remains the same, and any qualified person may file upon, reside on, cultivate and thus earn his patent to one hundred and sixty acres of government land, and in some localities where the land is not considered so situated that it may be irrigated, three

hundred and twenty acres may be taken under the dry farming clause of the homestead law.

The qualifications of a homesteader are that he must be a United States citizen or have declared his intentions to become one, and a single person, whether man or woman, must be twenty-one years of age or over, while a person that is the head of a family or a widow may take a homestead even though he or she is not that old. All are supposed not to have received the full benefit of the homestead law before, and there are many other minor qualifications, but those are the most important.

Then the first question to consider is that of finding a suitable piece of land. For a person not acquainted with the country or where the section corners are located, this is hard to do, but there are always homestead locators ready to show you a vacant place for from \$25.00 to \$200.00, as they have learned by noting which land the blueprints at the land office show vacant and then have surveyed it out so they can take you to a vacant place at once. There are among the others, unscrupulous locators that locate some people and bilk many more, so it is necessary to be careful of the locator, for if you are unacquainted with the numbers of the land you might be shown one piece of land and given the numbers on another, probably one-half to two or three miles away, as is told of some locators. And though we could not vouch for the truth of it, still I have always thought it quite probable that one locator in a timbered section of western Oregon has shown sixteen different people the same fine tract of timber and located them on vacant land of which he gave them the numbers, telling them that the numbers he gave them called for that land and fine timber. Of course these were timber claims, still the same might be done in locating others on homesteads. "A word to the wise is sufficient," 'tis said.

Then to find a reliable locator is of importance after you have decided in which locality, of which State or

Territory you intend to take a homestead, for I would not wish any one to think of eastern Washington where I am homesteading as being the last and only government land remaining, for our Uncle Sam still has more land to offer settlers than enough to make two States the size of Texas, our largest State. Of course much of it is considered worthless and some of it in northern Alaska, for instance, is not likely ever to become valuable for farming purposes, but not over twenty to thirty years ago there were thousands of acres of government land considered worthless that is now producing splendid crops and worth from \$15.00 to \$50.00 per acre.

So with modern inventions, our agricultural experiment stations, the wonders worked by Mr. Burbank, the California plant wizard, and the push of the American people to back it, much of the land now considered worthless will be in the course of a few years producing various crops of importance. Sure, some people laugh at any one so foolish (?) as to take a homestead from which they can see no immediate returns coming, but just wait a few years. Christopher Columbus was also considered very foolish at one stage of the game.

When you have decided on your location, the first step is to file your application to take the land under the homestead laws, which step can be made at the land office of that district by yourself in person or before the United States Commissioner of your nearest town, and your filing fees will be from \$16.00 to \$24.50, according to the amount of land you are filing on, whether 40, 80, 120, 160 or 320 acres, and also as to whether it is within the limits of the railroad grants, where the government has given the railroad companies each alternate section to help pay them for building their roads.

Then, inside of six months actual homestead life must begin, as the law only permits of the first six months being used as constructive residence in which time your residence must be constructed and actual residence begin.

As to the kinds of residences, I will say most all kinds are in evidence, from a ten by twelve foot shanty to very nice, modern-built frame houses, but in this section of country those most common are the ordinary box houses of but one or two rooms, as most all the homesteaders here are single folks like myself. I have only a fourteen by sixteen foot home with a shed for storing some things in and for sheltering wood and coal.

Some people seem to think of homestead life as being miles and miles from any town, neighbors, railroads, school or church and where woods abound, inhabited by all manner of dangerous wild beasts, or out on some trackless prairie with nothing to make life bearable. But please disabuse your mind of such

ideas if you ever harbored them, for though we have not all the conveniences that can be had in a city and though there are some hardships to endure, some features and drawbacks to overcome, still we have many things to make life pleasant and some things too that cannot be duplicated in any city, and taking it all in all, I find it has its attractions and fascinations, making it a very pleasant life after all. It is a free, open-air life with novel experiences and not void of pleasure, if one is looking for the sunny side.

The first work I did after moving on to my quarter section was to arrange things as handy as possible around the house, get some wood cut and take possession in general.

The next was a good rabbit hunt, as there are almost countless numbers of jack rabbits and some small cliff rabbits here and between the rabbits and squirrels, crops of wheat amounting to several acres in a tract are literally mown, so it becomes a necessity to kill them off in order to be able to even help harvest your crop, for they will harvest enough of it then.

Then, too, it is profitable as well as being great sport, for in the winter like it was when I started up they are very fat and quite palatable, making it almost unnecessary to buy fresh meat at all, as they can be prepared in so many different ways and to my taste are excellent in almost any way. Take, for instance, the way I have done a number to keep for a rainy day. Trim all the meat from the bones, cram it into common fruit jars raw with just sufficient salt and pepper to season it and place the lid on loose, then place the jar into a kettle of cold water on the stove, bring it to a boil and boil for three hours. Then remove from the stove, seal at once and it will keep the same as any canned goods. The meat is cooked so tender that to roast it with a dressing or to make a potpie of it, it is almost equal to chicken of the homegrown variety.

Of course, hunting alone would not make one a living, so I bought a few steel traps and have been trapping for what to the fur trade are known as prairie wolves, but among the farmers and chickens they are known as just common coyotes. Up to date I have caught twelve of them and as the scalps bring \$1.00 bounty and the hides \$1.50 to \$2.50 each, they have been a material help on my living expenses.

This being a sagebush country, wood is not easily secured, for the sage wood is not very good to last, so I, as well as others, pick up coal along the railroad track, as the main line of the Northern Pacific is only about four and one-half miles from my place. A great amount of coal is shipped to the East by here and a great deal being lost along the tracks, the railroad company does not object to our keeping the track clean. So I get my coal that way, for I can pick up from one thousand to fifteen hundred pounds of coal a day and at the price we would have to pay here, it comes

cheaper that way than to buy it. This, together with the old ties which we can get at three cents each, settles the fuel part of our homestead life here.

As soon as possible after getting things arranged at the house, I turned my attention to clearing the sage-brush from some of my place, ready for plowing. This I did by grubbing with a mattock, but it can be done much faster and easier if one has the means to get a four-horse team and a twelve to twenty-foot piece of a railroad rail. By hitching one team to either end, and dragging the rail across the land to be cleared one way, then returning on the same swath from the other way, nearly all the brush will be pulled out. Then rake it with a large, heavy four-horse rake and but little brush is left. But not being so situated, I have done what I could by hand and now have over forty acres cleared and about seven acres of it planted to potatoes, wheat and garden truck as a start in farming.

In some localities, a homesteader to have water at the house only needs to put in a sand box at one of his springs and pipe in the water, but here we put the sand box in the shape of a cistern near the house and haul the water into it as there are no springs and no running water near here, only the Snake and Columbia Rivers, and it is quite deep to dig for water, as most of the wells are from one hundred to three hundred and fifty feet deep.

What seems a novelty to some coming into this country, is that we have to pay for the water when we go to haul it unless we haul from the river. But most of those owning wells have gasoline engines and pumps and pump the water, so charge five cents per fifty-gallon barrel to help pay the gasoline bills. Of course to have water of a decent temperature to drink in the summer, I had to dig a cistern, so I did and have cemented it and now have hauled it full of water.

To one like myself, not having a housekeeper, that is another item to consider and of course occupies some time and attention. Though visitors are not very often seen, they are always welcome to our best when they will come. At present the housekeeping part is doubly interesting because of my working in Pasco, about ten miles distant, which distance a neighboring homesteader and myself drive with his team each morning and night, leaving but little time to cook and do other housework.

An interesting part for me is in planning meals far enough ahead to be able to go to work at it at once and get it well done in the shortest possible time, but having some chickens, helps a great deal in the way of having plenty of eggs for baking, and elsewhere in cooking and for lunches.

Possibly some of you may think that we are isolated from all church privileges, schools, etc., but we have a schoolhouse near us though no scholars in the district at present, and there is a promising little Sunday school at Eltopia, seven and one-half miles distant.

Though I have no other means of traveling than to walk, I have, until recently, attended Sunday school there and church services conducted by Elder Enoch Faw with what assistance I was able to give.

There are, taking it all in all, a great many enjoyable features to this kind of a life. Take a look at the wild flowers of nearly all colors of the rainbow, so many of them, making the country look like one continued flower garden. Look at their beauty, then listen to the larks and other birds singing which to me seems like the continuation of a most pleasant dream. I can only repeat the one word of *Oliver Twist*, "More," for the spring is certainly charming with the wild bunch grass waving in the wind and the thought to comfort us that in our daily life we can be alone with God and in our meditations and prayers be undisturbed.

In five years from the time we have filed on our place we may prove up, as it is called, and receive the patent to our land, or after fourteen months' continuous residence one may commute his homestead entry, pay the government price of \$2.50 per acre, and receive his deed and thus be paid for all this homesteading.

Pasco, Wash.

THE GREEN INN.

I sicken of men's company—

The crowded tavern's din,
Where all day long with oath and song
Sit they who entrance win;
So come I out from noise and rout
To rest in God's Green Inn.

Here none may mock an empty purse
Or ragged coat and poor,
But Silence waits within the gates,
And Peace beside the door;
The weary guest is welcomest,
The richest pays no score.

The roof is high and arched and blue,
The floor is spread with pine;
On my four walls the sunlight falls
In golden flecks and fine;
And swift and fleet, on noiseless feet
The Four Winds bring me wine.

Oh, you who in the House of Strife
Quarrel and game and sin,
Come out and see what cheer may be
For starveling souls and thin,
Who come at last from drouth and fast
To sit in God's Green Inn!

—Theodosia Garrison, in *Scribner's*.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LXV.

THE first thing I wanted to see on my return to the college at Smyrna was the little kitty I had rescued from the dark cellar from under the native's house. It was the first thing I asked about. I had given it over in charge of an Armenian student who was to care for it during my absence in Constantinople. He had been recommended to me by a member of the faculty, and he was considered reliable and trustworthy in matters requiring no more skill or care than that imposed upon him in looking after the interests of my little friend. He promised me that he would faithfully look after it while I was away, and would feed it regularly. On that morning, as I went away, I left some food with him and also put into his hands some money with which to buy fresh milk as he needed it, and any other food he liked to get for it. The nest and box in which kitty was to exist until I returned were all made to order for its exclusive happiness. Nothing was left undone that would lighten the work of the boy in caring for its humble wants.

My absence had been longer than I expected. The young Armenian met me with the usual friendly greeting.

"It's not there, now," he replied to my question as to the kitten.

"Where is it?" I asked, somewhat vexed that he should have removed it from its safe quarters in my room.

"I don't know," replied the boy.

"But you had the care of it. You ought to know where it is. I want to see it. I'm so homesick for it."

— He was going away, and I stopped him and asked if he would not come up to my room. Slowly and reluctantly he followed, dragging his feet over the hall-way and lingering on the steps as if he would go back.

We were now in the room assigned to my comfort while in Smyrna. But the little house in which the kitten was to live, move and have a being, was empty. There was no sign of any food having been lately brought into the box.

"What did you do with the milk and bread and meat I ordered you to buy for it?"

"I fed it to the kitten."

"But the kitten hasn't been here for some time—where is it?"

"I don't know; I think it died."

"Died!" I exclaimed, "what killed it?"

"It wouldn't eat."

"But you just said that you brought it milk and bread and meat. You said you fed it to the kitten. If you fed it to the kitten, the kitten ate it, did it not?"

"I thought you wouldn't come back."

"But what did that have to do with the kitten not eating, or dying?" I enquired of the boy, who by this time had about exhausted his expedients.

"When did it die?" I asked, unwilling to leave him go down stairs until he had at least satisfied my impatient curiosity.

"Oh, several days ago, two or three days,—yes, four or five days ago,—I can't remember now exactly as to this."

"How did it die? What was the trouble with it?"

"I was busy at other things and the kitten just died," the Armenian youth answered, unwilling that I should press the matter any further, for the end of his explanations had been reached.

The kitten had probably died. But it had not died a natural death. It had been assassinated by an Armenian! The commissary supplies intended for it had been misappropriated.

He had said that the kitten had disappeared four or five or more days ago.

"There!" I exclaimed, after he had gone down, "this little kitten exactly resembled that little kitten that came toward me in the magistrate's office in Constantinople. That one seemed to know me well. But I was a foreigner, and in both dress and facial appearance greatly differing from people with whom the kitten was familiar. As a rule such a kitten would have been greatly frightened at a stranger's appearance in the court that morning, and would have avoided rather than sought me. Might not this kitten have been put on the boat on which I sailed and carried up, with me, and by some one who had the care of it taken at once to the magistrate, either for some sincere purpose of gift or purchase, or as a joke on the world tourist?"

Such a thing could be perfectly possible, even plausible, yet not at all highly probable." Thus I stood reasoning about this little affair that some people in the mad rush of business would call trifling, or nonsense, or foolishness.

Did the kitten that I took from a certain and speedy death in the foul cellar in Smyrna, the kitten that afterwards showed me its deep gratitude for my aid, go in some way to Constantinople and there rescue me by the whole change of atmosphere it brought into that strange court room? If it did not go to Constantinople, as I do not believe it did, it must have died, for that was also the belief of the professor with whom I talked about the matter.

I am a little uncertain about superstition. There may be a good reason for queer ideas about fate in our lives, for queer and unexplainable coincidences do happen with all of us.

"There is a divinity that shapes our ends,
Rough-hew them as we will."

Granted that the kitten died as the youth had declared. It still had "given its life," while the other one had saved me from the terrors of an oriental court.

As to the boy, his laziness or greed had been too deep for the foresight of reliability and honesty to pierce. Did he not know that if he had been able to place that kitten into my hands on my returning, his reward from me, together with his own reward of a good conscience, would have paid many times more than what he would receive by his treachery?

Here then is an index, pointing to the character of the Asiatics. They may be of vastly superior morals to their neighbors, and for the chance they have had, be excellent Christians, but when placed in contrast to the long cultured honor, they appear to us as heathen that lack the first and rudimentary principles of gospel morals. It is so with this youth. He was a good boy. He was a charming boy. He had mastered English and spoke it elegantly. That was one evidence of worth, for no European or Asiatic can master the English language without becoming more of a master of himself and of the principles of high moral value. In the eyes of his own fellows, this boy was reliable. In my eyes, accustomed to boys in my own country so much more faithful in their promises, he appeared like a worthless scamp. I could imagine a country where the boys were better in plain, everyday morals than our own, and I can see that a stranger coming from that country to ours would find more faults in our boys perhaps than I could find in these Armenians. As to this boy, there were certain things of an immoral nature he would not do. Compared to the people about him he was a little saint.

My first conclusion at the end of this sorry incident was that it did not pay to send our money over to these people, and that our sympathy for them when they were massacred by the Turks, was without substantial

reason. In this I was wrong and a moment after I had advanced from that false position. Christianity is not in the world for the purpose of saving worthy or lovable people. The Gospel came to make the worst sinner better, to make the bad man good, and to make the good man better. Here was a good boy, already. He merely needed more Christianity, more time, more culture. He couldn't bear seedless pears while shooting twigs. That would take long years of patient toil, by teacher and by lad.

The very arguments of the boy, flimsy as some of them were, but witty and thoughtful, were in his favor. When thoroughly taught the value of pure honesty, by personal instruction, and better still by experimenting with honest and dishonest men after he grew up, he would hold to the truth. But if he didn't hold to it, his own children will hold to it. The little leaven will surely leaven the whole lump.

Latent forces lie wrapt in that boy, the chief of which is the undeveloped germ of truthful character. Reliability came only with the ten commandments and the sermon on the mount. To lie was the world's shameful attitude. To say that you would do a thing and then not to do it, was counted right smart among those ancient youths. Living for ages in an atmosphere tainted by corruption of the basest sort, seeing every day dishonest things turned off for honest ones among his neighbors, this Armenian's standard of morals can not possibly be as high as our own. Though he reads the same New Testament and sings the identical gospel hymns, he reads into the Scriptures a certain language from his own world of standards, and interprets, just as we interpret the Bible, to suit himself. The reason some folks can't believe certain doctrines in the New Testament is because they don't want to believe them. They won't. Others, willing to obey to the last jot and tittle even though they lose their heads, are more liable to get the exact truth from the commandments. But they get that truth because they want it. They interpret the Bible as it *suits them*,—which is exactly as it ought to be interpreted by them so far as their knowledge and intellectual ability and spiritual insight lead. We put no more in it, and we take no more out of it, than there is in *us*. This is why we are cautioned to use what light we have, and to increase, by prayer and praise, our capacity for the indwelling of heavenly power. Our leaders caution us about the danger of little sins, for they know that many of these in their incipient stage, or one of them, when full-blown, will so dwarf the spiritual capacity for understanding as to make the individual believe a lie, when good will be bad, and bad good.

As this Armenian lad becomes of fuller growth in the knowledge of the life he is expected to lead in following the precepts and examples of the one Great

Teacher, and as each boy with whom he plays and with whom later on he emulates in strenuous traffic of daily toil, climbing the same ladder of advancement together, a new and better platform of righteousness will ultimately appear in his heaven of progress, from which, as on angels' ladders, other visions of higher good will descend and ascend, bidding his timid feet try the single rounds that lead surely but slowly and by wearisome uplifts, to the realms above.

"Heaven is not gained at a single bound,
But we build the ladder by which we rise,
From the lowly earth to the vaulted skies,
And we mount to its summit, round by round."

It causes me pain to see how little some of the Christians with good, living incomes are willing to give to missions in other lands. The evil one, ever on the alert to win his battle, whispers to the rich Christian that it would be better to keep his money at home. No greater fallacy is believed, in active propagation of the Gospel, than this one. The only way we can save our own country is by seeking to save all other countries. That's why Christ said, we should go into all the world,—or send somebody to represent us there. Christians can show what Christ is, in business and social life and political life only by going themselves and saying: "Look on us. We are living the real life. Our doctrines are the right doctrines. We have come to you, not because we are better than you but because you have had no model to pattern after a holy and a prosperous life. That which you long for and suffer for we bring you."

And when Christ shall have come to Smyrna, in fullness, the boy will care for the helpless kitten, be honest in his games at marbles, and when he grows up, he will honor and reverence womanhood and glorify motherhood with equal or greater adoration than he now cares for his own selfish happiness.

SWEET POTATO CULTURE IN THE SOUTH.

J. I. MILLER.

THE sweet potato is one of the staple products of the South, especially so among the colored race.

Almost all, both white and colored, who have small plats of ground have some of it planted to sweet potatoes be it ever so small.

In February or March we make what we call a hotbed. A high location is selected, or where this is not convenient a bed is made something like the garden beds are made in the North, whatever size is wanted, then about four or six inches of stable manure is put on and well tramped down, then three or four inches of good mellow soil is put on, then the potatoes are laid down close just so they do not touch each other. Then three or four inches of mellow soil is put on to cover them.

The bed is then kept well moistened by giving a liberal sprinkling of water every day or two.

When the plants come up they come so thick in a few days the ground can not be seen. When they are four or five inches high they are pulled up and set in the sweet potato ridge, as it is commonly called. The plants are set from twelve to sixteen inches apart.

In from ten to fifteen days the plants will come up from the mother potato and be large enough to take up and transplant, and if they are taken off at intervals of every fifteen or twenty days they will keep sending up plants all summer.

Plants are set in April, May, June, July and sometimes in August.

The land should have good drainage. Sweet potatoes will not make a good yield on clayey or soggy land. The soil should be of a sandy nature, good and fertile.

We do not know how gravelly or stony ground would do as we have none of that kind. Here in our locality (or in the great rice belt, for that matter,) hardly a stone or gravel as large as a black walnut could be found that would average one to every ten acres.

The land should be well plowed and harrowed a month or two before planting. Then we usually plow two furrows apart; this makes a large, open furrow. Then a liberal supply of fertilizer is put in the furrow (good stable manure we think is best), then plow four furrows, two from each side back on fertilizer; this makes the ridge ready for the plants.

As soon as the plants previously set make vines two or three feet long the vines are cut off about eighteen inches long, laid crossways on ridge and pushed down into the ground leaving only a few inches of the two ends sticking out of the ground. Every joint on the vine that is put in the ground makes roots and potatoes and the deeper they are put in the more potatoes.

There are different methods of cultivation. When the grass begins to grow one way is to take a sharp hoe, scrape the sides of the beds down, then run between beds with a shovel-plow, let the grass die, then pull dirt up on beds with hoe. This, however, is a slow job and takes too much time for a large crop. A better and faster way is to turn a furrow away from each side of bed with turning plow, let it lie a few days and throw it up again. This way takes very little labor with the hoe. In a few days the vines will cover the ground so the grass will have no more chance.

In the matter of yield we will give just what we have done. We planted one acre and dug from same 174 bushels. Next year we planted the same ground and dug 186 bushels. The largest potato we had weighed 8 pounds and 15 ounces. We took up one hill that had only five potatoes and the cluster weighed twenty-four pounds. The large potato above men-

tioned was not in this hill. The average price is between 75 cents and \$1 per bushel.

The southern sweet potato is a very juicy potato,—not dry and hard like those commonly grown in the North. The favorite way of preparing them for the

table is to wash clean, put in a hot oven with peeling on and bake until thoroughly done, and you sure have a good bite. The rich juice often runs out in the oven in the form of a good, thick syrup.

Roanoke, La., May 24.

AS WE SEE THE CUBAN FAMILY

GRANT MAHAN

WE are not acquainted with families in the cities, and so what we have to say must be taken as applying to the families of the country or village. Traveling through the country, one would not suppose there were many Cuban families, especially in the unimproved parts of the island. But if one gets on a horse and rides across the country and along the streams, he will conclude that "the woods are full of them," for he

titles are all settled. And when that time comes the poor squatters will be at the end of their rope. Maybe they will drift to the cities, as such people tend to do. Some of them will doubtless waken up and secure homes for themselves before the price of land rises beyond their reach.

There is all the difference in the world between the various families. Some of them are thrifty and some are as shiftless as the worst of the negroes in the States. It is not hard to tell which class will drift to the cities and swell the already overcrowded ranks of the poor. It is here as everywhere else we have been—there are all kinds of people. Yet it does seem too bad that there are so many of some kinds and so few of others.

And there are all colors as well as all kinds. The color line has not been closely drawn—hardly drawn at all in new sections—and as a result there are white and black, and several shades between, in the same family. We called at a house once and were so surprised to notice

comes upon them in places where he would not have thought anyone had ever lived.

A great many of them are squatters; and some of them have been so for many generations. Whence they came or how they chose the place they did for a home, we do not know. Perhaps they thought they were moving to a place where no one owned the land and where they could remain undisturbed. If they were moved by any such motive, they have another think coming, for the final surveys of the land are being made, and those on land to which they have no title are being invited by the law to move off. The subdivision takes time, for there are many claims that must be adjusted; but it cannot be many years until

the difference in color of the children that the mother must have noticed it, for she said the children did not look as if they all had the same father, but they had. There will be a hopeless tangle in Cuba if they ever do try to draw the color line, as they are likely to do. But of course there has not been this intermarriage among the upper classes. They are as proud of their blood as almost anyone you will meet.

There is much the same life led by most of the country families; and yet there are differences, depending on the kind of people in the family. Comparatively few of them can read or write. And in even the best of these homes there is little that would make it seem like home to us. It would be torment for us who

A Cuban country family

have been accustomed to better things to try to live in that way. But of course it isn't so bad when one has never known anything better, and none of his friends or relatives can tell him of a different way of life—living instead of barely existing. Perhaps if they knew more of a better way of life they would not be so well satisfied as they are now, since it is not in their power to make much of a change, except very slowly.

But some of them come into the homes of Americans, and are struck by the contrast. It could not be otherwise. They appreciate what they see, and words and actions show that they would like to exchange what they have for what we have. But they do not seem to be envious. They know that what they see costs more money than they ever expect to have. Their houses are generally palm-leaf shacks; and their bedrooms are the only rooms not open to the weather on nearly all sides. Very few of the houses in our section are anything like as good as the ones shown in the picture. Just imagine a shack open on all sides, a dirt floor, uneven, pigs and chickens and goats and dogs all around—not a carpet or a rug; not a rocking-chair or couch; not a particle of ceiling or paper; not a picture; no books or papers; no piano or organ; no table linen; very few dishes. How would you like such a home as that? Don't you feel sorry for people so situated? Wouldn't it be a good thing to help them to something better?

Omaja, Cuba.

THE HORSEPOWER OF BUSINESS.

JOHN S. NOFFSINGER.

"SAY, do you use Pear's Soap?" This is the advertisement which stares us in the face, turn where we will. Pick up your morning paper and it is there; take up your evening paper and the same friendly question greets you; take up whatever you will, your scientific magazine, your weekly or monthly chronicle of events, your story paper or even perhaps your Sunday-school paper and the same interrogation greets you in lithographed colors from the back cover page. Take the train to the city and it stares at you from the billboards of every vacant lot; or retreat to the solitudes of the country and even there the fence-boards along the road are made to cry out, "Do you use Pear's Soap?"

This is not a freak of nature, neither is it a fanatic of a company who are thus educating the people of the civilized world to the merits of their product. Students of human nature have long since known the value of advertising. Even the ancient knew of its value, and the merchant who had wares to offer brought them to the gate of the city and there cried aloud, making known the worth of his goods to those who might be inducted to turn aside and purchase them.

But we are not more amused at this custom of those ancients than we are amazed at the magnitude of the modern system of advertising. From the day when Boaz took his stand at the gate to advertise Naomi's parcel of land by crying to the passing Israelites, until the day when Barnum and Bailey billed the town for their three-ringed circus, the evolution of advertising has been gradual, but at the same time astonishing.

As soon as printed symbols were invented, the advertising man made use of them to give publicity to his merchandise. We find advertising engraved upon walls and tombs, upon parchment and papyrus, and even some critics tell us that Homer wrote his great epics, the Iliad and Odyssey, to advertise some famous wine merchants of the East. And although these various forms of advertising were used by the ancients, yet little thought and care seem to have been expended upon them. But in the last decade posters, painted signs, street-car placards, booklets, calendars, almanacs, handbills, magazine and newspaper advertising have become forms of advertising so well established that we look upon them as an absolute necessity, and are surprised to learn that most of them are modern innovations.

Until about 1890 very little advertising of any nature was done in this country. In 1882 *Harper's Magazine* contained only one and one-fourth pages of advertising for the entire year. Last year the same magazine contained over 1,000 pages. There are now over 20,000 such periodicals carrying advertising, and each with a thus-increasing number of pages devoted to them. One company alone is said to put out over 25,000,000 almanacs annually to advertise its business.

And when we stop to think of this great expense it is appalling; conservative estimates of printed forms of advertising alone put the total annual expense at \$600,000,000. Think of it, every man, woman and child in the United States must pay an annual tribute of over \$6.00 to this great goddess of modern industry. It would pay our great national debt of two and one-half billion dollars in four years. It would build us each year six navies like we now possess, or in other words it would add two hundred first-class battleships to our navy each year. With the cost of advertising alone we could enter another war equally as expensive as the civil war and come out of it \$200,000,000 ahead. We could light up all our cities, install systems of sanitary sewerage, wipe out the obnoxious tenement districts until our towns would realize Moore's Eutopian dream, and yet with the surplus in a few years buy out the combined wealth of a Rockefeller and a Carnegie.

The first of last January the Proctor and Gamble Co., of Cincinnati, the makers of Ivory Soap, contracted with the *Ladies' Home Journal* for a full page advertisement for the space of three years at the rate

of \$4,000 per issue or \$600,000 for the three years. Mr. Post spends annually on his Postum and Grape Nuts over \$600,000; the Ayer Medicine Co. spends an equal amount; while such companies as Peruna and Force each spend over one million annually to educate the people of this country to the necessity of their products.

When we become conscious of this marvelous expenditure of money we are made to ask, Does this kind of investment pay? There is an old saying that a fool is born every minute and this is equally applicable to purchasers as well. For throughout the length and breadth of this country of ours thousands of men and women are daily, almost hourly, making their initial purchase of various wares. The comic papers have long since made sport of the bride and her early experiments in marketing. But the establishing of each new home is a matter of importance to most advertisers; for once let their brand of soap or soup or silver polish become established in a household, and the chances are that it will remain the family standard for years to come. So the farsighted advertiser begins to say "Sapolio" and "Gold Dust Twins" to her in infancy; "Sapolio" and "Gold-Dust Twins" follow her to school, they thrust themselves upon her when she travels, and all unconsciously engrave themselves upon her memory. At last the eventful day arrives and she sallies forth for her first day's shopping, and what is it that she orders? In all probability the following are on her list: Sapolio, Ivory Soap, Campbell's Soup, Walter Baker's Cocoa and a box of Toasted Corn Flakes. She knows and remembers these names but does not realize that in every case she has chosen an article made known to her perhaps by advertising alone. Multiply this instance a thousand times and countless others of similar character and you already have an army of purchasers.

Thus generation after generation must be schooled by the advertisers of the various brands of goods that are to survive in the twentieth century market. Manufacturers are becoming keenly awake to the proposition and in the last ten years have made marvelous strides toward the developing of this science; and science we may well call it, for magazines are now published especially for its benefit, books have been written upon the psychology of it, and at least half a dozen schools have been established for the development of the art. Mr. Mason has wittily but almost truly said in his paper on "Brains," "At one time brains influenced literature, but the discovery was made that literature could do without them and since they have been almost exclusively devoted to advertising."

Do you read advertisements? If you don't you ought to; for there are more downright brains and genius exhibited on one page of good advertising than over ninety and nine of modern literature.

Truly this is the advertising age, and with abundant reason it has come to be looked upon as the golden key which unlocks the door which leads not only to fortune but also to fame. For as no one will know what bargains are being offered unless his attention is forced upon them, likewise who will know the value of the advice and service of another unless he hears of his qualities? Everybody can read, everybody can buy, everybody can vote; and so the politician also enters the arena of advertising. The voters must be reached somehow by anyone who wants his vote, just as the purchaser must be reached by anyone who wants his trade. "To him that asketh it shall be given" is a truth with a great following in these days. To be, is no longer enough. If one would forge ahead it is necessary not only to be, but to be known, and the way to be known, is in some form or other to advertise.

We have come to advertise all things in this marvelous age; we advertise our religious meetings and we advertise our political meetings; we advertise our sacred things, and we advertise our secular things; we advertise our merchandise and if it does not pay to advertise the merchandise we advertise our business. We advertise and advertise until it has become universally recognized that advertising is the horsepower of twentieth century business.

PREVENTION BETTER THAN CURE.

OLD and new methods of looking after the public health are contrasted in the twenty-ninth annual report of the New York State commissioner of health. The bulk of the work now falls upon the sanitarian instead of the physician, as formerly. Prevention and elimination are the processes employed where formerly the health department gave most of its attention to the cure of diseases after they had appeared.

"The old way," says the report, "has been expensive and deadly. Its central thought was to cure disease, not to prevent it. It made no attempt to protect communities. Its highest conception was to take care of individuals after they became diseased. So came our public hospitals, asylums, dispensaries, and other charitable institutions. But we realize now that we can do better than merely try to cure or care for the sick. We know now that if we do the things we ought to do we can prevent sickness. We have reached a point where it is recognized that it is the duty of the community or State to effectually protect itself against the ignorant, the selfish, the filthy, and the diseased. We believe now that we must have proper sewage disposal, pure water, decent tenements, clean streets, good sized playgrounds, supervision of factories, protection of child labor, and pure food."

A State school of sanitary science is urged where special training may be given along lines for the prevention of disease.—*Chicago Tribune*.

NATURE STUDIES

MY BROOK AND BANK.

JOHN H. NOWLAN.

TODAY is a holiday for me and I am once more in one of my favorite haunts. When a holiday comes many seek the nearest town to while away the time. Others go in the opposite direction and seek a spot where the sights and sounds are those of Nature.

No place can be found where Nature reigns more supreme than in the grand old woods—God's first temples.

Here today not a sound is to be heard save those of Nature. Sit here by me on this old oak stump and see what you may see. But listen! You know birds? Good. Then you will enjoy the merry, changeable voice of the cedar bird in the brush behind us. Doubtless his nest is, or soon will be, in the cedar near us. There! Several of his fellows have taken up the song and the air resounds with their varied calls.

Over on the hill beyond, the jays are screaming and fluttering. Likely they have a squirrel or a snake. You can't mistake the jay, but do you know that bird in the tree to your right? He is Sir Oriole. His last year's nest is dangling from the bough of yonder elm, and there too may be his castle this year. Did you hear that shrill scream? That was the challenge of the hawk as he and his mate swept across behind us to the woods eastward. Their nest is away to the southeast in the top of a tall white oak in the dense woods. Every year that I have known this place they have had their eyrie here, to the sorrow of the housewife upon whose poultry they prey.

From my earliest childhood there has always been something fascinating about a stream to me. It is always coming, always going, yet always here. Here, almost at our feet, the water is rippling and flashing over the pebbles in the afternoon sun. Come back tomorrow and it will be the same.

Going back to the scenes of my earliest recollections after the lapse of years there was not a thing that was left to recall those days save the little stream. Not a bush or tree was left to mark the spot—no trace of yard or garden—nothing to indicate that it had once been the site of a human habitation. But the stream—it was flowing just the same as in those days. I had crossed that stream last a fatherless lad, not yet to the age of knickerbockers. When I returned I had learned

the bitter lesson that the world cares not for the sorrows of man.

Often have I passed near there since that day, but never have I again visited it nor do I expect ever to do so again. People change. Men come upon the scene, then vanish, but the brook pursues its way persistently. And what a latent power it possesses! What a model of persistence! Place an obstacle in its path and it will pass over, under, or around it, but never turn back.

Just beyond that small elm on a sandy bank see that bed of purple violets. Why did I say purple? Because that little flower not six feet down the bank is a *white* one while at the base of the hill is a large bed of them and farther down stream are *yellow* ones.

No, those blue flowers near the white ones are not violets—they are sweet Williams. Look sharply and you can see that they are not only basking in the sun, but some of them are peeping from the underbrush on the hill even to the very top. The bluebells are a little more particular—they keep away from the water's edge but swing from a clayey bluff where the woodchuck has his home.

Yes, that is a woodbine clinging to the elm leaning over the water, but the one on the tree where the oriole has his nest is a poison ivy. The difference? Easy enough. The woodbine has three leaves in a cluster and the ivy has five.

Certainly that elm would make lumber—but it also makes *shade*. Do you see that decayed limb? Madam Squirrel has her nursery there every year. Now you know why the woodman spares that tree.

Do you now wonder why I like to linger here? This is my study. Here at my feet are rushes—not the horsetail rushes but the branching ones—old plants when man first trod these hills.

Here you may watch birds, insects, and animals. Not a stone's throw from here is the body of the old oak felled some time ago, while a few paces farther is the rock quarry where you may read the record of the rocks.

On this acre of virgin sod bounded on three sides by the brook and on the other by the hill, may be seen sunshine or shade; land creatures or water inhabitants; birds flying from one to another of the twenty varieties of trees to be seen here, wading in the water, or peeping from the dense undergrowth;

plants that grow on the steep hillside or by the water's edge; ferns timidly peeping from damp, shady nooks, or clover basking in the bright sunlight.

What more could man want than to converse with Nature and thus with her Creator? That man would not be satisfied in this life if he owned the world.

SOME PLANTS THAT DO NOT FLOWER.

WHERE is the country boy or girl who does not know the possibilities of a playhouse in the woods? A lovely green bank beneath a great spreading beech, and sloping down to a little hollow, where stands a pool of water in the springtime, is all the invitation the average child needs to bring out his instinctive love for housekeeping.

Do you remember the summer afternoon when you and Bessie and Charlie went to the woods and made a playhouse? The ground was just soft enough so you could drive sticks into it, and the first thing you did was to make a fence around the whole bank. Heavy forked sticks formed the posts, and then you laid lighter crosspieces from one post to the other, resting them in the forks. And while you fixed sugar-trough chairs and shelves for bric-a-brac and some wooden "nails" to hang your hats on, you sent Bessie and Charlie away to find some pretty green things to decorate with.

They came back laden with ornaments of all kinds. There were tall, beautiful ferns, lovely mosses of all shades of green, and dear little "brackets" which they found growing upon the sides of logs and trees. You worked all afternoon, carpeting the bare places on your "floor," festooning the "walls," and ornamenting the doorposts and various articles of furniture.

And while you worked and played "house" did you realize what wonderful little woods plants you were playing with? The trees over your head were flower-bearing plants, but the ferns and mosses and fungi were plants that do not flower.

You know the mission of the flower is to produce seeds, and so reproduce the plant by making others of its kind. You do not recall ever seeing flowers on the fern plant, do you? And yet they must reproduce themselves in some way. This is how they do it. You perhaps have noticed the little brown dots on the under side of the fern leaf. These dots are the spores. Now "spore" is a new word to you, and I will explain the meaning. Spores are to the plants that do not flower what seeds are to flowering plants. They differ from seeds in this way: a seed contains a complete plant wrapped up in it; a spore contains no hint of the future plant. It is only a little cell, and when it falls on the ground a heart-shaped plant springs up from it. This is not a fern plant, however. The little heart-shaped plant produces a bud, and from this bud the fern

finally appears. This in turn bears spores again, and so the cycle of life is completed.

The spores of the moss are usually borne in a little cup on a tiny stem. You have often seen these little cups which give the moss such a beautiful appearance. When the spores are ripe the cups turn red.

The green, thick moss of the forests is truly beautiful. You have found it away down in a secluded dell where there is plenty of earth, the dark-green, velvety variety that is absolutely unequaled by anything of its kind for beauty.

The "funny little fungus family" are all very interesting. Many of them you know well. The mushrooms, toadstools, puffballs, all belong to this family. Perhaps you never knew that bread mold is in reality a forest of tiny growing plants, and wheat rust is equally wonderful under the microscope.

These fungi belong to the "tramp" variety of plants; that is, they are unable to make their own living, and must depend on other plants for their food.

The part of the mushroom that we see is not the real plant itself, but is the spore-bearing body. The real plant is under the ground. How often with a sweep of your little foot you have destroyed a whole village of toadstool dwellers, and then as you looked at the ruins you couldn't help taking one of those pretty white umbrellas up in your hands and looking at it. You thought the folds under the umbrella were just beautiful, and indeed they were. These folds produced the spores, and the whole "umbrella" was to that toadstool plant what the flower is to the flowering plant.

Has grandmother ever told you about the "scouring day" at the old homestead, when all the tinware was brought out and made to shine like a polished mirror? Perhaps you need not go back to grandmother's day; doubtless mother can well remember those occasions, which are now a thing of the past, since granite ware has come to take the place of the less durable and more troublesome tin. But what did they do the scouring with? Rushes, which grew down by the river—we call them horse-tails, or *equisetum*. These are interesting plants, for they have no real leaves, but scales which unite in a tube around the stem of the plant. Horse-tail rushes are hollow, with jointed stems which are easily pulled apart. The spore cases are borne at the top of the plant in a collection shaped something like a cone. And now comes the wonder of wonders: each little spore is wrapped about by four thread-like hairs. When the spore is wet these hairs cling closely about it, but when the spore gets dry and ripe, the hairs spring apart and the spore is thrown from the case to the ground, where it may grow.

Oh, the woods are full of wonders, that are more marvelous than all the doings of the fairy folk—and more wonderful, too, because they are real.—*Selected.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

THIS week our readers are given an interesting glimpse of frontier life in the article on "Homesteading." Many boys of today would consider themselves seriously handicapped in life's race if they were compelled to begin in this way, but such experiences are really among the most valuable assets a young man can have.

THERE are many things that we should love. The power to love sincerely deepens our understanding and broadens our sympathies. But there are also some things that we should hate, as hypocrisy, injustice, dishonesty, and our hatred of these should be as unyielding and uncompromising as our love of the noble qualities should be unfailing.

THE would-be leader of progress passes a wholesale condemnation upon ruts and rut traveling. But ruts are all right if they are the right kind. By the right kind we mean the ones that lead somewhere—somewhere worth going—to something worth having. To get out of a rut, sometimes means to get on a broad plain that leads nowhere.

HERE are some words from the philosopher, Epicurus, which it would be well for us in this age to consider: "No one who is a lover of riches or a lover of pleasure, or a lover of glory, can at the same time be a lover of men." Can you prove that the statement is not true? If not, evidently here are some more things for some of us to learn to hate in order that we may get on the right side.

THE worst thing in the world is the abuse of good things—the abuse of intellectual gifts, the abuse of physical powers. The saying, that a falsehood with a mixture of truth in it is the worst kind of a falsehood, is simply another way of stating the same

principle. There is no more revolting sight in nature or in the moral world than that which has been deformed or perverted. And there is no more effectual way of defeating noble impulses than by their perversion. Let us be careful that we are not guilty of these worst things.

IMPRESSIONS. No. 2.

IT would be impossible for us to give full expression to the feelings that possess us when we find ourselves at one of our Annual Conferences where, for the most part, the moving power that has brought the thousands of members together has been love for the church and for the Master who made possible our sitting together in heavenly places. The inspiration of the numbers alone is something that will remain with one for some time, and when we add to this the effect of their singing and their earnest listening to the Word, Elijah's Mount Horeb feeling leaves us entirely and we are ready to meet duty with renewed courage.

A meeting of several thousand people causes many of us to change our ideas of numbers. In general our congregations are small and scattering and we get the idea that though we number ninety thousand altogether, we are a mere handful of people. To be sure we are a mere handful compared with some bodies,—much depends on what is compared,—but for all that when we get ten or fifteen thousand people together we find our original mere handful idea a ridiculously inadequate measure. The one whose comfort is not complete without the feeling that he is one of a large body of people—that there is "a big crowd of us"—ought to attend our conferences and be comforted.

The social side of these meetings is a very important feature, and while we believe it should be held in bounds and not be allowed to interfere with the real purposes of the conference, we do not at all agree with those who would preach it down. We verily believe that the common ground on which we as a people meet is as broad as that of any other body of people. It fosters the democratic spirit and gives no encouragement to the cold formality and cut and dried mannerisms that stand on ceremony. May the conditions forever continue that make this easy friendliness possible.

Here is a homely illustration of what we mean, in part, in the above: To our right at lunch was one whose face was that of a stranger but which withal carried that look of common brotherhood that invited acquaintance. So we bid the stranger the time of day and exchanged comments on the weather. Then we continued: "Live hereabouts, do you?" "No, I live in Kansas." "Kansas? Um. (Strange, we didn't recognize that Kansas drawl at first "sight.") Live near W—?" "No, I live at C—. Know anybody

around C—?" "Well, I can't say that I do. Le' me see, what's your name?" "Black—Will Black." "What, W. O. Black?" "The same." "Brother to J. W. Black?" "Yes; you know J. W.?" "Indeed, I do; used to be in class with him at school." "Well, well! and who are you? Is that so? I'm very glad to meet you." Then followed inquiries about mutual friends, the progress of church work in each one's district, etc., and when we each went our way, it was with additional reasons for believing that the whole world is kin.
